The *Nationalist* for July is, if possible, more than ordinarily interesting and "breezy." The article on "Child Labor in Pennsylvania" ought to have a wide reading. The writer, among other things, says: "The woes of the mine workers have often been told, but there has been hardly a word about the little toilers, and yet the blackest blot upon Pennsylvania's fair name, and upon that of Philadelphia, her greatest city, and the greatest textile center of the United States, is the slavery of the little toilers of the mills."

The *Monthly Journal* of the National Association of Machinists, for June is on our table and we notice that T. W. Talbot, G. M. M., has resigned and that Grand Foreman, J. J. Creamer, of Richmond, Va., takes his place. The order is prosperous and steadily increasing in members.

The *Journal* of the Franklin Institute, of Philadelphia, for July, is on our table, containing a well written memoir of Dr. Thomas P. Jones, who, as far back as 1826, became the editor and publisher of the *Journal*. The Franklin Institute, "devoted to science and the mechanic arts," has an important mission, and is accomplishing good.

The *Arena*, for July, has come to hand, containing an article on the "race problem," from the pen of Senator Wade Hampton, of South Carolina. This one article is many times worth the price of the magazine. As the months go by, the "race problem" is certain to arouse intense interest, and its solution is fraught with anxieties bordering upon despair.

MIDSUMMER MUSINGS.

'Tis a subject my muse is in search of, and when she obtains it, I'll have a set-to with my pen, If the words will but follow to clothe my ideas, Now chasing each other with fluency free as Molasses in winter, when zero is here, A place he resorts for four months in the year— But, avast! as a sailor would say, for the hum Of mosquitoes proclaims broiling summer has come.

Yes, July, ever glorious for those who can sneeze By the sea shore enjoying the salt laden breeze Is upon us, to melt us like boarding house slush. Which the waiter calls butter, without any blush On her face as we view it while telling the lie In her coolest of manner in burning July: Dreary winter has fled, with its flanges and plows, And we have in its stead beaded drops on our brows.

What a beautiful time to recline in the shade Of a canopied bower, some leaf trolleed glade By the side of old ocean, this blistering weather— Would you like, Mrs. Bloom, if we two were together Our lyres attuned to the roll of the swell, Coming in to our feet, bearing many a shell, Full of symphonies stored, to inspire us to sing, Free of care in our hearts and our thoughts on the wing?

Let enthusiasts boast of the joys of champagne, And the great inspiration it sends to the brain, But I think when two hearts which are throbbing as one, With their owners concealed from the glare of the sun Neath the shade of a maple, longside of the sea, When sweet song birds are matting above in the tree, There's a chance to discount an old tippler's delight, Mrs. Bloom don't you think your admirer is right?

Where is Sargent? Dear Frank, if you chance to peruse This effusion of doggerel, flung from my muse, Let your fancy run back to that mem'able day When you said from my phiz the two bulls ran away. At Elmira, last winter, I reckon, dear Frank, You had cause to regret such a heathenish prank; All your superfine plumage and exquisite airs Were collapsed as my thrust on the Rathben House stairs.

Where is Hannahan now? About six months have fled Since I heard from the rogue, but I know he's not dead; For good eating and drinking don't kill at his age, And that boy hasn't got to the lunacy stage Of his life, where excesses run off with his brains, And prostrate him a victim of gluttonous pains. Oh, no! Jack is cute, just the sort of a man That will fight off the gout just as long as he can.

Don't you think, my dear Debs, it is nigh about time To set brakes on this go-as-you-please sort of rhyme? Many readers will laugh with ironical sneers And sweet "Kate of Missoula" fling venomous jeers At such trash as I'm writing (.) Dear Kittie, you're cruel; Sure, I owe you a stare from my pen, my dear jewel: You will get it as sure as there's impudence bred About six inches deep in your ignorant head.

Shandy Maguire.

The Matchless Metal Polish Co.

Among the growing industries of the times the Matchless Metal Polish Co. is deserving of special mention. Its success is due entirely to the superior quality of its goods. As evidence of this, it is only required to state that 12,000 boxes of the Matchless Metal Polish have recently been delivered to the government. Large shipments are being made to England, Australia and other foreign countries and the demand is constantly increasing. The company is to be congratulated upon the success it has achieved as well as upon its promising outlook for the future.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

The "Fly Man."

MR. EDITOR:

The "Fly man" is generally a young engineer, in fact he is invariably a young man because if it so happens that he holds his job long enough to be classed as an old man, he loves his "flyness;" there is always hope for him because there is bound to come a time in his experience when he trades away a lot of his "flyness" for sense, and when that time comes he is an Al man, for the reason that there is always an element of dash and daring in his character that impels him to take chances that less daring men would hesitate about until too late. This element of daring, when directed by sense and judgment, instead of "flyness" is a valuable quality in the make-up of an engineer, and the "fly man" has lots of it, but while he remains "fly" he is one of the "Fire-bro's" greatest "Jonahs." He has an idea that he can pull a train of box cars just a little bit faster than any other man on the road and is continually trying to demonstrate the truth of his idea. To hear him talk one would suppose that the company could not carry on business without him and that his resignation would cause a panic among the directors or make a difference of a few points in the quotations of the stock market. He does considerable of his railroading in the engine house, and is always ready with a story of how he pulled a full train from X to Y last trip with the "312" in just a few seconds less than no time at all and is willing to bet that he can get more speed out of the "old girl" than any man that ever run her. The card is always too slow for him, and he is in his element when he leaves a couple of hours late so he can get a chance to run 'em. He is always willing to take a car or two more than a full train just to show the "con." what he and the old "312" can do. The "con." comes to him while he is rolling around at H and tells him he'll have to head in here as he can't get any orders against the "cannon ball." He looks at his watch and tells the "con." he don't need any orders, fourteen minutes is time enough to get over to "J" and while he is talking he is getting them to going. The "con." gets on the engine with him and tells him Johnson that runs the "310" wouldn't go on sixteen minutes last trip, and advises him to lay back but he calls Johnson an old grandma and says "you bet the '312' can get there in fourteen minutes." He calls out to the fireboy, "keep her hot now Johnnie, I've got to nail her," and then "WHIZ, BANG!" the lever goes down toward the corner and the throttle goes out in the tank and the struggle begins. He makes it by the skin of his teeth—he just gets into clear nicely when the "cannon ball" goes whizzing by, and then has to lay there 30 minutes as there is no possibility of getting over to "J" in time to clear the "limited." If he had laid back at H for the "cannon ball" he would have had 22 minutes to get from "H" to "J" for the "limited" and been just exactly as far ahead, but then there wouldn't have been anything "fly" about that. I'll have to tell a little story about a trick served by a fireman of my acquaintance on one of those "flymen." The fireman (I'll call him Joe) was one of those dry, easy-going fellows that never get rattled at anything; he was firing for a first-class man and appreciated the fact, but his mate laid off one trip and a "flyman" was sent out in his place; everything went on very well until they came to a pretty stiff grade, here was a good place for the "flyman" to prove that he could run a train up hill just as fast as the train could run him down hill. He tried to prove it,

but stalled on the hill with 80 pounds of steam. After they stalled the "flyman" looked over at Joe and said "what's the matter with her Joe, won't she steam?" Joe looked at the gauge with apparent surprise and drawled out, "well, now that's too bad I was firing her just the same as I always do for Joe and I never thought to look at the gauge." I don't suppose there is any use in looking forward to a tin when there won't be any "flymen" as we are bound to have them like the poor, "always with us," but we can console ourselves with the reflection they are long distance ahead of the Hogs, because the last never lose their rind.

Vocum

PADUCAH, KY., July 11th, 1898

That the calling of locomotive engineers is a hazardous, has been forcibly demonstrated in many parts of the United States in the past few weeks; the many accidents recorded, perhaps no one death has caused more deep and sincere sorrow than that of Brother G. T. Perkins, of Plain C. Lodge, No. 238, B. of L. F. He was engineer of engine 600 on the N. N. & M. V. R. R. and at Kerd, Tenn., twenty miles east of Memphis, on June 1890, about 7 o'clock A. M., his engine was thrown from the track, caused by running over stock, which could not be avoided, as it was "down grade." The heavy freight trains running 16 or eighteen miles per hour. The engine and several cars were wrecked, and Brother Perkins crushed under the cars and instantly killed. Mr. R. R. Marshall, fireman, died of his injuries about seven hours after. Brother Perkins was a young man, and had only been promoted to the position of engineer a few months previous to his death. By close and earnest attention to his work, and the faithful, steady performance of the same, he had gained this responsible position, true and earnest christian, in an unostentatious way that compelled respect and esteem, he was sadly missed in the Sunday school here.

"Where once his voice was heard,
So earnest in his Master's cause,
Each youthful heart was stirred."

Before he had belonged to our lodge six months his noble qualities of head and heart had been recognized and he was unanimously elected to one of the most important offices in the gift of the Lodge. Faithfully did he perform his duties, always willing and ready to help to advance the cause of the Order and to better the condition of railway men. A Latin proverb "Say nothing but good of the dead can truthfully be changed in this case, to "Nothing but good can be said of the dead." His life was gentle and the elements so mixed in him that nature might stand up and say to all the world, *He was a man.*

Memorial

NICKERSON, KANSAS, July 1st, 1898

Editor Firemen's Magazine:

Reno Lodge, No. 258, is increasing in membership and the goat and enjoyed the exercise. Business is good on the road here that the boys are prevented from attending the meetings of the Lodge as regularly as the desire. Speaking of federation, I believe I voice the sentiments of the members of the Lodge, when I say that we fully indorse your federation, first, last and all the time, as also action taken by our Grand Officers in the formation of the plan of federation as adopted by the Supreme Council in Chicago, June 6th, 1899.

Your correspondent had the pleasure of attending a Union meeting held at Denver June 25th and which afforded him great pleasure in many respects. We saw the champions of system federation as practiced on the U. P. system and listened to all the arguments. We also heard the Editor of the *Firemen's Magazine* discuss federation, as established by the Supreme Council, and do not hesitate to say that when the meeting adjourned, the prevailing sentiment was in accord with the plan of federation put in operation by the Supreme Council.

The meeting, I am satisfied, accomplished a great deal of good, and its good effects will be felt by the Order generally. I will now close with the purpose of coming again.

Sticks

A TOAST.

TO MR. AND MRS. "THEO."

Here's hoping your life will be ever as bright—
As your eyes.
The morning your soul had seen with delight—
The nuptial ties.
Like a piece of the dawn shaken out from the skies.
Fill again to the sweet thrills of your heart—
In its joy.
When deep in its purest and tenderest part—
Came a Toy.
With a love like the silence of night and a
Nightingale's joy.

Tim Fagan.

THE MISER AND HIS HOARD.

The turret clock had struck the midnight hour,
And o'er the place a solemn stillness reigned.
The owl had sought the old, dismantled tower,
In solitude to watch the moon that waned.
In lone garret by a dim rush light,
There sat a man the very wreck of self;
His spectral form a churchyard might affright:
Let his huge table groaned beneath his pelf.
Gold was his God, his life, his very soul,
Else on earth to him was valueless;
Then gold he saw he could not self control,
Apprehended mind he seemed then to possess.
His eyeballs glared with ecstasy of joy,
And each vein thrilled and looked as if 'twould burst—
"I'm rich," he cried, "none can my hopes destroy.
I gold I've won—let man now do his worst."
He room he paced with all a miser's pride;
At once a mighty change come o'er his head,
As death's fell dart had pierced him in the side,
He gold was there the wretched man was dead.
E. L. B. L.

MONTREAL, CAN.

NOTHING TO DO.

Miss Mollina McMoran was hearty and hale,
Yet wished to be slender and languid and pale;
She defrauded her stomach of what was its due
And cheated her muscles of exercise too.
She dipped in the goblet her fingers rare
And wiped the tip ends with a delicate air
Then crossed her white hands on her hoop bespread
lap
Too inert to converse, too vain for to nap
For still was her aim in attracting the view
To convince all beholders she'd nothing to do
Miss Celestia Tity Mackeral would dandle all day
Over crochet and worsted or novel and play.
She sorted her shades with an accurate eye
But let her poor mother's wan features pass by
Who worn half to death with her family care
Found nothing like help from her daughter and
beir.
The getting of dinner, the toll and the stir
Of such vulgar pursuits were disgusting to her,
And thus to her nondescript creed she was true
The mother might fall, but she'd nothing to do.
Oh young men, my masters, who dream with delight
Of a home of your own which no discord can
blight
Where are roses of Eden from fading exempt
And an Eve whom no contraband apple can
tempt
Where the wheels of good order like clock work
shall move
And babies well trained bring an ocean of love
Where prudence with smiles of endearment shall
glow,
I'd fain sound a trumpet and bid you beware
Of quicksand beneath though the surface seem
fair
Avoild like the Upas with poisonous dew
Those exquisite ladies who've nothing to do.
Lindsey, Ont.

A Fireman's Sister.

MR. EDITOR:—When I called the attention of our members to the necessity of revising the compulsory feature of our insurance laws, I anticipated opposition; no such radical change was ever attempted yet but what there were many who took opposite views of the question at issue, and that this is no exception to the rule is proven by "Satisfacere," in the July *Magazine*.

Our worthy brother commences by stating: "I consider our insurance the grandest and very best I know of." But he failed to state his reasons for so thinking, also to how many insurance institutions his knowledge extends.

Now, if Bro. "S." was a sage or a philosopher, we would doubtless accept his belief as an assured fact; but as he is comparatively unknown, according to his own statements, he will kindly pardon the apparent irreverence of the brothers who refuse to accept his belief on this subject as higher authority than the facts stated by "Newcomer."

This is followed by an evasion. "Our friend emphatically says our Order is not conducted in accordance with our motto. I claim he is wrong in that particular if nothing else."

I emphatically reiterate my assertion that our Order is not conducted in accord with our motto, Protection, which means that we will be protected against any injustice which may be practiced upon us; this protection is the principal component part of our Order and every brother knows it.

Also that protection, or guarding the interests of labor is not the principal aim of the Order at present; but rather the maintenance of an insurance association, and our motto is silent on insurance, and if "S." will kindly point out where I am wrong I will esteem it a personal favor.

He next claims that insurance fostered at the expense of labor is cheaper than that controlled and maintained by capital.

While our quarterly assessment may be low in comparison with that charged by a capitalistic concern, yet when we look into the fact that we are paying for it in brotherhood stock, that we are ruining the brotherhood to preserve our purses, we must admit that it is very costly indeed.

Further down comes an inquiry: "In the name of common sense who are the strangers and who are the members that received the 12 per cent?" The heirs of deceased brothers are the strangers, and while they may be very dear to some one particular brother, they are beyond doubt strangers to our brotherhood. "S."s family doubtless is very interesting to him and therefore he thinks every brother is interested in them, when he ought to know that the majority of the members are unaware of their existence. He argues from a personal standpoint while I am arguing from a brotherhood standpoint. It is simply a business transaction; for the sum of \$5.75 per quarter we guarantee to pay to any person or set of persons that "S." may designate, the sum total of \$1,500.00 in the event of his demise. For a list of the members who received the 12 per cent. I would refer him to the assessment notices in the Grand Lodge columns of the *Magazine* for the past fifteen months for the benefit of totally disabled brothers. "S." then follows with an assertion that "when a fellow-employed does not care to associate with me or help me in misfortune, etc." Who are you referring to or what connection or sense has this with the points involved in our little controversy Bro. "S."?

Please elucidate, for the vision of sense peeping out from those lines is so dim as to require a microscope to discover it.

"S." states that "I pay my \$5.75 per quarter and feel perfectly insured and believe all my associate members feel the same way." He nullifies this statement in the following lines when he asserts: "If our insurance were not compulsory I imagine perhaps one-third of us would insure."

Now if "S." contradicts himself like this and changes his belief in the brief space of time necessary to write a single paragraph, how can he expect that we can receive his advice at all, not to think of framing laws on it that will last for years.

The last argument I have quoted is no argument at all, in my estimation, for I consider it a piece of presumption for one-third of our Order to arbitrarily

dictate whether the other two-thirds shall insure or not, and as a representative of the two-thirds I claim we have sufficient intelligence to determine the amount of insurance we wish to carry, and what organization we wish to carry it in, and beg leave to inform "S." and his one-third that while we appreciate their disinterested kindness, it is wholly unnecessary.

How the knowledge that my heirs would receive \$1,500 in the event of my death would alleviate my distress in my hour of sickness or misfortune is something I cannot comprehend; and that is about the only benefit I or any other brother would receive under our present insurance system.

I dispute the claim that any locomotive fireman who earns \$35 a month can support a family on an insurance policy, and our Order at the same time. He might do it in Michigan; perhaps the cost of living is cheaper there than in Chicago or any other large city, but he can't do it in a large city or railroad town and support his title of an honest man.

"S." disputes my definition of protection, viz.—against the oppression of organized capital. He holds: "No, far from it; protection against misfortune, sickness, disability, and in the end against the wolf that may chance to come howling at the door of our dear ones."

Now I believe Bro. "S." is mistaken. Previous to the Philadelphia convention the B. of L. F. was not a labor organization, and its motto was silent on protection. It was simply an excellent benevolent institution, and when the convention resolved to protect the labor interests of our members, it adopted protection as its motto to denote the fact and not as an advertisement of the merits of our insurance. Here is where the Philadelphia delegates erred. They changed the aims and enlarged the scope of the Order, but didn't reverse the laws that embraced those interests. Those laws are excellent for a benevolent institution, but it is all at the expense of labor.

I believe labor ought to have precedence, because every member employed as an engine-man wishes to be protected, and only a few of our members wish to be insured, one-third "satisfac" believes. This, I think, is rather a low estimate, but it serves to illustrate how the tail wags the dog.

"S." believes in letting labor take care of itself and working for \$35 a month, and then when he dies the Brotherhood will take care of his "dear ones." This is where I differ with "S." I believe in promoting the interests of labor first, and then we will receive fair wages; and it will not be necessary for us to die before our "dear ones" will get a square meal.

"S." makes a lame defense of our method of expelling members for non-payment of dues and assessments. He claims they are too penurious or selfish to pay their assessments. How does he know what motives actuated those men in refusing to support an insurance association? Is he a mind-reader or a prophet, and can he read the stars? or how does he obtain his information when he never saw or spoke to nine-tenths of them?

Even if his statements are true, if those men were too penurious to support our insurance department, is that any reason why they should be deprived of membership in a labor organization?

What connection or interdependence has our Brotherhood with this insurance institution? Are the B. of L. F. and this insurance institution created on the same plan as the Siamese twins?

What invisible ligament of flesh or facts connects them together? Is the happiness of one dependent on the prosperity of the other? Is it impossible for one to die without the other perishing? I believe not. I believe it is a ligament of fancy existing only in the inflated imagination of a few members, and the sooner we dissipate this fancy and divorce them the better.

Now, after attacking our present insurance plan, and Bro. "S." allow me to offer or suggest a new one. First, reduce our insurance to \$500 a policy. Second, allow a member to carry one or more, according to his means. Third, make this first one payable on total disability, so some benefit will accrue to a single member, something that will benefit our brothers and not all for strangers; and fourth,

conduct our labor organization and insurance as two different institutions. In justice to those candidates who are already sufficiently insured in some benevolent institution and wish to join us for protection; in justice to those who have no family to insure for; and last, for those members who don't wish to carry an insurance policy, regardless of what their motives may be.

I sincerely trust the delegates will take these facts into consideration and revise our insurance laws on a basis of equity and justice to all. *Newcomer.*

DERRY, PA., July 7th, 1890.

MR. EDITOR: Since I have been a member of Chestnut Ridge Lodge, No. 310, I have never seen anything from that lodge in the *Magazine*, so I will write a few lines to tell the boys of a trip I took to Illinois. I started for Illinois about the middle of June. I left Pittsburgh one night and the next morning I found myself in Columbus where I stopped a while and in looking around there I got acquainted with a few of the boys of No. 9, and among them was a B. of L. E. man who runs on the Scioto Valley, of the name of Thomas Jimby, but the boys called him "Spott." This man was one of the best friends I met while on my trip; he took me home with him and treated me the very best he could. On leaving Columbus I went to Indianapolis stopping at Bradford Junction a short time. I liked the city of Indianapolis very much. The Union Depot put me in mind of the one at Columbus, as the trains go straight through. From Indianapolis I went over the I. & V. road to Vincennes, a town on the Wabash river and the O. & M. road; here I took the O. & M. and went to Claremont, Ill., a small town on the O. & M. line where my parents live. On my return I went over the P. D. & E. to Mattoon. From Mattoon I came over the I. & St. L. to Indianapolis passing through Terre Haute. On reaching Indianapolis I came straight to Pittsburgh over the Panhandle road, stopping at Columbus a short time. I found the B. of L. F. much stronger through Indiana and Illinois than it is here. Most all the boys I met talked about federation and especially on the O. & M. road. I also found railroading much nicer on the roads I was over than it is on the P. R. R. because they have smaller engines, smaller trains and make shorter days and more money. I think it will do any railroad man good to go away from his road and see the difference there is in railroading. I am a fireman on the P. R. R. from Derry to Altoona, over the mountains. I will say in conclusion that No. 310 will "get there bye and bye," five applications on hand and more expected.

A Fireman.

PADUCAH, KY., July 10th, 1890.

MR. EDITOR:

Plain City Lodge, No. 238, B. of L. F., gave its fifth annual picnic and dance at Fountain Park, Paducah, Ky., June 19th, 1890. To say that it was a success, is putting it very mildly. There was an immense crowd, and all seemed to enjoy themselves hugely. Dancing was kept up till about 1 o'clock a. m., and as the weather was very warm, the "good people" must have been pleased or they would not have "tripped the light fantastic" till that time. More than half the members of the Lodge were there, and the very best of order prevailed. No intoxicating liquor, and a strictly temperance crowd, were the main features of the occasion. The General Superintendent, General Passenger Agent, Master Mechanic, and Round House Foreman, of the N. N. & M. V. R. R., are held in very high esteem by "the boys" for the many generous favors extended by them. Their kindness will long be remembered. The Paducah *Daily News*, June 20th, says: "The picnic and dance given by the Brotherhood of Locomotive Firemen at the park last evening was well attended, nearly a thousand people being present. The dance hall was crowded throughout the evening and everything was as merry as 'two' marriage bells. The committee are very much pleased with the success of the affair and feel satisfied that the good people treated them right. There never was a more pleasant affair in Paducah." 238.

COLUMBUS, O., May 25, 1890.

Editor Firemen's Magazine:

On May 14th the nineteenth annual ball of Franklin Lodge was held in City Hall, and was a brilliant success. The *Ohio State Journal* refers to the occasion by saying that a very pleasant time was had at the thirteenth annual ball of Franklin Lodge, No. 9, of the Brotherhood of Locomotive Firemen at the City Hall last evening. The Lodge has sustained a wide reputation for its annual hops and the thirteenth, though a proverbially unlucky number, was not less successful in every respect than a majority of those given in preceding years. There is no class of men in the railroad service more generally esteemed for their social and manly qualities than the firemen. They are mostly young men, full of life, energy and ambition, and sure to make a success of every undertaking. To these general qualities may be attributed the interest which is always taken by the members of the Brotherhood of Firemen in their annual entertainments and which contributes so much to the benefits derived therefrom. The preparations for the ball last evening were complete in every respect and there was nothing left for the members of Franklin Lodge to do but to make the evening as pleasant as possible for their friends. This they succeeded in doing to a degree which called forth numerous compliments from strangers of both this and other cities. Among the visitors from abroad who escaped the eye of the reporter was Bro. Chas. W. Mills and his estimable wife from Mt. Vernon, O. It is a real pleasure to converse with Mrs. Mills for she is a devoted friend of the B. of L. F.

Brother Lamb was present but could not leave his best girl long at a time. Brother John Mull was voted the dude of the evening. Our 200 lb. door-keeper was a terror to objectionable persons, and Brother Simpkins was voted a "corker."

It was remarked by all that a larger crowd of orderly young people never assembled in Columbus. Brother Schmiedler says he would not tend cloak room again for a hundred.

Brother Stump, as usual, was the life of us, while Brother Loudon, "sober as a judge," handled the "boodle."

Mr. F. F. Bennet, the popular jeweler, says if the crowd was a sample of the B. of L. F., it ought to prosper.

Fraternally Yours,
C.-----

MOBERLY, MO., July 7th 1890.

MR. EDITOR:—I see a communication in the July *Magazine* by W. S. Carter, in which he states that the delegates to the convention should be given written instructions as to what they should do while there. I differ with him there. What is the use of sending a man there if he is to follow these instructions? You might just as well send a wooden "dummy" and have these written instructions fastened to it, and it would answer the purpose and save money for the Lodge.

I believe in sending a man that is able to judge for himself what is best for his Lodge and for the organization. A Lodge may be in favor of a certain proposition which comes before the convention, but the delegate they send, finds, while at the convention, that they were wrong and he votes contrary to the instructions he received, and on returning home, can explain to his Lodge their mistake and satisfy them, whereas, if he receives written instructions, he is in duty bound to vote in accordance therewith and thus do an injury to the organization.

Bro. Carter also wishes to have the insurance reduced from \$1,500 to \$300, on the plea that many good men are kept out of the organization on account of the heavy assessments. On the contrary, I think that over half the members of the B. L. F. carry policies in insurance companies besides the \$1,500 that they hold in the Brotherhood, and if Anchor Lodge could be taken as a standard I could say nine-tenths of the members carried outside policies and would be able to prove my statement.

Bro. Carter can find a more satisfactory reason for our insurance being cheaper than that of other organizations, if he would consider the fact, that every member of the B. of L. F. carries a policy, while in other organizations the insurance is optional.

Our insurance is only expected to support itself and not pay a dividend to some rich capitalists, and as long as it stands on that platform it is safe, for it is plain to be seen that the more members we have the cheaper our insurance assessments will be.

Bro. Carter claims that our insurance is cheap because so many members are expelled. That is merely a minor cause and he seems to think that it is wrong for a man to pay assessments for a short time and then be expelled and lose all the money he has paid in; but he does not lose all the money he has paid in nor one cent of it, for as long as he pays his insurance fee he is entitled to the \$1,500 if he is totally disabled and there are thousands of men who insure themselves every year under these same principles and when they quit insuring they do not say the insurance company has beaten them out of their assessments, but on the contrary are glad that they did not have to call on the insurance company for money to pay for injuries received.

The Wabash is doing a good business and the boys are getting as much work as they want. There are to be five new R. Island ten wheelers come soon and they are needed on the East end.

Anchor Lodge is doing well and receiving new members constantly.
B. A.

SAVANNAH GA., June 22d, 1890.

Editor Firemen's Magazine:

It must not be thought, by the readers of the *Magazine*, that Georgia Lodge, No. 245, is asleep. Such is not the case. On the contrary we are sufficiently wide-awake to hold Union meetings in the interest of harmonious federation.

On June 22d a Union meeting was held at Firemen's Hall, this city, and I am pleased to say there was a good attendance of Brotherhood men, representing the B. of L. E., the B. of R. T., S. M. A. A., B. of L. F. and B. of R. C. A number of good addresses were made and good was accomplished.

Georgia Lodge was well represented, and we had visitors from Charleston, Way Cross and other points. In such meetings a good deal is learned, and they accomplish good. Let us still continue in such good work. The readers of the *Magazine* may feel assured that, though they may not see communications from Georgia Lodge, the members are all working for the good of the order.

Yours truly,
245.**MEDITATION.**

While at rest to-day I was thinking
Of the different pathways in life.
Of the men who do nothing but labor
Have nothing but sorrow and strife.
And then of the man with his thousands
Who cares naught for the pain and the woes
That he causes the poor and the needy
Of the seeds of affliction he sows.

So long as their labor brings profit
To add to his hoard year by year,
While he lives by the tolling of others
Who's cries he refuses to hear.
When on the day of judgment
We stand at the bar of God,
Tis they who will cry, Lord be merciful
And spare thy chastening rod.

But the Lord will answer them saying,
Ye accused, depart from me
While on earth you never knew me
Why should I have mercy for thee.
But for the weak, the poor and the needy
The doors shall be open wide
And a voice full of heavenly music
Shall bid them to come inside.

And I'm glad I belong to the millions
Who daily toil for their bread,
And its comfort to know while living
That I know where I'll go when I'm dead.
You may think I am quite sentimental
While in verses to you I thus write,
I can explain it all in a minute
I went to church in Hudson last night.

COLUMBUS, O.

L.

BE JUST!

In olden times when champions stood
 Arrayed in battle dress,
 To struggle for their country's good
 Or nation's wrongs redress.
 Their friends and kinsmen pressed around
 And sang their praises high,
 That strength within them might be found
 To conquer or to die

And if they conquered, well and good,
 All honor was their due;
 They battled as all champions should,
 Were steadfast, brave and true.
 And if they strove without success
 And died without a fear,
 Their kinsmen laid their forms to rest
 And held their memories dear.

Success or failure mattered not
 If they but battled well.
 Not what they failed to do but what
 They did, historians tell:
 Full many a man's intent was good
 And, though he vainly tried,
 Spare him your censure that he should
 Have conquered not,—but died.

To every man, sometime in life,
 Success comes or defeat:
 No one amid this daily strife
 Can fall not nor succeed:
 Life has no pleasant lounging bed
 Where one may pause and wait.
 All either must go on ahead
 Or else degenerate.

For some, then, Fortune throws the die
 And to them comes success,
 Shall they look with disdainful eye
 On him who's favored less?
 Dwell not on where a man fell short,
 Give to each one his due,
 Look not at what he did but what
 He nobly tried to do.

Spasmodic.

MACON, GA., July 1st, 1890.

MR. EDITOR: "Ye merrie month of May" is the great picnic season in this sunny southland, and when it approaches all the little folks grow happier and lift their glad voices in great glee for the May-day celebration that they know is in preparation for them. But the wee tots are not alone. The belles and beaux begin to dream of the shady dell, the purling brook and sloping hillside, where they may nestle for a season and soothe their sweet "nothings" into each other's willing ears.

But the enthusiasm is not confined to these two classes. Middle aged folks, aye, even gray-haired men and women become almost young again, and the prospect of a day's outing in some one of the many beautiful parks that lie adjacent to this Central City of the Empire State of the South, stirs their senses and makes the blood course faster through their veins.

The Brotherhood boys are no exception to this rule, and as their anniversary comes in this most beautiful of all the months they have a double incentive. But the "boys" don't seem to need any other incentive than the desire to insure their friends a good time. As before stated, this is the season of picnics, and there are picnics and picnics. Sunday schools, with all the increased memberships that the May-day celebration brings with it, flare forth, and the colored brother with his quarterly "anniversary" is there, too. The school teachers give their classes an afternoon out. Social clubs have their moonlight excursions and dances. The Butchers' Union and Bakers' Protective Association and all such must have their fun. All these and more too have had their day out. Some quietly, some with a great flourish of trumpets but all on mirth and pleasure bent.

But whatever others have done or may do the boys of Macon Lodge, No. 246, Brotherhood of Locomotive Firemen never do theirs by halves. May 24th was their date. Things had been shaping up to this date for almost a year past. As soon as last year's picnic

was over preparation began for this, and while this was only their second "annual" one would easily believe that they were all veteran picnickers instead of the sturdy, honest, reliable firemen that each and every one of them has proven himself to be.

As stated above the day has been looked forward to by the boys and their friends with the absolute certainty of a good time in store for all. And was anyone disappointed? If so they deserve to be consigned to the uttermost depths of perdition—unless it be that his or her sweetheart was from some unavoidable cause prevented from being present to enjoy the day with them. In this case it were indeed a hard heart that would fail to sympathize with them.

For this anniversary the Brotherhood selected "Beech Haven," beautiful Beech Haven on the new Georgia Southern & Florida Railroad. The day came and not the smallest detail had been omitted. Having in memory last year's splendid affair hundreds upon hundreds had concluded to avail themselves of the chance to indulge themselves. The number grew and increased until it was found necessary to increase the number of cars in the train from seven to nine and finally to secure another train of a like number.

The committee of arrangements consisted of L. Swansburg, T. E. Jordan, E. P. Almy, W. M. Roney, J. A. Morris, E. W. Walker and T. B. Jones. The committee, every member of which was peculiarly fitted for the duties imposed upon him, was headed by James I. Davidson. Who does not know Jim Davidson? Great big framed, great big hearted, great big souled Jim Davidson. To have seen him on that day one would have supposed that it was anything but a day of rest and recreation for him. He was indeed ubiquitous. No one could call a thing, hardly wish for it but Jim Davidson was his elbow to supply the want. But he had pleasure in it all, for his pleasure was in the enjoyment of others.

But to return to the two trains laden with the masses of surging, restless but withal happy human freight. At the early hour of 6 o'clock the crowd began to pour into the Union depot and to fill up the eighteen coaches that had been kindly provided for the officers of the Georgia Southern. Engine No. 105 had been selected to draw the first section and was manned by H. Matthews, engineer and A. Campbell as fireman. With such safe hands on the end and W. F. Holt to look after the comfort of the passengers in the nine coaches everybody felt safe and secure.

The lady friends of the Lodge had shown the appreciation and the 105 was bedecked from pilot nose to tender's draw-bar with the rarest flowers, flags and bunting and the low hiss of steam from her cylinders seemed to him a gentle song of thank to the fair creatures for their loving care. The time of departure was drawing near. Those who had been so long in their seats were getting a little restless but still the throng came and the baskets were gathered in.

Section No. 2 drawn by Engine No. 107 in charge H. O. Speer, engineer and Mr. Williams, fireman with A. M. Williamson to beam on the happy excursionists was also ready and soon the welcome cry "all aboard," was heard. The living, moving mass rolled out from the shed and after some little delay in the yard were soon on their way to the scene which was to impress on them a memory that would go with them even unto the youngest participant their dying days.

Out through shops, factories, mills and all manner of industries that bristle over this part of the city past the brick yards that furnish nine-tenths the brick that are building up the State of Florida here a lake flecked with myriads of "pretty poppies," there a grove of bay trees with their delicate white blooms peeping out all over them, the quietly magnolia scenting the air for rods and around with the delicate perfume of their magnificent flowers. On past all these in quick succession until only a few miles from the city the farm lands are reached. And here is one of the attractive features to a visitor from Northern climes. In so prairie country broad acres of waving grain stretch out before the eye as the traveler leans back in

seat in a palace car. As far as the eye can reach this sea of green is there. Through these fields we pass and the variety of crops is one of the attractions. First a patch of corn, then some oats or rye or barley or wheat, then the young vine of the famous Georgia watermelon just about to cover the ground and soon to bring its luscious fruit up to the market. Then long rows of King Cotton standing just peeping above ground scarcely yet an index of the grand plant it will be a few months hence.

On sped the trains, the merry chatter of the gay throng keeping time to the clatter clatter of the wheels. An hour's brisk run brings us to beautiful Beech Haven. Ah! here is the place and the occasion met. Situated on the ridge that separates distinctly the low flat pine from the rolling oak and hickory land it is in itself a study for the botanist, the naturalist and the geologist. Here the Georgia Southern Road has laid out a park of ten acres and fitted it up with a dancing pavilion, a ladies' cottage and a gentleman's club house. Strewn about the entire grounds are huge boulders which to all appearances are a conglomeration of sea shells. Fine specimens of petrified shark's teeth, the bones of extinct animals and other curiosities are seen scattered all around.

On the very summit of the hill and eighty-five feet above the level of the track is a cold spring gushing out in a stream at least four inches thick and furnishing ample water to run a grist mill, which does the grinding for a large circle of country. This pure water is conducted by pipes through the grounds and everything is made as comfortable and convenient as though you were within the limits of a city. But within the limits of no city could one find so magnificent a grove of virgin forest. Some one of a curious turn of mind counted the varieties and found fifty-three different species of wood-growth on the 10 acres. It is said that the same growth could not be found in any other locality within one hundred miles of this spot. Besides this a clear babbling brook takes its course through the park furnishing an additional attraction. In fact nature seems to have designed this spot for a picnic ground.

The immense throng was soon deployed about, each intent upon their own pleasure in their own peculiar way. The large majority "tripped the light fantastic toe" to the strains of Straigellows's excellent orchestra. Others were seated about in cozy nooks or rowed on the artificial lakes while yet others grouped here and there while the "Kodak" lens got in his work.

Altogether everybody was happy.

"Eyes looked love to eyes that spoke again,
And all went merry as a marriage bell."

Had the Brotherhood been allowed the making of the weather they could not have asked for better. A perfect May-day without a cloud upon the horizon.

There was not during the entire day one single thing to mar the occasion.

The committee ever watchful had their eyes on every one and if they had seen the slightest attempt at or indication of disturbance the guilty party would have been promptly dealt with. Of one thing the public may rest assured and that is that whatever has the stamp of authority from Macon Lodge, No. 246, can be relied upon as of the first class.

After a most delightful day—one thoroughly enjoyed by all, the shrill whistle of No. 105 at 5 o'clock put all on notice that soon this day must pass from the present to be numbered ever after among the most delightful that has ever crossed the lives of those who were so fortunate as to be there.

Baskets were gathered up, the fragments saved to be distributed in some charitable way and all were once again ready to take the home bound train. A little after 7 o'clock the two trains rolled into the depot and the large crowd dispersed, the Brotherhood to record another brilliant success and all their guests to make one little ineffaceable niche on memory's tablet to be recalled on many an occasion in the future with glad thoughts of the day.

Among the visiting brethren were Wm. Slade, of Kentucky, and George W. Heslep, of Virginia. Fun and good fellowship were written all over their

countenances and no words from them were necessary to assure one that they had enjoyed themselves. Sheriff Cooper, of Houston county, looked in on the picnickers for a while and was a most welcome guest. Miss Annie Venable, one of Macon's most beautiful and charming young ladies was a prime favorite with all the beaux. Especially was she admired by some of the visiting brothers that we could mention but we won't. Mr. J. G. Price, of the train dispatcher's office of the E. T. V. & G. R. R., was among the special guests of the Brotherhood. His enjoyment was apparent to all and on the return trip his clear tenor voice was heard above all others in the many merry songs of the gay revelers. It was a pretty and amusing sight to see the good natured scramble for seats on the first section of the train as it rolled up to the park for the return trip. Of course the two train loads could not be crowded into one, but those who were forced to wait for the second section took it good humoredly and the best of feeling prevailed.

Your correspondent takes this occasion to invite the whole staff of the *Magazine* to the next picnic with the assurance of a hearty welcome from the boys and a splendid time for you all. I trust that some of you may have the chance to accept their hospitality, and with the wish (than which there could be no better) that all future annuals will be as pleasant as that of 1890, I subscribe myself a delighted

Guest.

TEKOA, WASH., June 16, 1890.

MR. EDITOR: It affords the writer the greatest pleasure to announce through the columns of your *Magazine*, the organizing of Steptoe Butte Lodge, No. 419, Brotherhood of Locomotive Firemen. The installation was conducted under the supervision of Deputy Vice Grand Master, F. S. Stevens, of Mt. Tacoma Lodge, No. 192, assisted by Bros. Duryea and McElroy, of Blue Mountain Lodge, No. 348. Much praise is due the visiting brethren for the deep interest taken in the promotion of the members, and the welfare of the Order. There is already a membership of 18, but will soon reach about 30, making a very good start for a new lodge. In such a remote part of the country where one year ago you could not find ten firemen, with the aid of a lasso. Now they bob up serenely at all times, especially when there is a change to be made in the time card. After the lodge was dismissed they all repaired to the hotel, where a sumptuous supper awaited them, comprising all the delicacies of the season, especially strawberry short cake, to which Bro. Duryea helped himself most profusely. All were highly elated from the manner in which the day's proceedings were conducted, and to think that the visiting brethren have to come so far for palatable diet. Before closing I must say a few words in behalf of the worthy General Foreman, A. F. Gill, for his kindness in arranging affairs in such a manner as to have nearly all present, and manifesting such a friendly spirit for the promotion and welfare of the firemen. Furthermore, I will say there is no place under this great flag of liberty, where a warmer feeling exists between B. of L. E. and B. of L. F. than here; therefore, it is not necessary to ask favors of, or mourn the oblique position of the reverse lever, for such is the case in some portions of this land. I will now close, having a fraternal feeling for all the members of our great Brotherhood.

419.

SOMMERVILLE, MASS., July 11th, 1890.

MR. EDITOR: There have been and are at the present time, some of our members who advocate something different than our present form of federation. Some aver that the present plan of federation was not authorized. Now I can see nothing in our present form of federation detrimental to our best interests. In fact I believe it is the only practicable plan and by keeping this form we will avoid all unnecessary complications that will always arise when there are "too many cooks to spoil the broth." It has been demonstrated so many times in our *Magazine* and all other papers advocating federation, especially among railroad men, that such a union would be a power and the proper thing that must be guarded against is the improper use of that power. By any other form of federation but the one we have

adopted, the chance will be given to some person, not a Grand Officer to abuse, or rather make an extremely offensive display of power that may at some time react upon those who are in no way responsible for such actions. There are a great many "would be's" in our Order and we should be thankful that all chance to display their ability and ambition in any such manner is precluded. As our grand officers are authorized to make final settlements by our own constitution, their power is but continued as we have continued the power of our Order by federation. There are, I hope, none that question the federation of our Order with the others, on the ground that it would be better "to go it alone." If there are any such I advise them to get themselves bound in calf and placed on the shelf as back numbers. Let us see what is possible by the federation. All men can be organized; by their own common sense they will see the advantage of being members of orders devoted to their class, or if they can't see it, we can in a short time introduce the "working card" for the benefit of federated labor. By the introduction of such a card the "apprentice system" can be put in vogue. (No men hired but railroad men of the various orders. When they are out of work the preference must be given to all such first and in this manner the surplus can be disposed of.) The card is used in all well organized trades and is a strong safeguard to organized labor.

The time for our convention is near at hand and I sincerely pray that some means will be devised to lighten the burdens of the insurance so that we can induce those not organized to enter our order and feel that we and they are not depriving some one of the comforts of life. Let us try a five-hundred-dollar and a one-thousand-dollar policy for two years; I think it would be a "boomer" for the Order. We surely should make the effort to get all firemen in our Order and not think that federation will do all that we require without any further work on our part. No "laying back on the helper" must be a kind of watchword for us.

Yours fraternally,

Charles H. Trenholm.

THE WRECK.

Dedicated to the memory of Andrew C. Johnson, of Banner Lodge, No. 56.

The same sad story comes again—

An engine, rushing round a curve

Refused its windings to observe

And, scorning all the strength of men,

Leaps madly from its path of steel

And, trembling, creaking, crashing, falling—

A sight so dreadful, so appalling

The clearing clouds of steam reveal!

'Tis not for me to picture here

The sad results of such a crash;

For scenes like that would only lash

The bleeding heart yet more severe;

But rather would I dry the tears

Of those whose hearts are well nigh broken.

Or drop a word which fitly spoken

Might cheer the soul through lonely years.

Then gently o'er that new-made grave

Adjust the up-turned, broken sod:

Commit his spirit to the God

Who once that self-same spirit gave,

And on the shaft that marks the spot

Engrave,—sad words, yet full of beauty!—

"He fell while at the post of duty,"

And let the world forget him not.

Geo. W. Hall.

STANBERRY, MO.

We had the pleasure, while in Denver, of meeting Brother G. H. Whitney, the "Old Reliable" of the B. of L. E. Journal. His *nom de plume* is suggestive and reliable, and we were pleased to meet a writer of such wide and reliable reputation.

Personals.

PACK your grip for San Francisco.

THE distinguished gentleman from the "Burnt District," Hon. Jackson Hover, has the floor.

THE coming convention promises to be the most harmonious the Brotherhood has had for years.

BRO. J. ROSS, Master of No. 67, is away on a visit and the boys suspect that he is to return with a bride.

WILL TOM COSTELLO, of 192, please explain his connection with the Jap at the organization of Seattle?

JACKSON HOVER ventures the prediction that the "Burnt District" will soon be admitted to the union.

ANNOUNCEMENT is made of the marriage of Bro. Mike Roche, of No. 50, to Miss Julia A. Miles, of Canton, Iowa. The happy event occurred April 30th.

THE members of No. 48 are pushing Bro. Bush as an available candidate for Chief of the Fire Department.

J. F. ROODY, Master of No. 121, is a G. A. R. veteran as well as a true soldier in the army of the brotherhood.

W. J. NEWELL, Chaplain of No. 67, has been married and is receiving the congratulations of his many friends.

At the organization of Bald Eagle Lodge, No. 418, Bros. Potter and Dougherty, of No. 121, rendered assistance of special value.

AMONG our most earnest and enthusiastic members of Ashtabula is Bro. Truesdale. He labors ceaselessly for the good of the Order.

THE members of No. 191 have a faithful officer in Bro. Martin, who is exceptionally well qualified for the position he occupies.

THE members of Liberty Lodge, No. 24, have an excellent Master in Bro. John Finlay and the boys are justly proud of him.

W. M. GALLUP, who presides as Master of No. 125, is an indefatigable worker for the Order. Long may he hold the gavel at Marshalltown.

C. C. COIT, Secretary of Franklin Lodge, No. 9, is a zealous worker for the Brotherhood and avails himself of every opportunity to advance its interests.

W. T. FIELD is one of the most popular men at Livingston. He is ever on the alert for the "good of the Order" and is known as the "old stand by" among the boys.

WORD comes from Dominion Lodge, No. 67, that Bros. Peters and Farrance have slipped away from their bachelor friends and are away spending their honeymoon.

GEORGE WATT, of No. 48, has bought corner lot at Peoria and will soon build an elegant residence thereon of which Bro. Bush will be supervising architect.

It is said that Bro. Spencer, of No. 19, was recently offered \$20.00 by his wife to keep five minutes. The proposition was accepted, but is needless to say Spencer lost.

THE proverbial smile of Secretary Brudage, of Rocky Mountain Lodge, No. 77, has been copyrighted and all rights reserved. There are no mosquitoes on the whiskers of the Deputy Sheriff.

THERE is great rejoicing at the home of Bro. and Mrs. Wm. Burgess over the arrival of a little daughter. Bro. Burgess is a member of Huron Lodge, No. 221, and is receiving the felicitations of many friends.

A delegation of members of No. 264, headed by Bro. Boomer, better known as "Bed Rock," assisted in organizing the Lodge at Helena. As a "hustler" for the good of the Order, "Bed Rock" Boomer has no superiors.

When the Lodge at Mahoningtown was instituted some good work was done in the interest of the Order in which Bros. Mulvey, Heinselman and Reese, of 193, assisted. Bro. Thomer was also on hand with a delegation from Pittsburg and Chartiers. Our V. G. M. acknowledges his obligations to the assistance rendered by these members.

ANTHONY HARRITY, Esq., General Foreman of the Northern Pacific at Helena, is a warm friend of the Brotherhood of Locomotive Firemen, and at the organization of the Lodge at Helena, did much to encourage and assist the members. We feel confident that "the boys" will not forget Mr. Harrity when the opportunity occurs to reciprocate.

MR. L. M. HAYS, an engineer on the U. P. and brother of the late Bro. John Hays, of Mount Hood Lodge, No. 167, called at the Grand Lodge office in the latter part of June on his way to Ireland, where he is to visit his mother. We were unfortunately absent from the city at the time, but hope to see Mr. Hays on his return, which we are informed will be in the early part of October.

THE St. Joseph *Gazette*, of June 29, contains a pleasant notice of the opening of Brother W. E. Sullivan's new grocery store in that thriving city. Brother Sullivan was an engineer on the "Q," when the strike struck that system, and he is now Master and Collector of St. Joe Lodge, No. 43, B. of L. F., and we are glad to know is prospering. The *Gazette*, in noticing Brother Sullivan's "Grand Opening," says that "Mr. Sullivan had engaged Bernheimer's cornet band, which rendered delightful music, and also provided an immense stack of candy, with which he regaled the little folks without charge. The children were not loth to avail themselves of the feast and attended in crowds. Certainly five hundred children were in attendance and enjoyed themselves hugely. Mr. Sullivan will undoubtedly meet with the success he deserves." It is always pleasant for the *Magazine* to record the prosperity of any of the boys who went down on the "Q."

THE Western Railway votes unanimously in favor of Denver as the "permanent headquarters" of the Brotherhood of Railway Conductors.

IN THE way of newspaper enterprise, we should like to know if there is a city in the Union of forty-three states ahead of Denver. If there is such a city we fail to recall it at this writing.

THE Parsons (Kas.) *Daily Journal* refers to our *Magazine* in complimentary terms as follows:

"The *Locomotive Firemen's Magazine*, which is the official organ of the organization, is not only one of the best railroad magazines, but has also as much general information on subjects political, social, religious and general information as any periodical published in the United States. The *Magazine* ought to be in the family of every railroad man in Parsons, as the price is only nominal and the scope of information in each issue covers a large field. The *Magazine* can be had from now until January 1st for only 50 cents. Orders may be left with Engineer (Chas. Maier)."

It should be said in this connection that Bro. Maier, the *Magazine* Agent at Parsons, is rolling up an immense list of subscribers, thus demonstrating what may be accomplished by perseverance and a purpose to win. If all our agents were as ambitious and energetic as Bro. Maier the *Magazine* would soon have a circulation of 100,000 copies.

BRO. J. J. HANNAHAN, Vice-Grand Master B. of L. F., on Sunday, June 22d, organized Black Hawk Lodge No. 114 at Keithsburg, Ill. In noticing the event the *Keithsburg News* says: "The organization started with the following charter members: C. E. Mason, Wm. Wier, Wm. Burch, Jno. Anderson, Fred Venable and Jno. Conley. They have already about twenty applications for membership, and it is hoped to increase the number rapidly. Wm. M. Gallop, Worthy Master of Marshalltown Division, and Messrs. Linder and Davis, of Marshalltown, and Messrs. Frew and Sampson, of Peoria Division No. 48, were present at the organization of the Division." The Lodge extends a vote of thanks to General Manager Ackert and Superintendent Redmon of the Central for a special train to take Brother Hannahan to Monmouth Sunday evening. The *Magazine* wishes Black Hawk Lodge a prosperous career.

Addresses Wanted.

HARRY MILLER.—Formerly a member of Water Lily Lodge No. 402. When last heard from was at Marshall, Texas. Anyone knowing his whereabouts will please communicate with J. W. Diesel, Secretary of Lodge No. 402, Box 65, Water Valley, Miss.

WILLIAM DAVIES.—A Locomotive Fireman who was in the service of the Illinois Central R. R. Co. in the month of August, 1889. Anyone knowing his whereabouts will please communicate with W. R. Head, Room 13, No. 78 Michigan Avenue, Chicago, Ill.

THOS. BAGLEY.—A member of Elizabeth Lodge, No. 403, Left Portsmouth, Va., about five months ago and has not been heard from since. Anyone knowing his whereabouts will please correspond with O. W. Gaskins, Secretary of Lodge No. 403, corner County and Pearl streets, Portsmouth, Va.

JOE NANCE.—Formerly an engineer on the C. B. & Q. When last heard from was at Salt Lake City, Utah. Anyone knowing his whereabouts will please correspond with his father, Monroe Nance, 206 South Third street, Paducah Ky.

Acknowledgments.

TAMAQUA, PA., July 9, 1890.

To the Members of Tamaqua Lodge No. 323, B. of L. F.:

GENTLEMEN:—I desire through the columns of the *Magazine* to express my sincere sorrow at the death of our dearly beloved Brother, Wm. Dintinger. He was a faithful Brother and a true friend to every one. Yours ever,

ALBERT J. FRY.

HARBOR, OHIO., July 1, 1890.

To the Brotherhood of Locomotive Firemen:

DEAR SIR:—I desire to return thanks for the payment of a draft for fifteen hundred dollars, the full amount due me on the policy of my husband, Frank Bolmer, and to thank the Brothers of Lodge No. 218 for their kindness.

MRS. FRANK BOLMER.

NORTH SPRINGFIELD, MO., June 9, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN: I have received of Lodge 51 a draft of \$1.500 on the policy held by my beloved husband, L. S. Wolfe. Please accept my heartfelt thanks for the prompt payment of my claim; also allow me to extend my sincere thanks to Lodge No. 51 for the beautiful floral tribute presented for the casket of my husband, and further to extend thanks for their words of sympathy and many acts of kindness to me in my great trouble. May God in his goodness and mercy prosper your order, and be the protection of its members is the earnest prayer of

Yours truly,
MRS. L. S. WOLFE.

TOLEDO, OHIO, May 27th 1890.

To the Brotherhood of Locomotive Firemen:

DEAR BROTHERS: Allow me through the columns of the *Magazine* to express my gratitude toward the Order for a draft of \$1,500 due me as a disability claim. I sincerely thank those who rendered me assistance during my recent illness. May success crown the efforts of the Grand Officers.

Wishing the Brotherhood prosperity in the future, as in the past, I remain your disabled brother,

FRED. A. SPEELMAN.

MILWAUKEE, Wis., June 9, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN: I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my dear son Matt Nilan, through Mr. M. Purdy, Receiver. I also desire to express my sincere thanks for the beautiful flowers brought by John Hickey, Lodge No. 266, and also to those who accompanied the remains, and who so kindly assisted at the funeral.

May God ever bless and protect your noble Brotherhood is the sincere wish of

MRS. MARY NILAN.

ESCANABA, Mich., June 4, 1890.

To the Officers and Members of the B. of L. F.:

I have received from Mineral King Lodge No. 129, B. of L. F., the sum of \$1,500, through the hands of J. S. Rogers, receiver. Words cannot express my thanks for the kindness of your Lodge towards my son during his illness and death, and I hope it will be a long time before any of yours are taken from you. I also wish to express my sincere thanks to Mrs. Phillip Cavanaugh for the care of my dear son.

Your sincere friend,

JAMES CARVEY.

BELLEVILLE, ONT., May 1st, 1890.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS:—I beg of you to accept my sincere thanks for the draft of fifteen hundred dollars, (\$1,500), the insurance due me on the death of my dear husband, who was so suddenly taken from us on January 14th, 1890.

I cannot find words to express my gratitude to the brethren of Challenge Lodge, No. 66, of Belleville, Ont., who so kindly assisted us by their aid and sympathy in our time of trouble.

Their great kindness went far to lighten the heavy affliction which fell on me and my dear children.

With the best wishes for the welfare of your Order,

I remain yours truly,

LOUISA COTTERELL.

EXPLODED NOTIONS.

There are a good many notions long exploded.

Nobody believes, for example, that all women wear tight shoes.

That all club men get drunk and don't go home till morning.

That the children of fashionable people are not well taken care of.

That all boarding house tables are bad.

That all women wear tight stays.

That all women lay the seeds for rapid consumption by getting their petticoats wet on rainy days.

That all women are jealous of each other.

That all women are underpaid.

That all mince pies are indigestible.

That a little candy is unhealthy.

That a fruit diet will save your body and soul.

That your way is the right way and mine is the wrong.

Nobody believes any of these things, except the people who live such narrow lives that they think nothing good can come out of Nazareth.—*New York Sun.*

THE MODELS IN THE PATENT OFFICE.

Washington Post: There are in the neighborhood of 200,000 models in the Patent Office, and had it not been for two destructive fires the number would be near a half million.

In an isolated part of the building, in cases which but few visitors see, are the dental and surgical instruments that have been patented during the past three-quarters of a century. The scalpels and the saw lie side by side with the other implements for the relief of suffering humanity, while by a sort of incongruous juxtaposition the very next case contains coffins. There are coffins and coffins, and there is a suggestion about some of them that inclines one to mirth even in their melancholy presence.

In 1868 a New Jersey man, fearing probably he would be buried alive, constructed and had patented one of the most wonderful caskets that ever graced the Patent Office. It is certain it never graced any cemetery, modern or ancient. It is constructed like an ordinary casket, and after the deceased has been placed in the grave a towerlike apparatus with tubes reaching to the head of the coffin is placed over it. The top of the coffin, instead of being screwed down, operates by springs on the inside. When a person has been buried alive and recovers consciousness—if he has been buried in one of these caskets—he pushes off the cover, climbs into the tower and ascends a ladder, which is placed there to the surface.

There are any number of ballot boxes in the same way—so many in fact as to lead one to the conclusion that the Government could furnish one for every polling place in the country, and still have a large surplus remaining.

The jewelry cases are noted for one thing—there is a total absence of gold in the models. Whether this was because the inventors had but little faith in the honesty of the Patent Office officials, or themselves possessed but little of the precious metal to waste in making models, is a mooted question.

Among the many inventions of woman's apparel is an old pair of corsets, patented in 1841. It is made of sheet brass and leather, and if some of the dress reformers of the present day could see it they would forego their crusade against the modern corset. It resembles a set of harness, and as an instrument of torture would compare favorably with some of the choicest productions of the Spanish Inquisition.

Fifty years ago the people in many sections of the country used pine knots instead of candles, and some Connecticut genius secured a patent for a device for holding them not unlike the more modern candlestick.

The oldest model in the office is a cloth shearing machine, on which a patent was granted October 20, 1792, to S. G. Dorr, of Albany, N. Y. The workmanship is excellent and the model shows no signs of age. This may be, however, because it has undergone the same renovating process as the model of the cotton gin invented by Eli Whitney in 1793, which was destroyed by the fire of 1877, and a duplicate was built from the original drawings.

Occupying a prominent position in a case in the

centre aisle is the model of a boat for lifting vessels over shoals. It was patented to Abraham Lincoln in 1849, when the future President thought to make a reputation as an inventor rather than a statesman. Lincoln is the only President who ever secured a patent.

In the cases containing firearms are any number of curiously constructed weapons that look as if they would be more dangerous to the possessor who attempts to use them than to his would be victim. The first revolver, patented by Col. Colt in 1837, bears some resemblance to the present pattern, except the barrel is a great deal longer.

The model of the gun patented to ex-Senator Burnside in 1850 attracts considerable attention because of the trouble it caused between the future Rhode Island Senator and Jefferson Davis. Davis subsequently became Secretary of War, and Burnside endeavored to have the Government adopt his gun. Davis, however, refused to recommend its adoption, and after a long fight Burnside was compelled to give up.

The first shoe was patented in 1811 by two Massachusetts men. It is of undressed leather, and there is quite a difference between the workmanship of that and the present machine stitched shoe. So well was the work done, however, that it was impossible to tell whether it was pegged or sewed until some sacrilegious clerk cut the sole and ascertained it was pegged.

The hand that rocks the cradle and washes the soiled clothes has over 2,600 machines from which to choose a suitable substitute for the muscle fatiguing methods of fifty years ago. Ironing tables are also of frequent occurrence, and there is a plethora of household utensils.

Nearly every visitor sees the first double cylinder printing press invented by R. M. Hoe in 1842. It is a remarkably fine model.

Howe's first sewing machine is a wonderful contrivance. It was run by hand by means of an oscillating crank and bears no resemblance to the present improved machine.

Nearly every visitor sees the original electric telegraph invented by Morse; the original Gatling gun, patented during the latter part of the war, and the new Hotchkiss; the first engine run over the Baltimore & Ohio Road, invented by Ross Winans in 1837, and looking more like a monitor on wheels than a locomotive.

The rural mind has shown its desire to lighten the labor of the farmer, and not content with having churns turned by water power, dog power, and, in fact, anything but hand, devoted himself to producing a machine for milking cows. The invention did not meet with the favor its sanguine author thought, and so the innovation remains an example for future generations not to attempt to break down the barriers of a well established custom.

There are all sorts of armor, from the invention of tin pantaloons to the heaviest armored ironclad. The followers of Jules Verne's romance, "Twenty Thousand Leagues Under the Sea," are also numerous, for there are any number of ingeniously constructed submarine vessels.

The flying machine inventor is represented. There

are flying machines of all sorts, sizes and conditions. The last one to be patented was an elaborate arrangement of wings and tails, which the aerial traveler dons for his flight through space, and was patented March 5, last.

There are 186 classes of inventions, which are divided into over 3,000 subdivisions. The number of models in the office on January 21, 1893, was 1,819. The fire of Christmas Day, 1836, destroyed about 7,000 models, and the big fire of September 24, 1877, destroyed 87,000 patented and 27,000 pending and rejected models.

A TALENTED PISTOL.

It Belongs to a Stranger, Who Told Its Story to the Fairchild House Circle.

Hammondsport Letter in New York Sun.

Some very entertaining stories of the hunt and the angle had been going around the circle in the Fairchild House reading room the other evening. Theed Ross, the landlord, had told of a terrible combat he had once with a coon back of Penn Yan, during which the coon ate up one of his boots while he was kicking the animal to death with it. Packy Griswald tempted fate by relating how he once captured a big she salmon trout, in Lake Keuka, and had just laid it in the bottom of the boat, when a still bigger salmon trout, the mate of the she one, sprang into the boat and rescued the one just caught by seizing her by the neck and jumping overboard with her. Other similar evidences of the veracity of the Hammondsport Bureau of Information had been given, when a stranger, who had been a patient listener at the symposium, quietly asked if there were many bear about here.

"Not too many," replied Landlord Ross. "They are not so numerous that people have to carry guns to shoot them away."

"There are a great many bears where I come from," said the stranger. "But there is one less this week than there was last. That one I killed in a very singular manner. I am not a bear hunter. In fact I am not any kind of a hunter. I do not own a firearm of any kind except a very valuable pistol. This pistol is an heirloom in my family and is a four-shooter. That is, it is called a four-shooter, but there is nothing certain about it. I have known persons to struggle all day trying to make it shoot just once, without success, and have known the same pistol to go off with all four barrels at once as soon as those persons laid it down and ceased trying to make it shoot. Then I have known this pistol to shoot itself off one barrel after another, without the slightest provocation. It carries a ball about the size of a potato. That pistol isn't a very safe piece of ordnance, owing to its peculiar temper, but my family think a great deal of it.

"A year ago a man from what we call Popover hollow came to my house one day and gave me the exclusive information that there was a very large and audacious bear tramping about his premises. to the great discomfiture of pigs. What he wanted was to borrow that family relic of ours, the inconsistent four-shooter. He said he wanted to go out with a friend of his who had a gun, and who wanted to

try it on the bear. The man from Popover hollow had no gun, and he had heard so much of our pistol and its accomplishments that he thought if he could only take that he had no doubt that the hunt would end in dire results to the bear. I pleaded with the man with tears in my eyes not to go out after the bear with that pistol. I told him that the chances were all in favor of the bear taking him and eating him up before he could induce the pistol to go off, and then I would never get the valued relic back: but he insisted, so that at last I told my wife to get him the pistol, and I went over in the next lot while it was being delivered to him.

"He went away, and I didn't hear anything of him for a week. Then he came back, looking very downhearted.

"Colonel," says he, 'I won't be able to return your pistol, but if it ever goes off that bear is a goner.'

"Then he went on to tell me how he and his friend went out after the bear. They came across it in the woods, and the man's friend got behind a log and began firing at it. The bear stood it for a while, and then made a break for the man from Popover hollow, who had been pulling away at my pistol to make it show itself off to the bear. But it wouldn't, and the man shoved the pistol in his pocket and struck for a tree. Hegot up the tree just as the bear reached it and raised up along the trunk, with his mouth wide open. The man from Popover hollow threw his leg over a limb, and that threw the pistol out of his pocket. The pistol, all cocked as it was, struck right in the bear's wide-open mouth, and went on down before the bear could stop it. That was such a surprise to bruin that he trotted off and disappeared, something that the man's friend with the gun had done some time before.

"Of course I was very much put out about losing my valued relic, but there was nothing to be done, and the man went home. The bear wasn't seen around any more, and by and by it was forgotten. Last week what should appear in one of my back fields but a big bear. I always had an idea that I would like to kill a bear, and so I borrowed a gun and went gunning for this fellow. I came upon him suddenly before he discovered me, and hauled up and sent a ball into him. Simultaneous with the report of my gun I heard a dull, rumbling report, and saw a big piece of bear fly upward. Then came another report, followed by two more, and the bear was scattered around like autumn leaves. At first I was frightened, but in a few seconds the whole situation broke in upon me.

"The bear that swallowed my pistol!" I shouted.

"And so it was. My rifle ball had gone into the bear's stomach where the pistol was lying, and had hit the hammer with force enough to knock it down. The pistol felt in the humor and let itself go, with most disorganizing and disintegrating results to the bear. We had to gather the bear up with a shovel in corn baskets, but I found my much-prized pistol among the remains. It was a little rusty, but as full of snap as ever."

There was a silence in the circle, and by and by the stranger went to bed. Then the landlord said:

"If I hadn't thought that man was a liar I'd have asked him to have something before he went up."

REMARKABLE WATCHES.

For years, old Dr. Allan, the Scottish physician, was suspected of being a wizard, an opinion which was considered all but confirmed when, in 1630, he provided himself with a silver watch of the regular time size and style, says John W. Wright in the *St. Louis Republic*. Chancing to stop with a neighbor over night, and it being somewhat cold, he laid the watch near his body and covered it with the quilts so that the chilly weather would not affect its works. Next morning he arose rather abruptly and left the house without removing his treasure from its cosy nest in the bed.

In righting up the room the servant discovered "the infernal chattering thing," and immediately concluded that it must be the old doctor's "familiar spirit," conclusions which were hardly arrived at before she had fled wildly from the room. Other servants were called, and the whole array charged the "chattering thing" in the bed. Clubs and weapons were freely used, but the case was strong and the thing still chattered defiantly. One of the more courageous than the others, finally agreed that she would take tongs and carry the thing to the end of the garden and drown it, a proceeding fraught with danger. At last she decided upon it. The others followed at a respectful distance with hoes, clubs and shovels, which they proposed to pounce on the thing should it attempt to attack the heroic girl. When the doctor returned for his watch he was informed what had been done: one of the servants leading the way to where the thing was drowned. It was hanging on a bush on the bank of the moat. The failure to beat or drown the thing to death had convinced the servants that it was in reality the wizard's spirit, and they could not be persuaded to touch it.

The story is related simply to show what remarkable watches must have been, even at that late period of the seventeenth century.

In 1769, one of the admirers of George II. caused to be made for that monarch a watch which was made in its way. It had a calendar band which pointed to the days of the month and of the year. Instead of making a revolution every month, like the calendar watches of to day, it took the whole 365 days to get once around. The dial plate was only 6 inches in diameter, therefore the figures must have been very minute; otherwise, the 365 numbers could not have been arranged around the border.

The annual dial calendar was but one of a number of extras with which this watch was provided. A movable dial performed diurnal revolutions as regular as did the great orb after which it was modeled. It struck the hours, the half hours and the quarters, while an inside dial plate revolved in a manner clearly exhibiting the variations of the seasons.

The English House of Commons, following a suggestion from Sir Isaac Newton, appointed a committee June 11, 1714, with power to offer a reward of £20,000 to any one who would invent an accurate time keeper for use at sea in determining longitude. After many years of labor and study the invention was announced as perfected. However, the inventor, one John Harrison, did not receive the reward until his labor until September 18, 1764.

Keyless watches have been known for the past one hundred years, but not until within the past twenty-five years have they come into general use.

It would take columns to enumerate all the dainty and wonderful little time-pieces that have been made during the past four hundred years. They have been made not larger than peas and set in rings for physicians to facilitate the counting of the pulse. They have been fixed in bracelets, brooches, eyeglasses, tops of umbrella handles, and even on the ends of lead pencils, where they occupy the same position as the rubbers on the average Faber.

In 1883 a watchmaker of Dresden exhibited a watch made entirely of paper. The paper was chemically prepared, and the maker claimed that it would be as serviceable as if made of the material ordinarily used.

The same year at a fair held at Worcestershire, England, the Crowther Brothers & Co. exhibited one made entirely of iron.

An ingenious prisoner at Kariaus, Bohemia, recently constructed a watch, eight centimeters in diameter, with no other tools or material except two needles, a spool of thread, a newspaper, and some rye straw. The wheels, posts and cogs are all made of straw, which, it is well known, is quite coarse and tough. It runs six hours without winding and keeps good time. It is now in possession of the prefect of Kariaus, who considers it the greatest marvel of the nineteenth century.

The most ingenious, perfect and complex watch ever manufactured was sent out from the works of Patek, Philippe & Co., of Geneva, Switzerland, in July, 1877, and is now in possession of Baron Nicholas. It is what is known as the full sized "hunter." On one side there is a dial of the regulation kind, exhibiting the hour, the minute and second hands, also an independent chronographic hand which marks the fifths of seconds. The same dial has a repeating mechanism, which strikes the hours, quarters and minutes.

The opposite dial has hands pointing to the months, weeks and days. Another large central hand on this dial, if set at the beginning of each year, correctly points to all moon phases and also acts as a perpetual calendar. It is so constructed as to admit of its keeping two different times, say standard on one side and sun time on the other.

HARD-HIDED TOM BENTON.

Dyer's *Great Senators*: Benton was a fighter by temperament and experience. Once in the Senate a Senator had referred to what he called a "quarrel" of Benton's. "Mr. President, sir," said the great Missourian sternly, "the Senator is mistaken, sir, I never quarrel, sir; but I sometimes fight, sir; and whenever I fight, sir, a funeral follows, sir!" It was the custom to bathe and scrub down his body to the hips every morning and from his hips to his feet every afternoon. The implement he used was the roughest kind of a horsehair brush; and with this his body servant would curry him down with all his might. When asked the reason of this practice he replied: "The Roman gladiators do it, sir." Under this treatment his skin became a sheath of leather, devoid of sensibility, shutting him out from sympathy with others.

WOULDN'T SWEAR.

Atlanta Constitution: A moonshiner named Henry Adams is the central figure in a remarkable case. He is in Fulton County jail with no charge against him, and with nothing between him and his liberty but the taking of an oath. He could take the oath and swear nothing but the truth, but he sticks close to his Bible doctrine, and absolutely refuses to take an oath of any sort. The law is so framed that the Judge is left no discretion in the matter, and Adams is in jail for an indefinite length of time.

The facts are these: Nearly three months ago Adams, whose home is in Lumpkin County, was sentenced for a term of two months and a fine of \$100 for illicit distilling. He served out his time in Fulton County jail, less the ten days allowed for good behavior. There is a law, Sec. 1,042 of the Revised Statutes, that when a man is sentenced to pay a fine and is unable to pay it he can serve thirty days and then be discharged by taking oath that he is not worth \$20 over and above the \$1,650 exempted. Adams served out his term, was unable to pay the fine, and then served thirty days more.

Yesterday Jailer Seab Ozburn, noting that Adams' time was up, sent him before Commissioner Fuller to be discharged.

"Good by, Mr. Ozburn," said Adams. "You've all been as clever to me as you could be, and if I ever get a chance I'll do something for you."

The jailer wished him good-by, and all the moonshiners in jail shook hands with Adams before he left. One or two of them from Lumpkin County gave Adams messages to carry home for them.

The Commissioner looked over the papers and found everything correct.

"You are not worth \$1,670?" asked he.

"Great Scott—I'm not worth \$100."

"You can't pay a fine of \$100?"

"Not if I was going to be hung for it."

"Hold up your hand, then."

"What for?"

"To take the oath."

"I can't take any oath," said Adams, firmly. "If I had known I had to take an oath I wouldn't have come here."

"You'll have to go back to jail, then."

"I can't help it. I can't take an oath."

"Can't you swear to the truth?"

"I can't swear at all. The Bible says 'swear not.'"

"Well, that's the only way out of it."

"It ain't my way," said Adams.

Seeing that the man was determined, the Commissioner gave him credit for his scruples and explained to Adams that he would allow him to sign an affirmation.

"What's the difference?" asked Adams.

It was explained to him.

"It's the same thing," he said.

And he proceeded to quote Bible authority for his position.

His reply to every argument was a quotation from the Bible. He would listen to no argument unless it came from the Bible, and the available stock in the Commissioner's office was speedily exhausted, leaving Adams unconvinced. He was not offensive at all, but quiet about it. He made no display of his

conscientious scruples, but his mind was made up, and he wouldn't change it.

"Didn't you ever swear?" he was asked.

"Not since I was converted."

He couldn't be convinced that it was wrong to make whisky.

"Show me that in the Bible," said he, "and I'll believe it."

Adams is a young man, 28 or 30 apparently, a typical young mountaineer, and has a wife and four children.

"Don't you want to go home?" he was asked.

"Of course I do."

"The only way to do is to sign that affirmation."

"I won't do that."

"Then you'll just have to go to jail and stay there."

"I can't help it."

So Adams slept last night in Fulton County jail. He seems determined in the matter, and the law is explicit. He must stay in jail until the paper is signed, and he says he will never sign it.

COMPULSORY INSURANCE.

Railway Service Gazette: If the various associations of railway employes are really desirous of defeating the compulsory insurance schemes, this may easily be done by raising the question of their validity in the courts. If it can be shown that an employé has been discharged by reason of his refusal to become a member of one of these Associations, the courts will award damages to that employé. If it can be shown that a railway company has appropriated any part of the salary of an employé for the benefit of one of these Associations without the consent of the employé, or even with his consent given under fear of being discharged, that employé can recover every cent of the money thus withheld from his salary. We have reason to believe that in some instances the railway managements are prompted by the purest motives in their efforts to organize these compulsory insurance schemes, but they can result in no good, will prove the source of a great deal of trouble, and must at last fail before the law. And it is right that they should fail. For the compulsory insurance scheme, defined in one sentence is simply a proposition of the employer to forcibly manage the purely private and personal affairs of the employé, because the employer, as the employer, must be a wiser and a better man than the employé. If this is not true, then why may not railway employes demand with as much justice and consistency, that railway stockholders as a class, each month contribute a certain portion of the dividends of their roads to constitute a fund to keep indigent stockholders out of the poor house, and to pension their families when they come to die. Such a proposition as this from railway employes would be considered a piece of unpardonable impudence, but the cases are exactly parallel, unless it is true that the stockholder is a better and wiser man than the employé, and that the stockholder is more capable of managing the private and personal affairs of the employé, than the employé is himself. And while some provision for the family of the employé is often necessary in case of his death or disability, it cannot be

claimed that the family of the railway stockholder or even the railway stockholder himself has a sufficient guarantee against becoming an object of public charity. As far as we have seen there has been no one reason assigned for the necessity of this remarkable subversion of the law, so as to give to one man the right to manage the personal affairs of another and that is the liability of the railway employé in case of disability or death, to leave his family in impoverished circumstances. Now we should say that the railway owner is as liable to leave his family in circumstances as impoverished, comparatively speaking, as the employé.

Just at the present time there are probably as many railway stockholders looking for the poor house as there are railway employes. Hence the same reason exists for employes organizing a compulsory insurance for their employers, and if the employers contribute each month a certain part of their dividends. But this you say is absurd. Not more so than the compulsory insurance schemes of the companies when stripped of their false pretenses.

JOHN BURNS TO THE WORKINGMEN OF AMERICA TO FRIENDS AND FELLOW WORKMEN IN AMERICA.

The year that has passed away has been the most momentous for labor in England since 1848. Everywhere the workers have shown an enthusiasm and organization truly extraordinary in its effects. London alone 300 trades have secured shorter hours or better wages and demanded successfully in their present masters better conditions. This means that 200,000 more men and women in London have been added to the ranks of organized labor. The stokers in eight months have made 50,000 men and reduced their hours, at better wages, from twelve to eight per day. The baker who formerly worked 90 and 100 hours per week, now works through his union, only sixty hours and for better pay. In the port of London every dock laborer, stevedore, lighterman and carman is and must be a member of the trades union. The workingmen are following the example of the men and pressing forward for better times.

All through the world the laborer is moving forward toward the light, the little they are getting making them divinely discontented with what comfort remains. In Egypt forced labor has been recently abolished. All through the continent of Europe, encouraged by the recent labor successes in England, unions are organizing, while in the colonies labor is marching with accelerated speed.

All this should be encouraging to the Americans who have often been pioneers. In America I trust that the workers are imbued with the responsibility of their position in the labor movement and that American citizenship bestows on them. They are citizens of a republic that will be the central force and influence of the Anglo-Saxon race throughout the world and which may become a power for universal good.

All is well if each one sinks within himself feelings of mistrust, jealousy and suspicion; and works for the common good.

DISINHERITED.

[Mrs. Frances M. Mine in San Francisco Star.]
 The poor little life, just beginning,
 Was gasping and dying that day.
 There was clamor of sorrow and sinning
 In the desolate room where it lay.
 And the mother bent over her baby,
 And kissed the wan forehead and hair
 With an anguish as deep as yours, maybe,
 Tho' her lips had forgotten your prayer.

'Twas a morning beloved of summer,
 The meadows were fragrant and green;
 The rose had a blush for each corner,
 And thick was the trees' leafy screen;
 But foul was the alley and narrow,
 And back from the poisoning wall
 The sun shot his fiery arrow
 On foreheads defenseless to fall.

Oh, room for the lamb in the meadow,
 And room for the bird on the tree!
 But here in stern poverty's shadow,
 No room, hapless baby! for thee.
 Immortal we think thee, and name thee—
 The child of our Father above;
 But where is the justice would claim thee
 A share in the gifts of His love?

It is idle as folly, your weeping,
 Poor mother! those heart-heavy tears,
 Why, who would not covet that sleeping,
 In place of your desolate fears?
 How hopeless they stretch in the distance—
 Forever and ever the same;
 Each day with its dull, hard insistence
 Of work and of want for your frame.

"It is well with the child," says the preacher,
 "The lambs in his bosom are bid."
 "It is well with the child," says the teacher,
 "Great nature the sacrifice bid.
 The poor and the weakly must perish—
 So, only, the best we attain;
 The perfected type we must cherish;
 The law of progression is plain."

And yet—yes, the struggle is over;
 The small, shrunken limbs are at rest.
 It were well their mute witness to cover—
 'Tis a pitiful sight, at the best.
 And, somehow, the word of the preacher
 Sounds empty and vain as we gaze;
 And the code philosophic teacher
 May be science—but ends in a maze.

For, look! they were perfect, those wasted
 Small limbs, of life's effort denied;
 Those lips, from life's goblet untasted
 So ruthlessly hurried aside.
 What share in the world's great endeavor
 Those tiny weak hands might have wrought?
 What force in that brain forever
 Have lived in the realm of thought!

O father! O mother! rejoicing
 In childhoods fair promise to-day,
 Can you hear in your spirit a voicing
 For creed so inhuman, I pray?

Had priest or philosopher found you
 An answer to quiet the heart,
 If life in such fetters had bound you,
 And mocked with its fullness your part?

Why, look at your baby—the treasure!
 The rose tinted, dimpled delight!
 Could an anchorite's soul deny pleasure
 Nor thrill at the beautiful sight?
 No room in the world's spacious garden,
 For flowers so perfect to bloom?
 O Heaven! The blasphemy pardon,
 That finds for thy child but a tomb!

Our Father! Oh, well may we falter
 To name thee, and pray to thee so;
 Who turn from thy shrine and thy altar,
 Profaning thy image below;
 To thy children, thy bounty denying,
 While heaping the store of our greed,
 And, dead to their wrong and their sighing,
 Charge Heaven itself with our deed!

THE B. & O. INSURANCE.

Station Agent: The daily press has a good deal to say regarding the alleged attempt of the Baltimore & Ohio management to force its employés to join the insurance association organized under its auspices. We believe that this paternal authority in railway management is radically wrong. There should be nothing compulsory about an association of this nature. The Constitution of the United States protects every man in the enjoyment of his own free will within certain bounds, and as long as he does his full duty to his employés there should be no insidious efforts to coerce him into carrying out a pet plan of some person who chances to hold authority over him. It is said there is nothing compulsory about this insurance, but it is not difficult to see that under some circumstances the position of the employé who stands out against it will not be secure. Aside from the moral question involved there is grave doubt whether this system of life and accident insurance is not wholly wrong, and as long as this doubt exists the management of the Baltimore & Ohio Railroad Company have no right, morally or legally, to go into the pockets of their employers to foster such an association. There is talk of a strike on the entire road, but we do not believe that the difficulty is so grave as this, and certainly a strike would accomplish nothing, except misery for the strikers. Let every man choose for himself in the matter, and if he has the courage to assert his independence we hope that the gentlemen at the head of the Baltimore & Ohio Railroad will not think the less of him for it.

HE REMEMBERED.

"Why, Johnny, are you fighting?"
 "Yes'm."
 "I am astonished! Have you forgotten all our Sunday school lessons so soon?"
 "No, ma'm; haven't. That's why I'm given him a lickin'."
 "What do you mean?"
 "Didn't you tell us last Sunday somethin' 'bout it's being more blessed to give than to receive?"
 —*American Commercial Traveler.*

LABOR-SAVING MACHINERY.**Thomas Phillips Talks of Its Interest to the Workingman.**

In the course of a long article in the *Boston Labor Leader*, Thomas Phillips, of New Jersey, wrote as follows:

"Some ten years ago a man by the name of Madox came to my home in Philadelphia, and stated that it was his intention to organize the city in the interest of labor reform, and that he had been advised to see me before getting out his platform of principles. At his request I wrote out a declaration of principles, and in it placed the following plank, which I wish to call your attention to, now that the question of machinery is under discussion. It is important that we form correct opinions in regard to it; and, therefore, I submit this plank for your consideration, believing that the principle is of vast importance, and one which ought to be carried out in all industries where machinery is introduced:

"Section 6. That all labor-saving appliances should be so regulated as not to disemploy labor; that in all cases there is a trinity of interests which common justice requires to be consulted; viz., capital invested, labor employed, and the outside public: A rule giving one-third of the advantages to each would bind the whole in harmonious support of all introductions of machinery or improved methods resulting in a vast increase in production and the well-being of the people."

"The crowding out of labor by machinery, and the investing of what has hitherto been paid as wages in plants, is felt to be an evil that should be met. But it cannot be met by attempts to stop the use of machinery, or with any benefit to labor by taxing steam power, as some have proposed. The evil is not in the machines, but in the fact that labor has no claim on the product.

"The trouble is that the man of labor under our present system is ignored. His right to labor and its fruit is not acknowledged. A piece of iron has more right to exist than he under the capitalistic system. It is not only godless, but manless. Under its rule man has no right to live. It is bringing us to a point where a few men will control each industry: employ a few people to run their machines, and where these few can exchange products and starve the rest of mankind to death, if they so will it.

"The principle embodied in the above plank, if carried out, will reverse this, and bring about a more equitable distribution of products. Suppose that a machine was introduced into a shoe factory which would enable a pair of shoes to be made for fifteen cents less than formerly, what would follow? In the first place, the price of the machine, which was, it is fair to conclude, previously part of what is called the wage-fund, or money paid in wages, is now locked up in the machine. Secondly, the manufacturer will, as a rule, find that he has to sell the shoes at fifteen cents a pair less than before; competition on the part of those who have more machines than he has will force this. Thirdly, the labor which has been displaced by the machine goes into the market with fifteen cents less with which to buy the shoes, and the manufacturer has a machine on hand to look out for and keep in repair.

"Now, I would like some one to point out who is benefited. The manufacturer got the machine, it is fair to suppose, in order to sell more goods by putting them on the market at a less price, and he finds the income of the public, which constitutes its purchasing power, reduced in proportion; so that the difficulty in selling goods is as great as ever, and the further he goes the greater is the necessity for spending his every dollar in machines with no better market than before."

HE WEPT.

A London gossip gives the following story as illustrative of Lord Tennyson's "peculiar manners in society." In his early days, when he had no greater horror than that of being lionized, a great lady wished to introduce to the laureate a musician who had set some of his songs to music. A party was given for the occasion. The laureate appeared, and the musician sang his songs to him with every power of expression that he knew how to produce. At the end of the performance everybody waited the word of the poet. There was a blank silence. The hostess feared the songs had not produced a good impression. The silence became agonizing. At length, from the corner where Tennyson sat came a voice, choking with emotion: "Do you not see that I am weeping."

CONVICT LABOR AND HONEST WORKERS.

The state of Tennessee re-leased her convicts, recently, to the Tennessee Coal and Iron Company, the only bidder, for \$100,000 a year, the minimum price fixed by the law.

A number of Milwaukee, Cleveland and Marquette capitalists have combined for the purpose of dividing the iron Bessemer ores with the Schleisinger syndicate, and will erect large furnaces in Marquette to reduce their own ores. It is proposed to utilize the labor of the convicts in the Marquette Penitentiary. The prison is on the bay, and by using the convicts in the manufacture of coke, the promoters of the plan think they can produce pig iron as cheaply as it is produced in Birmingham, Ala.

United States Commissioner of Labor Carroll D. Wright, in a recent report, estimates the ratio of prison labor as less than one-half of 1 per cent. of the entire mechanical labor of the United States, numerically speaking. The productive capacity of convicts, he says, is not one-half that of the ordinary free laborers, and prison work, at best, is inefficiently performed.

The tendency to generalize in these matters blinds the commissioner to the fact that the injury done the labor interest is specific and local. This was shown by the effects of the laundry industry now carried on at Sing Sing prison on the employment and earnings of hundreds of men and women in this city, Brooklyn, Troy and Albany, as recently described in these columns. In such industries as this, laundering of new shirts, collars and cuffs, and the manufacture of shoes and hats, the inefficiency of the convict labor is largely offset by the use of machinery. But even if all Commissioner Wright's figures and deductions were admitted, they furnish an excellent reason for not employing convict labor on private work.

After all the talk of the evils of convict labor and the baneful influence it has on outside industries, the effect on the market and the tendency to depress wages, the system is to be again tried in the Kings County Penitentiary. The special line of work to which the forty convicts, who have been hired out to Mr. F. C. Johnson, are to be put is the making of government mail bags. The compensation will be arranged on the piece price plan, and the county will probably net \$40 a day from this class of labor. The attorney general's opinion that the use of steam power will not be an infraction of the convict labor law of 1888 has been received, and this will open the way for the commissioners to parcel out further gangs of convicts to other manufacturers, with whom they have opened negotiations.

LEARNING THE WORLD.

Experiences of a Well-to-do Young Farmer in Seeking a City Bride.

St. Paul *Pioneer Press*: Nels Wickstrom, a well-to-do farmer of Brunswick, Minn., thirty five years of age, and Miss Carrie Anderson, a young and rather good looking Scandinavian girl, who has been stopping with friends in East Minneapolis, are the parties in an interesting little confidence game of a very unusual sort. Wickstrom has been tilling the soil at Brunswick for many years, and is now in comfortable circumstances. He conceived the idea of getting married, a few days ago, and came to Minneapolis for that purpose. He was not acquainted in the city, but he imagined his cup of happiness would be full if he could wed a maiden of the city. Attired in his best suit of clothes, he called at the intelligence office of Mrs. Mary A. McGinnis, 428 Hennepin avenue, and in his blunt, granger-like way, informed the lady in charge just what he was after.

"I am here to get married. I have considerable property, and can support a wife. Can you get me one!"

Mrs. McGinnis might have been startled by this rather remarkable interrogation, but a happy thought struck her. There was in that very room a young girl in search of employment. She was of marriageable age, and Mrs. McGinnis thought of marriageable disposition. But she was mistaken, as subsequent developments proved. The twain were introduced. The rural wife-seeker took a good look at his new-made acquaintance, and appearing to be well pleased with appearances, he proposed at once. There was a smile and blush, and these were regarded as good signs by Wickstrom. A moment later, and the blushing young girl had bowed her assent. The happy couple left the intelligence office together. The prospective bride said she would need wedding clothes. Wickstrom had about \$75 or \$100, and he and his companion went out and purchased a wedding outfit. The young fellow was so happy over his "catch" that he purchased several articles of jewelry with which to embellish the one of his choice. Then the two repaired to the home of the girl's friends, at Fifth avenue northeast and Second street. It was agreed that the wedding occur yesterday. As evidence of her "sincerity" Miss Anderson took a gold ring from her finger and of-

fered to place it on her lover's finger. But the jewel was not intended for so large a hand, and it remained in Miss Anderson's possession. Yesterday afternoon Wickstrom called, wreathed in smiles. But these smiles were exceedingly transitory. They faded away as soon as Wickstrom was informed that Miss Anderson had left the house and would probably not return. This was the burden of the honest fellow's plaint when he called to relate his unpleasant experience as a wife-hunter, at police headquarters, last evening. He had \$5 left, but he had more knowledge of the world than ever before.

WORMS THAT EAT STEEL.

Railroad Disasters Caused by Their Ravages—How They Work.

For the past two years the German Government has been making inquiries into the life, history and ravages of one of the most remarkable worms known to exist. This wonderful creature is only satisfied after a feed on common steel, and was first brought to notice by an article in the *Cologne Gazette* in June, 1887. For some time preceding the account mentioned the greatest consternation existed among the engineers employed on the railway at Hagen caused by accidents; which always occurred at the same place, proving that some terrible defect must exist either in the material or the construction of the rails. The Government became interested and sent a commission to the spot for the purpose of maintaining a constant watch. It was not, however, until after six months had elapsed that the surface of the rail appeared to be corroded, as if by acid, to the extent of over one hundred yards. The rail was taken up and broken, whereupon it was found to be literally honeycombed by a thin, thread-like gray worm. The worm is said to be two centimeters in length, and about the bigness of a common knitting needle. It is of a light gray color, and on the head it carries two little sacs or glands, filled with a most powerful corrosive secretion, which is ejected every ten minutes when the little demon is lying undisturbed. This liquid, when squirted upon iron renders that metal soft and spongy, and of the color of rust, when it is easily and greedily devoured by the little insect. "There is no exaggeration," says the official report, "in the assertion that this creature is one of the most voracious, for it has devoured thirty kilogrammes of rails in a fortnight."

NEITHER ARM NOR LEG.

New York Sun: The simple cable announcement that Mr. Kavanagh, some time member of Parliament for Carlow, Ireland, was dead, recalls to public memory one of the most remarkable men ever sat in the British House of Commons. Nature had endowed Mr. Kavanagh with a singularly handsome face and fine torso, but had deprived him of arms and legs, and, therefore, it became necessary, on his election to Parliament, to make special provision to admit of his entering or addressing the House, as he could neither walk nor stand. The matter was discussed privately before the assembling of Parliament, and as soon as the name of McMurrough Kavanagh was inscribed on the roll of members the

Prime Minister rose and moved "That an exception to the rule that members must address the House standing be made in the case of the honorable member for Carlow, and that he be permitted to address the House seated."

This being settled, the further difficulty arose in respect to his manner of entering the House, which required the relaxing of another law, to permit him the assistance of his servants. An inexorable rule exists that when Parliament is sitting none but members must pass beyond the bar, which is near the members' entrance, on a line with the seat of the Sergeant-at-arms. On his first appearance Mr. Kavanagh had been carried in a chair to the table to take the customary oath and inscribe his name, by his two introducers, but as it was evident this could not be done continuously, it was moved that the honorable member from Carlow be excused from entering by the members' door and be allowed to enter by a door at the opposite end of the chamber, used by unparliamentary persons. This being settled, Mr. Kavanagh was carried into the House by his attendants and placed in his seat under one of the side galleries almost daily during his term, he being most assiduous in the discharge of his duties. Seeing him thus, with a light wrap thrown over him, no one would have hesitated to describe him as a man of striking noble appearance. The member for Carlow soon justified the wisdom of the choice made by his electors, his maiden speech placing him at once far above the ordinary level of House of Commons oratory. He possessed a strong and original mind, enriched by varied reading, and was one of the few men who never spoke to empty benches; the words, "Kavanagh is up," which in his case was somewhat incorrect, never failed to bring a crowd of straying members from the terrace, smoking-room or library. Mr. Kavanagh was the happy husband of a beautiful wife, and the happy father of a large and handsome family, none of whom shared in any degree their father's affection. He was a man of old family and possessed considerable wealth, was fond of society, and was exceedingly genial and popular. The defects of nature were so well supplied that he was enabled to participate freely in field sports, of which he was exceedingly fond. He was widely known in the most famous hunting districts as a straight, bold and fearless rider; while the style in which he drove a four-in-hand coach was the despair of many of his brother whips. He wrote beautifully, was particularly fond of the fine arts, and had won considerable fame among the amateur artists as a painter.

THE TRAMP.

As we stood in a group in the depot waiting room at Elmira, there was a scuffle and loud words, and we turned to see the depot policeman shoving a trampish-looking man out of the place. It was a scene to make most of the crowd smile, as the officer was a big man and his victim a small one, but before he had him out of doors a well-dressed, fine-looking man stepped forward and demanded:

"Officer, has this man been guilty of any offense?"

"He's no business in here, sir," was the reply.

"Why hasn't he?"

"Because he's a tramp. My orders are to put 'em out."

"Just wait."

He brought out his wallet, handed the forlorn-looking stranger two crisp ten dollar bills, and turned to the officer with:

"Now let him alone. A man with \$20 in his pocket is no tramp."

"God bless you, sir!" whispered the recipient of his bounty as he looked at the money in the great astonishment. "I'm no vagabond; I'm simply down on my luck. I was wanting to get to Buffalo, where I hope to hit a job, and I'm willing to work at anything and at any price."

Someone ventured to ask the gentleman for an explanation of his liberality, and he replied:

"Just a year ago to-night, in one of the towns on the Erie road, a tramp struck me for a quarter of four. He must have gone off on a freight car right away, and he got a lift of twenty odd miles before he was bounced. Four hours later I took a train, and while passing from one coach to another I lost my footing and was flung off. I struck on my head and shoulders, and was rendered unconscious though not very badly hurt. When I came to, there was a quarrel over my body. Two men wanted to rob me, while a third was holding them off. When they attacked him, he gave them such a beating that they hauled off. Then he ran to a farmhouse, a quarter of a mile away, routed out the people, and helped carry me there. While I couldn't speak, I heard all that was said. I heard him say that he recognized me as one who had befriended him that evening; and before he went away he insisted on taking an inventory of my personal property. I had a watch, a diamond pin and over a thousand dollars in money; and everything I kept safe for me during the two weeks I was in the house."

"But what became of the tramp?"

"I have never seen him since. After seeing me safe at the house he started off, saying he would send a doctor from the nearest town, and I have never had a chance to even thank him."

EUNUCHS AS SAILORS.

Sixty Mohammedan eunuchs, formerly owned by Prince Baelde Bueby, of India, compose the crew of the English steamship St. Fillians, which discharged a cargo from the island of Elba, at Philadelphia, long ago. Prince Baelde Bueby is a wealthy and influential living in the interior of India. He amassed a fortune trading in ivory tusks with European dealers. He then retired to live in luxury with twenty wives. The sixty eunuchs attended his household. Some time ago Bueby had to retrench, and his discharged eunuchs wandered to the coast, and are now shipped in the St. Fillians.

GUESS WHAT SISTER HAD SAID.

Tommy (entering the parlor where his sister and her young man are)—Guess what I've got in my hand, Mr. Sappy?

Mr. Sappy—Why, those are beans.

Tommy (with a triumphant look at his sister)—There, what did I tell you sis?

Imagine Sappy's feelings.—*New York Sun.*

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

AUGUST, 1890.

Assessment Notice for August.

OFFICE OF GRAND LODGE, B. of L. F. }
TERRE HAUTE, IND., August 1, 1890. }

ASSESSMENT No. 13, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 261. Timothy H. Hennessey, of Livingston Lodge, No. 389, died of Heart Disease, March 28, 1890.

CLAIM No. 262. Chas. A. Meigs, of McKean Lodge, No. 154, died from injuries received by explosion of Engine Boiler, May 8, 1890.

CLAIM No. 263. Orin A. Farnham, of H. G. Brooks Lodge, No. 169, died of Peritonitis, May 10, 1890.

CLAIM No. 264. Daniel McDougal, of Gold Range Lodge, No. 341, was killed by Railroad Accident, May 11, 1890.

CLAIM No. 265. Jno. Cook, of Bonanza Lodge, No. 194, was killed by Engine Turning Over, May 19, 1890.

CLAIM No. 266. Wm. E. Mitchell, of Adopted Daughter Lodge, No. 3, died of Typhoid Fever, May 23, 1890.

CLAIM No. 267. Jno. Jefferies, of J. Scott Lodge, No. 136, died of Typhoid Fever, May 24, 1890.

CLAIM No. 268. M. W. Downs, of Great Western Lodge, No. 24, was killed by Engine Turning Over, May 25, 1890.

CLAIM No. 269. Wm. J. Dintinger, of Anthracite Lodge, No. 323, died of Typhoid Fever, May 29, 1890.

CLAIM No. 270. Wm. H. Coleman, of Elkhorn Lodge, No. 28, was killed in a Collision, May 31, 1890.

CLAIM No. 271. C. S. Harrell, of Stone Mountain Lodge, No. 332, was killed in a Collision, June 2, 1890.

CLAIM No. 272. Willard C. Staples, of Bethesda Lodge, No. 382, died of General Septic Peritonitis, June 2, 1890.

CLAIM No. 273. Chas. H. Crane, of Ft. Pickering Lodge, No. 206, died of Peritonitis, June 4, 1890.

CLAIM No. 274. Robert Michael, of Charity Lodge, No. 5, died of Typhoid Fever, June 11, 1890.

CLAIM No. 275. Wilson L. Geary, of Fairmount Lodge, No. 333, died of Typhoid Fever, June 15, 1890.

CLAIM No. 276. Chas. Hunt, of St. Joseph Lodge, No. 43, died of Pernicious Malaria, June 16, 1890.

CLAIM No. 277. Gwin T. Perkins, of Plain City Lodge, No. 238, was killed by Railroad Accident, June 16, 1890.

CLAIM No. 278. Geo. H. Ward, of Union Lodge No. 138, was killed by being struck by a Bridge Cover, June 19, 1890.

CLAIM No. 279. Samuel M. Lowman, of Three Branch Lodge, No. 304, was killed in a Wreck June 21, 1890.

CLAIM No. 280. A. C. Johnson, of Banner Lodge No. 56, died from injuries received in a Railroad Accident, June 23, 1890.

CLAIM No. 281. Edward D. Tohill, of C. J. Hepburn Lodge, No. 160, was killed in a Collision, June 21, 1890.

CLAIM No. 282. Herbert J. Nesser, of Standard Lodge, No. 158, was killed by Engine being Wrecked, June 25, 1890.

CLAIM No. 283. W. J. Baldwin, of J. H. Kirk Lodge, No. 376, was killed by being struck by Bridge, June 27, 1890.

CLAIM No. 284. John Purdy, Jr., of Central Ohio Lodge, No. 299, was killed by Engine Turning Over, June 28, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each member whose name appears on the rolls August 1, 1890, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than August 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., July 1, 1890.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement
of the Beneficiary Fund for the month of June, 1890:

RECEIPTS.

• Alexander's Ready Reference

New 1890 EDITION For Engineers and Firemen.

Broke Down. What I Should Do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanation of the manner of handling are given. A diagram of SLIDE VALVE MOVEMENT, 16½ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in the book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, is easier understood by railroad men, than any other book now in print, because it is written in the manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS' PRACTICE EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given, in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR PROMOTION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without it," or, "It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Price \$1.50 per copy.

Address,

THEO. DEBS,
TERRE HAUTE, IND.

All other Editions of Ready Reference are sold and are out of print.

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

BAKER CITY, ORE., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe it far superior to any other Dinner Pail now in use, and will take great pleasure in recommending it to all railroad men.

Yours truly,
DR. T. N. SNOW,
Surgeon

Size of No. 2 Pail is 9 1/4 inches long by 5 1/4 inches wide by 9 1/4 inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order of one dollar and fifty cents, and for every fifteenth Pail order received we will refund the money and send the Pail free of expense. Try one.

TEAMSTERS.

You work in all weather. You want an "all-weather" coat. In fact, the best waterproof coat in the world. No frail rubber affair that will rip before the week is out. Rubber costs more, and lasts but a short time. Four teamsters out of five wear the "Fish Brand" waterproof clothing. They are the only teamsters' waterproof coats that are light, strong, durable, and cheap. They cost very little, and last a long time. They never get sticky or peel off. The buttons are wire-fastened, and never come off. They are absolutely waterproof and wind-proof. Until you own one you will never know the comfort of a rainy day. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

NON-MAGNETIC WATCH.

Agents Special **Price, \$22.95**

"Jas. Boss Patent" Gold Filled Case guaranteed to wear for 15 years, stem wind and set, vermicelli border, elegantly engraved. Movements are made by the American Waltham Watch Co., and are full jeweled, full nickel, elegantly damaskeened. ABSOLUTELY NON-MAGNETIC and fully adjusted to heat, cold and the three positions.

Warranted to stand the test of any railroad inspector.

Send for our Agents Confidential Price List and Illustrated Catalogue in which are listed Watches, Diamonds, Clocks, Jewelry, Silverware, etc., at the lowest wholesale prices. Special attention given to Fine Watches for railroad men.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1899.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We are confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E.

[SEAL.]

G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1899.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the principal representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

ALVAS' BRAZILIAN SPECIFIC.

Or Cactus Blood Cure.

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico Division 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with a like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

† A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

EUGENE V. DEBS, . . . *Editor and Manager.*

EDUCATION VS. ILLITERACY.

The theory is that in carrying forward the great enterprises of the times, illiterate persons will be required to do the drudgery work at comparatively small wages. If a man of advanced years is illiterate, he will probably remain in that condition. His opportunities to obtain an education have been squandered, and he finds himself at last a confirmed ignoramus, with neither time nor inclination for intellectual culture. The young men of the present have it in their power to choose between education and illiteracy, and it is needless to say, that in a far greater measure than thousands of them seem to be aware, upon their choice their future welfare depends.

In discussing the question outlined by the caption of this article, we do not propose to dwell upon what is called a "liberal education," nor the lower depths of illiteracy. We have known men, unable to read or write, who were valuable workmen,

and regarded in some cases as fair mechanics. They were good citizens, good husbands and fathers, and some of them were possessed of moderate estates. They had healthy intellects and strong bodies. They were energetic, shrewd, good managers and close observers. Students of human nature, they could, to use a phrase, "size up men" quite as well as their neighbors who had "book larnin'." Of these men there were two distinguishing types. In the one case they did not regret their illiteracy and were free to declare that "book larnin didn't do a bit of good," and in support of their theory, would point to some educated person who had gone "to the bad." In the other case the want of opportunities to secure a moderate education was keenly felt and deplored. They had discovered along their journey that in numerous instances they had been prevented from advancing to better positions because of their illiteracy, and realizing the crushing disadvantage under which they had labored, determined that their children should be exempt from such degrading embarrassments. There is nothing to be said in favor of illiteracy, however gratifying it may be to recognize the fact, that in spite of its debasing influence, some men escape its severest penalties, just as some men escape with light wounds and bruises, while others are killed outright, or are maimed for life, in railroad wrecks.

It should be said that the term "illiteracy" is not a synonym of idiocy or dementia. It has no reference to intellect, *per se*; it is simply a lack of learning, a want of familiarity with books, an absence of

mind culture, it is ignorance more or less pronounced.

In census reports those who can read and write are not classed with the illiterate. If they are able to write their names and master lessons in the "First reader" the stigma of illiteracy is removed. Such a classification may answer certain very valuable purposes, but in so far as education in any proper sense relates to the well being of society, or of individuals, the simple attainments of reading and writing, if carried no further are of little consequence.

Illiteracy in its lowest form is inability to read or write. To learn the alphabet would be an upward movement, and there are thousands who, when they can scrawl their names and read imperfectly, concern themselves very little, if at all, about any further progress. And if such advancement is not stimulative of ambition to know more, it is doubtful if their acquirement is of any value whatever. On the other hand, if learning to read and write awakens ambition to know more, there is scarcely anything within the range of useful knowledge that a young man may not secure.

The American idea is to educate the masses, because it is held that should illiteracy prevail the institutions of the country would be imperiled. It is not believed that an educated people can be enslaved, but it must be understood that in no proper sense is the mere ability to read and write to be regarded as education. It is to be assumed that Corbin's men on the P. & R. can read and write, and to what extent some of them have resisted degradation is well calculated to suffuse every manly American cheek with shame.

When education, however limited, inspires ambition to know more, it may be said, like the seed in the parable, falling upon good ground, that it will bring forth an abundant harvest. The statement is often made that an American workingman, in the same number of hours, produces more than a European workingman, and the reason assigned is, that the American is more intelligent, that is to say, his head as well as his hands have been educated; mind and muscle are in alliance, and when that is the case, not only more product but a better product may be expected.

It need not be said that education is elevating and that illiteracy is debasing. Such propositions have long since been dismissed from debate, but it may be said that the sands of workingmen do not appreciate any proper measure, the lifting and advancing power of education. Starting out in life with a limited education, they seem content to remain unimproved intellectually except in so far as improvement comes from absorption. They catch here and there an idea, an explanation, a suggestion, and are satisfied. They spend their money in ways that contribute nothing to the development of their intellects, their mind forces; they do not purchase valuable books, but squander their leisure in idleness rather than study.

As we have said there is work for all men, but it is not the most remunerative and it is needless to say, that in every branch of work the time has arrived when illiteracy has become a bar to advancement. The man who is ignorant and who is content with his condition, may make up his mind to remain where he is, at the tail of the procession. There is absolutely no promotion for him, while for the man who comprehends the value of education, knowledge, and determines to master problems in the line of his calling will be well paid for responsible and remunerative position.

Fortunately, if a man at twenty years of age finds himself illiterate, he can, if ambitious to secure a useful education, stand among men of knowledge when he is fifty years of age, and at forty he is in the prime of his manhood. He will understand the English language so thoroughly that he will be able to speak and write it correctly. The library and not the saloon will be his resort; he will spend his leisure if unmarried at home, if married. If a member of a labor organization, he will be able to help and encourage those who are seeking for intellectual advancement, and in this way will be of incalculable advantage to the low men.

The time has come when ignorance can be tolerated only at the bottom round the ladder, or very near it. Ignorance cannot climb. It is stationary. It decides the fate of its victims. To escape the degradation

it inflicts a man must study, and if opportunities are limited he must be the more determined—the more resolute. He must not be ashamed of the rudiments. Books are cheap. The school master is abroad. Two hours a day devoted to study is equal 730 hours a year, or 73 days of 10 hours each. If, for five years, two hours a day are devoted to study, a man has secured one year, 365 days of 10 hours each, and in twenty years, four years of student life. And as we have said, at that time he will be accepted as an educated man thoroughly equipped for responsible positions.

It may be said, that we have discussed the subject from the standpoint of wages. That is true. The educated workingman in the long run will receive the higher wages, because he will be wanted, while the ignorant man will not, as a general proposition, advance.

It must not be surmised that education is to be valued simply because it enables a man to do more and better work in a given number of hours, and secure thereby more pay. The educated man has sources of enjoyment of which illiterate persons know little or nothing at all.

The difference between an educated and an illiterate person is something like that of a man with perfect vision and one born blind. By education man rises intellectually. If education brings the animal propensities, the intellectual powers and moral sentiments of men into harmonious alliance, it is worthy of all that can be said of it, and such is its mission. Considered from such a point of observation, education is a source of ceaseless felicities. As education advances, men compare ideas and make combinations and deductions. Thoughts multiply, knowledge accumulates, and the fortunate individual exults as the field of his vision widens. He grasps truths, analyzes propositions and solves problems. He is no longer the victim of demagogues and charlatans. He detects the tricks of sophistry and avoids the traps and deadfalls set for the illiterate.

Hence, while the educated workingman secures better positions and better pay than the illiterate man, he secures also pleasures and satisfactions to which the illiterate man is a total stranger.

And in saying this of education, we do not refer to a collegiate education. Abraham Lincoln had no *alma mater*. Other names, illustrious in American history, could be mentioned by the score to sustain our position, when we say, that a young workingman, if he will, may, between twenty and forty years of age, so educate himself, as to walk arm in arm with men who boast of diplomas, nor be required to blush for his ignorance.

We could enlarge upon the subject. The theme is inviting. But we close by simply saying to young men of twenty years of age or in their early manhood, get good books, read them, master all the problems in your chosen vocation, cultivate your intellectual faculties, bring hand and brain into alliance, and as sure as water runs down hill there is a demand for such men *on top* and they will get there.

THE Philadelphia *Record* prints the following about "the American boy:"

A Washington street business man says: I have two boys in my employ and amuse myself watching their ways. They are about the same age. One is an American boy and the other is English. The American boy likes to take things easy. When I send him out on an errand he comes back when he gets good and ready, and always has some excuse. The English boy comes back looking scared to death if he thinks he has been gone over time. The other night I asked them if they would like to make some extra money. They said they would, and I loaded them with librettos of the German opera, and told them where to sell them. On the following morning the English boy brought back his money and no books. He made \$3.15 for himself. The American boy said he hadn't sold any. That he wanted to go to a show himself, and didn't want to make any extra money. There you have an example of the average American boy of to day. He is letting the boy from the other country get ahead of him because the American boy wants to have a good time. This is my observation, and it is not confined to the two boys of whom I speak, either.

It may be true that the American boy is sluggish, stupid and unambitious as the *Record* paints him, but such is not our observation. The American boy does not take kindly to menial duties. He is not built that way. He makes a poor valet, and that is all there is in the *Record's* story.

THE steel pen was invented because the inventor became disgusted with the goose quill. Repugnance has seldom been of more benefit to the world.

PECUNIARY COMPENSATIONS.

Under the heading of "Pecuniary Compensations," the rule of law, as authoritatively published, is of special importance to passengers on railway trains. It is held that "as a general rule, claims for personal injuries must be based, not upon the injuries, but upon the pecuniary consequences thereof to the sufferer and those depending upon him; and a railway company is never liable in damages for the mere death of a passenger, unless his survivors can prove a pecuniary loss or worldly disadvantage; hence the amount of damages which a railway company may be called upon to pay for injury depends in a measure upon the rank or position of the sufferer. Under a special statute, the executor of a passenger killed in consequence of the default of a railway company, is entitled to sue the company for damages on behalf of the survivors of the deceased." This rule of law is immensely suggestive. The mere killing of a person amounts to nothing. If survivors are unable to prove a "pecuniary loss," a loss in dollars and cents, they will have their litigation for nothing, except the experience gained in threading the labyrinthian mazes of the law. If the dead person had no one "dependent upon" him then there would be no "survivor" to sue, and then the survivor must prove a pecuniary loss or "worldly disadvantage." Just what "worldly disadvantage" means we have no way of determining, unless it means pecuniary disadvantage. Any other definition lets down the bars and throws wide open the gates, and invites lawyers, clients, judges and juries to roam over the entire domain of conjecture. Take, for instance, the death of a child. What pecuniary loss could be established? Children are a source of expense rather than income, hence, any claim for damages by survivors would not be allowed, unless prospective damages could be specified and established. A yearling calf or colt, sheep or swine would have a certain market value "all along the line." Not so with children; their value is an absolutely unknown quantity, and a moment's reflection upon the subject is fruitful of confusion. Take an old man whose money-earning days are gone, what

pecuniary value could be placed upon him by survivors? What "worldly advantages" could survivors prove? If an old horse or mule were killed "pecuniary consequences" and "worldly advantages" could be arrived at without great labor, and a verdict could be rendered. The amount would doubtless be small, but it would be something, and owners would be compensated, but the survivors of the old man would act wisely keeping out of court.

But when railroads are liable for "pecuniary consequences" and "worldly advantages," the amount, we are informed, "depends, in a measure, upon the rank or position of the sufferers." This, we apprehend, will be regarded as something novel. Manifestly, before a jury renders a verdict it will demand to know the rank of the dead man. We will suppose the case shows that two persons were killed, one a judge and the other a juror, and that each case damages to the amount of \$1000 were demanded. It would doubtless be shown that the judge outranks the juror, that his position was the more exalted, that the judge received \$10 a day and the juror \$2 a day. If rank and pay were permitted to settle the question of damages, the juror would cut a sorry figure in that court, the survivors of the judge received \$1000, the survivors of the juror would have to be content with, say, \$500. This thing of rank and position in American courts is something worth thinking about. It is suggestive of class jurisprudence, and if worked into the laws of the land would be productive of very sharply defined protests.

Carrying forward the illustration of judge and juror, it might be learned upon investigation, that in all the dignifying qualifications of citizenship the juror was the equal of the judge. It might be ascertained that he was the more useful citizen of the town, that while the judge had the highest rank and knew the most about law, and could make the best speech, the juror could build and run a locomotive engine, or was an accomplished mechanic in some other department of mechanics, in which case, when he becomes of rank or position when the question of damages comes up for decision, it may be that some men are worth more

others, but when worth is predicated upon rank and position in this age of crookedness and *cussedness*, courts and everybody else are liable to go egregiously wrong. Every person—man, woman and child, old and young, except convicts and tramps, ought to be and are, worth something, and when it is published as law that “a railway company is never liable in damages for the mere death of a passenger,” then passengers stand lower in the scale than the dumb brutes which fail to get out of the way of the locomotive.

STEALING STATISTICS IN THE UNITED STATES FOR 1889.

The thieves of the United States did a remarkably active business during 1889, and from their standpoint, as profitable as active. The names of some of the thieves who got away with \$100,000 or more are given as follows: H. W. Davis, Cincinnati, \$100,000; Treasurer Benson, of Barnes City, N. D., \$140,000; Joseph A. Moore, agent of the Connecticut Mutual Life Insurance Company, Indianapolis, \$500,000; John E. Sullivan, clerk of Marion County, Indiana, \$100,000; Henry Deickman, secretary of the St. Louis Board of Trade, \$200,000; James M. Lane, county treasurer, Circleville, Ohio, \$100,000; A. B. Cleveland, president of the A. B. Cleveland Company, New York, \$150,000; P. F. Pratt, cashier First National Bank, Anoka, Kan., \$100,000; William O. Collender, of the Collender Insulating Company, New York, \$400,000; J. C. Bradley, cashier, and Charles W. Palmer, assistant cashier, Merchants' National Bank, New Haven, Conn., \$100,000; George Jessup, cashier Scranton Bank, Scranton Pa., \$135,000; W. H. Sherman, manager grain elevator, Buffalo, \$200,000; Al Graham, county auditor, Lebanon, Ohio, \$250,000; J. Frank Cullom, lawyer, Minneapolis, \$277,000; Eben S. Allen, president of the Green Line Street Railroad, New York, \$130,000; Consul General Tsaing, San Francisco, Cal., \$200,000; Alphonso Phillips, lawyer, New Orleans, \$100,000; T. V. Roach, cashier Citizens Bank, Prairie City, Iowa, \$100,000; W. B. Higginbotham, president Blue Valley Bank, Marshalltown, Kan., \$100,000; Major E. A. Burke, ex-state treasurer of Louisiana, \$500,-

000; August Culmage, agent, Rat Portage, Ont., \$150,000; Emil Van Gelder, of H. E. Van Gelder & Son, 10 Maiden Lane, New York, \$400,000; E. H. Van Hoesen, cashier Toledo National Bank, Toledo, \$125,000; W. H. Fursman, real estate, Pontiac, Ill., \$200,000.

Here are twenty-four educated rascals whose stealings amount to \$4,770,000, or an average of \$199,040 each; two of them going up to the half million notch, and both of whom got away without the slightest embarrassment, indeed it is doubtful if the great majority of them, did more than pack their grips and hurriedly take shelter in Canada.

The items given, are called “embezzlements,” and the total of embezzlements as given by months, for 1889, amount to \$12,-862,551 as follows:

January	\$1,111,643	July	\$ 892,060
February	808,219	August	1,171,756
March	1,181,487	September	903,200
April	5,888,375	October	564,657
May	433,256	November	353,775
June	87,066	December	466,527

Commenting upon the foregoing, a New York dispatch says that “the annual appropriations for the United States Navy Department are less than double the amount stolen, while it would meet the expenses of the War Department for three months. It is about equal to the total value of either the living animals, fresh and salt beef, leather, lard, petroleum, woods, or cheese exported from this country to Great Britain in a year. It is more than equal to the combined annual exports to Great Britain of iron, copper and sugar, and two-thirds as great as the total volume of tobacco or maize annually exported to the same country, these being the most important items of America's export trade. The amount would be sufficient to meet the allowances to Queen Victoria and the English royal family and the royal pensions for two years. It is greater than the total annual public revenue of the Kingdom of Servia or the principality of Bulgaria, to say nothing of the minor German principalities and duchies. It is also greater than the total annual revenue of the Republic of Guatemala, the united republics of Honduras, Costa Rica and San Salvador or Columbia and Ecuador combined. The amount is also greater than the cost of

governing either such important colonies as Tunis or Algeria by France."

Embezzlement is called a "breach of trust" but is simply stealing; an embezzler is a thief, and the meanest sort of a thief—he is a sneak thief—and these sneak thieves, as we have shown got away with more than \$12,000,000 last year. Only a few of them were punished. During all the time they were stealing they stood high in society, Many of them were pillars in "the churches." They were not known as members of the criminal classes. They dressed in "purple and fine linen." They fared "sumptuously" every day. They had beautiful homes. They dressed elegantly, as did their wives and children. They were the "upper crust," and when their crimes were made public thousands of the "upper crust" slobbered out their sympathy on the corners of the streets, and were glad, if the scoundrels got beyond the jurisdiction of the courts.

But these embezzlers are not the only robbers who prey upon society, and who are recognized as good citizens, *par excellence*.

The men who water stocks, run high or low toned bucket shops, *alias* exchange, where "lambs" are enticed and sheared; trusts, syndicates, monopolies, etc., are all of the robber tribe, who are forever in pursuit of the weak and credulous, on whom they bestow no more pity than Satan extended to Job.

Some of these iniquities can be crushed, and if that is not the purpose of the organization of workmen, it should at once be made their irrevocable purpose.

THE REASON WHY.

It is easy to ask questions and it is right to ask questions. Interrogatories are always elementary. The men who inquire are path finders. To find out the reason why is the great business of life. It has been said that "fools can ask questions that a wise man cannot answer." Manifestly, a great many foolish questions are asked, but is it not quite as true that a great many foolish answers are given to very important questions? To ask questions, let it be borne in mind, while it implies a lack of information on the particular point in contro-

versy, does not signify ignorance, in any general sense. On the contrary, it involves considerations diametrically the opposite. To have an inquiring mind, is to have a thirst for knowledge, and those who ask the greatest number of questions, other things being equal, know the most. A question is at the foundation of every enterprise. Investigation is the order. To know is to inquire. Every explorer without regard to the field of his research is a question answerer. It matters not whether he is navigating polar seas, finding his way across the dark continent, reading rocks or stars, he is seeking to solve some problem—to answer some question. In all the sciences, in all the schools of philosophy, in every educational institution from the primary, the kindergartens, to the university, the inspiration is to find the reason why. While one reasons from the cause to the effect, another reasons from the effect to the cause, and thus the sum of human knowledge is daily augmented.

It may be asked, what is knowledge? One answer comes, among many others: "Knowledge is power," it is a maxim. Men no longer question the answer, it is universally accepted. Knowledge is power. It is not given to men to know all things that by searching may be found out. Life is too short for the attainment of universal knowledge by one person, even if it were desirable. The capacity of the best brain is limited, even when the largest opportunities are afforded; as a result, knowledge, in response to inexorable laws, has its departments. Some men know more than others, but no man knows it all, and as a consequence, none are so advanced as to be relieved of the necessity of asking questions, and therefore they are ceaselessly seeking for the reason why.

The present is eminently and preëminently a question asking and a question answering age, and the term "age," should include the nineteenth century. This is not surprising, since the more the people know the more earnestly the demand, to know more. The present generation knows more than any past generation.

Mr. Sidney Smith, in a prose masterpiece discusses the question of the relative knowl-

edge of past generations, as compared with that of the present and says, "Experience is certainly the mother of wisdom, and the old have, of course, a greater experience than the young; but the question is who are the old, and who are the young? Of individuals living at the same period, the oldest has, of course, the greatest experience; but among generations of men the reverse of this is true. Those who come first (our ancestors) are the young people, and have the least experience. We have added to their experience, the experience of many centuries; and, therefore, as far as experience goes, are wiser, and more capable of forming an opinion, than they were." If the reason why we of to-day know more than any past generation is asked, one answer is ready—we know all past generations knew, and have added largely to the sum total. Moreover, it being true that we know more, we are in a position to solve more difficult problems, for knowledge being power, its power is exerted in the accumulation of knowledge—and not only in its accumulation, but in finding means for its preservation and dissemination.

And here, the thoughtful reader will find not only satisfaction in contemplating the vast superiority of the present as compared with the past, in the knowledge possessed but in the means provided for its wide diffusion.

As an illustration, take a man whose investigations have resulted in adding to the sum of human knowledge. He concludes to make an enduring record of his researches by writing a book. At this point the modern printing press comes into view. The book is issued in multiplied thousands and the world is benefited. The present is a book-making age, and a reading age to an extent unknown in all the past.

It would be easy to show that the people who have lived in this nineteenth century in the matter of knowledge are superior to any and to all past generations of men since time began. More questions have been asked, more satisfactory answers given, more reasons why, than during any previous century—and now, the human mind is more than ever active.

In all the past the few have ruled the

many. Why? The few had the knowledge. The many yielded to the power it exerted. In some lands despotism still continues, but throughout all christendom the reason why is being asked with ever increasing emphasis. Antiquated theories are no longer accepted. Men may talk of our wise ancestors, the wisdom of old times, of venerable antiquity, etc., but the great majority will not listen, they will not yield, they will not bow down.

In the United States of America the many know more than the few. They read books and papers, all the avenues of information, of knowledge are open to the many, and men, in all the walks of life are estimating the power of knowledge and are preparing to wield it in a way that the greatest good shall be secured to the greatest number.

The wage workers are asking the reason why for strikes, and the answer comes, because wrongs exist—because injustice prevails. The question arises can the wrong be cloven down and the right enthroned? If not, then the die is cast and fate decrees human nature a failure. But such is not the conclusion. The advancement in knowledge and the power which knowledge confers give an affirmative reply. Some wrongs have disappeared and the mighty mustering of the mind forces has but just begun. The fight has been simply skirmishing. In the absence of unification, consolidation, federation, the many have not learned their power. If there is wrong and injustice, want and degradation, the reason why is not fully understood, but it is being grasped. The awakening forces are at work, working perhaps, as the coral builds continents, but certainly at work. It has been said and sung that

"Truth crushed to earth shall rise again,
The eternal years of God are hers."

To help the truth to rise again, is the mission of the *Locomotive Firemen's Magazine*. We do not doubt results. Our faith is the substance of things hoped for. We only ask the coöperation of the Brotherhood.

THE Pennsylvania railroad reported for 1889 earnings of \$2,000,000, in excess of 1888.

PETROLEUM AND NATURAL GAS.

In certain localities natural gas and petroleum are found a few hundred feet below the surface of the earth, and wherever found the work of boring for these substances goes forward with ever increasing energy. Holes are being bored by the thousand, and gas and oil are coming to the surface in steadily increasing quantities. The natural gas is used for fuel in home and factory and for illuminating purposes; petroleum performs the same services with many others of great value to the human family. This gas and petroleum have at last become essential to progress, indeed they are regarded as prime factors in carrying forward the great enterprises of the times and could not be surrendered without entailing wide spread disaster and inconvenience. Just at this juncture latter day warnings are sounded. The scientist has begun investigations, and, so far, the conclusions arrived at are anything but quieting. Prof. Joseph F. Jones, in a late issue of the *Popular Science Monthly* assumes that "the earth is a hollow sphere filled with a gaseous substance, called by us natural gas, and he thinks that tapping these reservoirs will cause disastrous explosions, resulting from the lighted gas coming in contact with that which is escaping. He compares the earth to a balloon floated and kept distended by the gas in the interior, which, if exhausted, will cause the crust to collapse, affect the motion of the earth in its orbit, cause it to lose its place among the heavenly bodies, and fall to pieces." In saying this, Prof. Jones adheres to the generally accepted theory in regard to the internal condition of the earth, but it would seem to be in the line of safety to permit some of the internal gases to escape rather than keep them pent up and rely upon the laws of attraction to keep the earth on its regular circuit around the sun. Prof. Jones' balloon theory is not likely to scare men in search of gas, or oil, or both.

Another writer is reported as saying that drilling for gas, oil, salt water and other subterranean treasures should be prohibited by stringent laws. He thinks there is great danger of an explosion, which, should it occur, the country along the gas belt from Toledo through Ohio, Indiana, and Kentucky will

be ripped up to the depth of 1,200 feet or 1,500 feet, and flopped over like a pancake leaving a chasm through which the waters of Lake Erie will come down, filling the Ohio and Mississippi valleys, and blotting them out forever. If the gas in the district named should explode we doubt if the extent of the disaster is exaggerated; but all sorts of explosives have been used to "shoot" gas wells to increase their flow without disturbing to any serious extent Pluto's dominion, and we doubt if the northern lakes are to submerge all the Sunny South-land in the near or the remote future.

But still another scientist has been investigating the gas wells with "telephones" and delicate thermometers, and he announces startling discoveries. He distinguishes sounds like the boiling of rocks, and estimated that a mile and one-half, or so, beneath the Ohio and Indiana gas field the temperature of the earth is 3,500°.

The scientists say an immense cavity exists and that here the gas is stored; that a mile below the bottom of the cavity is a mass of roaring, seething flame, which is gradually eating into the rock floor of the cavern and thinning it. Eventually the flames will reach the gas, and a terrific explosion will ensue." Taking such views into consideration, the future, it must be confessed, is not altogether lovely; nevertheless we are inclined to the opinion that the boring will proceed, and that the wealth of the world below the surface will be utilized for the purpose of carrying forward the world's enterprises.

THERE are going the rounds of the press special telegrams relating to the death of celebrated dogs, which were so fortunate to live in Boston, the "Hub" of the Universe and the Athens of America. One dog by the name of Mentling, valued at \$20,000, died of heart disease. Icford, valued at \$10,000, died of peritonitis, and Countess, a valuable, handed in her checks, because her boudoir was not properly ventilated. Such stuff, relating to dog, whelp, and hound is wired from Boston, while the death of men, women and children, who sickened and die, half starved, half clad and meanly sheltered, are unwired and unwept. Such is a feature of modern civilization.

THE Philadelphia *Record*, discussing the alliance between the Knights of Labor and the farmers says: .

We have a profound distrust of the meddling of secret societies in politics. For this reason we look for no public advantage as a resultant from the coalition of the Knights of Labor and the farmer's secret organizations. Some of the measures which they advocate—like the free coinage of silver and government ownership of railroads—are dangerous or dishonest. To cheapen the legal tender of the country would be mere stealing from the pockets of one portion of the people to fill the pockets of another portion. To put the railroads in the hands of the federal government would be to turn the government over in perpetuity to whatever party should have possession of the railroads and the government at the same time. That party could not be dislodged. A fusion brought about with such ends in view is a fusion of scatter-brains. Neither the great body of laboring men nor the farmers could be led or driven into the support of such folly.

As for the free coinage of silver, it is worth while to say that no nation or individual ever failed, or went into bankruptcy with a surplus of silver dollars. No good reason is assigned for preferring national bank bills to greenbacks. As for the government owning and operating the railroads and telegraphs of the country, we think the objections of the *Record* well taken, but that the Government should hold a tight rein on all corporations that deal with the public is manifestly right and proper and we are not likely to have too much of it. As for secret organizations entering politics it so happens that the moment they touch politics their secrets are made public and ten thousand secret organizations could not make politics more corrupt and vicious than at present in Pennsylvania where the *Record* is published.

BOILED down, the facts relating to railroads in the United States are authoritatively stated as follows: There are in constant operation 165,000 miles of railroads. During 1888, 475,000,000 people were transported, and 600,000,000 tons of freight; 1,000,000 employes were constantly engaged, 30,000 locomotives, 21,000 passenger cars, 7,000 baggage cars, and 1,000,000 freight cars were used in transportation work; \$8,000,000,000 represents the capital invested in construction and equipment alone, besides which, there is expended yearly for labor and supplies the enormous sum of \$6,000,000,000.

SOUTH Carolina took two prizes last year for the largest yields of corn per acre. The *American Agriculturist* offered \$500 as a prize and South Carolina \$1,000. A number of farms competed for the \$500 prize, and forty-five showed an average yield of 104 bushels of shelled corn per acre, but the South Carolina farm showed the remarkable yield of 255 bushels of shelled corn per acre, which when kiln dried was reduced to 239 bushels. The report says, "the variety was Southern white gourd (dent), improved by twenty years' selection until the ear had from 20 to 36 rows of kernels. The kernels were very large—many nearly half an inch long—and the growth so tremendous that fences had to be built between the rows to support the overweighted stalks. An extraordinary amount of manure and fertilizer was used, but it is claimed that the crop paid, if due allowance is made for improvement of the soil. Indeed, the acre on which this big crop was grown was part of a tract which only a few years ago was known as Starvation's Empire."

Such facts show very clearly that the United States can feed the world, and yet thousands of Americans languish for want of corn bread.

It was given out that a member of the committee which demanded the removal of Mr. Russel said, "If he isn't discharged it will be the greatest mistake the company ever made, and it will hurt Chicago more than anything that has happened to it since the fire. In two days not an engine or car will leave or enter Chicago, and the strike will spread and take in so many other issues and causes that it will not be settled, perhaps." The *Switchmen's Journal* says no member of the committee made such an assertion. The committee certainly made mistakes enough, without being credited with such a fool threat as we have quoted.

ENGLAND reports 28,729 thieves over sixteen years of age. Suppose they should manage to steal, on an average, 50 cents a day. We could match the entire gang with Austin Corbin and his pals who have Russianized a good portion of Pennsylvania.

The Church and its Mission.

As a general proposition, the church, by which is meant professed Christians, without regard to denominational name, resents with great emphasis, that it is not fulfilling its mission in the world. If the allegation is made by an outsider, it is deemed a satisfactory answer, to class him or her with infidels, and, if one within the pales of the church, as an apostate, a heretic, deserving of anathema. Nevertheless, men of opinions and convictions, who read the New Testament, and are familiar with the teachings of Jesus Christ, persist in declaring that the church has missed its mission, and that it exists for purposes widely different from those which animated its founder, and in very many regards burlesques religion; that it not only makes religion ridiculous, but uses it, in numerous instances, for purposes which excite detestation.

In the *Arena* for July, Rev. Carlos Martyn, D. D., has a paper captioned "Churchianity vs. Christianity," well calculated to produce a sensation in religious circles. Mr. Martyn writes without gloves. He strikes terrific blows. He is iconoclastic. No sham escapes his eye nor is spared by his pen. He is one of "the cloth," not an outsider. He ministers at the altar. He feeds the sacred fires. His lips have been touched with live coals, and his thoughts breathe and his words burn. He says "Churchianity may be defined as Christianity formalized. It is like counterfeit coin—current but false." * * * "Whenever form is put for substance, whenever the medium is regarded as the essence, Christianity crystallizes into Churchianity. We have a religious establishment, but no longer religion. We look for Christ and find a church. We ask for bread and are given a stone."

Rev. Mr. Martyn says, "in this country we have no state Church," that "our danger comes from a different direction but results in the same abuse," and adds:

The American pulpit is dependent on the pews. Therefore its inevitable temptation is to preach within the limits of parochial desire and prejudice. If the congregation were predominantly spiritual, this would give ample liberty. Unfortunately, however, the average congregation represents the world, the flesh and the devil: so that the minister in addressing the trinity above keeps an eye and ear prudently open towards the trinity below. A lady of the writer's acquaintance has hanging on the wall of her dining-room a motto worked in worsted which reads: "The Lord will provide;" to which her vagabond husband (whose name is George) has added: "but George pays the bills!" Those who pay for the music usually dictate the tunes. Since the unadulterated Gospel might offend this important parishioner, and that liberal supporter, and yonder wealthy manipulator of the market: since the feelings and interest of a great variety of people must be consulted and deferred to by a clergyman who desires to fill and hold any prominent position, is not a padlock put on the pulpit by the voluntary system as effectually as though a government turned the key?

As compared with England, we simply exchange the bench of bishops for the lords—brethren, the throne for the pews. Moreover, the church is full of "pomp and gold." Fashion invades it. As where fashion is there will be, ceremonialism, with scrapings to the east and bowings to the west. The less fervent the piety, the more sounding the ritual. There is a beautiful body of doctrine without its soul of practice—like Hawthorne's hero in the "Mable Faun." Phariseism is thus resurrected and baptized with a Christian name. Pray, what is it but Churchianity?

Burke said he did not know how to indict a nation. Whittier one of the most devout of men, diects American Churchianity:

"But the living faith of the settlers old
A dead profession their children hold
To the lust of office and greed of trade
A stepping stone is the altar made.
The Church, to place and power the door,
Rebukes the sin of the world no more,
Nor sees its Lord in the homeless poor."

The foregoing is a terrible arraignment of the church, and it is true as truth. There is not a holy sabbath of the year, that the church does not afford crushing exemplification of Dr. Martyn's allegations.

Dr. Martyn invites the reader to "turn over the catalogue of recent and current forms." He refers to the "anti-slavery cause," temperance," to the "sphere of women," and charges that "Churchianity has been the resolute opposer of every single forward step." It has had an excuse for everything. He says:

Take the Labor movement—the movement of masses against the classes, in Gladstone's phrase, of the movement of the toilers to rescue from the clutches of work and wealth, shorter hours and a share of the profits. This movement, the world over, the latest and largest of miracles. From Russia to the United States, Labor is marshalling its forces for the purpose of controlling to-morrow.

Straws show which way the wind is blowing. Of these tell-tale straws is the popular outcry against trusts, monopolies, and the protean shapes assumed by illusive and aggressive capital. Another is the multiplication of Labor organizations, and the gravitation of these toward federation. Another is the sale within a few months of 250,000 copies of Edward Bellamy's industrial romance—a book that owes its phenomenal success to no special dramatic style, still less to any novelty of suggestion, but only to the universal interest in the industrial revolution.

Churchianity takes no interest in it, never notices it, knows nothing about it. The Pharisees are too busy bombarding the Pharisees of the nineteenth century. They only say: "Bless us! what are those fellows in their shirt-sleeves are making of there. Let us sing the Doxology."

The slave cries: "Church of the living God, give me to liberty!" And Churchianity replies: "Be quiet. You are black. Stay where you are, and we are trying to send the free colored people back to Africa." Temperance cries: "Christians! and to mediate this cancer of drunkenness which is eating out the vitals of civilization." And Churchianity responds: "Did not Paul advise Timothy to take a little wine for his stomach's sake?" Women cry: "I am trembling between starvation and the brothel. Open to me broader avenues of occupation." And Churchianity answers: "Fie! Fie! shame! Do you want to unsex yourself? Go to and darn stockings and rock a cradle." Laborer cries: "Give me a chance. I want shorter hours, but wages, more bread on the table, and part ownership in what I make." And Christianity whispers: "Capital rents the pews, pays for the music, patronizes the parson. We'll open a soup kitchen. We'll build a mission chapel on a side street and name it 'St. Lazarus.'"

Such is Christianity under the reign of "Churchianity." Dr. Martyn surveys the whole field and he plows it with relentless honesty. He sweeps along like a cyclone. Subterfuges and coverts are torn up and shattered. He speaks of "the weakening grip of the church upon practical life," and adds:

It builds cathedrals, not men. It meets on Sunday for worship in splendid exclusion and seclusion, and shuts the building through the week, while the congregation is occupied at the theatre, in the ball-room, or on Wall street. The pulpit, warned off from the treatment of living issues, drones through a parrot-like repetition of the creed, and puts the emphasis on belief when it should put it on conduct.

Another result is that the Church is preempted (and emptied) by wealth and fashion. Lawyers who are of counsel for trusts and monopolies; capitalists whose names are identified with tricky monetary transactions; leaders of the *ton* whose real god is society, occupy the highest seats in the synagogue, and love to come because they can feel sure that they will not be reminded of time in the contemplation of eternity.

Saddest of all, the industrial classes are conspicuous by their absence from the church, like the images of Brutus and Cassius in the imperial procession. There is an almost complete alienation from institutional religion on their part. Those who were foremost in planting Christianity—in its apostleship, among its most devout adherents, its chief beneficiaries, its saintliest exponents, its most eager martyrs—are now embittered and critical.

Such pen pictures of the Church, tell of universal demoralization. They are not pleasant to contemplate. They tell of rottenness and decay. But they are true to life. Contradicted they may be, but they cannot be disproved. Will they arouse the church? Will they change its methods? We do not believe it. The church is a business institution. It has vast incomes. Its pillars are firmer than those of Dagon, and though Dr. Martyn is gigantic and towering in his facts and logic, he is not strong enough to bear away the rich men, trust barons, syndicate kings and money lords, who are the pillars of the modern church.

No greater demand upon the church was ever made than to come forward and help workmen secure rights denied them by employers; but it sits silent, or croaks like Poe's raven, "never more."

J. B. Shrew.

Labor's Right to the Earth.

A PARAGRAPH in your article on Austin Corbin, taken from his contribution to the *North American Review*, and your reply to it, seems to me to involve a third and more important truth. Mr. Corbin says: "The wage question is one in which capital, as such, is only remotely concerned. It is primarily and essentially a question between the employers and the employed." And the substance of your reply is that it is a war between the employes and such unjust employers as Mr. Austin Corbin. Now there is undoubtedly

some truth in both statements. But is it not possible to go deeper?

The employer! who is the employer? Society is the sole employer of all labor. There will be work for each individual, and high wages, too, so long as the effective demands of society render to the worker an equivalent for the value of all his production. His wages will be measured by the effectiveness of this demand; and the so-called employer is merely the assistant capitalist in the work of getting these things ready for the consumer.

All theory, you say. Well, let us examine it closer. A man on a desert island needs no employer. He goes to work himself. Robinson Crusoe and his man Friday cooperating in production constituted the society of Juan Fernandez. Friday was his slave, you say. Ah, yes, that is so. But this was because Friday was a fool, or to speak less harshly, he had been brought up without educational advantages. But let us suppose Friday had been an Englishman, instead of an ignorant black, and his former occupation that of farmer or mechanic. When he landed on the island he would not have sought the protection of Crusoe, but he would have taken up a little patch of land and gone to work. Suppose even that Crusoe possessed all the capital. What of it? Couldn't Friday, had he been an Englishman, or American, or anything but what he was, *have got capital out of the land?* He wouldn't have gone to Crusoe, and prayed him for God's sake to give him employment. Crusoe would have said or perhaps he would not have said: "Why, go to work yourself. I can't forbid you employing yourself. *I don't own the island.*" Then this English Friday would have gone off and applied his labor to the land, and the thing he was best adapted to do he would have done, in return for things which Crusoe's labor could, in like manner, most advantageously produce, and the society of the island would have been established on firm foundations—equal rights to land as men, and mutual interdependence as producers in cooperation under freedom, for, of course, trade too would have to be free.

Now make no mistake about it. What is true of simple is true of complex life. Drop Crusoe down into New York City and the conditions are the same. The same natural law of the right to land, and the same natural law of the interdependence of all producers, obtain here as on the island of Juan Fernandez. But the difference here would be that the operations of economic laws, perverted from their true uses, have not been permitted to do their beneficent work. Crusoe must seek for an employer, for one who will permit him to go to work on his land, or for one who has bought the permission of some one else. Thus labor is a slave.

The very terms employed are badges of labor's slavery—the sign and signature of industrial dependence. The employer is master or boss, the employés are hands; and we are accustomed to hear men speak of a working class, as if it were a lower class. There is no class necessary to social existence that is not a working class. There is, it is true, an upper and lower strata in the social organization; but the upper strata is the industrial element, and the really lower and ignoble strata is composed of the classes, by whatsoever name they be known, who subsist upon the earnings of the other.

That labor is really a slave we may see if we will but look. The story is told of a beautiful Circassian slave who was pressed upon an American traveling abroad, and he was urged to bring her to this country, for *being a white slave* no one would dispute his right to her.

Look at the condition of the protected Pennsylvania miner of to-day! And then think of people who in winter want coal. And then think of the United States with its vast surface of 3,000,000 square miles with 1 square mile of coal field for every 15 square miles of territory! Think of California, where there are sixty acres for every soul, and men are arrested for vagrancy! Think of Maine, which has more land than the area of the other five New England states combined, and from which men travel west, leaving fireside and family, in search of land! And out along the lines of the far western railroads men lie down at night because they have no home. And yet there is scarcely a cattle raiser or ranchman in all the cattle raising regions of the West who is not a land trespasser or land thief. Thousands of acres of the still existing public domain are being used by millionaire ranchmen.

Until the equal right of all men to the use of this earth is proclaimed and made effectual in the laws, labor must still go seeking an employer, must still have an uneasy suspicion that it is capital that employs him, must still dread the coming of Europeans to our shores, and must still remain the prey of politician, the victim of monopoly, and the despair of angels.

Joseph Dana Miller.

Railroad Men in Politics.

THIS is the title of a rather suggestive paper in the July issue of the *North American Review*, by Chauncey M. Depew. He reminds us in the introductory paragraph that he was an unsuccessful candidate for the presidential nomination before the Republican National Convention in Chicago, 1888. Unsuccessful, he intimates, because of his being a railroad man. It is very evident that he desires to leave

the impression that a reconsideration of that conclusion would be most acceptable. Commenting upon this a well known and able western journal remarks:

If Mr. Depew were not a candidate for the presidential nomination, his article would have a very different character. It is nothing less than astonishing that he permitted himself, under the circumstances, to write an article of this sort. It is so clearly an argument in his own interest that one cannot but be surprised that a man of his intelligence made such a palpable blunder.

Mr. Depew's article is plainly inspired by an ambitious politician, and one who cherishes the interests of corporations with a devotion far deeper than the love he bears the horny hand that made him great. Organized labor is not without good reasons for this belief. I am not chiding him for this preference. I merely desire that we understand each other and to secure this we should know our relationship not only as employes but as citizens of the same Republic.

He supports Mr. P. M. Arthur in his opposition to federation, a most important measure for the advancement of every branch of organized labor, and to advance organized labor is to advance the interests of every man that toils.

That state is the most prosperous whose wage earners receive the most pay for their labor. The workingman is the greatest wealth distributor in the world; this is true in its broadest and most comprehensive sense. In proportion as the resources of the workingman are reduced, so are the channels of prosperity narrowed and weakened. Mr. Depew must distinctly understand that organized labor knows best what it needs and a proposition like federation that never received a breath of opposition, supported by any argument worthy the name, should, if he is sincere, give it his unqualified approval, or show cause why he denies it. The mere assertion that he is "ag'in the gover'ment" will not be considered logical or to the point, or even to echo that sentiment coming from another, who ought to know better, but does not, will not be accepted as sufficient to meet the cogent reasons for the establishment of federation. If he does not understand it, he can learn every phase of its character in far less than half the time that it will take him to convince the railroad men of the country that his failure to receive the presidential nomination was intended as an affront offered to them.

Mr. Depew says: "Some remarkable cases have come under my observation, where the employes with all their supposed hostility to capital became its protectors." There is nothing remarkable in this. Labor never has been hostile to capital. Labor has and always will be hostile to the arrogance and tyranny of capital, but never to legitimate enterprise when conducted with

a spirit of justice toward the employes. The proof of this is clearly shown by the existence and teaching of labor organizations. How does the work of combined capital compare with this? Have they given labor that consideration that organized labor has displayed towards capital? Ask the hungry women and children of New York and Pennsylvania whose industry has built colossal fortunes for a few. Ask the employes of those well regulated railroads of New England, where Mr. Depew says, "the feeling against railroad men in politics never existed." Look at the pitance they receive as compensation for their labor, then you will not wonder at their indifference as to whether Mr. Depew or any other railroad president is nominated or not. Their struggle for existence is too sharp and absorbing to permit their attention to be attracted in any other direction. How often has labor been forced to share what is declared to be the adversity of capital, but who, outside of coöperative establishments, ever hears of labor being invited to share the prosperity of capital, that labor has materially assisted in creating?

In this whole paper Mr. Depew labors to show us that the object of all railroad men in politics from the highest official to the humblest employé in the service, is to advance the interests of the company, thereby advancing his own. This sounds very well, but what are the facts? Surely the disability act making it impossible for an employé to collect damages from the corporation for any injury he may receive is not for his benefit; no more than is the conspiracy law of Illinois that denies its citizens the privileges guaranteed to them by the Constitution. Yet these are only two examples from hundreds of others that have been crammed into our statutes against the liberties of the people by the agents of railroad and other corporations, in our state legislatures and national assemblies. These representatives were not men from the road or shop service, but men who, while acting as representatives of the people, were in the pay of corporations, as are many of our Senators and members of Congress to-day. When the legitimate railroad man enters politics supported by his fellow-citizens of other avocations, then these abuses will be eradicated. But Mr. Depew says, "all railroad men are politicians, and active ones," and further, he continues, "they are teaching the politicians the lesson that their votes are as good as those of anybody else." Now, we all know that railroad men, as a rule, are not politicians and certainly not active ones. With more than one railroad you will not be permitted to be an active politician, unless you are active in securing the election of a railroad attorney. They have not yet taught that lesson of which

Mr. Depew writes, that is, not with the force and effect that the future will demonstrate. Railroad men have realized that there are other and greater considerations than wages and those can only be obtained by a combined effort in politics, irrespective of party.

Tim Fagan.

The Brakeman's Story.

IT was a wild bitter January night, snow and sleet were falling and taken altogether it was a bad night for a railroad man.

I was a reporter and was taking the trip from Terre Haute to St. Louis. For the novelty of the thing I had ridden on the engine for several miles. At last, driven by the cold, I had returned to the smoking car and was enjoying a fine Havana.

The engineer of the train had attracted my attention; he was a tall, nervous looking man with refined, clear cut features and was very pale. I was thinking of him when the brakeman came through and stopping at my seat, said: "Don't you know me, old boy?" I looked up and recognized him as being an old school mate of mine.

I made room for him and we were soon discussing old times and the changes which had taken place since I had seen him last. The conversation soon tended to the railroad and I questioned him about the engineer who was on the train.

"It's quite a long story," said he, "but I'll tell you all about it." "Five years ago, this engineer had a hateful run in the southern part of the state. The road went 'round a sharp curve and below it was a deep cañon and just ahead was a rotten old bridge that had long been declared unsafe, but the company was hard up and wouldn't build a new one."

"Well, one night—it was a night just like this, Charley received word to take the engine up to C—. He was all tired out for they'd worked him hard for a week and he was so dead for sleep he could hardly keep his eyes open. But of course he obeyed orders and went down to the station for his engine."

"Charley lived about a mile and a half from the sharp curve and he knew the ground so well that you'd think nothing could ever happen, wouldn't you?" I assented and Brakeman Bob went on with his story.

"Charley had the cutest little boy you ever laid your eyes on. The young one had just gone into knickerbockers and he'd strut up and down the platform when his father would come in, with his hands stuck into his pockets, as happy as a king. His mother wouldn't have his curls cut off and I'll be hanged if he didn't look like one of

them Fauntleroy's, that folks are talking about."

"Well Charley was forever speaking of him and getting off his sharp sayings and every man on the road took an interest in the kid and would give him candy and such stuff."

"That night Charley didn't have much of a load going up to C—, but on the home run there was a lot of theatrical people, some opera troupe, that had an engagement at Cincinnati and were in a rush."

"Meantime, while Charley had been gone, the old, rotten bridge had caught fire and if something wasn't done right away it would be Charley's last ride, for the curve was sort of up grade and when they got 'round that, they'd be going so fast that that they couldn't stop and would go down into the deep black water of the cañon."

"Charley's house stood up higher than the others and it so happened that little Bert went up stairs to get something for his mother. It was pitch dark, but the little chap wasn't afraid. He looked out of the window and saw that something was burning, he called his mother and she soon saw it was the old bridge. She was a real delicate woman so the only help to be had was Charley's kid.

"The train was due in half an hour so there was not much time left. Of course Bert couldn't run a mile and a half in thirty minutes, but he knew of a short cut, he had often played up there, so, knew the way pretty well."

"He grabbed a lantern and his mother fastened a red scarf around his chest and he ran out of the house like a streak of lightning. His big dog, Don, seemed to understand something was up, so he followed his master."

"When Bert reached the bridge the fire was all out but it was so burnt that he knew the train would go through if it tried to cross."

"He got over, the beams were left, and he was cute enough to hold on to Don and at last he was on the curve. There wasn't any extra space, for the rails were on trestles so he couldn't step off if the train should run him down."

"He stooped down and put his ear to the track. He could hear the far off rumble of the approaching train and soon the head light could be seen looking no bigger than a firefly."

"Little Bert tore off the red scarf and wrapped it 'round the lantern and began to wave it with all the strength his tiny arms possessed."

"Charley was keeping a sharp lookout ahead, and he soon saw his curly headed boy. He knew in a minute that it was Bert and that something had happened to the old bridge."

"They stopped the train as soon as they could but little Bert had been run down and—killed."

The brakeman could not speak and I openly wiped my eyes, he resumed however, in a little while.

"They took him home and his mother carried on awfully and Charley's never been the same man since. Little Bert looked just beautiful in his coffin and there were lots of flowers. All the men turned out and there wasn't standing room in the house."

"The people that he'd saved made up a purse and put up a sort of monument to the boy. The bridge was built over but nothing can make Charley cross it."

"Bert's mother didn't live a year after the accident, and Charley never talks any more is he cheerful for he's always thinking of his child who sacrificed his life that other might be saved."

His voice broke again and picking up his lantern he left me.

The story was so simple, yet so tender, sad and true that I wrote it out from memory that others might hear the story of brave little Bert. *Edith Bradford Green.*

THE WATCHWORD.

From heights above all human strife and din.

I look out o'er our Continent's domain.

The signs of progress point where men have been

Engaged in battle for the honored gain

Of our great nation.

What means this living wall in yonder vale?

Phalanx'd with earnest hearts in unison.

It closes round an emblem, staunch to hail

Its stirring magic word with voice as one

In salutation.

From out the city's busy, teeming throng,

There pours the thoughtful work of brain and hand.

To join the ranks' array of Right 'gainst Wrong

Whose watchword set on high throughout the land
Is "Federation."

Down from the by-paths of the hillside green

Grim faces with firm-ordered tramping file.

The same mysterious pennant here is seen

To stream above the van mile after mile.

Of "Federation."

They march across the plains that stretch beyond

The east to west—this throbbing country's head

Labor hath spanned the gaps that intervene

Its enemies can only stand apart

From "Federation."

Time was when men oppressed knew but despair

But now Success and Right go hand in hand

So long as Freedom's Eagle cleaves the air.

Pure aims, that seek man's good, must join in grand

Organization!

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Steam Distribution.

There are few more interesting problems in steam engineering than to trace out the relative positions of slidevalve and piston, so that we may know just where the piston is for any position of the valve, and *vice versa*.

To those who are not used to this work, it seems, sometimes, rather dry and difficult work; but it may be simplified very much by very easily applied and understood graphical means, and with the aid of a few pieces of cardboard properly cut.

We will take an engine which has four inches of valve travel; the end ports are each one inch wide, the bridge is one inch, the outside or steam lap one inch, and the inside or exhaust lap $\frac{1}{2}$ inch. The width of the middle port or exhaust port is $1\frac{1}{2}$ inches, and the lead we will assume is $\frac{1}{8}$ inch upon each end.

Take a manila card about 6" \times 3 $\frac{1}{2}$ " and draw a light, straight line down the middle of its width. Let this represent the

and a metal-edged rule, slice the valve from its seat, so that it can be moved along thereon.

It might be well to hatch in the laps a little more heavily than the rest of the valve legs, before cutting the valve from its seat.

Now, moving the valve upon its seat, to one side of its central position, to the full extent of its travel, you will be able to see whether or not it opens the end ports fully for steam, and if there is no over-travel; also, whether the middle port is or is not choked by the inside edge of the valve at extreme travel.

Now for the means of telling about the

valve in relation to the piston movements:

Take a manila card about 10 \times 12 inches in size; place it with the length horizontally; upon it, about centrally, draw a circle having a diameter equal to the valve travel. Draw a horizontal and a vertical diameter thereto. Above its horizontal diameter, and parallel thereto, draw a line $\frac{1}{8}$ inch therefrom; this being the amount of lead. Parallel with this, and at a distance above it equal to the amount of the steam lap, or one inch, draw with a needle point a line cutting the circle at the right hand side (supposing it to be an engine that "runs over"). Where the needle point line cuts the main circle, which we shall call the travel circle, or the eccentric circle, draw with a radius of one inch, (because that is the amount of steam lap upon one end), a circle which we shall call the steam lap circle. With the same centre, draw another with a radius of $\frac{1}{2}$ inch, this being the inside or exhaust lap circle. Draw from the centre of the valve travel circle, two diameters tangent to each of the lap circles. Draw another diameter

top of the valve seat. Draw a line at right angles to this, in the middle of the length. Below the horizontal line lay down the ports and bridges to half scale and hatch them in as shown. Above, lay down the valve in a simple form to half scale; hatching it in too. With a good scale rule, lay down a scale of eighths of an inch, to $\frac{1}{2}$ scale, so as to represent two inches each side of the central vertical line. (It is best to mark these in with red ink.) Now, with a sharp knife

of the valve circle, through the centre of the lap circles. Note the angle which this makes with the horizontal diameter of the valve circle. It is the amount in excess of 90° , that the eccentric will have to be set ahead of the crank, for the given lap and lead.

Upon another manila card draw a semi-circle four inches in diameter, with a vertical

radius, which will, of course, be 90° from the diameter. Draw a semi-circle of $1\frac{1}{4}$ inch radius, concentric with the larger one. Lay out to one side of the vertical radius of the four-inch circle an angle equal to that already mentioned as being the excess over 90° that the eccentric must be put ahead of the crank. Cut out the card as shown in the diagram, so that you will have a templet for the angle which the eccentric makes with the crank. Mark one side of it "top," and mark one of the edges of the angle "crank" and the other "eccentric." Make a fine needle hole exactly in the centre.

Perpendicular to the horizontal diameter of the large diagram draw a number of parallel lines, $\frac{1}{8}$ inch apart (red ink preferred), extending across the whole face of the diagram.

Now apply the templet concentricly to the valve circle, using a fine needle for a pivot.

Put the crank edge of the angle in the templet along the left hand half of the horizontal diameter of the valve circle, and note that the arc of the four-inch circle, upon the other side of the angle, cuts the vertical graduations at a point showing that the valve has, when the crank is upon the back centre, gone $1\frac{1}{4}$ inches from its mid position or $3\frac{1}{4}$ inches from its back position.

Turn the templet around to the right and you will be able to see just where the eccentric and the valve are if in crank position, or just where the piston is if in valve position.

In order to show the piston position as well as the crank position, draw upon the same line as the main diameter of the valve

circle a semi-circle ten inches in diameter lying above this diametrical line. Draw a horizontal line parallel with the diameter of the semi-circle and six inches above it. Graduate all the space between this last horizontal line and the valve circle, decimally, say, into inches and tenths of an inch with red lines, marking the inches and half inches more strongly than the tenths.

Make another templet having the same angle as the other, but with the left hand arm five inches long, and the other only two. Put this upon the diagram as the little one was. Mark the long arm "crank" and the short one "eccentric."

Turning these upon the diagram you will be able to read the valve travel upon the bottom of the diagram and the crank and piston position upon the top. Thus: when the valve is at its furthest position forward, the piston has made 0.28 of a forward stroke; when the valve is at mid position and the belly of the eccentric below the shaft the crank is above the central line and the piston has made 0.84 of the out strokes, and so on.

You can learn more in one hour with a simple appliance like this than in a week with non-movable diagrams.

Robert Grimsdale.

Review of the Reviewers.

MR. EDITOR:—I first make my bow to you and offer an apology for some epithets and slang phrases, that I permitted myself use in some of my former articles. They don't look well in a scientific journal, and are unbecoming an argument on a scientific subject. I was led to this by two causes. First, because similar epithets and phrases had been hurled at me and my articles by my critics, and second, because I wished to provoke them to say something definite and tangible on the points at issue.

I am sorry I was influenced by the first cause, for it is not my desire to hurt any one's feelings, nor to get the ill will of any of my critics; and for the second cause, they have partially succeeded. They have not stated enough of their "facts" to make a small subject for dissection; therefore I hope you will excuse me for these "pleasantries" or rather "unpleasantries," and pardon past offenses, and I will promise to steer clear of such in the future. It would be unbecoming your excellent journal. As for the gentlemen—my critics, any or all of them will point out when I used any "epithets or slang phrase" in my articles such were used towards me, I will make due apology. My critics have become numerous, that I cannot reply to them in detail, but must take them collectively at the different points; and they have been

so voluminous, that I can't refrain from exclaiming: "Who are these that darkeneth counsel with words without knowledge; they openeth their mouths in vain" (to get the Dr. entangled.)

The little subject for dissection for a short name, we will call "facts." "Eccentric Strap" wants me to change my tactics. All right! I have been taking my "supposes" and figuring out the "facts." Now I will take your "facts" and figure out your "supposes." And for a basis I will commence with "E. S.'s" big train. Hear him:

"I will give you a brief history of a trip with a 16"×24" eight-wheel engine, and this is a fact." (Reader, please remember he is stating facts, and facts are stubborn things.) "We started out with a train of forty loads, and sure enough loads we found them; we filled our tank and started, but the forty loads were so heavy, that our speed could not be got up to more than six miles per hour. The tank held 2,700 gallons of water and was full and boiler full. Steam was kept at 140 pressure, no waste through the pop; pressure never below 135 pounds, and only down to that occasionally, when the injector had to be put on in addition to the pump to keep water in her. The engine was worked at from twenty to the corner all the time, but very near all the time at twenty. In twelve miles run, time two hours, the injector would not work on account of water being too low in the tank. We cut and ran for the tank and reached it with one good gauge in the boiler, and the tank as dry as a chip, not a drop left in it, and all had gone through the cylinders as *dry steam*, no foaming. The engine was an excellent steamer, and under the given conditions did not burn much coal, about a ton or perhaps a trifle over. So she must have utilized over the average of her heat units; but what catches me is the amount of water evaporated—2,700 gallons—623,700 cubic inches of water in two hours, 5,197½ cubic inches per minute. As steam at 140 pounds pressure is 179 volumes to one of water, we have a total consumption of steam 111,642,300 cubic inches in two hours, and 930,352½ cubic inches of steam in one minute."

I have made a long quotation, so that none can say I have been unfair. Now he rushes at my figures and supposes he has completely demolished them. He then computes his H. P. by the accepted rules and finds he has a little over 151 H. P.,—certainly very little for such a great outlay of steam, and wants to know "which horn the doctor will take now." For his gratification I will say the "Doctor still clings to the same old horn."

Now the points he has given in these "facts" are these: Amount of coal burned, water evaporated, the total amount of steam made, and the amount of *dry steam* that passed through the cylinders; this is given to within half a pound. He gives the size of engine 16"×24" the area of the cylinder heads, the point of cut-off 20 inches, the number of revolutions 35, and the load he hauled (about 466 tons, add 634 tons for weight of cars and locomotive, total 1,100 tons.)

Now let us take a scalpel and cut into these "facts" a little, and see if the "supposes" are correct. The first cut lays open the cylinder, twenty inches of its length, to the cut-off, contain 4,023,248 cubic inches, then it requires four times this much to fill the cylinders for one revolution, 16,093

inches nearly, and thirty-five times this for one minute, which is 563,255 cubic inches. But he says (supposes) he did pass 930,352½ cubic inches of dry steam through the cylinders. Now aint this a stubborn fact? There must be nearly twice as much steam put into the cylinder each time the port is opened as it will hold. *Which horn did you put it in with?* As a "fact" it went through the cylinders. "E. S.," which is right, the "fact" that you made 179 volumes of steam to one of water, or that you only "supposed" you did?

Do you still believe the laboratory basis something tangible and a safe basis to work on? and that it still stays by you, and that it does not elude you when you stretch out your hand to grasp it? If it is still a "fact," please explain how 367,097½ cubic inches of steam which you made per minute above the capacity of your cylinders, got away from you? Again, if your rules for traction are correct you could not have pulled the load at all. We will see about traction further on. Again, if you got 930,352½ cubic inches of dry steam, 140 pounds pressure, to pass through the cylinders each minute, it would be pretty safe to put your average pressure at about 220 instead of 90. This in the calculation would have considerably increased yours "H. P."

Again, with all this surplus steam, you say you could only get a speed of six miles. Then in the name of common sense, why did you not cut off at ¼ instead of nearly full stroke, then your steam would have had 3.2 times as much "efficacy;" this might have given you a speed of eighteen miles per hour. (See "Vulcan's little paragraph July, 1889, pages 596-597.)

For a comparison, we find firemen running up a 60 foot grade at 15 miles, and by your rules he has not ½ enough steam to account for the work done. On the other hand "E. S." is crawling along a comparatively straight and level track in southern Texas at a six mile speed and uses 65 per cent. more steam than it is possible to get into the cylinders by ordinary methods. Don't these "facts and supposes" harmonize beautifully?

And in the light of "E. S.'s" "facts," water will make 179 times its volume in steam at 140 pounds pressure, not only in the laboratory, but in actual work with locomotives pulling heavy trains. This is valuable from a scientific standpoint, if "E. S." don't admit that a few got away before he could get them in the cylinders, and thereby spoil the "fact" and leave nothing but a "suppose."

For further comparison, I will refer the reader to the September number of 1889, page 786, "Pittsburg, Ft. Wayne and Chicago Leaflet," cylinders 18"×24" speed 663 miles, 305.2 revolutions per minute, ports opened 1,220.8 times per minute, ac-

tual running time 158 minutes used 3,600 gallons of water, consumed 13,395 pounds of coal, 84.8 pounds (nearly) per minute, more than 2½ tons per hour, and on the authority of "E. S." used 148,856,400 cubic inches of steam, they do not give the cut-off, but from the speed, we presume there would be cylinder capacity to hold this great amount of steam, provided it could move fast enough to get there, would have to use 772 (nearly) cubic inches every time a port is opened. 942,129.75 cubic inches per minute. Here "E. S." is badly scooped on the coal question, but he holds his own pretty well in getting away with the water, and he is scooped again in getting clear of the steam if they cut off at four inches, and have a cylinder space of 1,018 cubic inches in which to put about 772 inches of steam. But here is a conundrum for them to answer. The throttle is open each time about $\frac{1}{11}$ part of a second. If the throttle is one by 12 inches, then for every inch of the column of steam passing, would represent 12 cubic inches, and to admit 772 cubic inches of steam, will require a column of 64½ inches, this must pass in the $\frac{1}{11}$ part of a second, and would be at the rate of 3.98 miles per minute, or 238.8 miles per hour. At that rate would there not be a tempest in a teapot? You say you can believe all this. Yes for the "fact" of the "Indicator and Dinagraph" we believe it.

But this is not all. There are "Vulcan's" "silent yet eloquent witnesses," his diagrams in May number 1890. Let us dissect them a little more, and for further comparison will take the 1st and 7th as these are the extremes in speed, and the cut-offs the same, 7½ inches. Each throttle would be open 9.375 seconds in each minute, the same time for both 1 and 7. In No. 1 they are open each time the longer. In No. 7 the oftener, so at the end of the minute each has been open 9.375 seconds. In No. 1 the throttle is open $\frac{1}{11}$ part of a second each time. In No. 7 the throttle is open $\frac{1}{11}$ part of a second each time. In No. 1 the four throttles are opened 672 times per minute. In No. 7 they are opened 1,232 times per minute. To fill the cylinder of No. 1 for 7½ inches requires 1,282,680 cubic inches of steam per minute, and to get there through a 1×12 inch throttle it must move about 54 miles per minute, or 324 miles per hour. Can you "git thar Eli?"

But for No. 7, 2,351,580 cubic inches of steam to fill the cylinders for 7½ inches for one minute, and would have to move at the rate of nearly 11.07 miles per minute—664.2 miles per hour. But "Vulcan" gave no size for cylinders, but size of cylinders will make no difference in the velocity. Nor does he say that the steam fills the cylinder to the cut-off at boiler pressure, but has an average of 51 pounds throughout the stroke. The question then is, how much steam at

boiler pressure of 151 lbs. will give 51 lbs average in his No. 1 diagram? If you only got the steam in the cylinder at ½ boiler pressure, it would still require the steam to move at more than 100 miles per hour. Now which "horn" will you take? that the indicator is right, or that there is a great deal less steam used than you "supposed."

Which do you prefer? "Facts" with the "supposes" figured out, or "supposes" with the "facts" figured out. Figures are "facts" that won't "elude" you when you come to grasp them. The indicator gives a flip, and it is gone, and you never can hold it to see whether it is true or not.

You all grumbled because I did not take water into the account in my last article therefore I must not neglect it here. The to make steam for No. 1 it takes 1,861 gallons per hour, 500 gallons more than "E. S." used per hour, and for No. 7 it will take 3412.2 gallons per hour, 712 gallons more than "E. S." uses in two hours, and he was astonished at the "fact" of using so much water. But as "Vulcan" does not say anything about the coal, we will have to pass the diagram from Thos. Pray, jr. He tells the amount of water to the thousandth part of a pound and the amount of coal to the thousandth part of a pound; he has got down pretty fine. But he fails to give the cut-off and boiler pressure, or, perhaps, he does not use steam. He only mentions steam once and in this manner: "The quantities that I promised your columns are actual horse-power per pounds of water and steam per horse-power per hour." Again he says, "It is an arbitrary point on the expansion line from which the pounds of water, etc. are figured. Again, "from the data much more can be had, if only our readers will figure it out."

"Vulcan" has figured the cut-off at 11 inches; thanks "V." Again "Vulcan" says April, 1889, page 313, that "not more than 90 pounds is usually calculated to strike the piston with a boiler pressure of 130 lbs. And as Thos. Pray, jr. has failed to give boiler pressure let us assume it to be 140 lbs. and that it strikes the piston with 100 lbs. Diagram lines certainly indicate this, and the average would then be about 85 lbs. and there would be about 70 lbs. against the piston at the end of the stroke. But come down to the facts and figures. He says I used 346,288 lbs. of water per minute. That will be 9,574.7 cubic inches, and is "supposed" to make 1,713,776.43 cubic inches of steam. The four ports are opened 431 times per minute. This gives about 3.9 cubic inches of steam every time a port is opened. But the space in 11 inches of cylinder is only 3,455.76 cubic inches. He is in the same "dilemma" with "Electric Strap." He has made more steam than his cylinders will hold, and he does not tell us how he gets clear of it. If the port

1×12 inches, then to admit 3,980 inches of steam, a column of 331½ inches must pass through every time the port is opened. If the port was opened to the full extent instantly and remained open while the piston moved 11 inches, then closed instantly, it would be open each time nearly $\frac{1}{1000}$ of a second, but as the valve does not act that way, it will do no violence to common sense to say it is fully open two-thirds of that time, $\frac{2}{3} \times \frac{1}{1000}$ of a second. Then the steam in passing in and out of the port must move with a velocity of 7.37 miles per minute—442.2 miles per hour. Now "Vulcan" says the ragged edge of the expansion line in Pray's diagram is caused by the steam not being able to keep up with the piston; how then, in the name of common sense, will it keep up with the piston in your No. 7 where the piston is moving nearly three times as fast? The whole thing is preposterous and resolves itself into this: *Plain figures and facts, or indicators and supposes.* And the "Doctor" don't have any funny way of figuring, but it is funny how his plain figures get away with "indicators."

Now "E. S." has another "fact" for the "Doctor." I like "facts," but this one is a valuable contribution to science; he has proven how long it takes to raise steam in a boiler from 125 to 135 lbs.,—"about 40 seconds," time accurately kept with a coal pick. This is a "fact" and all "intelligent readers" will certainly appreciate it.

If he calls these "facts" *sculpting* I can stand it three times per day, again at bed time, and once before breakfast, and not miss a hair nor a particle of hide. But if I had to put 6,645½ cubic inches of steam from the boiler into a space of 4,023 inches in the cylinder and do this 140 times per minute, I would feel as though I had been flayed alive. The rest of "E. S.'s" "facts" are made of the same kind of cloth. "Requiescat in pace."

"Vulcan" says, "It takes more power in exact ratio as the speed is increased." "See March number 1890, page 216. And per "dinagraph" it takes about six pounds per ton at a speed of five miles, and 12 lbs. per ton at fifty miles. Now the "exact ratio" between five and fifty is ten. Therefore his philosophy makes the pull sixty pounds per ton at fifty miles, quite a margin between philosophy and "dinagraph." But reverse, and if twelve pounds will pull a ton at fifty miles, diminish in an "exact ratio" and 1½ pounds will pull a ton at five miles, and at the same ratio ¼ pound is sufficient to move a ton one mile per hour. Which is right, your "philosophy" or the "dinagraph?" Again, remember you have knocked out Watt's H. P. theory. If you don't stop pretty soon you will have more laws of philosophy violated than I have, and when you violate them they are damaged.

Again, the law of momentum as ex-

pounded by "A Philadelphian" in March, 1889, page 225, and endorsed by you in April, page 313, are no longer taught by "well informed mechanics." It was found out a good while ago that that law founded on "fact" proved to be a "suppose."

As to "Vulcan's" complaint about my unfairness to steam, let him turn to February number, pages 117-118 and read carefully what I said, and he will have no grounds for complaint.

"How the mighty has fallen" was not intended for "Vulcan" alone, but the rest of my critics and the rule-makers of H. P. generally. "When the "Doctor" makes such a statement he ought to be sure of his case. For "Vulcan's" information I will call his attention to April number, 1889, page 313. See what you say to "G. E. H.," and see May, 1889, page 406. I could give other references, but this is enough to show that the "Doctor" is pretty sure of his case, and that "Vulcan" himself had come down at least a button-hole or two.

"Vacuum" comes rushing at me with his locomotive under full headway, in a manner that would be appalling to a nervous individual. In the first place he makes a wrong diagnosis of my case, therefore his treatment is all wrong. But wrong treatment with him may be all right, for I presume he would delight to annihilate me. But I am not gone over the river yet. I thank you, I feel exceedingly well. After his boast of what large trains are started, and I showed him how they were started, and pushed him to the "wall," he unwillingly admits "slack as a factor in starting trains, but not to the extent I claim." But he made an effort to show to what extent "slack" was a factor. He refuses to give any information on the point, but branches off with "Yes I see trains started every day that are made up with the express purpose of eliminating slack &c." and says he could give the approximated weight of them, ("did I see fit"). He didn't see fit: he is very voluminous in words, but they are without knowledge. I will venture the assertion that the trains he sees started every day do not require 20,000 pounds pull, "dinagraph" measure, quite a margin between that and 34,000 pounds. But this is far in excess of the slipping point of the drivers if your rules are correct. Therefore the *Rules or Dinagraph* should be changed. I will not be so selfish with this gentleman as he was with me. I will answer one or two of his questions to show how careless he reads and how miserably he construes. Question: "Did you not in these examples take the entire distance run by these trains, and charge it all up as *work done by steam*, and compute horse-power on that basis?" Answer, No—I computed the part of the work that steam did in the whole run, nor did I give steam credit for doing it all. I am trying to keep steam separated from other

forces that may or may not cut any figure in the case. It is not my province to compute the work of any other factors at the present. The question is not evaded.

But you bring in other factors and say that "trains were running the engines, not the engines the trains for a large part of the distance shown, and you say you 'know of no rule of logic or common sense to compute H. P. on this basis.'" Well the basis is yours, you must do the computation; for I don't know whether the trains on that road or any other road are in the habit of "running the engines" for a large part of the distance or not. Wonder who "has got a little of every occult force known to nature mixed with steam?"

As for your "impossibility" for an "engine to pull the trains instanced the distance indicated, with amount of coal shown," you say the trains pulled the engines a large part of the way; this may help the impossible, and further I will refer you to B. A. July No. page 606. To "Vulcan" May No. page 415 also to page 419 see what "U. S." says his fireman swears. This should be a "fact" sworn to and attested by "U. S."

"Uncle Silas"—I will first call his attention to January No. 1890 page 23, and about half a dozen of the last lines of his article. Then read your article in May No. and note some of your expressions. Now turn to July No. page 593, top of first column read down half dozen lines and note particularly the 4th and 5th lines. Then read your whole article. *It may do you good, but it is not likely to benefit any one else.*

U. S. Starts out with: "While it is not my wish to enter an argument which is like a jug handle" etc. Don't blame him, when he knows the other fellow has the handle; and the most that he can hope for is to get the Dr. entangled, in which his success is a great failure, and he says "it is all in Rankine," and he leaves it there. And the average reader will get about as much information from his three formulas as any other part of his discourse, viz:

"3. Heat wasted by the engine—XXXXX.

"4. Useless work by the engine—XXXX.

"5. The useful work—XXX."

As his efforts can all be solved by 3 and 4 there was no need of his introducing 5. I feel sorry for U. S., that he had such great labor to produce so small a progeny. Therefore I will pursue this *useless work* no further.

Another point to which I wish to call attention is the two cylinder question. For example, take the Fireman's engine 19" X 24" and Vulcan's calculations Jan. No. page 18. Area of piston 283½ sq. inches: round stroke 4 feet, m. e. p. 70 pounds. Then $283\frac{1}{2} \times 70 = 19,845$, pressure during the stroke, and $19845 \times 4 = 79,380$, foot pounds of work, by the steam in the cylinder. And for both cylinders 158,760 foot pounds. The circum-

ference of driver 13.6 feet, $158,760 \div 13.6 = 11,700$ pounds (nearly) the tractive force of the engine. And if it takes 11 pounds pull at 30 miles per hour on a level track, the locomotive in question would pull 1063 tons.

If there is an average pressure in the cylinder of 19,845 pounds this force moves forward two feet, then reverses and goes back two feet, this is the motions in the cylinder and this motion is communicated through the driving rod, which does not move in straight lines, to the wrist-pin which moves in a circle. If the wrist-pin moved forward and backward in straight lines as does the piston then the force could be estimated on the pin the same as on the piston. But such is not the case; and the pin moving in a circle goes more than 6 feet while the piston moves 4 feet. If we say the steam is pushing with a force of 19,845 against the pin all round the circle, then the foot pounds of work would be $19,845 \times 6 = 119,070$ instead of 79,380, evidently too much for the piston could not give more than it has. But reduce 19,845 by one-third, we have 13,230 and this multiplied by six gives 79,380, the same as the force on the piston multiplied by 4. But here comes another Rule in mechanics called the moments of force. This rule is to measure a force moving in a circle around a point; and this force is supposed to pull equally at all points in the circle, which is not true of a force applied on a wrist pin. The Rule is, multiply the force by the perpendicular distance from the point to the action line of the force. The perpendicular distance is the radius of the circle in which the force moves. If the radius of the circle is one foot you multiply by one, but if the diameter of the circle is one foot you multiply by ½ &c. In this case the radius of the circle is one foot and 79,380 multiplied by one does not change it. But the push and pull on the pin is not constant, nor is it on a level of one foot except at two points in the circle, and the level is constantly changing from one foot to nothing and from nothing to one foot again; also the force is constantly changing, but in the present we won't consider this, but suppose what it may average. Now when the pin is on the centre there is neither pushing nor lever. Then instead of a lever of one foot all around the circle it is not possible to average more than six inches then to get the true average force on the pin we will have to divide the 79,380 by 2, this gives the average force on one wrist pin or in one cylinder just half what you are in the habit of estimating consequently the force we estimate for one cylinder is all the force it is possible for both to give. Therefore yet Rules give double the horse-power of the steam; to harmonize with "facts" provide all other conditions were true I think an one desiring to come to the truth can comprehend the above.

In comparing the "facts," figures, coal, water, steam, indicators, etc., in the above table we find a great diversity of "facts." While "Eccentric Strap" uses the least coal and water, yet he makes and passes through the cylinders enough dry steam to fill the whole cylinders full from one end to the other, nearly three times every revolution. While P., Ft. W. & C. burns more than five times as much coal, evaporates only a little more water than "E. S." and has only steam enough to fill about three inches at each end of the cylinders every revolution.

And Thos. Pray, jr., burns nearly 3½ times as much coal evaporates nearly double as much water as "E. S." and has little more than enough to fill his cylinders once, every revolution.

As Vulcan gives neither water nor coal, I know that in the kindness of his heart he will excuse me for assuming just enough of water to make steam enough to fill his cylinder to the cut-off, not meaning that they are filled that far at boiler pressure. But that it requires that much from the boiler, and has a pressure in the cylinder less the amount of loss in transit from boiler to cylinder. Now compare the velocities with which the steam must pass through the ports, and we find the "facts" as elastic as steam, and from a velocity standpoint, alone becomes a "Reductio ad absurdum."

I am glad F. J. Hill's article for August has come to hand before I have finished this article. It is an excellent thing for comparison with others. He takes up my figures in December *Magazine*, where I "supposed" a case to show that it was impossible to make steam enough to fill the cylinders to the cut-off. (But he says nothing about what I said could be done). But nearly all, and the indicator diagrams, even to "Vacuum's" diagrams in August *Magazine*, seem to claim that much steam from the boiler, but do not claim to get quite the boiler pressure in the cylinder. In "Vacuum's" case, he says: "observe that admission line does not come up to boiler pressure; this is due to the fact that the steam travels through 70 feet of pipe from boiler to cylinder." If it had not been for the "fact" of the long distance traveled it would have reached there with boiler pressure.

Hill says it only requires from the boiler about ½ to ⅓ the amount shown in my "suppose," "Vacuum's" piston speed is greater than mine, there-

fore, his claim for steam is more than ten times what Hill claims. But Hill says I "give the boiler no show; that I raise steam by rule." The rule given was 150 pounds in 15 minutes, and there was only steam enough for $3\frac{1}{2}$ seconds. Hill says it only requires one-tenth of what I supposed. If so, there would be steam enough to last 35 seconds. And I don't believe that Hill will claim as a "fact" that he can raise the steam in his boiler 150 pounds in 35 seconds, if he takes a second sober thought; and "she" would in my case only require the cylinder filled about $\frac{1}{6}$ of an inch at each end, is what Hill's figures lead to, and to obtain this, steam must be raised 150 pounds in 35 seconds. This goes "E. S." more than 15 times better by the coal pick. In other words by Hill's calculation the cylinder would be filled one-fifth of the cut-off, i. e. if the cut is at five inches, one inch in length of cylinder is filled with steam; or rather that much is taken from the boiler. Quite a margin between "E. S." and Hill. Where Hill claims 1 inch, "E. S." wants 45. In other words the amount of steam that will run one locomotive for "E. S." will run 45 for Hill. If you cannot stoop low enough to take in this, I cannot reach up to you.

There is one point more I wish to touch before I close, "The average steam pressure." For example, I will take E. S.'s big train, as he made more than enough steam to fill his cylinders to the cut-off—20 inches—at boiler pressure, then to the end requires an expansion of about $\frac{1}{2}$ of its volume. Then in 20 inches of the cylinder there is a pressure of 140 pounds, and from 20 to the end it will be $140 \div 117 \div 2 = 128\frac{1}{2}$. Now divide the length of the cylinder into six parts; five of these parts have an average of 140 pounds, and one $128\frac{1}{2}$, then $140 \times 5 = 700$, and $700 + 128.5 \div 6 = 138$ pounds for an average, instead of 90, as supposed by "E. S." Again, take "Thos. Pray, jr.:" Amount of coal and water given, steam accurately measured with the indicator, and as he has considerable more steam than will fill his cylinders to cut-off—11 inches—as with "E. S." will assume the pressure at 140; then have 11 inches at 140, by expansion from here to end of cylinder will average $91\frac{1}{2}$, and the average for the whole stroke would be about 17 pounds. But to get his horse-power according to rules requires about 91 pounds average. Therefore, his estimate on horse-power must be too low when the water used is sufficient to make more than enough steam for an average of 120 pounds, if he could have utilized it. These are slow trains. Let us take a fast one. The P., Ft. W & C. make all their 1,366.63 gallons of water per hour into steam, at 179 to 1, and they only have steam enough to fill the cylinders, about three inches each time the port is opened. But this is enough to give an

average of about 84 pounds, if it is all utilized, and for that small amount to get into the cylinders, it must travel about 240 miles per hour. Now take what Rankine gives you as the "efficiency" of steam $\frac{1}{2}$ to $\frac{1}{10}$ —about 9 pounds m.e.p. and this is near what I figured out from another standpoint. A great deal more can be figured out, but I have no more time, and if you cannot figure out the rest of it from the starters I have given you, just trot out some of those smart ten or fifteen year old school children and let them do the figuring. My critics have backed down, as I supposed they would, when I asked them to solve a few plain questions, one dodging behind the rules, another behind the Editor; others seemed to think the less said easiest mended. *so Vacuum, come down, or perhaps you will get no dinner to-day.*

Now, as we approach the last station, and will soon have the locomotive in the stall, I will blow the whistle for "Vulcan, for he has never found steam enough to blow it.

One evening, after quitting work with a small engine, steam at about 40, and set to blow off at 60 pounds, I opened the injector to put more water in the boiler. I fired up with chips and split pine knots, so as to make a quick, hot fire; presently the steam commenced rising, and soon it was ready to pop. Then I opened the whistle, and in five minutes the steam came down eleven pounds. The ordinary work of the engine would not have lowered it at all.

According to the rules of discussion, if opened, I have the prerogative of closing. Now, what I have suggested is enough to keep any of you studying for the next twelve months, if you are of an inquisitive and investigating turn of mind, and are not satisfied that everything is established and already found out. And if there are any who cannot stoop low enough to comprehend what I have said at present, I don't know how to reach you.

My lady friend, at Argenta, can rest easy. I am "right side up with care," although steam and horse-power have carried me thousands of miles since I left there. Some times at five and other times at fifty miles per hour, but as it only takes a little over one pound of force to carry me along at five miles per hour, there has not been much coal or water wasted.

Now, Mr. Editor, accept my thanks for your kind indulgence. May your shade never grow less, nor your purse slimmer, and my best wishes shall ever be for your success.

Now I extend the hand of friendship to the Brotherhood; you are doing a noble work, and are brave and generous men. Though some of us have had a little trouble about steam, I hope all may be profitably thereby, and that it may yet lead to great

results. And may it be long before you are ditched for the last time; also remember there is a hotter place than the furnace of a locomotive, and less water. To all, "Au revoir."

Russell, Kas.

L. A. Wilson.

MR. EDITOR: When I glanced at those diagrams in the *August Magazine*, I was just a little bit hot in the collar. The diagrams are so entirely out of proportion to the orig-

cylinder, 78 revolutions per minute. Card No 1 was taken with 70" boiler pressure, card No. 2 with 84". Steam travels through 70 feet of pipe, from boiler to cylinder, which will account for admission line falling so far below line of boiler pressure. The short lines drawn across admission line indicate the amount of compression. Card No. 1 shows the greater amount, and both cards show more in head-end of cylinder than in crank-end. The true Corliss theory

Card No. 1.

Boiler pressure 70.

inal scale as to render them of no use. To correspondents who feel inclined to jump on me with both feet, I would say, that I am not to blame for the appearance of the cards and, I am satisfied from correspondence with the Editor, that it was one of those accidents that are bound to occur at times, no matter how much care may be taken to avoid them. Now in order that my original purpose may be carried out it

is to show no compression at all. In that case, the admission line would run up straight from atmospheric line to highest cylinder pressure. It is a disputed point among engineers as to this theory being correct. Head-end of card No. 2 was run over twice, which accounts for double expansion line. With the automatic cut-off, the cut-off is constantly changing with every slight variation in the work the en-

Card No. 2.

Boiler pressure 84.

will be necessary for correspondents to forget that those August cards were ever published, and consider these:

These cards were taken with a 40" spring, from a Hamilton Corliss engine, 22" x 48"

gine is called upon to do: the speed at all times remaining constant. We might take 50 cards, in as many minutes, from the same cylinder, and probably no two of them would show exactly the same point of cut-

off. I want the boys to notice the difference in appearance between these cards and the ones published by "Vulcan" in *May Magazine*; the difference is due as much, or more, to peculiarities in the Corliss valve motion, as to different conditions under which they were taken. I am fully alive to the fact that there can properly be no comparison in point of economy between the Corliss and slide valve motions; and my sole purpose in publishing these cards is to start a discussion that may lead to good results, and throw some light in what are now dark places to a great number. I have no doubt both "Vulcan" and "Uncle Silas" can pick out a great many imperfections in these cards, as I suppose, (judged by the Corliss standard) they could be improved in point of economy. Now let all the boys who are interested in this subject, (and I feel sure there are many) pitch right in and question all they want to; I have the facilities at hand, also the time, and will do my best to accommodate them.

Vacuum.

Review of August Mechanical Department.

DRAWING MR. EDITOR: After getting us all started on the subject of drawing water over 34 ft. **WATER OVER** "Vacuum" comes out now **34 FEET.** and says that he does not think that it can be done, because the law of nature cannot be abrogated by any such device. I have had a little personal experience with pumps lately and am inclined to believe that it will require a very good pump—one with an air tight piston that would produce a nearly perfect vacuum—(no relation to our friend "Vacuum" with a big V.) to draw water even up to the 34 ft. limit, and if any one can give us the address of a man who can put in a pump that will draw water higher than that I can assure him of one order right away, for it would be natural to assume that it would also be an easy pump to use within the limit.

AUTHORITY. Our friend "Vacuum" does not believe in blindly following the dictates of any one who may be presumed to be authority, and wishes to be allowed to reason out the problems that are presented to us from time to time by the use of such faculties as we may be endowed with, and in this idea is embodied all hope of progress for the world. I pointed out the folly of following authority by giving the opinions of some of the learned predecessors of our Dr. Wilson, who declared that any one seeing, or riding on, a train of cars would become mad or crazy and that railroads ought to be prohibited. Then again while the first steamship was actually on its way across the ocean an eminent "authority" in a very learned essay on the subject declared the thing impossible, and so it has been with

most every invention that has been produced. Learned men, high authorities, have stood by and said: "It cannot be done," but the practical workers, knowing their business, have cried out: "Away with such authorities; it can and shall be done": and by patience and persevering study they have overcome the most stupendous difficulties and accomplished seeming impossibilities.

INDICATOR The indicator diagrams presented by "Vacuum" in the *August Magazine* afford food for thought, as they are taken from a type of engine in which we find embodied the most economic principles of engine running. The aim of the Corliss type of engine is to use the steam with a full throttle and regulate the speed by the cut-off, as is clearly shown by the double diagram (No. 2) where it shows the pressure with a light and then with a heavier load. My theory has ever been that if we have a high pressure engine we ought to use the steam at as high a pressure as possible and to do this we must use a full throttle and govern by the cut-off, as is shown by these so-called automatic engines.

INJECTOR That the injector is an unsettled problem all hands readily admit and welcome any light on it from our friend "Vacuum" when time and inclination serve him to give it.

30 TON That question from the *"Machinist"* about a fire-box capable of holding 30 tons of hard coal reveals a lack of calculation in the writer, for nearly everyone knows that it takes a large wagon to hold a ton of coal, and that it would take thirty of them to carry thirty tons. It is commonly estimated that it takes a space equal to 29 cubic feet to hold a ton of coal, and as an ordinary hard coal fire-box is not quite 3 ft. wide and but little over 3 ft. high it would take one nearly hundred feet long to hold 30 tons, if filled up to the crown-sheet. It is consoling to us firemen to hear that no engine of this class is in existence anywhere.

WHEEL The other item about the movement of a wheel when pulled by a rope fast to the pin on the lower quarter, and the movement of the piston through the cylinder really relates to the fulcrum in both cases, and the answers, if they are taken as authority, would settle the point of a Locomotive fulcrum as at the centre of the wheel, while in the case of the detached wheel it would be at the rail.

ADMITTING In firing, the first and main object of a good fireman is to keep her hot, and the next aim should be to do it with the least possible expense for fuel and repairs. In some cases it may be

come necessary to sacrifice fuel to save repairs. Tender flue sheets are very easily started to leaking; the least breath of cold air that strikes them starts them. This is due to the unequal contraction of the sheet, which is cooled off in one place by a current of cold air and still kept hot in other places by heated air, and this causes the leaks. Anything that will lead to an unequal distribution of air over or through the fire will tend to make flues leak, whether it be an open door or an open damper. In our hard coal fire-boxes we have no dampers at all, but allow a free ingress to the air to reach the fire, and we find we must have this to insure steam, for if by any oversight ashes are allowed to accumulate in the ash-pan, thus cutting off the free admission of air to any part of the fire, we need not expect to have steam. The air thus has an unrestricted entrance to a hard coal fire at all times and the pressure must be regulated by the use of the door to admit air over the fire. A small quantity can be thus used on most engines without injury to the flues, but if too much of it is admitted some of it will not be heated enough in its flight over the fire, and produce disaster to the flues. I have thus been forced to choose between leaky flues or having her pop off, and as I deem the leaky flues the worst of the two. I have kept the air out and let her pop. Each engine will soon show the careful fireman what kind of treatment suits her best in making steam and avoiding repairs, and no universal rule can be laid down that would apply to all alike. I once fired a hill engine for some time; going down the hill backwards to get the cars left at the foot of the hill by other trains. It was our common practice to clean the fire while running down grade, and our engine would show no sign of a leak when I opened the door, but a few minutes work at the fire with the door open would start the flues. I never could devise any plan to clean the fire without opening the door and had to let her leak in spite of all other care.

Vulcan.

MOBERLY, Mo., Aug. 3d, 1890.

MR. EDITOR:—I see in the July No. (page 606) where one of our firemen gives an example on light firing. I would like to say to the firemen at large that (B. A.) Big Annie was running down Huntsville hill when she hauled eleven coaches fourteen miles with eighteen scoops of coal. I have fired an engine from here to St. Louis, a distance of 148 miles, making ten stops and using five minutes for crossing St. Charles bridge in 3 hours and 40 minutes on two and a half tons of coal; this is about the average record on the Wabash west of the Mississippi river.

F. A. McGinty.

The Railways of the World.

In a late issue of the *Archiv für Eisenbahnenwesen* appears the following table, giving the railway mileage of the world, at the close of 1888, as compared with 1884:

Country.	1884. Miles.	1888. Miles.	Country.	1884. Miles.	1888. Miles.
Prussia	13,572	15,120	Paraguay	45	94
Bavaria	3,119	3,324	Uruguay	292	392
Saxony	1,349	1,389	Chili	1,150	1,802
Wurtemberg	886	915	Peru	814	837
Baden	826	879	Bolivia	35	81
Alsace	816	905	Ecuador	43	127
Other German States	2,251	2,781	Guiana	22	22
Austria	13,715	15,988	Jamaica		
Great Britain and Ireland	18,872	19,920	Barbadoes, Trinidad, and Martinique	99	295
France	19,388	21,912	British India	11,527	14,515
Russia	16,001	18,274	Ceylon	162	180
Italy	6,264	7,675	Asia Minor	231	409
Belgium	2,713	3,000	Asiatic Russia	144	891
Holland	1,650	1,864	Persia		11
Switzerland	1,774	1,848	Dutch India	718	763
Spain	5,396	6,008	Japan	265	721
Portugal	939	1,189	Malay States		31
Denmark	1,181	1,224	China	7	86
Norway	941	971	Cochin China	52	52
Sweden	4,101	4,677	Egypt	932	932
Servia	152	327	Algeria and Tunis	1,203	1,771
Roumania	995	1,538	Cap Colony	1,545	1,776
Greece	109	416	Natal	107	217
Turkey	867	1,024	South Africa		50
Malta		7	can Repub. Mauritius, Reunion, Senegal	168	410
United States	125,358	156,153	N. Zealand	1,570	1,868
Canada	9,657	15,162	Victoria	1,663	2,167
Newfoundland	50	80	New South Wales	1,687	2,264
Mexico	3,231	4,177	South Australia	1,058	1,625
Central America	352	533	Queensland	1,207	1,930
Colombia	165	212	Tasmania	216	327
Cuba	994	994	West Australia	138	253
Venezuela	86	249			
Dominican Republic	50	71			
Porto Rico	11	11			
Brazil	3,799	5,549			
Argentina Republic	2,548	4,509			

The number of locomotives employed in different countries are as follows:

Country.	No. of Miles of Road.	No. of loco- motives.	No. per 100 Miles.
Germany, 1888	24,332	12,811	52
England, 1887	19,587	15,552	78
France, 1887	20,826	9,747	46
Austria, 1886	14,235	4,610	32
Italy, 1887	7,309	2,256	30
Spain, 1887	5,855	1,616	27
Belgium St. R. R., 1886	1,970	1,792	91
Belgium, other lines, 1886	899	540	59
Holland, 1887	1,567	657	42
Switzerland, 1887	1,747	650	37
European Russia, 1887	16,758	6,691	40
Sweden, 1885	4,152	717	18
Norway, 1886	971	139	14
United States, 1888	156,153	29,398	19
Brazil, State lines, 1887	1,251	224	18
British East India, 1886	13,350	3,224	24
New South Wales, 1887	1,988	426	21
Victoria, 1887	1,926	364	19
South Australia, 1887	1,417	176	13
New Zealand, 1888	1,752	271	16
Algeria and Tunis, 1887	1,466	243	16
Natal, 1887	217	48	22

The first table shows that in 1884 the total mileage of all the countries in the world was 291,285 miles, that in the four years, to the close of 1888, it was raised to 367,781 miles, an increase of 76,496 miles in all the

world in these four years, and that nearly one-half (31,000 miles) of it was built in the United States alone, showing very plainly that this is the railroad man's country above all the world. It has often been asked why we hear so much about foreign capital being invested in this country, but when we look at the development of our railroad system and remember that they are only the arteries of trade, whose mighty pulsations are felt in every corner of the land, and that they indicate an astonishing vitality and growth of the whole country, it is no wonder that we find the money of the world at our service to still farther develop our resources, and secure a share in the profits arising therefrom.

The second table takes up the subject of locomotives and shows that in the countries on that list having 299,797 miles of road there were 92,062 locomotives in use; to this must be added about 15,000 more for the 68,000 miles not included in the last list and at least 15,000 more as the natural increase of the last two years and we have an array of about 125,000 locomotives, with as many firemen and engineers to man them, engaged in the traffic of the world. It shows that our Order has a large field to work in, as but a small part of this host is as yet found beneath our banner, keeping step to the march of progress. Even in our own country, where every one of its 35,000 firemen should be in the Order, we find many standing aloof, but at the same time reaping the benefit of our organization.

Another point in connection with the last table is the number of locomotives to the hundred miles, which ranges from ninety-one in Belgium and seventy-eight in England down to fourteen in Norway; the United States being put down as averaging nineteen locomotives to each hundred miles. Some time ago (in August, 1888,) we had a comparative table in this *Magazine* showing that some of our eastern roads had as high as sixty-nine locomotives to a hundred miles, while some in the extreme northwest had only four to the mile, and nineteen may be considered a fair average. Our eastern states are not very far behind our trans-Atlantic cousins in the amount of motive power required to transport the passengers and freight committed to the railroads of their sections, and bid fair in the near future to even outstrip "Old England" in the amount of business done on the road. *

CHICAGO, August 10, 1890.

MR. EDITOR:—I am a much interested reader of the mechanical department of our *Magazine*, although I have never contributed anything to its columns, but seeing "Subscriber's" questions in the July number (Page 607) I have decided to give him my information on the subject.

"Subscriber's" questions are:

First: Why are the rocker-arms of some locomotive engines put up out of centre, or have to them what some people call lead while on other locomotive engines of different pattern and the same size the rocker-arms are central?

Second: Why is it that on some engines the rocker-arms $\frac{1}{2}$ " out of centre while on others $\frac{1}{4}$ " and still others are only $\frac{1}{8}$ " out of centre?

Third: How in a mechanical way do you find how much out of centre to make the rocker arm and what mechanical rule is used?

In the foregoing question (No. 1) "Subscriber" asks "why the rocker-arms of some engines are put up out of centre or have in them what some call lead." Now I think "Subscriber" has been misinformed in regard to lead as lead is obtained from position of eccentric; nor do I think "out of centre" is just the right term to be used in his questions. I think according to the cuts accompanying "Subscribers" question that he wants to know why the rocker-arm on most engines are put up out of line which I will say first, that this is done to give the engine a more perfect valve motion. Second, because the centre of link block pin is farther below the centre of driving shaft in some engines than it is in others. Third, to find how much out of line the rocker-arms should be, we must have the upper rocker-arm stand at right angles to the valve seat, (when in this position the valve should set centrally over the port) then from centre of driving shaft we draw a line to the centre of link block pin and this line the lower rocker-arm should stand at right angles. Therefore "Subscriber" will see that the further the lower rocker-arm extends below the center of driving shaft the farther out of "centre" it must be placed.

Mr. Briggs on the Locomotive Service.

Mr. Briggs, the President of the Railway Master Mechanics' Association, in his opening address at the recent Convention of the Association, spoke as follows:

The great diversity of territory through which our locomotives travel would seem to prevent anything like national uniformity in construction. Severe grades demanding features in the engine required over prairie country, and other special forms provided for use in special localities. But as we travel through our country and see the different locomotives at work, we cannot but be struck by the great similarity of these powerful machines. We feel a glow of pleasure in the knowledge that existing uniformity and excellence has been attained more through the labors of this Association than from any other influence. This thought inspires us with confidence in our progression and look forward to our annual convention in the security of individual improvement as men and enlarged and enlightened service for the railways we represent.

As we contemplate the immense work that locomotives have been made to perform in the transportation of the harvests from the prairie to the seaboard, in the movement of all living and dead freight, creating cities, establishing markets, breeding life and civilization, making the "desert blossom as a rose," let us not forget the grand ar-

of faithful engineers and firemen to whose care these vast machines are entrusted; an army of men larger in numbers, stronger in discipline, richer in intelligence and higher in bravery than any of whom Alexander could ever boast. These men, largely recruited from humble life, form a perpetual monument to the mothers who gave them birth, true type of our American womanhood, who sent her boys to school and struggled so often with poverty and privation that her children should have every opportunity for gaining knowledge, and who by a lifetime of devotion has encouraged and fortified us all in the development of our progression.

Let us thank God for what has been gained, but let us not think that everything has been gained; much has been done, but much remains to be done. Science is daily improving our knowledge as to the combustion of fuel; mechanics is daily improving the learner in the care of these machines. It is not necessary now as in former days, when you and I were young men and members of the rank and file, to search after this knowledge—by the aid of a tall candle, perhaps; the knowledge thus obtained by those early pioneers of progress has been so concentrated and compiled that it is now within the reach of all; a few cents will place these most precious thoughts within the grasp of the student. Let us unite in our endeavor to educate our men in their profession; inducing them as far as practicable to read and think over the scientific literature flowing towards them. Animated with such knowledge coupled with their daily experience, the evolution of efficient service to our companies must result, and we and they will have an enduring place in the history of our progression.

Mr. Briggs does not appear to have forgotten the days when he belonged to "the rank and file," and had a struggle to obtain knowledge, but he has evidently made a good use of his opportunities, for his opinions on mechanical subjects are not readily controverted, and he is held in esteem as a worker in the Association.

Mr. Briggs pays a high tribute to the Engineers and Firemen for their many sterling qualities, which it seems are necessary in the railway service, but while admitting that much has been done, he thinks that a proper use of the means so ready at hand will lead us on to still greater attainments, and for this purpose he calls on his associates to unite in the "endeavor to educate our men in their profession, inducing them as far as possible to read and think over the scientific literature flowing toward them." With Mr. Briggs' example and his words to cheer us on, let us prove ourselves worthy of the encomiums bestowed by him, and let the future prove that our aim is to "elevate the social, moral and intellectual standing" of our members, and that they are willing and ready to do all in their power to be thus elevated.

A Puzzle.

At a time when wheeled vehicles were not as plentiful as they are now, a wagon was slowly making its way over the rough roads of a sparsely settled part of Scotland, where such a thing was a novelty to the inhabitants. A lad with an inquiring turn of mind kept following the wagon, and on being asked what he was after he explained it by saying that "he wanted to see how long it

would take the big wheel behind to catch the little wheel in front." Nowadays we are better posted and know that the big wheel never can catch the little one, for the axles will not permit it, and will make the small one revolve a greater number of times to get over a given distance, and that the number of revolutions will be in proportion to the circumferences of the two wheels. As there is no connection from one wheel to the other, each one is free to turn as many times as the ground to be traversed may require of a wheel of its diameter, and nothing prevents the free movement of either. But suppose a rod or a bar was attached to the wheels such as the so called side, parallel or connecting rods of a locomotive and what would be the result, even if the utmost care were taken to have the pins on which the rods turned at equal distances from the centres?

The answer would at once be obvious that there would be a great strain on the wheels and in fact on the whole wagon, for the wagon could not be moved without sliding one or the other of the wheels, and that this would have to be done by a strain conveyed from one wheel to the other by the pins and connecting rod. But, says someone "what has this got to do with the locomotive where all the drivers are the same size?" Not so fast my friend! While there is not so great a difference in the drivers of a locomotive as there is in the wheel of an ordinary wagon, a less difference may, and no doubt does, exist in many, yes very many cases, and this difference may result from several different causes. In the first place it might just be possible that a wheel can be turned out of the shop differing from its mates $\frac{1}{4}$ of an inch in circumference and yet on a 5 foot wheel which revolves 334 times to the mile it would mean a slide of one of the wheels of over 5 inches to the mile. If there were a difference of $\frac{1}{4}$ in diameter it would mean a slide of over 15 inches in each mile traveled, and yet it is possible that some wheels might, on close inspection, show that much out on leaving the shop.

Again, unequal wear produced by different degrees of temper in the tires may cause wheels which were turned up true at first to be of unequal size after running awhile, and this difference is often far greater than the above supposed cases.

Again, the use of sand to prevent slipping of drivers will ultimately accomplish a turning or wearing down of the wheels to an unequal size. Sand pipes are usually so placed as to give sand on the rail in front of all drivers; the first one gets the full effect of the sharp grains and is worn down by them in the same manner as a new file shows its power; the second wheel catches what is left of the sharpness and is worn by it in proportion; while the third wheel (if there

is one) hardly finds enough to take hold of and remains the largest of the three. On account of breaking front pins by slipping the wheels just as the front ones had taken the sand, and before it had reached the main drivers of their "moguls," a change was made in the position of the sand pipe on one of the trunk-lines, and the sand is now delivered to the main and back driver of the "moguls" leaving the front ones to get along without any. The front wheels therefore remain nearly full size, the main ones are in many instances worn in $\frac{1}{4}$ of an inch and the back ones $\frac{1}{2}$ of an inch; making three sizes of wheels firmly bound to each other and compelled to revolve uniformly. As before stated a 5 foot wheel would make about 334 revolutions to the mile and would then be about 21 feet ahead of a wheel, which had been worn down $\frac{1}{4}$ of an inch and would thus be $\frac{3}{4}$ of an inch less in circumference, both having made the same number of revolutions. The back wheel having been worn down only $\frac{1}{4}$ as much as the main one would naturally occupy the half way position between the two other ones, or about 10 $\frac{1}{2}$ feet from either, if allowed to revolve 334 times without restraint. But they all reach the end of the mile at the same time and by making the same number of revolutions, but now comes the question: how is it done, and what amount of power has to be expended to do it.

It is evident that one or two of the wheels must slip, either ahead or back, to accommodate themselves to the others and that this slip must go on constantly in order to allow the pins to remain in the same position in regard to each other. When such a process is in continual operation on an old "mill" may it not account for much of the "grinding" and some of the "pounding" which is going on and which often defies detection? The weight on the drivers of an ordinary "mogul" is given at about 33 tons or 11 tons on each pair of wheels, and this leads to the query: how much power is thus needed to simply move the engine, slipping the wheels some with every turn? These thoughts are presented for the consideration of our readers, and those in authority over rolling stock of our railroads, and seem to deserve more than passing attention, from the fact that if the defects above stated were eliminated much power now lost might be used to a better purpose.

The Great Railway States.

According to the *Railway Age* the grand total of railway mileage of the United States to January 1, 1890, is 161,270. Illinois continues, as she has done for twenty years, to lead all the other states in respect to mileage, and has now considerably passed the 10,000 mile point. In 1869 Pennsylvania stood at

the head, with Illinois second and New York third; but in the following year Illinois passed to the front, and has since continued to hold pre-eminence, while Pennsylvania has dropped to the fifth place and New York to the sixth. It is interesting to note some of the remarkable transpositions in rank which have occurred in those twenty years, and for this purpose we will take the States which have now reached a railway mileage of over 5,000 miles, and show their rank and mileage in 1890 and 1870 respectively.

STATES HAVING OVER 5,000 MILES OF RAILWAY.

STATE.	1890.		1870.	
	Rank.	Miles.	Rank.	Miles.
Illinois	1	10,079	1	4,823
Kansas	2	8,815	10	1,501
Texas	3	8,494	26	711
Iowa	4	8,455	5	2,683
Pennsylvania	5	8,417	2	4,656
New York	6	7,762	3	3,928
Ohio	7	7,759	4	3,588
Michigan	8	6,739	8	1,638
Indiana	9	6,013	3	3,177
Missouri	10	6,001	7	2,000
Minnesota	11	5,519	18	1,092
Wisconsin	12	5,440	10	1,525
Nebraska	13	5,020	27	705

The most remarkable transposition indicated by these figures is that of Texas, which in twenty years has jumped from the twenty-sixth place to the third place, her railway mileage having increased from 711 to 8,494 miles. Nebraska also shows a notable advance—from the twenty-seventh to the thirteenth place, and from 705 miles to 5,020 miles of road. While the Western States and Territories have been the scenes of the greatest activity in construction of late years, still the older Eastern and Middle States, which had the largest mileage twenty years ago, have also continued to build new roads, and still maintain prominence in the list—New York, for example, having just about doubled her mileage in that time, and Pennsylvania having nearly done so. That Illinois, in spite of the rapid growth of the country to the west, should still continue for twenty years to lead all the rest in point of mileage, is notable evidence of the great strength of her position, in the heart of a continent, with a metropolis, which has, for years, been the greatest railway centre in the world. The prospects are good for Illinois remaining at the head for yet a few years. The railway growth of the entire country during the past twenty years has been wonderful in the aggregate, the mileage having increased from 50,898 in 1870 to 161,270 in 1890—an addition of no less than 108,370 miles, or an average of over 5,400 miles every year.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

NOTES FROM SUMMER RESORTS.

I have been very much interested in the editorial in the July number of the *Magazine* entitled, "The Higher Education of Women vs. Marriage," an interest I am sure which is shared by all of our readers. The desire is strong to add a few supplementary thoughts, to call attention to one or two points which the writer, probably for want of space, has failed to consider. But up here among the great lakes, with the cool breezes blowing down fresh and sweet from the pine woods, and a picnic, a fishing party or a yachting excursion on the programme for every day in the week, it is impossible to enter into a discussion of the abstract or the didactic. As we take our ease under the great trees, with glimpses of blue sky above and blue waters beneath, or lie at full length on the white sand and watch the long waves roll in and break into white foam on the shore we are not quite sure that we believe in education of any kind. We lose all interest in the great problems of life, all capacity to reason and to argue, we are almost ready to abjure civilization with all its perplexing demands and return to the wild and roving life of our savage ancestors. A few months from now, when the long evenings begin and we revive our waning interests in the vital issues of the day we will seriously consider whether the higher education of women is detrimental to the institution of marriage. Only a few weeks ago the whole country was flooded with a fresh installment of "sweet girl graduates," every one of whom is this summer industriously in pursuit of a husband. We will not disturb their fond anticipation by suggesting that if they continue their studies any further they will imperil their chances of marriage. Later on, however, we will give this subject the attention to which so serious a question is entitled.

Since early in July I have been enjoying the various resorts of northern Michigan, not resting but recuperating. After the very hot and depressing air of southern Indiana every breath of this pure and bracing atmosphere is a mental and physical in-

spiration. There is this distinction between those who labor with the hands and those whose work is of the brain, the former may enjoy a complete rest which is never possible to the latter. They may lie down at the close of the day and fall into a deep and dreamless sleep, which puts new life into the tired body, and an "outing" to them means absolute rest and refreshment. But these things are beyond the command of the brain worker. When he lies upon his pillow in the darkness of night the mind continues ceaselessly to labor and is entirely out of control of the will power. It goes remorselessly on through all the hours of the day and knows not the "noon hour" or the six o'clock signal that work is ended. If the literary toiler goes among new scenes hoping for a respite, fresh themes for his pen are constantly suggesting themselves and, whether it be from the love of writing or whether it be from financial necessity, he is never able to enjoy a complete and unbroken rest.

Northern Michigan has many pretty and interesting pleasure resorts. From the time one leaves Chicago on the steamer there is a succession of picturesque spots in any one of which the traveller may find whatever he wants in the way of boating, fishing, hunting, delightful climate and that chimera known as "watering place society." Along the eastern shore of the lake are St. Joe, with its fine hotels and lofty bluffs, Grand Haven, whose beauty was so sadly marred by last winter's fire, Muskegon, Petosky, Bay View, Charlevoix and Mackinaw, so magnificently situated at the intersection of the world's great lakes. It commands a view of which one never tires and many wonderful productions of nature in the shape of gigantic rocks and gloomy caves. But after the novelty has worn off one becomes tired of the limited confines of the island and longs for wider fields. Charlevoix is beautifully located and a pleasant place to those who do not grow restless and weary of the same narrow round of pursuits week after week. Bay View is finely located on high and breezy bluffs terraced down to the shores of Traverse Bay, an inlet of Lake Michigan. Here the Chautauqua Assembly meets every year and for nearly a month offers an unexcelled programme of lectures, music, religious exercises, educational advantages and entertainment of various kinds. The amphitheatre, the beautiful Evelyn Hall, dedicated to the W. C. T. U., and numerous other public buildings are all first class, and, it more nearly approaches the parent Chautauqua in New York than any of the large number of branches scattered throughout the United States. The Assembly is very largely attended and among the hundreds of cottages are many as handsome as any to

be found among the Michigan resorts.

Across the Bay are Harbor Point and Harbor Springs, the former largely occupied by Chicago cottagers and the latter an Indian village, so quaint and interesting that it would require a letter by itself to do it justice. Petosky, a mile away and connected by a five minutes ride on the "dummy," has a most excellent hotel and affords many summer enjoyments. The third city in size on the lake is Muskegon, the largest shipping port for lumber in the world. The census just completed gave this place 25,000 inhabitants, exclusive of the suburbs, and it is alive with enterprise and energy. Here I have spent the greater part of my vacation thus far, partly because it is the home of very dear relatives and partly from a natural disinclination to entirely let go the advantages of city life and "take to the woods." I confess that I would rather take my cool breezes and fresh air where I can at the same time get my daily newspaper and have springs on the bed and screens in the windows. A vitiated taste no doubt but one which grows with those, especially women who are born and bred to town life. Muskegon has thirty miles of paved streets, is lighted with electricity, has miles of white cement sidewalk bordered with little parks, beautiful green lawns and an endless number of handsome homes, electric railways, one of the finest public libraries in the country, twenty public school buildings, many churches and a most refined and hospitable people. Lake Muskegon is almost surrounded by huge lumber mills and in every direction rise the big smoke stacks of other manufactures. A ride of a few minutes by steamer or by the electric cars brings one to Lake Michigan with its many attractions and at all points of the compass are parks, picnic grounds and charming drives. It is a delightful place to spend the summer and we are tempted to regret the season's programme which, in a few days will require us, like the wise men of old, to follow the star in the east.

A PLAGIARISM EXPOSED.

In the January number of the *Magazine* as our readers will perhaps remember appeared an article entitled "Kissing Mother," and signed "Kittie Wadden, Keokuk, Ia." We published it with the editorial comment that it was "one of the most beautiful contributions that has ever graced the *Woman's Department*." Immediately upon its publication we received a letter from a gentleman in New Jersey telling us that the article was originally written by Robert J. Burdette. This letter we published in the next issue of the *Magazine* and it at once called forth an indignant denial from Miss Wadden, who declared that she

was the author of the article, that she was "only a school girl" and did not see how any one could compare her writing with that of Burdette. She enclosed another contribution which showed conclusively that it was not written by the same person who penned "Kissing Mother." Not satisfied with this Miss Kittie had one of her friends write a very complimentary letter asserting she had positive knowledge that Kittie wrote the article in question.

In the meantime letters began coming from every direction stating that the writer had read the article years ago and given the name of the publication where it appeared. One from Ottawa, Kansas, enclosed a leaf taken from Green's Almanac of 1883 upon which was the same article. Another from Danvers, Mass., contained the same clipping taken from "The Ingleside" dated December, 1883. Another sends from a patent medicine advertisement. In all of these cases there was not the change of a single word from the article claimed Miss Wadden. There is no question but that it was a deliberate forgery upon her part, adhered to even after she had been detected and exposed. Comment is unnecessary. Her last contribution is in the waste basket, which will receive anything she may send. We are under obligations to our correspondents for the interest they have taken in this matter and we will keep our readers always to inform us if they detect a plagiarism in our columns.

HOW TO MANAGE A WIFE.

Editor Woman's Department:

Some will probably suggest that the best way to manage her is to use the "bald headed and broom!" While others will probably say that she should be petted and adorned with luxuries.

Her likes and dislikes should be studied, and her faults; for there is no recipe for a perfect wife any more than there is for a perfect husband; there is always just as great a number of good wives as there is of good husbands, and never did any whether married or single, who made a determination to be agreeable fail in his or her efforts.

I do not think that women, any more than men, should have an abundance of authority over home for it has been said, "That a household without a woman at the top of it, and a man at the bottom of these concerns where the wife has authority without power, and where the husband is mere without virtue."

A wife, affectionate and gentle, sensible and virtuous, will always bring domestic happiness. It is not matter whether she be an inmate of a palace or a humble, little cottage, virtue and sanctifiedness will abide. Her pains, pleasures, opinions, sentiments and thoughts should be harmonized with those of her husband.

If he be ill or in trouble the double balm of love and mutual friendship comes to his rescue and dispels all gloom and makes pain appear as a jest for she alleviates his trials by sharing them. His easy, short and enjoyable does the road of his life with such a companion and as the sunshiny life fades and age bends them low, when children like the birds has flown away, they will find the winter of life has drawn near without either serving its approach. Summing up, "a wife completes a household."

KEOKUK, IOWA.

For Woman's Department:

A FRAGMENT.

There's no name among the living
Like the ones I do not speak.
Not so fair the rose that's given as the
One I may not seek.
There's no bliss caged in fruition
Like the hope that's on the wing.
And no words hold half the sweetness
Of the song I may not sing.

Eagerly I clasp the shadow while the
Substance, fled before,
Hath its dwelling past Time's portal
And an angel guards the door.
Yes, there still remaineth Heaven,
And the bounty of its bliss
Is the cup that here we thirst for.
Is the thing that most we miss.

Alice O. Darling.

CHICAGO, ILL., July 8, 1890.

Editor Woman's Department:

I am always delighted when the *Magazine* comes and eagerly peruse the Woman's Department first. I enjoy the book ever so much and find the reading very interesting. I would like to exchange patterns and recipes with our sisters, any kind of fancy work for the home. It may not seem but a trifle, but if we exchange with each other it may be new to the rest of us. We have had enough of "how to manage a husband" and of "Kicker," let us have a change. I think perhaps some of us wives may need managing, but we do not see our own faults as those of our husbands. Stop and reflect for a few moments, your husband, be he a fireman or engineer, out upon the road working hard; see the great danger they are always in, to return home and a wife, could she hold such feelings toward her husband as to how she would manage him? No, dear sisters, when they part with us and our little ones to go out upon the road it may be the last time we may see them living, then do not have any such feelings toward your husband.

When they return home from work, do we make allowances for the many cares and troubles they may have to contend with while away which may make them feel out of humor? Now the best way to make them happy is to have their meals ready on their return from work, clean clothes laid out for them to change (of course the buttons must not be off nor any holes in the heel or toe of the hosiery), and their shoes polished nicely, or if they prefer their slippers have them close by. Then always build the fires of mornings and let them rest their tired and weary body and see how they enjoy that. It's better than trying to manage a husband. Give it a trial, sisters, and see the effect. Some of our readers will say, "no, tis not a woman's place to build the fires and wait upon a man," but I say if we can build the fires while they are upon the road we can do so on their return. I do all these things and have two children, besides, to work for and think it a great pleasure to do all I can to save my husband. Then we ought to at all times keep ourselves as pretty and attractive to our husbands as before marriage, also our little ones, have them tidy and clean. That's what pleases all men, no matter who they are, and if we have any aches or not feeling well, why complain? Does it lessen the ache or pain? No! If single we would not think of telling such things, then why bother the men now. If one is real sick that's different. I will give some recipes in my next, will also give some patterns for work, that is if I may come again.

Blanch.

[Come again by all means. We very seldom have a correspondent who seems so near perfection. When you give us those recipes, please let us have one that will tell how a woman can build all the fires and black her husband's shoes and at the same time keep herself as "pretty and attractive as before marriage."—Ed.]

MONTREAL, P. Q., July 7, 1890.

Editor Woman's Department:

I have only been married a year, during which time I have been a constant reader of the *Firemen's Magazine*, and I never read any thing to equal an article written by a person and signed "Kicker," in the April number. In one place he says he has his *Magazine* sent to the round house so that his wife (poor creature) could not get it to read for fear of spoiling her. Just think of it, as though any sensible person could see any thing in the *Magazine* to spoil a woman! Why I subscribe for several home journals and, do you know, I don't feel half so interested in them as I do in the *Firemen's Magazine*. We look forward with delight to its coming and if my husband is at home when it arrives he will don his cap and slippers and say, "Now old girl read me some of those interesting letters," so you see he is not afraid of it spoiling me and as I have no baby and like to please my old man I comply with his wishes.

Now as to managing a husband well, I have not had much experience of married life but I don't see that a woman needs manage her husband for I think kindness and a little good advice go a long way. I will tell you how I manage: I keep my little house (though I say it myself) as neat as a new pin, and when I know my hubby is coming home I attire myself in a dress I know he likes and when I hear him coming up the steps I run to meet him and give his dear, old, black face one of my best kisses and if you could see how pleased he looks it would do you good and I never hear him speak a cross word and he is so kind and thoughtful. There are several of my former school mates very prejudiced in regard to railroad men. They say they would rather live single all the days of their life than marry one. Now let me give the girls a little advice: If you want a good husband, which I am sure you do, marry a railroad man, for when he comes in off the road tired and hungry to a neat little home and wife to cheer him he will appreciate her, whereas a man that is always at home, thinks it is no more than he should have and looks upon his wife as a slave. Yes, girls, marry a railroad man and you will never regret it. I married one of the boys of Lodge No. 35 and I do not regret the step and it is with pride I sign myself a fireman's wife.

Emma.

May happiness and prosperity ever follow our Editor and the B. of L. F. is the wish of E. S.

[This is a very good recipe.—Ed.]

PHILADELPHIA, July 7, '90.

Editor Woman's Department:

I have been a constant reader of the *Magazine* for three or four years, and as my fireman is constantly reminding me of a promise to begin and do my best, which timidity has always deterred me from fulfilling. I have through my admiration for the Woman's Department and its writers, plucked up enough courage to express my hearty thanks for the many lessons and helps I have received through its pages.

I never see anything in the *Magazine* from the members of Enterprise Lodge, No. 75, B. of L. F. which I think is not from lack of writers as they are a live set of men and always on the lookout for the good of the Order. There is a sermon written by the Rev. Emory Polisher in July's *Magazine* which I am now reading and which pleases me very much. It is written in railroad language and to the Knights of the Rail which if taken to ourselves would teach us how to trust and bear our burdens. The Rev. says "the Great Master Mechanic hears the prayers no matter when or where. It makes me strong when I am tired, it makes the rough places smooth, and the dark places light." Although but two months have passed since I linked future and life with my fireman, I have learned what it is to worry when he is out on the road, but my great burden bearer the Grand Master, is ever ready to hear my prayer for my fireman's safety and so wonderfully helps to bear the worry and if it is willed otherwise than his safe return to me, that when he is called home he may have the full hope of entering into the higher life. My best wishes to the *Magazine*.

A Fireman's Heatherbell,

Mrs. L. B. H.

*For Woman's Department :***MY MOTHER.**

Ever dear to me was mother—
 Dearer far than words can tell,
 Ere we parted from each other—
 Ere she breathed her last farewell.
 And the dreary years whose silence
 Lie between the past and now,
 To my heart hath brought deep sorrow—
 Left their impress on my brow.

Ever dear to me was mother,
 Ere the angels called her home
 To that bright celestial heaven,
 Leaving me in grief to mourn;
 Oft when twilight shadows deepen,
 In my fancy I can hear
 Words of love so kindly spoken,
 And I feel her presence near.

Oft beside her grave I linger,
 Where she rests in dreamless sleep,
 Freed from all life's cares and sorrows,
 Unmindful of the tears I weep;
 But when life's journey shall be over,
 And I seek the fairer shore,
 May I meet my own dear mother,
 To be parted nevermore.

Mrs Nellie Bloom.

WEST OAKLAND, CAL.

CLIFTON FORGE, VA., July 8, 1890.

Editor Woman's Department :

I am a constant reader of the *Magazine* and have thought several times of writing to it, as I rarely see anything from this state. Once I thought I would write and give my opinion as to "How to Manage a Husband," but as I had none of my own to manage I concluded I had better abandon that idea. I want to tell the readers of the *Magazine* something about our town (no longer little) away up near the top of the Allegheny mountains. Eight years ago it consisted of three houses; one an old farm house, the other two were put up temporarily by the Chesapeake & Ohio R. R. to be used as a telegraph office and blacksmith's shop. Very soon this became the end of two divisions of the road and the farm was sold off into lots, which were bought principally by the R. R. men who built upon them immediately in order to bring their families here. This brought other business men here besides railroad men and pretty soon our little village began to put on the appearance of a town. When it was about three years old another railroad was built up James River and this became the terminus of it. That brought more work and workmen and both roads built their machine shops and round houses here, and now, from twenty to forty trains come in daily, with trains averaging from fifty to sixty cars each. The freight consists largely of coal from the mines of West Virginia, which is shipped to New-Port-News and from there to the northern cities for manufacturing purposes. Then nature has done a great deal for this town. The scenery is unsurpassed, the air is fresh and invigorating, we have almost a constant breeze and in the very driest, hottest summers the temperature is rarely over 90°. I think we have the most beautiful water here in the world, even our largest rivers are as clear as crystal and the small mountain streams are clear and cold the whole summer. Our mountains are high, the altitude of this place is 1,500 feet. Last, but not least, nature has filled our grand old mountains with the richest minerals in the south. Within a radius of ten miles six furnaces have been built and put into operation in the last few years. We have good schools, fine churches, newspapers and banks. Last year's census shows that in eight years the population has grown from a dozen people to upwards of 3,000. A \$75,000 hotel is being built here now with all the modern improvements. When finished it will be the finest in the place.

When I began I did not mean to say so much but hope it is not too much.

Before I stop I want to tell some of the ladies how to make ottomans of tin cans. Take seven cans (tomato cans are the best) put six around and the seventh in the center. Put a strong piece of cloth

all over them and sew strongly, then take a cord and wrap tightly between each can, this makes the scallop; then make a cushion for the top and cover the whole with some pretty material or patchwork, and I venture to say you will be surprised at the pretty piece of work you have accomplished.

I don't know very much about the B. of L. F. of this place. I am not acquainted with many of the members, but think it must be in a prosperous condition as I saw not long ago, the secretary send by express \$35.00 for a new regalia; from that I judge they are still alive.

I remain,

[We like a letter of this sort. Come again.—Ed.]

GAINESVILLE, TEXAS, June 29, 1890.

Editor Woman's Department :

I am a constant reader of the *Magazine* and having never seen anything from the Southern Cross Lodge, No. 324, I take the liberty to write a few lines, trusting it will find space in your valuable *Magazine*.

The Southern Cross is thriving rapidly, having been organized about ten months. The boys here are all steady, hard working men and well liked by all.

We have two railroads here: The G. C. & S. F. and M. K. & T., and three wholesale groceries, seven dry goods houses, fifteen small groceries and nine saloons and ten churches. Gainesville can say she has 12,000 population and a good country to support her.

Mr. Kicker I will give my opinion of you: I think you have only sense enough to pick and shovel and clean the ashbox and ring the bell. But furthermore you know nothing. I, for one, do not believe you belong to the B. of L. F. and you do not take the *Magazine* and you are a little dog sure enough. There, now, if you do not like that all you have to do is to come down to Texas (as I am a real Texan) and if I don't give you the best whipping you ever received. You can get my address from the editor as I will not be ashamed to sign my name. I am afraid you will never show up, as we women would not leave a piece of cloth to send your poor, unfortunate wife.

May, I do not know what to say to you, only I feel very sorry for you. If you would do as a lady friend of mine did perhaps you will conquer him. Whenever he comes home meet him with a smile but do not let him see you are down-hearted. Be as gay and lively as your poor, aching heart will permit. Talk of other men and their wives, how they get along. Tell him you do not wish him to go out and leave you, and if he does, just say to him you are going where your husband goes and you go too. If he says he will leave you, go and pack his things or, better still, pack your own and tell him if he cares nothing for you that he and you had better part. Mean what you say and if he does not yield, he does not love you. God knows you are better off by yourself than to have a man come home only once in twenty-four hours. This lady friend is my sister and she said only this evening, (while reading your letter) "write and tell my plan, perhaps she will succeed as I did and conquer her husband."

*Wishing the Magazine and B. of L. F. success,**I remain,**A Fireman's Wife, Claude.*

EVANSVILLE, IND., July 28, 1890.

Editor Woman's Department :

After reading the contents of the July number of the *Firemen's Magazine*, especially the Woman's Department, which by the way, is the most interesting part of the *Magazine* to me, I thought I should like to contribute a few thoughts, although I am neither wife, mother or sister of a fireman. But I know a good many firemen and engineers and they seem to be a very kind, generous class of men. ("Kicker" surely cannot be one of this number.) I feel sorry for him poor fellow, for I am certain he is one of those shallow minded men that met a pretty face in the ball room, danced with it, made love to it, and went home and dreamed of angelic visions.

finally married this lovely butterfly of society, and then woke up one day to find marriage a failure and of course he is so narrow minded as to judge all men's wives by his own. And his wife, poor soul, what must have been her mortification when she discovered that she had linked her future with a being so inferior in all the essentials of manhood. But pshaw, there are plenty of men of intelligence that believe their wives to be their equals in mental qualities; then why waste time on "Kicker," he should be placed in an institution for the harmlessly insane. But I really believe that a great many men attach too little importance to the intelligence and industrial skill of the women they aim to make their wives and they soon discover their mistake when they find their homes disorderly and their meals badly cooked. They do not stop during courtship to think whether the adored one can mend a shirt or prepare a respectable dinner, and yet the most sentimental husband must come down from his ecstasy soon after the marriage knot is tied, and he then discovers if the real element of home comfort be lacking, that he soon tires of his home, notwithstanding all the good looks and bright glances of his wife: And the public house soon separates what the law and God have joined together. The mainstay of all domestic happiness is the wife, especially in the laboring man's home, for she is not only wife, but housekeeper, nurse, servant, all in one, and if she be of a cheerful, contented disposition she is a crown of glory to her husband; she helps him in all his good resolutions, she may by her kind and gentle ways bring out all his better qualities. How little pains are taken in so many homes to cultivate that beautiful quality of a kind and forbearing disposition! Were more women to try kindness with their husbands when they come in tired and worn out after a hard day's labor, how much better it would be than tears and reproaches over some imaginary slight. There is nothing of which a man tires sooner than a woman forever in tears.

One word more in regard to managing a husband: Manage him with patience and kindness and if that fails just set him down as another "Kicker" and do not worry more than possible about him but just enjoy life in spite of him.

With best wishes for the Woman's Department I remain the firemen's friend.

A Reader of Firemen's Magazine.

HINTON, W. VA., July 10, '90.

Editor Woman's Department:

In perusing the July No. of the *Magazine* I find a letter from Hinton criticising your humble servant or "some other Hinton ladies" for not contributing more to the Woman's Department. I, too, think it would be well for the ladies to take more interest. It is very encouraging,—but I am truly glad my letter had the desired effect. Our good friend "Grit" will find if he looks around that he is vastly mistaken when he claims that "Miss Eva" is not acquainted with the boys of 236. Why! among them are her very best friends. I am sure it looks as if it was a lack of grit or something else for they come to the front as she gives them a gentle reminder through the worthy columns of the *Magazine*. I can't quite understand why in writing up the popular members of 236 our correspondent should have forgotten "Frankie" Vanstavern. Judging from his actions the past week he must be love sick, and we fear will soon have to take a trip to the Green brier white sulphur springs. If you don't go soon I am afraid Will Mc. will get ahead of you. I think the "Ladies Pet" has lately concluded not to go to San Francisco, but the man that bought the furniture will go. Now friend "Grit" there's Eli, John Williams, Frank Smith, and last but not least, bashful Clayton and a number of others, both married and single, that are just as worthy of being mentioned as are your particular favorites.

In regard to our enterprising city I will say—"It's the garden spot of the world" to some of us. In scenery it is unsurpassed. The surrounding country has many attractions. The famous brown stone quarries, ice cave, burning spring and many other places of interest. Any one wishing to pay a visit to

the mountains will never regret a visit to our little city. We have five churches, good schools and situated on the corner of 3d and Summers St. is our elegant Opera House. Our reading room is a perfect model under the skillful management of the I. O. G. Y's. Where the railroad men while away many a leisure hour instead of at some of the more attractive resorts. We have a number of hotels and stores and in fact everything that goes to make up a real nice little city. You will seldom find a jollier and more sociable lot of girls and boys than we can boast of. My declaration of love for Shandy is a matter of little consequence: one could be in love with him and some of the members of 236—also—and not mention it, for I am sure some of them are very lovable.

Wishing the *Magazine* and B. of L. F. success and long life.

I am most truly,

Eva Carol.

[No, it doesn't "count" to be in love with Shandy Maguire. He is the Woman's Department beau.—Ed.]

OBITUARY.

A tribute to the memory of John A. Mangan who lost his life on the I. C. R. R. As a boy he was beloved and mourned by all.

A brother dear, I once possessed,
Noble he and pure and good,
Who made our home a joyous nest
By his endearing presence wrought.

His manly form, I see it still,
His eyes so blue, his hair of gold,
Oh hand of death! oh Heavens will!
Alas he's laid beneath the mould.

A mother's pride, a father's joy
To sister a fond protector he,
How dear to all our lovely boy
Why was his end so soon to be?

That fatal day I thus recall
When the dreadful message came,
For written there told what befell
Our John so dear, the child of fame.

By cruel wheels a wound received
From which for life he e'er must bear
Unless by God he's soon relieved
And summoned to realms beyond earth's care.

"Could it be true, was it our John,
Who had been the victim of cruel wheels?"
Were the words of mother as she moaned
The loss of one whom she must yield.

Alas too true for down the path
By strong arms borne our lovely John,
They laid him down on a snowy couch
And turned away with a tearful eye.

But oft return with words of cheer
For Johnnie's sorrow by all was shared
And a railroad badge he was to wear
If life to him was spared.

The weeks sped by till weeks were five
And they were sad dark days of grief,
For at their close the spark of life
Had left this world of weary strife.

His death was mourned by all the boys
And oh, alas, what words can tell
Of the lasting sorrow, the heavy sighs
That in the family bosom swell?

But we to God's will meekly bow
For angels whisper, "All is well."
Our darling John is resplendent now
And his deeds are chanted by Heaven's bell.

His Sister Kitty.

MME. VIALARD, upon whom the French military medal has been bestowed for distinguished services on the field of battle, is a widow, fifty-five years old, and is—as for thirty-five years past—the cantiniere of the Thirty-first Regiment.

For Woman's Department:

FOR HIM.

On the ocean shore, where the waves beat high,
When the light was growing dim,
We stood together, my love and I
And listened to evening hymn.

From an ivy draped church on its rocky site
Came the choir's softened tones.
Blending so well with the quiet scene,
And the ocean's murmuring moans.

The tide's coming in as we stand on the shore
Of the limitless sounding sea,
Bearing the shells of the briny deep,
In its strength so grand and free.

In the gathering gloom of the twilight hour
While the choir finished the hymn
There on the sands I promised to give
My life and my love to him.

'Till the reaper Death with sickle keen
Shall garner and gather in
The ripened sheaves of well spent lives
From this world of care and sin.

A year passed by, again I stand
By the shore of the sounding sea,
But he is not here to clasp my hand
And speak loving words to me.

In the churchyard fair, where the choir sang
One little year ago,
They laid him to rest in the evening time,
While the sea was whispering low.

And so I stand in the twilight gloom
While the shadows of eve grow dim
And gaze on the deep ocean's surging waves
And await my meeting with him.

Sibyl.

CARTIER, ONT., August 11th, 1890

Editor Woman's Department:

In the August number of the *Magazine* is an article from E. E. S. giving the "lords of creation" a rather severe "roasting," and it is too to be regretted that there is but too much truth in her remarks. But they only apply to the genus "dude," who is I am happy to say, a rarity among railroad men. Just imagine one of those over-dressed, perfumed dandies, handling the "pick and scoop," ha! ha!

Now let us look at the other side of the question, and see what "the girl of the period" is like: Whether her station is high or low, you will always find her dressed in the height of fashion, be that fashion of the village or of the metropolis. What matter it to her that her father, brother or husband slaves from morning till night to lay by a few dollars for a rainy day? Oh! no! she must have that "love of a bonnet," or a dress of that lovely blue silk, or some other expensive article and with a sigh the purse strings are loosened and the hard-earned savings go. She is well up in athletic exercises, she can row a boat, plays tennis, swing Indian clubs, etc., but when a weary mother or sister asks for a little assistance when wash or ironing day comes—oh! no; she could not think of doing any work, she is so delicate.

She is also well versed in "slang," and when asked a question which requires an affirmative reply she does not say simply "yes." Oh! no. That form of expression is too old fashioned to suit her taste, she says "you bet your life," "I should smile," or something else equally brilliant and so on, *ad infinitum*. There is evidently, though unintentionally, a bit of sarcasm in the second paragraph of "E. E. S.'s" article but the insinuation that "brains" are not among the "qualifications requisite for a young lady," is hardly fair.

But don't despair boys and fly in terror from all thoughts of the hymeneal altar. The "girl of the period," like the "young man of to-day," described by "E. E. S." are not, thank God, so common as some cynics would have us believe. There are as many pure, noble, self-sacrificing girls to-day as ever there were; just as there are thousands of loyal, true-hearted boys to make husbands for them. G. M.

FORT DODGE, August 7, '90.

Editor Woman's Department:

I have for almost two years been a constant reader of the *Firemen's Magazine* and I think I could honestly say I have never had the pleasure of seeing anything about the worthy and good members of Western Lodge, No. 222, and it has always been a mystery why they should be so totally ignored. Deeming unjust I thought I would say a few words in their behalf as I am personally acquainted with most of them and know them to be good, honest, solid and industrious members of the Brotherhood whose rules and regulations they so faithfully follow. The worthy Master A. W. Nunn is the right man in the right place and is always seen winding his way to lodge room on the second and last Sunday in every month and his example is followed by the other members for, as I sit here writing, I hear three the members, Andy, Charlie and L. saying goodbye to some lady friend till after Lodge. So you see they would not absent themselves even for a pleasant walk with their best girls. As they start off they turn back and say, "Say, Mary, when are you going home? Don't go till the meeting is over and I will be back." I did not hear the answer but I guess waited. And now I see other members and among them is Omar Rhodes, who but a few short weeks ago came to the conclusion that "marriage was a failure" and wedded Miss Lizzie Warner, a lovely and accomplished young lady of this city, who though she cannot become a member of the Brotherhood will do all in her power to promote its growth and prosperity. Brother Fred Peterson is enjoying a visit from his brother of Ohio. L. M. Flicker has just returned from a visit with the old folks. J. McKemley spent the Fourth of July with his girl at Algond. C. L. Carter, who was hurt in a wreck at Rensen, is again on duty with shovel in hand. And "Willie we have missed you" must have been up in a balloon on the Fourth for we haven't seen him since, but we sincerely hope to, for the firemen could ill afford to lose such a good member.

Bro C. E. Taff almost got lost in the flags. He had his engine the "Cannon Ball" decorated with eighty-five flags floating in the breeze from Fort Dodge to Albert Lear on the morning of the glorious Fourth.

Well, I will not say any more this time. I stop, hoping all the firemen had a good time. Fourth and will enjoy many happy returns of the day so dear to each American heart.

I will sign myself a "Better late than never."

Fireman's Magazine

THE OLD HOMESTEAD.

I'm sitting to-day in my mansion,
Made up of brown stone and plate glass,
Where the fashionable crowd in their satins
And beauty and pride daily pass:
But sometimes my heart turns in sadness,
From fashion and folly away.
For I long for the old gabled homestead
And the garret where I used to play.

The memory of fields and of clover,
Of the lake, the orchard and barn,
And everything I can remember
That's lovely around the old farm,
Steals into my heart like an echo
Of a song that seems distant away.
That I sang when at the old homestead,
In the garret where I used to play.

'Tis true that near by the old dwelling
Lie buried the treasures I love,
And dear one I cherished so fondly
Have gone to their home up above,
Still I long once again to revisit
The wild woods and 'mong them to stray,
And roam once again through the homestead,
And the garret where I used to play.

I know I am grateful and happy
For this home of riches and ease,
But my heart holds many a memory
I would not exchange for all these.
And oft as I sit at my window,
As the crowd passes, careless and gay,
My heart wanders back to the homestead,
And the closet where I used to play.

THE STRIKE ON THE N. Y. CENTRAL.

The Visit of the Chief Executives of the Federated Orders of Railway Employes to New York.

THE CONVENING OF THE SUPREME COUNCIL, ITS DELIBERATIONS AND FINAL CONCLUSIONS.

On the night of Friday, August 7th, as unexpected as it was sudden, business on the New York Central and Hudson River railroads, from the city of New York to Buffalo was suspended—trains ceased to move—except those carrying the mails. It requires an effort of the mind to grasp the situation. The New York Central and Hudson River railroad, more properly the New York Central system of railroads owns and leases 1,441 miles of track and employs about 20,000 hands, paying out annually for wages about \$10,500,000.

The New York Central is one of the richest, strongest and best equipped roads on the continent. It is sometimes called the "Vanderbilt road," and "Vanderbilt" is regarded as a highly expressive synonym of wealth, fabulous wealth—and it certainly does no violence to metaphor to say it means a mountain of gold.

The company has about 900 locomotives and must necessarily have 900 engineers and 900 firemen in constant employment and it is fair to estimate the total number of engineers and firemen in the employ of the company at 2,000.

In the state of New York the B. of L. E. has thirty-one divisions and the B. of L. F. twenty-eight Lodges, a total of fifty-nine local organizations and a large per cent. of the membership of these Divisions and Lodges, it is presumable, are employed on the Central. It is known that besides members of the organizations named, non-brotherhood men are employed, as also a large number of Knights of Labor. The troubles which led to the strike on the night of the 7th of August, seem to have been between the Knights of Labor and the officials of the road, and related as charged chiefly to the

discharge of men because they were Knights of Labor, though it is asserted that the officials violated certain pledges relating to promotion and some other minor matters.

After the strike had been inaugurated, in response to the request of T. V. Powderly, General Master Workman of the Knights of Labor, the chief executive officers of the four orders represented in the federated body, visited Buffalo and New York city. While in New York, these representatives of great labor organizations became profoundly impressed with the fact that the demands of the Knights of Labor, were just, and the officials of the New York Central and Hudson River R. R. should have promptly recognized Mr. Powderly as the Chief Executive of the Knights of Labor, and that arbitration, as proposed by Mr. Powderly, for the honorable settlement of the strike, should have been conceded by the officials of the road.

This was not done, and because it was not done, and for the purpose of enabling the Supreme Council of the Federated Orders of Railway Employes to hear all the facts and to take such action as the situation demanded, the Supreme Council was convened, and its action is fully set forth in the following declarations, which were given to the public at the time the date indicates:

HEADQUARTERS OF THE SUPREME COUNCIL OF
UNITED ORDERS OF RAILWAY EMPLOYEES,
TERRE HAUTE, IND., August 23, 1890. }

To all Labor Organizations:

MEN AND BROTHERS:—On the night of August 7th a strike began on the New York Central & Hudson River Railroad, involving about eight thousand men in the employ of said road, who were members of a great Labor organization known as the Knights of Labor.

The reasons set forth by T. V. Powderly, chief executive of the order, may be summarized as follows:

The peremptory discharge of between fifty and sixty men, employes of the road and members of the Knights of Labor, because they were Knights of Labor, without giving them any reason whatever for their discharge.

Prior to the strike the men sought, through the representatives of the order, to have their grievances adjusted, but their appeals being disregarded, a strike was inaugurated.

At this juncture T. V. Powderly, General Master Workman of the Knights of Labor, entered upon the task of adjusting the difficulty and of making such arrangements as would result in an honorable peace between the employes and the officials of the road, but his efforts were unavailing.

Mr. Powderly, comprehending the purpose of H. Walter Webb, third vice president of the company, to make war upon the Knights of Labor, and ultimately upon all Labor organizations represented on his road, sought a conference with the Supreme Council of the United Orders of Railway Employes.

The request of Mr. Powderly was granted to the extent that four members of the Council, the chief executives of the Federated Orders, met him in the city of Buffalo, N. Y., viz:

F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen and President of the Supreme Council.

George W. Howard, Grand Chief of the Brotherhood of Railway Conductors and Vice President of the Supreme Council.

S. E. Wilkinson, Grand Master of the Brotherhood of Railroad Trainmen, and Frank Sweeney, Grand

Master of the Switchmen's Mutual Aid Association. At the conference with Mr. Powderly, at Buffalo, the members of the Supreme Council became satisfied that the officials of the road, by every consideration of fair and honorable treatment of Labor organizations, should meet Mr. Powderly and adopt some just plan for the adjustment of the grievances of the striking employes.

This conclusion having been reached, the members of the Supreme Council, in response to the request of Mr. Powderly, extended their journey to New York, to afford such aid as was in their power to bring about a settlement between H. Walter Webb, third vice president of the company, the official having full authority in all matters pertaining to the strike, and T. V. Powderly, General Master Workman of the Knights of Labor, having authority to negotiate such arrangements as might end the dispute.

An interview having been secured, Mr. Powderly sought to have the men discharged heard in their own defense in the presence of Mr. Webb and himself. This fair and honorable proposition was refused.

Mr. Powderly proposed arbitration, which was also refused.

There were other propositions made by Mr. Powderly, having for their object the honorable settlement of the existing trouble, all of which were refused on the part of Mr. Webb.

The members of the Supreme Council, while in Buffalo and the City of New York, had ample opportunities to thoroughly inform themselves upon all matters concerning the strike. They saw and heard both sides. They appreciated the gravity of the situation, and comprehending impending consequences to labor organizations, deemed it advisable to convene the Supreme Council for deliberation and such conclusions as facts should warrant.

In response to the order of F. P. Sargent, President of the Supreme Council, that body was convened in the city of Terre Haute, Indiana, on Saturday, the 23d day of August, 1890, and remained in session until noon on Monday the 25th.

In making their report to the Council, the members who went to New York to confer with Mr. Powderly found all the statements made by him fully corroborated by the facts.

In an interview with Mr. Webb, he refused to entertain any proposition looking to a settlement of the difficulty.

He would not arbitrate any question nor make any explanation or concession whatever with regard to the discharged employes.

He claimed the right to discharge employes at will, without making explanation, or giving to the victims of his power any reasons for his despotic action. He would manage his road to suit himself without reference to any rights claimed by his employes, or any rights claimed by Labor organizations to interfere in the matter to protect their members.

The Council, having heard the statements of its members who had visited New York for the purpose of ascertaining the true condition of affairs, exhaustively discussed every important proposition, and arrived at conclusions as follows:

1. That the position of the Knights of Labor, as set forth by T. V. Powderly, General Master Workman, and the General Executive Board of the Knights of Labor, meets with our unqualified approval.

2. That the course pursued by H. Walter Webb towards Mr. Powderly and the Knights of Labor, notwithstanding his declarations to the contrary, evinces a purpose to disrupt and destroy labor organizations on the New York Central and Hudson River Railroad, as was done by Austin Corbin on the Philadelphia & Reading.

3. That the policy of H. Walter Webb is despotic to an extent that outrages every principle of American citizenship, and if generally adopted would, if successful, reduce American workingmen to the degraded condition of serfs.

4. That H. Walter Webb, by the employment of Pinkerton thieves, thugs and murderers, vile wretches from the slums and brothels of New York and other cities, to kill workingmen because they

dared to protest against his rule and strike for their rights, is a crime of such enormity as will associate the name of H. Walter Webb forever with those who, dressed in a little brief authority, have used their money to secure power to degrade their fellow-men.

5. That the efforts now being put forth by H. Walter Webb to destroy the Knights of Labor would, were circumstances changed, in like manner be made to destroy the organizations of engineers, firemen, conductors, trainmen and switchmen, and if successful, it is only a question of time when a similar effort will be made to seal the fate of other labor organizations.

6. That H. Walter Webb, by the course he has pursued towards the Knights of Labor, and the representatives of labor organizations has shown a total disregard of those principles of citizen sovereignty, dear to every American worthy of the name, and, considering only his money power and the corporate power of the company he represents, his acts, which speak louder than words, say, in the language of W. H. Vanderbilt, once the autocrat of the New York Central, "the public be damned."

7. H. Walter Webb seeks to support his arrogant attitude towards workingmen and labor organizations by assuming that the New York Central & Hudson River railroad is private property and that his acts in the treatment of his employes is in no sense a matter of public concern; that he can with impunity discharge men and remand them to idleness and poverty and render them homeless wanderers without giving them any reason or explanation whatever for his conduct, disregarding the fact that the corporation for which he plays autocrat is a thing created by laws, in the making of which, the men he seeks to degrade, have a voice, which, once unified, will bring his corporation to the bar of justice where his millions and the other millions he represents, will cease to be potential in deciding questions of right.

In view of the foregoing facts, the Supreme Council puts upon record its unanimous and unqualified approval of the strike on the New York Central and Hudson River railroad for the causes set forth by T. V. Powderly, General Master Workman, as also the efforts made by Mr. Powderly to bring the strike to an honorable termination. In this general expression of approval of the action of the Knights of Labor, the course of Vice President Webb is as unequivocally condemned.

The power of the Supreme Council in the matter of the strike has been exerted to aid the Knights of Labor, through their representatives, to secure the recognition of their order by the officials of a rich and powerful corporation, to secure for workingmen, the victims of autocratic power, a hearing, and to perform such other kindly offices as were proper under the circumstances, demonstrating sympathy and good will, thereby aiding the Knights of Labor to bring the strike to a close upon principles of right and justice. In this the council met with failure, owing to the autocratic attitude of H. Walter Webb.

It now becomes necessary for the Supreme Council to say, that owing to the fact that the order of Knights of Labor is not a member of the Federated Orders of Railway Employes, the laws of the Supreme Council do not permit of its doing more than it has done to aid the Knights of Labor, and its inability to participate otherwise in the strike is now known and appreciated by Mr. Powderly.

Referring to the laws of the Supreme Council relating to strikes, the matter is concisely presented as follows:

In the first place, if the members of either of the organizations, on any railroad, have a grievance, it is submitted to the proper officers of the road by the local grievance committee. In the event of failure to obtain satisfaction the chief executive officer of the order having the grievance is called upon and in connection with the committee seeks to amicably adjust the difficulty. If failure still attends the efforts to adjust the trouble then the Supreme Council is convened at the headquarters of the railroad officials, with whom a conference is requested and its influence is exerted to obtain a settlement alike just to all parties. If failure still follows efforts to remove the cause of complaint, and

the council by a unanimous vote decides the grievance to be of such gravity as to justify a strike, it is promptly ordered. In which event all the members of the various organizations employed on the road where the grievance exists, viz: firemen, conductors, trainmen and switchmen, abandon their work.

In conclusion, the Supreme Council places upon record its high appreciation of the manliness of the Knights of Labor employed on the New York Central and Hudson River Railroad in struggling to maintain a principle sacred to every workman on the continent and to all men who love justice and hope for the triumph of right over wrong as flagrant as ever stained the pages of history.

Attest:

W. A. SHEAHAN,
Secretary.

FRANK P. SARGENT,
President.

In commenting on the foregoing declarations of the Supreme Council, the *Magazine* records its commendation of their letter and spirit.

We have little to do with the whys and wherefores of the discharge of the Knights of Labor employes on the New York Central. The action of the officials may have been justifiable, at least from their standpoint, though the facts warrant a different conclusion. Be this as it may, the discharged men had a right to a hearing, the denial of which by H. Walter Webb exhibits him in the role of a petty tyrant, and the facts are of such consequence that labor organizations should consider them as of vital importance.

But, dismissing such reflections, the Brotherhood of Locomotive Firemen is profoundly concerned in another phase of the subject, the disclosure of which, more than compensates for all the trouble experienced by the members of the Supreme Council in their efforts to arrive at honest conclusions concerning the strike.

While in the City of New York, F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen, in the course of an interview with H. Walter Webb, third Vice President of the New York Central, said to that official: Suppose a locomotive fireman, a member of the Brotherhood of Locomotive Firemen, was discharged by Mr. Buchanan, the Superintendent of Motive Power, and suppose the discharged fireman should endeavor to secure reinstatement and not succeeding, a committee should take up his case in accordance with the laws of the Brotherhood, and the committee should also fail to secure the man's reinstatement, after which I, as the Grand Master of the Brotherhood should be called upon to adjust the difficulty with Mr. Buchanan, and should also fail, do I understand you to say, that if I called upon you, you would not treat with me as the Chief Executive officer of the Brotherhood? To this pointed and important question, Mr. Webb replied: "These cases are all investigated by subordinate officers of the Company, and no man is discharged without just cause."

The declaration of Grand Master Sargent, is, that "Mr. Webb evaded the question and left the impression upon my mind that

he would not recognize nor treat with me as the Chief Executive officer of the Brotherhood of Locomotive Firemen."

Here then, we have the case in a nut shell. This H Walter Webb, who has money which he never earned and by virtue of which he holds a petty office and plays tyrant, has given the Brotherhood of Locomotive Firemen to understand, that should he, or any of his underlings wreak their revenge upon members of the Brotherhood, he, Webb, would not recognize its Grand Chief Executive officers, for the purpose of having justice done; in a word, H Walter Webb, acting for the New York Central and Hudson River R. R., places himself and his road on record in line with the policy of Austin Corbin.

There is no escape from the conclusion, that on the New York Central and Hudson River railroad the policy relating to the recognition of organizations of railroad employes for the purpose of protecting their members against outrages, is sharply defined. The declaration is, "we will discharge men at will, and for any cause whatever that may be assigned, or for no cause whatever that would bear investigation, and no organization shall interfere to remedy any wrong inflicted."

Taking this view of the case, of what importance is an organization of railway employes on the New York Central and Hudson River railroad in so far as the protection of its members from wrongs is concerned? Manifestly, the answer must be, that so far as H. Walter Webb can control such matters such organizations are shorn of their power and their mission is ended.

The facts as stated, have been brought out by the strike of the Knights of Labor, and warrant the full measure of denunciation contained in the declarations of the Supreme Council.

In conclusion, what of it all? This, the fight against organization of railroad employes is on. If labor is to win it must federate, combine. In the absence of this, defeat and degradation awaits the workingman.

A COLLISION between two passenger trains on the Monon, near Bedford, Ind., occurred August 3d, by which Arthur Byrne, an engineer, of New Albany, and George Kole, a fireman, both of the same train, were killed. On the other train the engineer, Bob Muir, and Lare Smith escaped with slight injuries. The trains were running about forty miles an hour; both engines were totally wrecked, and a report says, "Just under the high boiler of engine 24, lying alongside the boiler of the other engine, could be seen the foot of poor Kole, the fireman, and still deeper in the unsightly pile of bolts, bars and shattered timbers, hidden from sight, are the mutilated and crushed remains of engineer Byrne.

THE SAN FRANCISCO CONVENTION.

On Monday the 8th of September, 1890, the Second Biennial Convention of the Brotherhood of Locomotive Firemen convenes in San Francisco, California.

Up to 1886 the Brotherhood held annual conventions. As a consequence the laws enacted at one convention could scarcely more than go into effect, and while practically untried, agitation regarding amendment or repeal would begin, productive of constant unrest. In a large measure biennial sessions have been a remedy for such things, and laws going into operation are thoroughly tried and their wisdom or defects ascertained, enabling delegates to legislate prudently for future emergencies.

The choice of the city of San Francisco for the convention of 1890, though geographically at the extreme western boundary of the country, possesses so many attractions as to largely compensate for the extra travel and expense of reaching it.

To a vast majority of the delegates attending the convention, San Francisco and its immediate surroundings will be a revelation such as they have scarcely dreamed of. The journey across the country, particularly that part of it where the railroad tracks pass through canyons and gorges, wind around mountains and climb to their snow capped summits, will give to memories pleasure and delights, which will defy exaggeration. The scenery of the Rocky Mountains for grandeur, sublimity and beauty stands almost unrivalled, and in some regards has no parallel. The "Dome of the Continent," the "Royal Gorge," the "Gateway to the Garden of the Gods," "Castle Rock," the "Devil's Gate," "Echo Canyon," the "Devil's Slide," "Weber Canyon," and Salt Lake City are but a few of the attractions that await the eye of the voyager to San Francisco.

The approach to the city, as the trains wind their way down from the Sierra Nevada peaks, is a succession of surprises until the metropolis is reached and the Pacific Ocean spreading out before the enraptured vision, proclaims the journey ended.

But for those, who for the first time visit the City of the Golden Gate, there are other surprises in store scarcely less novel than those of the mountains. The city of fabulous fortunes, where gold, dust and nuggets, from placers and from the bowels of the mountains finds its way in a ceaseless tide to its marts, has created a civilization that has attracted adventurers from all nations, and where the pagans, whose fealty to filth horrifies all who behold their habitations, whose habits make them moral and physical lepers, and whose pigtailed pronounce them as certainly proof against American ideas of civilization and government, as Gibraltar would be to the attacks of the fleets of Lilliput, must of necessity be a real

wonderland. Nor is this all, but the delegates from the central portion of the continent will have an opportunity to view the ocean, the

"Glorious mirror where the Almighty's form
Glasses itself in tempests."

which once seen is never forgotten.

Taken all in all, we are satisfied that in selecting San Francisco, the Atlanta Convention performed an act which will receive the grateful acknowledgments of the delegates.

Again, the delegates will have an opportunity of seeing much of the great state of California, a sort of fairy land to thousands who have read of its products, gold and silver and wheat, its oranges and figs, its grapes and wine and its salubrious climate. It may not be all that fancy has painted it but we surmise there will be little adverse criticism in such regards and that not a few of the delegates will be so delighted with the Eldorado of America, the Italy of the West, that they will sigh for a longer sojourn than the convention permits.

At any rate at this writing the outlook is most agreeable, every prospect pleases, hopes beat high and faith is strong that the Convention will be one of the most harmonious, dignified and efficient that embellishes the history of the Order.

Of the Pacific states, including Utah, California has 4,202 miles of the 11,473 miles of their railroads, and as a consequence our Brotherhood is largely represented within her borders, a fact which supplies still another argument in favor of selecting the great metropolis of the state as the place for holding the convention.

As we have said, the Convention will convene on Monday, September 8th. The executive session will be held at I. O. B. B. Hall on Eddy street and the opening session will be called to order promptly at 8:30 o'clock Monday morning, September 8th. A public reception will be tendered the delegates at the Bijou Theatre on Market street, Monday afternoon, September 8th, at 2 o'clock. The programme of exercises includes addresses by His Excellency, R. W. Waterman, Governor of California; by His Honor, E. B. Pond, Mayor of San Francisco; by the Hon. Tom Fitch, of Nevada; by Brother D. J. Brown, of the B. of L. E.; by the Rev. R. Harcourt, of San Francisco, and by F. P. Sargent, Grand Master of the Brotherhood.

The Baldwin Hotel will be Grand Lodge headquarters, where rates have been secured at \$3.00 a day. Arrangements have been made with the San Francisco *Examiner* to publish full reports of the proceedings of the public reception and all other matters pertaining to the Convention which concern the public.

Some idea of the Convention may be had by the statement that 425 Lodges will be represented. That it will take time to get so large a body of men down to business is a forgone conclusion, but the Grand Master is noted for order and promptness, and there need be no misgivings when such questions are suggested.

It is understood that no diversions will be provided during the time the Convention is in session, but after final adjournment the committee of arrangements will see to it that the delegates and their wives will have no complaints to offer relating to entertainments, the purpose being to attend strictly to business first.

The Convention will be required to legislate upon matters of great importance to the Brotherhood, matters which will touch, in some regards, other organizations of railroad employes, and we feel assured the delegates will be animated by a purpose to make a record for the Order, which will not only maintain its high and advanced position but carry it forward to positions of still greater usefulness.

THE BIG FOUR SETTLEMENT.

The re-adjustment of the wages of railway employes, which for some time past has been a feature in railroad affairs, and is still going forward on numerous roads, has been most satisfactorily terminated on the Big Four system. The grievance committee, representing the Locomotive Firemen on the system, was made up of prudent and capable men, with first-class staying qualities. Their patience was equal to every emergency, and if there were delays in reaching a settlement, their effect was to increase the zeal of the committee to arrive at satisfactory results. The representatives of the firemen were courteously received by the officials of the system and demands treated in a business-like way, and as a consequence, wages were advanced. Some other matters of importance were attended to, showing conclusively, that wise councils prevailed.

After the schedules were agreed upon it was found that the average increase of pay of passenger firemen was 16 cents per 100 miles, and on freights 17½ cents per 100 miles. Under former arrangements switch firemen received \$1.45 a day of twelve hours. Under the present schedule the wages are \$1.80 a day of ten hours, an increase of 35 cents a day pay, with a reduction of two hours time; besides, they now receive 18 cents an hour for overtime.

In yards, classification has been abolished. Formerly, second class engineers received \$2.05 a day first year. They now receive \$2.75 for ten hours, with 27½ cents per hour, for overtime.

On the several roads embraced in the sys-

tem classification was modified to the extent that, whereas, under previous arrangements a man served from eighteen months to several years before full pay was secured and his wages were from one-half to three-fourths less than first-class pay, now, the pay is one-fourth cent less than first-class and after promotion he is required to run only one year at the reduced rate.

The fireman's pay for road, construction, wreck, work or coal trains to be 55 per cent. of engineer's pay, the fireman to have the right of representation on all investigations, and a fair trial involving infraction of rules or accidents, and a man is furnished to black front ends, and leave of absence is to be granted any man serving on committees.

Seniority is recognized in every particular; a matter of unquestioned importance, and the justice of which was conceded by the officials.

Another matter exhibiting a purpose on the part of the officials to deal justly with the firemen was to place them on an equal footing, in all regards, with the engineers.

The engineers, firemen, trainmen, switchmen and conductors, through their respective organizations, acting in harmony, contributed largely to the efficient work of the committee. No unjust demands were made, a fact which the officials of the system discovered, and which eliminated all unpleasant friction and resulted in uniform courtesy and respect on the part of the officials, when conferences took place between them and the committee. The schedule went into effect August 1st, and harmony reigns throughout the Big Four System.

In bringing this important work to a final and satisfactory conclusion too much credit cannot be given to the committee who had charge of it. Brother G. W. Miller, member of Lodge No. 14, was chairman of the Joint Board for Firemen, and Bro. John Harman, of Lodge No. 10, was Secretary. The committee was constituted as follows:

G. W. Miller, No. 14, Chairman.
John Harman, No. 10, Secretary.
T. F. Parker, No. 239.
M. Lautenschlager, No. 107.
G. W. Coen, No. 111.
D. O. Conners, No. 22.
W. H. Hill, No. 282.

But while we recognize the valuable services of the committee, we take great pleasure in recording the fact that they were fortunate in having to deal with officials, such as M. E. Ingalls, President; W. M. Greene, General Manager, and E. A. Peck, General Superintendent, of the Big Four system. These gentlemen were not only courteous, but were disposed to grant the demands of the committee, comprehending the fact that even handed justice to the men in their employ would prove fruitful of many and valuable compensations.

PROMISCUOUS STRIKING.

Tersely stated, a strike is not only a declaration of war, but is war. Here let it be understood that the various orders of railroad employes engaged in the train service of the country deprecate strikes. They hold that strikes should be the last resort. They believe, that as a general proposition, they can be avoided; that justice can be secured in a vast majority of cases without war—and, be it said to the credit of the organizations, that their laws do not contemplate strikes except as a last resort, when every means known to diplomacy has failed, and then only when rights, sharply defined and unquestionable, have been denied.

We desire to make such propositions clear, not only to the members of the various organizations, but to railroad corporations as well. It may seem to some paradoxical, but it is true, nevertheless, that while the organizations are organized to strike, as a last resort, they are also organized to exhaust every resource at their command to prevent strikes.

We are led to such reflections by an article in the *Switchmen's Journal* for August, in which an account of the "Illinois Central Strike" is given. The *Journal* points out the matter in controversy, which was the "removal of Superintendent Russell and the reinstatement of Trainmasters Berry and Pushie." In this case, the *Journal* says, "the management naturally asked for reasons which had led the men to demand the removal of Mr. Russell, and these the committee were utterly unable to furnish, and, that, too, after a delay of twenty-four hours." This is the case in a nut shell, and the *Journal* says, "This strike was a monstrous wrong, entered into blindly by some, recklessly by others and without regard for the laws of the organization," and, it should be added, without regard to the rights and interests of the Illinois Central, in fact, the "monstrous wrong," as the *Switchmen's Journal* justly characterizes the strike, relates, not only to the wrong done the railroad, but to the wrong done the organizations scandalously represented by some of the men engaged in the outrage.

The Brotherhood men, with weak protests, deliberately violated the laws of their respective organizations, and that they did make such protests only the more clearly defines their guilt. They knew they were doing wrong, and therefore, with their eyes wide open, they permitted themselves to cast odium upon their organizations.

The organizations of which they were members have well-defined laws relating to grievances. These laws were all shamefully ignored, and the men proceeded to formulate demands which they could not substantiate, and because they were not granted proceeded to "tie up the road" and inflict

incalculable losses, and the odium of such transactions falls upon the organizations, notwithstanding the wrong perpetrated is in defiance of the laws of such organizations.

We desire, in what we have to say in this matter, to be severely frank. There should be no subterfuges. We stand squarely by the law—its letter and spirit—and we would have every member of our organization do the same. If there are grievances to be adjusted, the laws of the Order point out the way to have them redressed. To violate the law, is itself a grievance, and should be punished with marked severity. Wrongs are not corrected by perpetrating wrongs, and we are greatly mistaken if the Brotherhood will much longer condone flagrant departures from its laws in such matters.

It frequently occurs that men who are not members of any organization, approach men who are members, with their grievance. They say in substance: "Here is a grievance—thus and so—if you will give us your help we can succeed," etc. Now, then, what is the simple duty of the Brotherhood man? Manifestly, it is to say, "If you want to discuss grievances with me, if you want to have the influence of the Brotherhood, join the Order; otherwise, paddle your own canoe. The Order of which I am a member has laws relating to grievances, and methods of procedure, and I am bound to recognize the binding force of such laws, and therefore cannot discuss grievances and strikes with you." Instead of this, the Brotherhood man ignores his Order, its laws and the obligations it imposes, and permits himself to say to the non-Brotherhood man, "Go ahead, we will stand by you." As a result such disgraceful strikes as that on the Illinois Central frequently occur, in which, while the organization is disgraced, the road suffers loss, all of which could have been avoided by a faithful adherence to the laws of the Order.

This *Magazine* is the advocate of justice—justice to the membership and justice to the corporation. The railroad company has rights, and the right is sacred wherever found. The Brotherhood of Locomotive Firemen has no law that is not based upon principles of right and justice; no law that countenances wrong doing. Its entire machinery is constructed to find the right and to eliminate the wrong. It makes no war upon railroad officials until it is demonstrated beyond all cavil that they will not concede righteous demands, and up to that point the Brotherhood proceeds in a way which challenges criticism.

It is easy to see if the various brotherhoods permit the membership to join in with non-brotherhood men to inaugurate strikes or to engage in strikes not sanctioned by the laws of the Order, confusion, disaster

and humiliation are inevitable. The Order at once, and deservedly, loses caste, forfeits confidence, and may be justly regarded as a public enemy, whereas, by an unwavering adherence to the laws its movements win approval, and it is accounted a public blessing.

As we have intimated, we do not believe the Brotherhood of Locomotive Firemen will much longer condone illegal methods of presenting grievances or helping men to engage in such strikes as that on the Illinois Central and many others now occurring all too frequently for anybody's good. Nor should we be surprised if the laws are so changed as to visit upon those who thus engage in unlawful strikes, the penalty of expulsion. The question is becoming a serious one, and demands robust treatment.

THE FIRST STRIKE.

A friend has handed us the following historical item, captioned, "The First Strike," which those who sigh for the past, will find interesting:

The way in which the first strike, recorded in history (that of 1350) was disposed of by Edward III., is a curious illustration of the temper and ideas of the age. Workmen of all classes having deserted their employments, and labor being at a standstill throughout England the king promulgated the famous "statute of labor," enacting that every man or woman, whether free or bond, within the age of threescore, not having landed property, or other means of livelihood, should be bound to work for any employer requiring the labor, at the ancient rate of wages; that no combination among workmen should be permitted, and that all artificers, servants and laborers refusing to serve, or even venturing to leave the town or district to which they belonged, should be punished by fine, imprisonment, or the stocks! Henry VIII. was equally summary. One clause of his ordinance on the subject being well worth quoting, as showing how "tramps" were dealt with in those days: "The first time they be found so begging they shall be soundly scourged for a public example; the second time, their ears shall be cut off; and the third, they shall ineffectually be put to death." A third strike, also unsuccessful, occurred in 1600-01, under William III., owing to the lowering of the "good wages" of the clothing trade (then twenty-five cents a day) by the emigration of Huguenot workmen from France, who represented the Chinese cheap labor of that period. A verse is still extant from one of the songs in which the strikers vented their discontent:

"We'll make 'em work for sixpence (twelve cents a day).

Though a shilling is what we should rightly pay;
If at this they should grumble, and say 'tis too small.
Will bid 'em choose whether they'll work at all.

During the last 500 years, working men have advanced somewhat in England, as Mr. Gladstone has pointed out. The crown and the scepter no longer determines the condition of workmen in old England. Strange, but not more strange than true, there are Edwards, Henries and Williams in the United States, who are seeking to emulate the old autocrats and degrade workmen, but thanks to organization and federation their power is growing smaller by degrees and cheerily less every day.

UNION MEETINGS AND GRAND OFFICERS.

We desire to say to our brothers of the Order that from this time forward we can not attend union meetings, from the simple fact that the business of the office of Grand Secretary and Treasurer, and the demands of the *Magazine* absolutely forbid, however gratifying it would be to us to be present. Occasionally, and at great sacrifice, we have attended union meetings, and this fact has naturally led to the conclusion that we could attend all; as that would be impossible, and as we have said, to attend any of the meetings requires the neglect of important business, we must, in future, decline all invitations, unless some question arises imperatively demanding our presence.

Grand Master Sargent is frequently required to respond to calls connected with grievances, which must have precedence over all other demands upon his time, and this fact has repeatedly led to disappointments in attending union meetings, a matter which he regrets, but for which there is no remedy.

In the case of Brother Hannahan, he has been in demand at widely separated points to organize Lodges, and has been compelled to forego the pleasure of attending union meetings on that account.

These frank statements are made for the purpose of informing the members that in calling union meetings they must expect the attendance of Brothers Sargent and Hannahan only when other and imperative duties will permit, and to understand that only such duties will prevent their attendance. As for ourself, our brothers must not expect us at all, as every available hour of our time is required to perform the exacting duties of our office.

THE BROTHERHOOD OF TELEGRAPHERS.

The Brotherhood of Telegraphers, we are glad to know, is prospering and constantly adding new lodges. It has started out right and is certain to achieve success. Protection is the shibboleth of all organizations of workmen, and the Brotherhood of Telegraphers having adopted protection, is in an alliance with every other order, that is animated by that battle cry. The members of the Brotherhood of Locomotive Firemen can, in many ways, promote the interests of the Telegraphers, particularly by urging all operators with whom they come in contact, to join the Order. Those desiring information upon the subject of organization should address E. L. Randall, 1718 Tracy avenue, Kansas City, Mo., or by writing to J. S. Morris, Grand Secretary and Treasurer, 875 Fulton street, Chicago.

RAILROAD business must be booming. One car building company in Pennsylvania has orders ahead for 25,000 freight cars.

CALIFORNIA'S BIRTHDAY CELEBRATION.

Forty years ago California was admitted into the Union, and these Native Sons of the Golden West, propose to celebrate the fortieth anniversary of the event, in splendid style, as will be seen by the following circular:

JOINT COMMITTEE OF ARRANGEMENTS, N. S. G. W.

ADMISSION DAY CELEBRATION.

Headquarters: Grand Hotel.

W. H. Chamberlain, Chairman.

W. H. Metson, Vice-Chairman.

R. P. Doolan, Secretary.

J. P. Dockery, Treasurer.

Press Committee, Headquarters, Grand Hotel.

The arrangements for the celebration of Admission Day in San Francisco, on September 6th, 7th, 8th, 9th and 10th next, are assuming definite shape and the fortieth anniversary of the State's admission into the Union, will be celebrated in a fitting manner, the Native Sons of the Golden West having entered upon the work in a manner that precludes the possibility of anything but success crowning their efforts. The various subordinate committees have made reports to the Joint Committee which indicate that the celebrations of the Grand Army of the Republic and the Knights Templar held in San Francisco, will be surpassed on Admission Day. It is the first time in the history of the State, that an attempt has been made to celebrate California's birthday on such an elaborate scale. Native Sons from every section of the State will attend, bringing with them their friends and relatives to enjoy the various entertainments that will be provided during the first and second weeks of September. The event will be long remembered by all who participate, as an appropriate and worthy commemoration of the fortieth anniversary of the admission of California into the Union.

The city will be artistically decorated by experienced decorators and contracts for the building of the triumphal arches will soon be let. The city will don the gayest garb it has ever worn, the sum of \$10,000 having already been appropriated for decorative purposes.

It is expected that nearly \$100,000 will be expended in the proper observance of the day, which amount is already assured.

The different Parlors will have headquarters throughout the city, where visitors will be royally entertained. Beside the decoration of the city, the Mechanics' Pavilion will be gorgeously adorned. The grand ball will be held in the Pavilion, admission to which will be strictly by invitation.

September 8th having been declared a legal holiday, will give many additional persons an opportunity of enjoying the five days' celebration. Excursion trains will run from all parts of the State and the attendance in San Francisco will be very large.

Arrangements have been already made with the proprietors and managers of all the principal hotels, lodging houses and restaurants insuring to all visitors the usual and in many instances *reduced prices for board and lodging*. A Committee on Hotels and Accommodations has already been appointed, and it is now ready to arrange for the accommodation of visitors.

The arrangements for the entertainment of the guests, so far as completed, indicate that the celebration will be the greatest event of such character in the history of the State. The various committees in charge are working zealously and many novel features will be provided throughout the demonstration.

The festivities will commence on Saturday evening, September 6th, by a magnificent display of fireworks, music and competitive drills by the various corps in the Order, in Union Square, which will be handsomely decorated for the occasion.

Sunday, the 7th, will be a day of rest preparatory to the festival days following. Sunday morning special services will be held in all of the churches in honor

of California's anniversary, and in the afternoon a grand sacred concert will be given in Golden Gate Park, for which a special programme will be arranged, and excellent music discoursed.

Monday, September 8th, will be devoted to an exchange of fraternal courtesies by the members of the different Parlors with their friends, and a general welcome to all visitors. In the evening a grand promenade concert will be held in the Pavilion, and everybody given an opportunity of reviewing the pleasing sights. Music will be provided for the entire evening.

Tuesday, September 9th (Admission Day) will witness the great parade, which will be, without exception, the most magnificent and gorgeous demonstration in the history of the State. At the conclusion of the parade, literary exercises will be held in the Grand Opera House, and an interesting programme offered.

The different Parlors will also entertain visitors on that day. A grand rowing regatta will also be held in the afternoon. In the evening the grand ball will be held at the Pavilion and there will also be a grand display of fireworks.

Wednesday, September 10th, excursions around the bay will bring the celebration of Admission Day to a fitting close. For the excursion it is expected to secure three large ocean steamers to convey the visitors to the different points of interest.

The above is a correct outline of events to happen during the celebration, so far as determined by the committees in charge. Other interesting features will also be provided.

Special provisions will be made to entertain the Press of the State. It is desired that every newspaper man in the State shall attend, that he may obtain an adequate idea of the grand purposes of the fraternity as one designed to add to the material and moral advancement of the State, and to perpetuate the memories of the men and events that have made California historic in the annals of the world. A headquarters will be established, of which information will be furnished later, where visiting newspaper men will be cordially received. All necessary materials for correspondence and other press work will be provided, and it is expected that the visiting journalists will avail themselves of these conveniences to the fullest extent. The members of the Press Committee will also provide special entertainment for their guests, during the entire celebration.

We earnestly request you to publish such parts of the above circular as your circumstances will permit, for the general good of the cause. Trusting that you will accept the hospitality offered by the committee, we remain

Yours respectfully,

JOHN T. GREANY, Chairman
G. GUNZENDORFER,
JAMES COAKLEY,
DANIEL SUTER,
R. M. FITZGERALD,

} Press Committee.

It will be observed that most of the imposing features of the celebration will occur while the convention of the Firemen's Brotherhood is in session, and that they are of a character to add indefinitely to the pleasure of the sojourn in San Francisco goes without saying.

WE are under obligations to Messrs. H. V. and H. W. Poor for a copy of the "Introduction to Poor's *Manual of the Railroads of the United States for 1890*." It is shown that the length of track laid, up to December 31, 1889, was 161,396.64 miles. The liabilities of these roads are stated at \$9,931,453,146 and their assets at \$16,205,493,050, the excess of assets over liabilities being \$274,039,904. Poor's *Manual* is now accepted as the highest railroad authority in the country.

DR. LYMAN ABBOTT, in the *Century* says, that "politically America is a democracy; industrially America is an aristocracy. The community which allows the laborer to determine the destinies of the nation, allows him no voice in determining the nature or the profits of his own industry. He makes political laws, he is under industrial laws. At the ballot box he is king; in the factory he is a servant, sometimes a slave. Men who make legislators, governors, judges, presidents, are not allowed to determine how many hours a day they will work, and are able to determine what wages they shall receive only by organizing into an unarmed militia to preserve that right. The community at the same moment puts a ballot into the hand, and a manacle upon it. We must either take the ballot out or the manacle off." Well, it is settled that the ballot will not be taken out of "the hand," and the time is near when the manacles will fall from the hands of labor. The struggle is on. Workingmen are preparing to solve the problems Dr. Abbott submits for their consideration. The "aristocracy of America" makes a sad mistake if it supposes it will be forever in the ascendancy, and that it will be able to effectually manacle "Industrial America." It is not so written—such is not the decree. The world can get along amazingly well without an aristocracy, but without industry, it would stand still.

It was thought by many that Abraham Lincoln moved slowly in the matter of issuing his proclamation that made the American negro slave a free man. It was not so; Lincoln simply waited until the country was ripe for the proclamation, then it came. It may be surmised by the "American aristocracy" that the workingmen are progressing slowly, or not at all, that they are too abject to resist manacles, that they will accept degradation and glory in their debased condition. It will be well if the American aristocracy, reconstruct their theories. At present those who oppress, defraud and degrade labor, bank upon the beligerent attitude of workingmen towards each other, but every year brings them into more harmonious relations. Organization is going gradually forward. Educational advancement is everywhere observed in the ranks of labor. After organization comes federation, and then victory—indeed, federation is victory. The federated hosts of labor, the "unarmed militia" will determine in the near future how many hours shall constitute a day's work, and what the wages shall be. They will determine what laws shall stand on the statute books, and who shall administer them. Then the workingman will not be a "slave in the factory," while being "king at the ballot box." Things are moving in the right direction, and Labor's millennium is dawning.

THE Indianapolis *Labor Signal* of June 27, has the following, constituting a part of an interview with P. M. Arthur, Grand Chief of the Brotherhood of Locomotive Engineers:

"You have been opposed to federation, have you not?" he was asked.

"Yes, I have always been opposed to such a move and all the brotherhoods know it, for I am not ashamed to tell it. After having been organized for twenty-seven years and having accomplished so much alone I do not believe the Brotherhood should federate. The differences of interest cannot be harmonized, and the Brotherhood can succeed better in my opinion, alone. Does the Brotherhood ever strike? Yes; that is a right every labor organization must reserve as the last resort after every honorable step has been taken to settle the differences. We believe in arbitration, but we have had four strikes in the history of our organization. We have at times co-operated with the firemen, and are perfectly willing to do the same now, for they are very close to us."

Mr. Arthur always avoids reciting facts, which, were he to state them, would at once place him *hors de combat*. In response to a query, "you have been opposed to federation, have you not?" he would be required to say. O, yes, when with Chauncey M. Depew, but when dealing with President Barnard, of the O. & M., "I am in favor of it. I am in favor of federation when it will be of service to the engineers, but opposed to it when any other class of railroad employes are benefitted by it; then I say, "mind your own business."

"Did you advise federation in the settlement of troubles on the Q. & C. and on the O. & M.?"

Well, yes. I suppose I did. You see on the O. & M., the engineers and firemen had a grievance. Mr. Barnard, the president, wouldn't recognize me officially, nor would he settle the grievance. Then I acted in concert with the Supreme Council of the Federated Orders, the firemen, conductors, trainmen and switchmen, and the engineers and firemen won the case. As I said, I'm for federation when the engineers have a grievance, on such occasions I think switchmen, brakemen, conductors and firemen are well enough, but when any of these men have a grievance, I tell them to mind their own business."

On September 15th the Brotherhood of Railway Conductors will hold their first annual Convention at Toledo. The meeting will be a notable affair. The organization though in its infancy, has had phenomenal growth, and nearly a hundred delegates are expected to participate in the deliberations of the convention.

We are under obligation to Henry C. Adams, Esq., statistician of the Interstate Commerce Commission, for an advance copy of the second annual report of the Statistics of Railways in the United States. The report is of great value.

MR. OTTO PELTZER contributes many excellent sayings to the columns of the *Chicago Rights of Labor*, among which is the following:

With all that has been said about the frauds and abuses of stock watering, the practice goes on unchecked and a fresh transaction of the sort of large proportions is just reported from Kansas. The municipalities in that state which subscribed to the stocks of the Chicago, Kansas & Nebraska Railroad are now resisting the foreclosure of a mortgage on the company. The municipalities claim their subscriptions were investments, not gifts, and they demand that the proceeds of sales of stock and bonds be used in paying corporate debts. It is claimed that the cost of the road will not exceed \$10,000,000.00 while the company has issued stock to the value of \$30,000,000.00 and sold \$25,000,000.00 worth of first mortgage bonds. The road is thus capitalized for \$45,000,000.00 more than it cost to construct its line, a capitalization five times greater than the money invested. For every dollar justly paid by shippers four must be extorted from them for return on bogus capital. Rates cannot be reduced because the holders of fictitious stocks and bonds want interest and dividends on pretended capital never actually invested. The people continue without complaint to pay hundreds of millions annually to supply undue and illegitimate profits on pretended investments.

The foregoing tells the whole story—a story of robbery pure and simple, and yet such infamies are not only practiced continually, but are protected by the courts. To pay dividends upon water, labor must suffer. Labor has suffered long and patiently. It is now becoming restive. It has discovered the fraud and proposes in due time to apply a remedy. Dividends upon water will have to cease. In the wide world there is nothing in the way of scoundrelism equal to watered stocks and nothing better calculated to bring legislation and law, courts and judges into contempt.

Again Mr. Peltzer in discussing capital and labor introduces an address of Mr. Robert Linblom, a wealthy man, delivered before the delegates of the National Board of Trade as follows:

"I say that every fair-minded man must admit the right of the workingman to wish for a change and the right to agitate a change so long as they do not trample upon the rights of other men. Laboring hard from one year to the other, depending for bare subsistence often upon the whims of other men, full of anxiety day and night for the fate of those depending upon him, unable with all his efforts to provide for the future—is it to be wondered at, I say, that when this man looks at other men who know no more than he, who work no more than he, who spend more money in one week than he earns in a year, that he should say to himself and his fellows: 'There is something wrong about this. Let us find out where it is, and, when found, let us try to arrange it so that every man who is willing to work, who is able to work, shall have a share in the accumulations in proportion to his mental and physical ability to produce these accumulations called wealth. Let us arrange it, they would naturally say, so that when two men work together one shall not take all the accumulations, but so that each gets a fair proportion according to the labor and the capital contributed. Is there anything unnatural about the desire of the laboring men for this change? Put yourselves in their places and your answer will be, No! It is natural, it is proper that they should agitate for it, provided they do it lawfully or as lawfully as it can be done.'"

In concluding his most convincing argument he says:

"Look where you may and on every side, in every department of industry, you find these fictitious representatives of capital permeating the whole industrial fabric and like cancers destroying the life of the great industrial body."

"The system is not only mischievous in its effects upon the economic welfare of the body politic, but it is mischievous in its influence upon the morals of society. It puts the stamp of respectability upon fraud when successfully carried out and blunts the moral sense of business men until they are unable to distinguish between right and wrong."

"In pursuance to my arguments I beg to offer the following resolutions:

WHEREAS, Capital is accumulated labor and accumulation the result of industry and intelligence, and,

WHEREAS, Capital has the same, but no more, rights than labor, therefore, be it

Resolved, That the issue of fictitious certificates of labor to capitalists is dishonest as would be the issue of fraudulent certificates of labor to laborers.

Resolved, That equity, fairness and common honesty demands that all issues of stocks and bonds should represent the actual capital invested and no more.

Resolved, That so-called watering of stocks should be made a criminal offense by law, and the law enforced.

Such declarations demonstrate the cheering fact that men of thought outside of the ranks of labor, are coming to the rescue. They see that a storm is brewing and that there must be a reign of right inaugurated for the good of all.

We have received No. 1, Vol. 1 of *United Labor*, published at Denver, Col., under the editorial control of James H. Cater, Esq. As the name implies, *United Labor* will be devoted to advancing the interests of organized workmen, in every department of labor, and in Mr. Cater workmen have a fearless but discreet champion of their interests. A born orator, his most eloquent periods are cogent arguments, and as a writer his quick comprehension of the needs of the times, enables him to present them, in a way to rivet conviction. In his salutatory Mr. Cater refers to the fact that "workmen united, are simply invincible" and adds:

With concerted action and united sentiment the workers are masters of the situation. The great reforms that have been effected demonstrates this proposition. The greater reforms that are to be wrought indicate the need of still closer union among the producing classes, and the utilizing of all the proper machinery obtainable to achieve the great work that the various labor unions have undertaken to perform.

The *Magazine* wishes *United Labor* all the success its brilliant editor can wish. There are places for more labor Journals. The field is wide and inviting, and we recognize in Mr. Cater a man with the required capabilities to make his paper one of the best in the country.

TALKING of horse power, it is stated that the sun raises 37,000,000,000 tons of water a minute from the earth. In this connection, it is estimated that 12,000,000,000 tons of coal would be required to duplicate the heat of the sun. Just what such estimates are worth to the world we do not pretend to say.

GEORGE B. GRANT, in the *American Machinist* has some generous words for the Pullman car porter. He says, "the porter is expected by the car company to bleed the public or go without his pay, and he generally earns what little he gets by work that is not particularly heavy, but which must be unusually wearing. For example, I noticed once that the porter that left Minneapolis with me was still on duty twenty-four hours afterwards as we neared St. Louis, and in reply to my inquiry, he said that was his usual run. 'I get so tired that I go to sleep while eating my supper. I have to be off early to-morrow morning, but I get a short day, as I get through at ten at night.' I suppose the company favored the poor man with a short day's work of sixteen hours, in consideration of the fact that he had had twenty-four hours steady the day before. I did not grudge the quarter that man got for blacking my boots and answering a couple score of questions." The Pullman car company is very rich. Prince Pullman has several palaces, even his private car is constructed with oriental splendor. His wealth mounts into the millions and it is this man who requires the car porter, says Mr. Grant, "to bleed the public or go without his pay." It would be difficult to paint a more repulsive picture. It is organized robbery. The Pullman porter works for Pullman and bleeds Pullman's patrons for his pay. There may be meaner men in Hades, but it would be difficult to find a more venal wretch outside of that widely advertised locality.

JOHN Chinaman isn't regarded the pink of perfection in the United States, but at home, John has some traits, if they could be universally adopted, would be of advantage. In trading with foreigners, John pays cash, but among themselves they have the credit system. "They are," says one who knows, "proverbially honest in all their dealings, and will closely adhere to a bargain, even if doing so should entail a loss on them. There are no bankrupt laws in China, but debtors are liable to corporal punishment from their creditors. It is considered a disgrace not to pay debts, and there is a sort of national custom in conformity with which accounts are paid up at New Year's day (in February). The effect of this arrangement for settlement of money matters is that there is never anything like a commercial panic in China." Sticking to a bargain though it entail a loss is a good idea, but granting the creditor the privilege of licking the debtor, is too Whitecapish for this country.

A BIG fight is in progress between the Wagner and Pullman sleeping car companies. So far the porters are not in, and the "tip business," is as profitable as ever.

THE way it works in New England is told by the *New York Standard* as follows:

A New England cotton manufacturer, who has large works, was talking recently with one of my acquaintances on the question of ballot reform. This master of men did not feel any too comfortable at the thought of a change in methods. Things as they are please him well enough. He said: "They have ballots now that are supposed to be got up so that no one can tell how a man votes. But we get around that. No man in my employ votes more than once against my interests. I'm around about election times. I sit on the platform at meetings and I know who are present. I know, too, how things are going on election day. When a ballot falls into the urn we know who puts it there and know what ticket it is. We've got to look out for our interests. This infernal free trade racket of last fall cost me more than ten thousand dollars. I'll tell you, Phil, there's nothing for keeping workmen in their places like a good strong monarchy."

The *Standard* has a national reputation for telling the truth, and we invite workingmen to read the foregoing paragraph and then ask themselves, if from the days of the helots, there ever existed a more damnable slavery than the "New England Manufacturer" discloses? The "good strong monarchy" which the New Englander so much desires, is coming as certainly as that rivers flow to the sea; with all the crushing, degrading appliances of a "good strong monarchy," if workmen do not organize and federate to crush out the last lingering hope of monarchists.

HIGH authority says that the best summer drink ever discovered is made by putting two spoonfuls of oat meal into a tumbler of water. It is further said that this drink is far more strengthening to sustain the toiler through continued exertion amid a high temperature than the stimulating beers and ales which are frequently, and in some places customarily, resorted to by men in these occupations; while it matters not what heat the workmen must undergo, he may consume any desired quantity of the oatmeal water without any injurious consequence whatever. A little over half a pound of oatmeal to a gallon of water makes this most excellent beverage, which the more temperate among foreign iron workers greatly use, and which they assert much surpasses, as a regular drink, all that can be found in ale, beer, or porter, even as regards those particular qualities for which the latter are used by men whose daily employment is in an overheated atmosphere.

A TRAIN on the the Atchison, Topeka & Santa Fé, of thirty-eight cars laden with silk, wine, oil, sealskins and tea, valued at a half million of dollars, caught fire and the entire train was in danger, but was saved by the liberal use of wine and silks as extinguishers. Rich wines and fine silks did the business.

THE American Federation of Labor claims a membership of 750,000.

THE MAN AND THE HORSE.

The London, Eng., *Labor Elector* contains the following dialogue which shows the drift of economic views on the part of those who buy horses and employ men:

Passenger In a London Omnibus—How long have these horses been on?

Conductor—This is their second journey.

Passenger—And how many journeys do they make in a day?

Conductor—Two: sixteen miles a day. On some lines the two journeys are only fourteen miles.

Passenger—And when will they come out again?

Conductor—Not until 2 o'clock to-morrow morning. There's eight horses to this 'ere 'bus, and they takes turn about, the heavy trips one day and the light ones the next.

Passenger—And all the other hours they rest?

Conductor—Yes, Sir. Ah, the company takes care of their horses, that they do.

Passenger—The horses are better cared for than the men.

Conductor—You may well say that, sir, but the horses cost money, and when you have worn out one you have got to buy another, but when you've worn out a man, you can get another for nothing.

The foregoing illustrates a universal practice; one that will be continued until workmen have the independence and courage to change it. The employers view is, that the horse, mule and ass, not man, were made "a little lower than the angels."

KEMMLER AND ELECTRICITY.

The *American Machinist* says:

A great many people and a great many newspapers are at present indulging in hysterics of the most violent type over the alleged failure and the awful cruelty of the execution of Kemmler by electricity. And yet it seems very clear that there was no cruelty more than is inherent in any execution, except so far as the effect of this one upon the spectators was cruel, and that was undoubtedly the result of gross bungling. So far as Kemmler was concerned, he was a base wretch, who showed no mercy for the defenseless woman whom he murdered. Nevertheless, as to whether or not the state is justified in putting such animals to death by any method is a debatable question. Assuming that such a right exists, it is still debatable as to which is the best method. We have never claimed, nor do we now claim, that execution by electricity is preferable to any other, but we have protested, and still do protest, against the evident effort to increase the mystery surrounding the subject, and to make it appear that no one knows whether or not electricity will kill.

The miserable wretch, Kemmler by his monstrous crime, and, as Josh Billings would say, by the dampfoolism of slobbering cranks, in law and literature, gained a world wide notoriety, when he should have been quietly and expeditiously "removed," as if he had been a mad dog, a rattlesnake or any other venomous reptile. There is not a man on the continent, from the President down, throughout all the ranks of the great and good—scientists, philanthropists, explorers, educators, divines and statesmen, whose achievements in their chosen fields of labor and investigation, had they died, would have commanded a tithe of the notoriety that has been given to Kemmler, the ignorant murderous animal, who was killed by electricity in the Auburn prison and the humiliating fact, say what we may, permits the thought-

ful minority, to estimate correctly the coarseness, the vulgarity, if not the beastliness of the great majority and tells all too plainly that this majority, including high and low, from palace and slum, relish with peculiar zest, hangings, prize fights, dog fights, bull fights, cock fights—all things bloody and disgusting. If Kemmler had been executed in public, multiplied thousands would have been present to witness the tragedy and though nominally secret the press managed to secure all the repulsive details which the great public devoured with depraved gratification.

In view of such facts, what becomes of the stereotyped boast that our civilization is pre-eminently christian? In such things there is food for reflection. The civilizing agencies employed don't civilize to the extent desired, nor indeed to the extent claimed—our civilization is largely material. It estimates horse-power, rather than heaven-power. It is a money civilization. God is pushed aside for gold. On the surface it is pleasing enough, but just below the surface are forces which when let loose demonstrate that the age of sham, pretense and hypocrisy has not passed away.

GROWTH OF OUR MEMBERSHIP.

The increase of the membership of the Brotherhood of Locomotive Firemen is not only phenomenal, but in all regards healthful. Locomotive firemen, never in the history of the Order, have given to the subject of membership the critical study of accruing advantages they are now bestowing upon it. As a result, the membership for the quarter, ending July 31st, 1890, increased 815 over and above all losses by deaths, withdrawals and expulsion, or, at the rate of 3,260, net for the year. That our healthy and wise system of insurance has had a mighty influence we do not doubt, and in addition, firemen recognize the fact, that the Order is courageous, progressive and aggressive and that it stands for the right.

ACCORDING to the latest revised estimates China has a population of 450,000,000. In two provinces of Kiang, having an area of 90,000 square miles, the population is set down at 80,000,000, or 888 to the square mile. No wonder rats are scarce in the Kiang provinces.

A LADY, who has been bitten by dogs, snakes and a weasel, writing to the *New York Tribune*, says, a cure was effected in every case, by the application of salt and vinegar. A little more vinegar than salt. Worth trying.

THE *Switchmen's Journal* for August does itself eminent credit by the way it points out the scandalous proceedings of the strikers on the Illinois Central.

THE following resolutions, adopted by railway organizations at union meetings are being forwarded to congress:

Resolved, That it is the sense of this meeting, composed of the representatives of the undersigned railway organizations, that we deem it our duty to do all in our power to have our various secretaries of the different organizations communicate with the members of Congress who represent the district in which said orders of railway trainmen or their branches are located demanding their vote to defeat the bill now pending before Congress relative to arbitration, for the reason that said bill is contrary to principles of a free government, and be it further

Resolved, That said secretaries notify the United States Senators who represent the states in which said orders are located that it is the desire of the members thereof that such Senators support the bill introduced by Senator George, of Mississippi. In regard to the liability of railway companies in case of injury to an employé; also the bill providing for the application of the safety couplers and power-brakes on all railway rolling stock, as a means of safety to the employes thereof.

A GOOD story is told of an engineer down in Maine who saw a man on the track waving his hand at him a few days ago, and, his mind filled with the possibility of impending danger, stopped the train. Every one was in a high state of excitement, but the man coolly boarded the smoking car without uttering a word. He looked as if he had not traveled far from his native heath, and, on being questioned, said: "Wal, I just waved my hand because I wanted to get on the keers. I'm going ter Wells, and I never been on the keers before." He spoke, it is said, with an unmistakable air of innocence, and raised such a flood of good nature that the conductor silently took his fare, and when he landed at Wells he was loudly cheered in honor of his first ride.

IN various localities great efforts are being made by the enemies of the federation of organizations, as represented by the Supreme Council, to inaugurate "local federation." The *Switchmen's Journal* refers to the receipt of such articles of federation, and as they purport to come from Representatives of the local Lodges of the B. of L. E., B. of L. F., B. of R. T., B. of R. C. and S. M. A. A., pronounces them "frauds," and says: "The S. M. A. A. was not represented at any of these meetings, neither were the Firemen, Conductors or Trainmen. No Lodge of this Association is interested in any plan of local federation."

WE notice that Mr. James J. Creamer, G. M. M., has become Editor of the *Journal* of the National Association of Machinists, published at Richmond, Va. We notice that the order has one hundred and four Lodges, and is making steady advancement.

AN Indianapolis master mechanic, is of the opinion that the electric headlight for locomotives, should be generally adopted.

MRS. NELLIE BLOOM's poetical gem, "My Mother," embellishes the Woman's department of this issue of the *Magazine*. Mrs. Bloom is entitled to the encomiastic remark that she writes better as she grows older, if, indeed, poets ever grow old. Her contributions would indicate that with the flight of years, she renews her youth. Hope so.

JOHN A. HALL, Esq., ex-Grand Organizer of the S. M. A. A., is now editor of the *Switchmen's Journal*. It may be a little trite to say that he is "the right man in the right place," but it is always in order to tell the truth, and some sayings like the one we have quoted, as the years go by renew their youth and vigor as truth tellers and no apology is required for putting them on the stand.

THE *Switchmen's Journal* not only has a new editor, but a brand new dress, from foundation to dome and still it is the same unrelenting foe of the oppressors of labor, that it was when it was Vol. 1, No. 1. The *Magazine* wishes its lusty contemporary continued success.

For the fiscal year, ending June 30, 1890, our Uncle Samuel raked in taxes amounting to \$81,687,375 for spirits, \$33,958,991 for tobacco, and on fermented liquors \$26,008,534, a total of \$141,654,900, and an increase over the preceding year of \$11,751,997.

THE annual convention of the S. M. A. A. will be held this year in Buffalo, commencing September 15. A large attendance is expected, and questions of great importance will be discussed.

THE New York Central has put in service its new ten-wheeled passenger engines, and they get over the road at the rate of a mile a minute.

BARNUM's elephants don't check their trunks when they travel.

SWITCHMEN declare they can't live on the hind legs of railroad frogs.

WE have on our table the *Nationalist* for August, the leading article being "Social Transition," by John Orvis. The writer is confident the transition is now rapidly going forward and that Bellamy's Utopia is already in sight. "Practical Nationalism in Chicago," by Charles F. Weeks, contains facts well calculated to set men to thinking, if not about Nationalism, at least about municipal reform in many things which are now sources of vexation.

After reading a book which was sent us from New York a few days since, we can not refrain from calling the attention of our readers to the advertisement of the *Cactus Blood Cure*, which appears on another page. From the testimony of the large numbers who have been cured of blood troubles, including scrofula, rheumatism, skin affections and blood taints of every description, we are satisfied that it will do just what it is claimed to do in the advertisement, and we judge that any who are troubled with any of the affections mentioned can not do better than write the company and get the medicine. At least don't fail to send for the book.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

A MINER IN HIS STUDY.

Listening to the song of the perfumed pine,
Near my cabin in the soft wind blowing,
Or watching the glories of the sun's decline,
That blushed all the peaks in its glowing,
"It's the memories of the day," my heart had said,
"Like a pure life's thoughts before it fled."

I've heard the shriek of the torrent's roar,
In its anger, the chasm leaping,
And saw the forked-light in my cabin door,
As the sun from the gloom was peeping
"Like a ray of hope, when the end is nigh,
From the soul's despair," in my heart thought I.

Dreamily under the aspen shade,
Watching its trembling leaf
Make dancing shadows that quickly fade,
Like the sobs of childhood's grief;
I marvel that life is much of this,
With its lines of sorrow and smiles of bliss.

The storm, the shadow, the sunset's glow,
The birth of day down the cañon stealing,
The bright warm sun and the drifting snow,
Shapes all my thoughts and feeling;
And the yellow dust holding fast in my pan,
Is the cherished hope of a manly man.

Tim Fagan.

Federation.

MR. [EDITOR:—I will state in the outset that I am not a member of the B. of L. F. nor of any other labor organization. Why I am not is because my term of service does not render me eligible for membership, but as I have as much sympathy for firemen as any one connected with their Brotherhood, I trust I may be permitted to say something on the subject of federation, through the columns of your Magazine.

I am ready at any time to contribute to any project that may be for the good of the Brotherhood. I am aware that I am to-day enjoying the benefits of a salary that was established through the efficacy of the philanthropic Brothers who have preceded me in the service, and I trust I may be able to accomplish, or help to accomplish, some good when I have become a member, for those who may succeed me in the service.

This subject of federation has been discussed by men of a life experience in the railway service, and whose judgments are too mature to commit serious errors.

What we non-members wish to say is, that we are anxiously awaiting the time when we may be permitted to swell the ranks of this, the grandest and bravest army of honest working men that ever existed. You have fought the good fight. You have kept the faith and when you have finished your course, have ended the hardships and reverses of a life of indigence and toil, we shall twine the wreath of memory about your sepulcher and teach our children to appreciate you as the noblest benefactors of your race.

The hardships and privations you underwent, the disdain and insults that were offered you by the merciless aristocrats of wealth in your attempts to obtain a living compensation for your services, would, without a word from my feeble pen, enshrine you forever in the hearts of my successors. You have gone before and prepared us a place: you have made our path straight: you have established the signals of danger at every point where our enemy is lying in wait for us; you have erected fortifications behind which we may protect our interests:

you have established a government for us to which we give the oath of allegiance and pledge our lives in defense of its constitution. We shall exemplify your course, and whenever the hand of oppression falls without justice and without mercy upon us, we shall do as you have ever done, battle for the right until our bodies go down to the grave. Whenever the cries of our little ones for bread constrain us to accept the terms of injustice, we will not recognize subordination, but will live in hope that justice shall triumph. He who battles for the right cannot be conquered in spirit. We shall be buoyed with the hopes that the recruits and reinforcements offered through federation, will equip us with the power to trample the nefarious schemes of our oppressors under our feet and while we are thus subjugated, federation will brand upon the oppressor's brow:
Sic semper tyrannis.

"A house divided against itself cannot stand." We are virtually divided. We are all laboring in one common field, and if an enemy attacks a brother across the way we are by a set of fixed rules and principles rendered powerless to assist him; and the forces or fortifications of our brothers are so weak that we stand only to mark their defeat, which greatly reduces our confidence in our own power to defeat them should they ever attack us. And we must feel that if the enemy was strong enough to conquer them, he will be strong enough to conquer us; and just so the enemy looks at it.

There have been some poor, narrow-minded O. R. C. and B. of L. E. men who opposed federation with the B. of L. F. because it appeared to them a condescension to connect themselves with a Brotherhood, or have a Brotherhood connected with them, whose members received a smaller amount of pay than they did. I have no power to express my contempt for such men. If we were as mean and selfish as they and had as little regard for their interests as they display for us, we and the B. of R. T. could defeat them by accepting their places. I am familiar with the engine I fire, and the B. of R. T. man is familiar with the duties of his conductor; and our familiarity with the class of work we have daily performed would render us fully able to perform their duties with surprising perfection to them both. But, sirs, we are too honorable for this. We have made this allusion only to show you that we are endowed with a power to prostrate your schemes if we were rejected and mean enough to use this power. "It is noble to have a giant's strength, but it is tyrannous to use it as a giant." God pity the man who earns his bread by the sweat of his brow, who feels that he would be committing a condescension to soil his hands by grasping those of a fellow laborer. The true aristocrat of labor is dignified in spirit and in character, and recognizes no distinction between himself and a brother laborer, only by the true principles of genuine integrity.

I would not have any to understand me as advocating the principles of "scabism" when I refer to the exclusion of firemen from federation with the B. of L. F. and O. R. C. I am not a Brotherhood man, but if a strike was ordered on the system that I am employed on, and if I could be shown that the principles were just, I would be one among the last to accept the terms of injustice, or to pilfer from the oppressed his sword and heave him "to the mercy of a rude stream that would forever hide him"; yes, I would rather coin my heart for dimes than wring from the hard hands of the poor their substance by any treachery to their interests.

Friends, I have no words at my command adequate to express my loathing for these aristocrats who oppose federation with us. Thank God, they are not the true representatives of the noble orders from which they spring. They are a weak and ungrateful, unphilanthropic element who seek ascendancy without the power to obtain it, and without the merit to deserve it. Ah! give them but the power, and they would be more tyrannical and oppressive than those lords of wealth whom they charge with oppression. They remind me of a man about whom I wrote a short rhyme some weeks ago who was one of these aristocrats of labor.

This maxim I find filled with great truth,
And I have observed it closely from my earliest youth,

That promotion reverses the actions or ways of the man who had little in his earliest days; But take the man refined in his spirit,
 • And the wealth of this world let him inherit,
 'Twill effect no change in his actions to men,
 If he ever was once, he is yet your friend.

I am grieved to discover that there are a few in and out of these Brotherhoods who oppose federation on the ground that if we are federated, our power will be so augmented that after repeated victories we would drift to anarchy. It is a poor ignorant wretch who ever conceived this idea, and it is an insult to the advocates of federation. He who has no more confidence in the integrity of this grand body of honest workmen, deserves naught but to bow at the knee of oppression and accept from the grudging hand of avarice his hard-earned dimes. "In the multitude of council there is safety." J. G. Cary.
 BIRMINGHAM, ALA.

ST. LOUIS, MO., Aug. 3d, 1890.

MR. EDITOR:—I have carefully read all communications from the different brothers, and I see a great many are not in favor of changing our name, and I for one, being much opposed to it, agree very much with Bro. Carter, of 263, when he says: "If this is the case it is so evident that with their new name they will take a new leader." This is the opinion of a good many that I have heard arguing this question and I would like to see the name stand as it has stood since the origin of the organization. We are all known as Brotherhood Firemen and as a general thing have a good record throughout the country. We are respected under our old name just as well and probably better than any other name we can find. We have won many a battle under our B. of L. F. flag and stand a good show of winning as many more. If we were to change the name I am afraid we would not know what to do with a candidate who wants to join the B. of L. F.; our opinion is let the name remain as it is. I also agree with Bro. Wescott, of 82, when he says if there is anyone not satisfied with the name of the Order or its management he had better join some other order that changes its name yearly: that is my opinion exactly. There are many more like Bros. Wescott, Carter and myself who judge what is best for the Order, not what suits some of the brothers who are hostile or running a switch engine. We all know what the B. of L. F. has done for itself, we have a wide reputation, but what we will have after we do away with our parent name we don't know. Our song is let us federate and keep our name.

Fraternally yours,

F. A. McGenty.

GALESBURG, ILL., July 28th, 1890.

MR. EDITOR:—Will you please put a few lines of mine in the grandest labor paper in the country?

I write in answer to one of those noble, high-minded, B. of L. E. enemies of labor. A man whose utterances show he has no claim to the title of friend, and I make this reply hoping he will read it in the B. of L. F. Magazine, of which E. V. Debs is editor.

This enemy of labor writing from Chicago to the B. of L. E. Journal, says that he understood it was to be decided whether or not the B. of L. E. would adopt federation July 1, 1890, that it is now the latter part of the month and his royal highness has not been informed how it is—what a pity! But, the writer says, it is troubling his mind very little, as the idea is simply preposterous and that the engineers should not accept it for several reasons. First, because the B. of L. F. at the Atlanta convention presented a resolution and passed it, providing that the poor humble crumb-searching officers of the B. of L. F. should present to the high minded, way-up-yonder engineers a plan of federation. The idea of a fireman offering a resolution for an engineer to adopt, he regards an insult to the Order.

Again, the writer says, after the B. of L. F. officers had presented their offer to the B. of L. E., the B. of L. E. officers sent them home and that the B. of L. F. officers should have regarded themselves as highly favored for having been permitted to approach his royal highness close enough to do that much, and ought not so much as dreamed of having federation adopted, unless there was something in it to elevate

engineers one notch above the dirty firemen. The writer still further says that he has been informed by a fireman who attended the Atlanta convention, that there was not anything adopted. Now, if such is the case that fireman has sunk himself very low in my estimation, for relating anything that occurred at the convention, to a man who seems to have no use for a fireman, but to show his contempt for him and for his Order. But no one believes that any fireman who attended the B. of L. F. convention at Atlanta ever made such a statement.

Again, says the writer, he don't understand why it is, 18 or 20 strikes the B. of L. F. as an association had never done anything. I can tell him. Simply because they know of the old timers in the "Q" strike stayed with the company and taught men how to run engines, and they know there are hundreds on other roads to day married to their gods and would go sailing in the same boat. The writer seems to think that E. V. Debs is the sole instigator of the federative plan, and that he is entirely too fast, but I can tell him this much, that the B. of L. E. never had a man who dared to treat labor oppressors as he has done.

The writer again says, that firemen have no regard for their obligations. Come to Galesburg and see who stood the test the best. Old engineers who had had runs for ten and fifteen years paying them \$125.00 to \$175.00 were the first ones to go and look for work and scab. Firemen, who for three months got no money and who had families as large as engineers and in many instances larger, stood without a word of complaint, but as soon as the engineers were a month behind, they commenced dropping out, one, two and sometimes six at a time, and went to scabbing. That is the kind of men who are able to take care of themselves. If they are such a strong self supporting order, why did they come to us on their knees and beg us to help them in a time of need? And if we had refused, how long do you think the strike would have lasted? I could have taken my engine out as well as the man who was running her, for I have had to take her more than once for reasons unknown.

And why, I ask, do the engineers still insist on talking about "skilled labor" when the "Q" company put men to running engines who had never run a day in their lives; and to-day say they are just as good as any men they ever had—why anyone can run an engine now. The writer further says it would be foolish for men having runs paying \$140 to \$180.00 a month, to get down off their engines on account of a brakeman or a switchman. If that is the case, why did the switchmen stop work on account of us, when the company offered them the best pay in the country, simply to lend a helping hand to a fellow workman? What matters it, whether a man gets \$1.50 or \$5.00 a day? He has a family to support and his rights to protect. Drunkenness seems to be the main slur thrown at a switchman, but how about the engineers? Nine out of every ten on the "Q" who had been running engines from ten to fifteen years had nothing in time of the strike, and firemen drawing half the money of engineers, had little homes.

The writer, again says, the engineers are to-day working under \$2.00 or \$3.00 contracts, with the company. That means they are standing on the edge of the lake with a ball and chain around their necks, and are afraid the company will kick the ball into the lake and deprive them of life. Why, it is a surprise to me that other orders want to federate with engineers if this Chicago writer represents their opinions.

Again, says the writer, there is one more chestnut about other men asking for more pay—pay nearer the engineers. He seems to think it is absurd to ask such a thing. Why is it absurd? They made good engineers on the "Q" in the time of the strike in two weeks and the most trying thing they had to contend with was in keeping up steam. The writer seems to forget the men's reply when we asked them to leave their engines, so I will inform him, they all said "no." That grand leader of yours and his B. of L. E. men beat us out of our positions and we are now trying to get even. And I suppose they have done so while we fought being fed on "stand firm" by the grand old leader while he was at home enjoying himself. If the B. of L. E. is such a strong body why don't you make a move? There are some of your old men

working at common labor.—why don't you assist them to obtain employment on some road? Do you think you are so strong you will succeed in making the "Q" take them back? You say your order has been successful far beyond expectation. I am sure I have never seen it, for you never gained the first point toward winning a strike. It made widows and orphans. It beat good men out of homes. It run men so far in debt that they never will get out. That is what your splendid order has done. It always had so many enemies that it never could be successful. Why, you can go to the west and south to day and conductors will carry a half car of firemen and kick if one engineer asks for a ride—and it is just such letters as you write that makes it the way it is. If I belonged to your order, which, thank God I do not, I would vote to expel every one who would write such a letter as you have written to the B. of L. E. Journal. If you want to find out what federation is good for, talk with some of the old C. B. & Q. men who have been through the mill, they will tell you what would have been secured if all the trainmen had been banded together. And above all things don't let anyone hear you speak of being afraid to strike, because there are one thousand enginemen out of employment and I don't think any of them are yet ready to scab, on the opinions of such a short sighted man as your letter shows you to be.

Yours,
L. Watson.

GLENVIEW, MONTANA, Aug. 17th, 1890

Editor Firemen's Magazine:

Having read several letters in the back numbers of our official organ, which refer to hard "feelings" existing between engineers and firemen, I was inclined to believe the writers were a little too severe in their criticisms, but, recently some things has come under my notice which lead me to believe that there is no doubt as to the correctness of their statements. As an illustration, I will mention the fact that the Northern Pacific R. R. Company is sending the Westinghouse air brake instruction car over the entire system, for the purpose of instructing engineers, firemen and trainmen, alike, in the practice of handling air, showing them all the different and most complicated parts of the air pump, brake, cylinders, tripple valves, etc., endeavoring to give every man an idea as to the working of the apparatus. While in Forsyth, some days since, a class of engineers and firemen were receiving instructions from the air brake expert of the U. P. R. R., the class being formed, because it would require too much time to instruct each man separately. After instructions had been given to the class, the men were requested to repair to a private room for examination, and be questioned in regard to their knowledge of the brake practice. At this time, one of the engineers, seeing that firemen were to be admitted to the room along with engineers, said—"Don't let any of those firemen in here with us." He was politely informed that the instruction was for all alike, firemen as well as engineers. Now, Mr. Editor, I ask, what could have been the motive of that engineer in desiring that firemen should be excluded? Was it because he was afraid that some of the firemen were more enlightened in the air brake practice than some of the engineers? Was it because he realized his own lack of information and skill, and therefore, did not want to have his ignorance exposed? As it was, one of the firemen answered a question which he could not, and as he is one of the most prominent engineers on this division, I was surprised at his lack of knowledge, and equally surprised that he desired to debar firemen of the advantages of instruction. Such things explain why "hard feelings" exist, and such feelings will continue to exist as long as engineers look down on firemen and seek to embarrass their advancement in their chosen calling. But the engineer to whom I have referred, is not the only one whose ungenerous remarks are calculated to create "hard feelings" and foster animosities. Another engineer on this division is credited with the remark that "engineers should not associate with their firemen when off their engines," and also, that "his social position and standing would not allow him and his wife to visit a fireman and his wife." Such gabble smacks of ignorance and arrogance and little attention should

be paid to it, but I write of it just to show the readers of the Magazine that it is no wonder "hard feelings" exist, when men who desire to be considered the leaders, who want to be looked upon as authority on all questions concerning men engaged in railroading for a living, who claim to be posted on labor matters and who advocate harmony and good fellowship, make such remarks as I have quoted. The longer they will have their ill will of firemen, as not only firemen, but other employes connected with the service.

Why is not a fireman just as good as an engineer? Does he not work as hard and as faithfully as an engineer? Does he not support his family and call himself just as straight and honorable as the engineer? The only difference I can see is that the engineer has a little more experience and sits at the right hand and pulls a throttle, while the fireman uses shovel and pick.

Now, I do not wish to make matters any worse than they are, as I do not believe in being at logger head with engineers. But last winter they patched up a truce with the O. R. C. by having a grand ball and supper with them, something, I believe, no other division of engineers ever thought of, and I do not see why it would not be just as well to be on good terms with the firemen and give them a chance to learn, as they themselves had to begin at one time and learn their profession. Just so with us. We are all working for the same thing, that is, a living for ourselves and families. When death takes us we cannot take our engines with us. We have got to leave all behind. So while we are on the earth and working together, let us work together as friends, as possible and try to make life a pleasure.

Yours fraternally,

Medora

PHILADELPHIA, Pa., August 14th, 1890

Editor Firemen's Magazine:

It is with a sorrowful heart that I take this opportunity of writing. It has been the will of Our Heavenly Father to take from our midst another of our brothers, (Charles G. Appgar, who died August 11, 1890). Brother Appgar had been a member of our lodge two years and his disposition and character won respect and esteem of all who knew him; a dutiful one of the foremost thoughts in his mind, and toward his family as a husband, a supporter and protector; duty toward his fellowman, as a brother ever ready to extend assistance to those in need, worthy thereof; and duty to his employer, by performing his work to the very best of his ability, thus command the respect of his superior officers. Brother Appgar had the highest regard for the Brotherhood of Locomotive Firemen and was one of the most prompt in paying his dues or assessments. I am with heavy hearts that we look upon the death chart of our Lodge and call to mind the long suffering endured by him. May we all live so that when it comes our turn to leave this world of care and trouble, we may receive eternal life and meet our brothers in Heaven, for we know it is said in Scripture "Those that seek shall find and to them that ask, it shall be given." I remain yours,

E. L. F.

JACKSONVILLE, ILL., July 20, 1890

Editor Firemen's Magazine:

On Friday, July 18, at about midnight, Crystal Lodge, No. 408, B. of L. F., was organized here on the Jacksonville Southeastern line. There was a lot of R. T. Lodge organized on New Year's day last. There is some talk of the engineers going into the B. of L. F., as they have no lodge here. Bro. Hanahan notified some of the members of No. 408, and Bros. Kerr and Klenze responded, as also Bro. Link of No. 18, and Bro. Baird, of No. 48. Our worthy Vice Grand Master told us of the standing of the Brotherhood throughout the United States, Mexico and Canada, also what the Supreme Council had done. We adjourned at 3:30 A. M., and the occasion will long be remembered by those who were present. Crystal Lodge extends thanks to Bro. Klenze for the interest he took in organizing while he was with us on the road. Hoping this will not be a victim of the waste basket, I remain,

Yours fraternally,

408.

GALVESTON, August 10th, 1890.

THE TERMINUS OF THE LINE.

When we roll into the depot.

The terminus of the line.

And I climb upon the seat-box

Just to rest my weary spine.

While I gaze without the window

As the passengers alight.

What a view of human nature

There is here to greet my sight.

Here are men of wealth and leisure,

Some in broadcloth, with an air

That speaks of ceaseless pleasure,

Others with a look of care:

Faces with a worn expression:

When they raise their eyes to mine,

How I wish that I could help them

At the terminus of the line.

Traveling men from York and Boston,

With their grips and mighty packs,

Emigrants, fair Chris and Lena,

Household goods upon their backs:

Pat is here from dear old Ireland,

French and Prussians from the Rhine.

May they prosper in "God's country,"

At the terminus of the line.

Here's a dude with an expression

That would make a mule shed tears,

Cigarette, eye-glass, high collar

Holding up his donkey ears,

Stove-pipe hat and cane enormous,

How I'd like to kick his spine

Up the hills and through the hollows

To the terminus of the line.

Here's a soldier, "Let's be joyful,"

He has come to paint his horn,

Soon he'll bear the national colors

Brilliant with extract of corn.

Don't disturb him, "Let's be joyful,"

Thus he'll sing while drinking wine.

He'll be tearful in the guard-house

At the terminus of the line.

To the throng there seems no ending,

Every trip brings faces new:

Italians, Swedes and Russians,

John Chinaman, and wandering Jew,

Ministers, Salvation soldiers,

Gamblers, whose diamonds shine,

They're all jumbled up together

At the terminus of the line.

Here's a bride with her dear hubby,

Come to spend their honeymoon,

She's as fair as morning glories,

He's as silly as a loon;

As they pass beneath my window

Low he whispers "Ducky mine,"

Well, I wish them joy forever

At the terminus of the line.

Here are gay and happy maidens

That have just returned from school,

With their rosy, smiling faces,

Every one a mother's jewel:

Here to spend a short vacation,

Each of them a friend of mine,

I can see it in their glances.

At the terminus of the line.

Here's a couple, aged and feeble,

Now their heads are white as snow,

Once their steps were light and merry,

Now they totter as they go:

Faithfully they've stood together,

Trusting in the One divine,

That awaits to give them comfort

At the terminus of the line.

Here's a mother with her darling,

See how carefully she keeps

Everyone from jostling baby,

While unconsciously he sleeps:

She reminds me of another,

One whom I called mother mine,

But in peace and quiet she's sleeping

At the terminus of the line.

E. B. Harris.

Editor Firemen's Magazine:

Gulf City Lodge No. 115 would like to have sufficient space in the *Magazine* to say that the second annual joint picnic given by No. 115, B. of L. F. and Oleander Lodge No. 70, S. M. A. A. June 15th, at Dickenson Grove, was a success. The attendance was up to expectation. The ladies and gentlemen enjoyed themselves greatly and the boys of "115" are happy.

Engine No. 53, of the I. G. N. R. R., handsomely decorated from pilot to back of tank, manned by J. Kileen, engineer, and I. N. Schroder, fireman, pulled the train of twelve coaches, filled with a joyous company. As soon as the train reached the grove, dancing began and was kept up till a late hour in the evening, notwithstanding the weather was very warm.

The picnic was well conducted and there was no rowdiness on the grounds. As the evening approached a number of races became an exciting and pleasant feature of the occasion.

The first race was the married lady's race and the prize offered secured a great many entries. The next race was for young ladies, in which a large number of the girls tried their speed, and there were a number of children's races, all affording much pleasure. But the fat men's race occasioned the most merriment—none were admitted weighing less than 225 pounds and the race was won by our able friend, John Hennsey, timekeeper at the I. G. N. shops at Galveston.

The last presentation was a handsome silk banner, presented to "115" by some of our good lady friends—a token of regard which we shall long remember.

It is needless to say the picnic afforded those who were so fortunate as to participate, great pleasure and they will be anxious to be present at our next annual entertainment. Yours fraternally,

Secretary 115.

THE FIREMAN ON DUTY.

In tempest and darkness,

Like a demon of night,

Or some fearful monster

Pursuing its flight,

The lone locomotive,

Through forest and vale,

And o'er limitless prairie

Speeds over the rail.

Though fogs veil the headlight

And curves hide from sight,

The dangerous draw-bridge,

Or the flooded track's plight,

The undaunted fireman

Peers calmly ahead,

Or throws in the fuel

Which the monster is fed.

And accustomed to danger,

'Midst the gloom of the storm,

Thinks of home with his children

So happy and warm.

Sees his wife's tender smile

While caressing his boy,

Or her face brighten up

With a welcome of joy,

As she hears, in the distance,

The whistle, well known,

Of the powerful engine

She knows as his own:

Or haply, in reverie,

Sad visions arise,

Of old and tried comrades

Who have passed to the skies.

Which may fill him with sadness,

But never despair.

For their families are safe

In the Brotherhood's care.

And he silently prays to

The source of all good

To bless, in his mercy,

The brave Brotherhood.

Amy.

For the Magazine :

FEDERATION.

In every planet hung in space
In every twinkling star.
In Earth, as whirling on through space,
Without a jolt or jar;
And in the blazing sun's fierce heat;
In fact, in all creation,
We see a harmony complete,
A sort of—Federation.

Were every sphere to move alone
And each to spend its force;
Like some unshaply missile thrown
With unknown, zigzag course,
How the universe would partake
A fearful consternation.
Were nature, for an hour to break
Her mighty Federation.

And since this law is made so plain,
Is not in labor, too,
A vast amount of good to gain,
By work that we may do?
And since in nature all unite
In perfect combination,
Can we not learn in nature's light
The worth of Federation?

Then up! as honest workmen
Present a faultless line,
Stand boldly for your purpose when
You know it is divine!
For I believe, with all my heart,
The welfare of our nation
Depends, in no uncertain part,
Upon our Federation.

'Tis not prosperity to see
A country's treasures shut
In vaults, if each man's home must be
A palace or a hut!
But pleasant homes for great and small—
The happy consummation
When discords cease; and over all
The shield of Federation.

I would not tear the palace down,
But rather would I build
For workmen in every town
The spacious cottage, filled
With all that makes a home sublime.
Be this the coronation
Of workmen—secured in time
By what? By Federation!

Then may the work be wisely done
So that, from heart to heart,
A thrill of confidence shall run
And give the world a start
Toward better days, when all receive
Abundant compensation;
When rich and poor alike believe
In Labor Federation.

George W. Hall.

STANBERRY, Mo., July 30, 1890.

SAN MARCIAL, N. M., July 17, 1890.

MR. EDITOR:—Having a leisure hour I will try to give you a brief account of Magdalena Lodge, No. 261. The boys here are well, with the exception of Bro. J. J. McInnis, who is at the hospital at present, taking in the mountain breeze of Las Vegas; we expect him back soon. Bro. McInnis is, or is supposed to be, the "rustler" for the *Magazine*, but he is too good natured to ask a man for a dollar, but all he needs is a little shaking up and he will do better. Well, Mr. Editor, Magdalena Lodge is not one of the largest, but the members are as good a set of men as can be found, and I don't believe there is a black sheep in the flock. Business is fair on the road and most of the boys are saving money. Although I am not a member of the Brotherhood I expect you will publish the above, as it may urge some of the members to let you know once in a while that they are alive. With respect for you and your organization I remain
Yours truly,

Gordo.

LORDSBURG, N. M., July 28th, 1890.

Editor Firemen's Magazine:

We see in the July number of our *Magazine* an article captioned "An Important Trial." We agree with you—it was an important trial, important to us, in this respect: It shows us that section 62, on page 23, of our Constitution is not just what we supposed it to be. The section does not, in our opinion, cover total disability. In it there are but three ways in which a Brother may become totally disabled. Only three injuries that will entitle a member holding a beneficiary certificate to his money. One if not two of those injuries, we claim, does not totally disable a man. We have a Brother here firing on the road who has lost one leg above the knee joint. He is not disabled. He is considered one of our best and ablest fireman. Taking this case for an example, we do not think it right that just because a man loses a leg or two he should be allowed his beneficiary.

We hope to see section 62 still further changed at the coming convention. Will not you please use your influence to have it changed to read something like this:

"A beneficiary member in good standing shall upon our receipt of positive proof of his death be entitled to the full amount of his beneficiary certificate."

That in our opinion is about the only manner in which a man can become totally disabled.

We think a beneficiary law something like the above will protect our Order from fraud.

We think it should not make any difference if a man *does* have his back broken—let him be scalded or burned so his limbs are drawn out of shape—*Don't* let him have \$1,500 of our good money for any such thing.

Why? A man might be a contortionist and make us believe he was totally disabled by twisting his legs around behind his neck and in that manner defraud us. Of course this might not happen often. Say about once in a hundred times. We could not stand it to be defrauded like that. No sir? We would rather a hundred brothers be crippled all out of any kind of shape and sent to the poor house than have one man defraud us.

If you, with the help of the rest of the Grand Officers and other right-minded brothers will take this matter up at the coming convention we think the present disability law can be advantageously changed and if you will see that it is changed according to our wishes you will gain our everlasting gratitude as we are really afraid of being beaten out of a dollar or two. We remain dear sir, yours fraternally,

H. W. Brandt.

Our Insurance.

NEW YORK, July 15, 1890.

MR. EDITOR:—I ask for some space in our book, to have a little say in reply to some things I see in the July number, written by Bro. Carter, of 263. I like what Bro. "Satisfacere" says in his letter, page 633. That letter gets right down to biz, and Bro. Carter ought to read it. Bro. "Satisfacere" thinks when a fireman kicks at paying \$1.33 $\frac{1}{3}$ a month for insurance he might as well go. Bro. Carter says, "If every member should keep his policy until death, it is evident that they will have to pay \$1,500 assessments for \$1,500 insurance, (in proportion to their longevity). Some time ago, I don't remember when, the *Magazine* published a table, which for the benefit of Bro. Carter, ought to be printed again. I remember it might well, and it showed that Bro. Carter is all wrong. I want to give my memory of it, because it demolishes Bro. Carter's argument completely. Now, \$1.33 $\frac{1}{3}$ a month is \$16.00 a year. Suppose Bro. Carter, when 21 years old, takes out a policy for \$1,500—suppose Bro. Carter remains in the Order 50 years—then he would be 71 years old. Now, at 71 years old he would have paid \$16.00 a year for fifty years. That is \$800. At 71 years of age he dies, or is totally disabled, then he or his heirs get \$1,500 or \$700 more than he has paid in. But I am not done with Bro. Carter's statement, and I am writing of my recollection of our insurance benefits to our members. The chances are ten to one that Bro. Carter will not live till he is 71 years old—which is one year over

"three score and ten." I don't know how old Bro. Carter is, and that is not material. I want to show my recollection of figures that satisfied me that our insurance scheme was a good one for the boys, and I will try to get at it as I remember it. I will suppose Bro. Carter is 31 years old, has carried a policy of \$1,500 ten years, and therefore has paid \$160. I will take Bro. Carter along till he is 71 years old, and has been paying \$16.00 a year all the time, and so on, in ten year divisions, till he is 71 years old. Here is the way I do it:

Age.	Chances of death or disability 10 years.	If he lives to be.	Amount of Assessments he would have paid.	Amount of policy secured.	Amount secured in excess of payments.
21 years	2 to 3	31 years	\$160 00	\$1,500	\$1,340
31 years	3 to 5	41 years	320 00	1,500	1,180
41 years	5 to 7	51 years	480 00	1,500	1,020
51 years	6 to 9	61 years	640 00	1,500	860
61 years	7 to 10	71 years	800 00	1,500	700

If Bro. Carter will examine the table I think he will be convinced that if a member should keep his policy until death he would not, in proportion to longevity, or in any other proportion, "pay \$1,500 assessments for \$1,500 insurance." I am anxious to see if he will yield to facts and figures? But, Mr. Editor, take the average of chances for a fireman to live until he is 71 years old, and they are from five to seven against him, in which case his assessments would be about \$300, which would leave him or his heirs \$1,000. It is such statements as Bro. Carter makes that are calculated to brood dissatisfaction and that never do any good. It is kicking at the good things which experience has taught the boys, and that has placed our Order away ahead of any other order that has an insurance scheme. I don't know what will be done at San Francisco, but if the delegates are level-headed they won't meddle with our insurance.

Fraternally.

Stoker.

SOMERVILLE, MASS., July 21st, 1890.

MR. EDITOR:—In the July number I see the brother from Texas needs a little correcting. If the policy of the railroad orders was not defective why did they change it? Why did they federate? A more complete perusal of the article will clear his view. He states that it was Brother Sargent's rotten policy. I believe that Brother Sargent's policy is the law of the Order, and delegates in convention make the law that defines his policy. Brother Sargent confines himself to the law and interprets it according to what it means. Now, Brother Carter, if a new leader is chosen for the new order or the old it will not be by the *New England* vote. I estimate Brother Sargent as the right man in the right place. If you had paid as much attention to other articles of mine as I think consistency should dictate, you would not rush into print with any such charges, and what is more, I am satisfied with our editor and other Grand Officers and always have been, and I consider that Brother Sargent is entitled to the title of Grand Master of our Brotherhood and I shall emphatically protest against any of our Grand Officers being titled *Boss Herder of the Breeding Pen*. I hope that some action will be taken at our coming convention regarding the age limit. I think if a man is too old to take the insurance he should have the privilege of membership the same as those who fail to pass a satisfactory medical examination. I hope the new name will be discussed in convention. I believe that new name question has done our Order a vast amount of good by its discussion. I think it an excellent question to discuss under certain circumstances and I sincerely hope that at our convention we will have the question decided. I will echo fervently Brother Carter's, "Lord forbid" on the question of a new leader and remain as ever,

Charles H. Trenholm 957.

OUR BROTHERHOOD.

O, far away,
To Frisco's bay,
Where waves, like soldiers to the fray,
March to the shore.
Forever more
Obeying what the "wild winds say."

Our delegates
From forty States,
Will meet to talk in high debates,
And many eyes
Will act as spies
To tell where danger lurks and waits.

Beyond the line
Of "mine and thine,"
Where Victoria's banners twine—
Each Lodge will send
A trusty friend,
True to duty in storm or shine.

Ne'er since '73,
We all agree,
Our Brotherhood, dear to you and me,
Had greater power,
Than in this hour
Of prestige and prosperity.

Our dead, our dead!
O, be it said
Were followed where the black pall spread,
No widow cried,
Nor orphan died,
For want of shelter or of bread.

In darkened homes,
Midst sighs and moans,
Where sorrow's broken, dingle-like tones
Besought in prayer
For strength to bear
Trials which only faith o'ercomes.

Fair women stray,
Fair women pray,
Their gentle words drive gloom away;
And tearful eyes,
In glad surprise,
Behold again a shining day.

Come, Brothers, all,
What e'er befall,
We'll ne'er be deaf to duty's call:
Our Brotherhood
Is great and good,
And an injury to one is the concern of all.
A Tie.

DENISON, TEXAS, July 20th, 1890.

MR. EDITOR:—I have been taking notice of the discussion that has been going on in our *Magazine* in regard to the change of name of our Order, and I see that the question is no nearer settlement now than when it was first proposed, and I wish now to express my idea on the subject, as for one, I am opposed to a change of name. My reasons are simple and plain and here they are: We will all admit that a man or woman occasionally wants new clothes, that they do not care to wear their old ones all the time, as clothes wear out, but in my opinion, with the change of the name of the Order, it is different. The name we now have is not getting old and worn out with me, for the oftener I hear it the better it sounds, and the more I see it the better it looks, but if the day ever comes when locomotive engines are run by electricity or friction, then I would not say anything against a change of the name of the Order, as we would not be locomotive firemen if engines were run in that way. I will now state that just as long as railroad companies are compelled to hire men to fire engines, just so long we have got to have an Order to protect those men. I think that the Order we now have is just the thing, as I know that every member of the Order is proud of the name we now have, so I hope the name of the Order will never be changed.

Yours fraternally,

No. 21.

TO MR. THEODORE DEBS,

TERRE HAUTE, IND.

So, Theodore, my genial lad,
Like any fool, you went and did it;
You caught the marriage fever bad,
In spite of all who do forbid it;
You headlong went, you foolish boy,
Right into Hymen's rosy traces,
Allured by beauteous Miss Toy,
And captivated by her graces.

I really thought your level head
Would shield you from such fearful danger,
As with a lovely maid to wed,
But, no, you acted like a Granger;
Alas! You gave your heart the rein,
And didn't for an instant falter,
To hold a parley with your brain,
Until she had you at the altar!

You're not the first who lightly trod
O'er flowery banks in Summer weather,
And thought yourself a demi-god
Reclining on the perfumed heather
With one of Nature's charming girls,
Whose honied words, in perfumed rapture,
Allured you into deadly perils.
Where she sat gloating o'er your capture.

Indeed you're not, friend Theodore;
This fact will give you consolation,
If e'er through life you should deplore
Your present sweet intoxication.
This rough old world just now, you think,
Is bridged with sunbeams up to glory—
Ah, well, my moralizing ink
Tells nothing new—the same old story!

Sure Adam, our old foolish sire,
When Time was young in Eden's bowers,
Was scorched by Love's consuming fire,
And followed Eve amid its flowers;
She led him by the nose along,
Just as her sisters still are doing;
We follow, whether right or wrong,
Until the altar crowns the wooing!

I hope yourself and charming bride
May gallily float adown life's ocean,
Both borne upon a flowing tide
Of love and mutual devotion,
Until your bark finds peaceful rest
On some serene, eternal river.
Mid pure delights, supremely blest,
Beyond the reach of pain forever.

Shandy Maguire.

MINNEAPOLIS, AUGUST 10, 1890.

Editor Firemen's Magazine:

I never suspected that there was, in the ranks of the B. of L. F., a single member who would willingly counsel a backward step, or who would undoubtedly take supreme delight in seeing the organization relinquish its hold on a single good branch of the work it was engaged in until now.

I had never supposed, until I read the August *Magazine*, that there was in our ranks a man so utterly friendless that there are none on earth whom he cares for half as much as he cares for himself. Just think of it, a man without one single relative, homeless and alone, despised or unknown the wide world over!

The idea of contracting the work of this Brotherhood is one that I cannot entertain, and hold my peace; on the contrary, I think we should add still another feature, in the shape of Mechanical Education, because I believe that there is a field for it and that the mission of the Brotherhood demands it and is able to do so.

This Order was (if I understand the sentiment of those who originated it) primarily a benevolent one, and after due time it branched out and took up protection. I do not see wherein it was necessary to

drop any of the good work already done, in order to assume other obligations. If we are to judge or profit by the experience of others, we certainly do not want an *optional* insurance where the assessments range from \$5 to \$10 per month, such as the engineers have, and only pay twice as much benefit for over four times as much premium.

The insurance people of the land who live in comparative idleness and luxury have enough now, and they presumably will continue to have enough without this organization willingly throwing into their coffers more than twice as much as we now pay for our insurance, thereby *giving away* about \$25 per year of hard earned money. It is doubtless true that a man who has not a friend on earth for whom he cares or who who cares for him doesn't need any insurance, but I never heard of but one and as he is a *Newcomer*, we may hope for hunger and sickness to *elucidate* him. For all that is devoid of humanity to the homeless and orphaned; in the light of our history as a Brotherhood that which is the most soulless, cold and unfeeling is found in a letter commencing on page 721 of the present volume, wherein the writer intimates that he represents *two thirds* of our membership and boldly asserts that they do not now, nor never did want any insurance, and then caps the climax of his logic by admitting that they would like \$300 for a disability claim. Brother Newcomer does not in my estimation represent *two thirds* of this Brotherhood nor even *one thousandth* part of it. The insurance and disability features of our Order are founded on a perfect equality to all and none are barred from participating in it, and it constitutes one of the corner stones of our existence, and I have yet to hear of a single instance since the Philadelphia convention, where the protective part of our structure was neglected for the benevolent. Will Brother Newcomer please tell me through these columns when and where that has been done? And also name the insurance company who employs him at present? (Can he give the names of the *two thirds* of our members whom he claims to represent? Can he tell me why it is logical to have \$500 insurance and not \$1,500.

Fraternally,
Dirigo.

BOWLING GREEN, KY., July 21st, 1890.

MR. EDITOR:—In the April number of your *Magazine*, page 323, I find the following statement: A policy of \$1,500 in the B. L. E. cost last year \$26.50. A policy of \$1,000 in the B. of R. T. cost last year \$21.00 and a policy of \$1,500 cost \$16.00 in the B. of L. F. This is certainly an excellent showing in favor of Brotherhood insurance, but the fact still remains that the policy in our Order is not so large as many wish to carry, and it is well known that many of them carry heavy policies in non-brotherhood insurance companies for which they are compelled to pay an enormous sum. I will give you one instance: I carry a policy of \$2,000 in the Travellers' Insurance Co., for which I pay \$32.00 per year. I get the benefit of this insurance only in case of death by accident. If I sicken and die I get nothing for weeks of suffering and my family nothing at my death. In my Brotherhood insurance I am protected in accident and natural death. Should such accident result in disability my family and myself are protected against want. Now such being the facts, is it not vastly better that the entire sum which I can spare for insurance should be invested in Brotherhood insurance? But at present I am limited to \$1,500. I therefore propose the following plan and hope to see it discussed and acted upon at our next convention: Let each member of our Brotherhood who may feel able to do so, carry two policies of \$1,500 each in our insurance, the second policy to be subject to like conditions as the first except that it be not compulsory and that a failure to pay the dues for same shall not subject the holder to expulsion from the Order. The cost of our insurance last year was \$16.00, a double policy would cost \$32.00, just the exact amount I pay for an accident of \$2,000 in the Travellers'. I would be pleased to see some ideas from the brothers upon this subject in the *Magazine*; it is certainly worthy of consideration. Yours in B. L.,

C. M. Moon.

Adair Lodge No. 100.

A DREAM.

I dream of that fair golden shore,
And all its perfect summer days;
Where 'round Diablo's summit hangs
A wreath of dreamy haze.

I dream dear dreams of that fair home,
Environed with its hills of blue;
That tired, worn hand, that lay in mine,—
That heart so warm and true.

I dream, dear God, of those brief hours
When all the world was fair to see.
Shall life's long expiation bring
No recompense to me?

Etoile.

SAN BERNARDINO, CAL., August 12th, 1890.

MR. EDITOR:—San Diego Lodge No. 90 gave its first public installation of officers in A. O. U. W. Hall, San Bernardino, Cal., August 11th, 1890. To say that the affair was a grand success would not be doing it more than justice. We were favored with the company of a large number of the fair sex, consisting of the brothers' wives, their mothers, their families, their sweethearts and friends, and more especially were we favored with the attendance of our M. M., Mr. George W. Prescott, also his family and relatives.

After all were seated the ceremony was opened with a few brief remarks on the organization, the aims, objects and principles of our Order, its standing and its welfare, by our most highly esteemed and ever Noble Master, J. C. Sharp, of whom all brothers feel proud. Brother Croden, who was acting as Past Master, then took the installing Officer's Station. Brother Croden having memorized the installation ceremony the installation was performed without the use of a ritual. The members of No. 90 feel proud over the credit that Brother Croden won for himself and also for San Diego Lodge No. 90 of the B. of L. F. The ceremony being performed most successfully, with Brother C. E. Rhodes as Marshal. Refreshments were served by the members, with Brother George Corson as manager of refreshments, who served all in such a manner as to win esteem for himself and the members. We thank the ladies of Los Angeles and San Bernardino for the abundant supply of excellent cake we were furnished with. After the refreshment room was closed the most enjoyable part of the evening's entertainment was opened to all with Brother J. C. Frates as floor manager. Dancing continued until one a. m. when "Home, sweet Home," given by the orchestra, made all hearts beat with joy to retire after the evening's pleasure. Thanking one and all for their attendance hoping this won't be our last, we bid adieu until our next.

Yours fraternally,

First Attempt.

CINCINNATI, O., July 20, 1890.

Editor Firemen's Magazine:

On June 29th O. K. Lodge, B. of L. F., held one of the most successful and enjoyable picnics that ever fell to the lot of those who were so fortunate as to participate in the festivities, and the members of our Lodge are proud of results and want the members of the Brotherhood to know that we still hold our heads above water as we did in days of yore. Our picnic was held at Wordsdale Grove, one of the most delightful localities to be found anywhere west of the Alleghany Mountains for out-door pleasure. We had a train of twenty cars to take the pleasure-seekers to the grove and a more joyous company never left the city on any similar excursion. The company was made up of members of the B. of L. F., and by members of the B. of R. T., B. of R. C., S. M. A. A., as also, members of the K. of L., their wives, mothers, sisters and sweethearts, aunts and cousins, and everyone seemed determined that the occasion should be one of uninterrupted pleasure. The picnic was ably handled by the Committee of Arrangements, viz.: John Shehan, H. E. Jordan and G. W. Snyder, who were assisted by Brothers McCreary, Halpin, Dodds, Lavin, Moore, Geutche, Hayes, Gallagher, Schulikers, Steininger, O'Brien, Yost and Terren. There were about two thousand people on the dancing platform to cheer

Brother James Hayes when he was presented with a beautiful emblem of our Order, as he had sold over five hundred tickets. The presentation speech was made by Brother Jordan, in splendid style, and he was cheered to the echo. There were loud cries for Brother Hays to reply, to which he responded in a way which secured the applause of those who listened to him. Brother John Shehan said he would never leave No. 269 until she was once more in the rank of the banner lodges of the Order, and in closing this account of our picnic I want to say our Lodge is away head financially. O. K.

MARSHALL, TEXAS, July 23, 1890.

MR. EDITOR:—As it has been a long time since there has been anything in the *Magazine* from Sunset Lodge, No. 177, I will write a few lines to let our sister Lodges know that we are still alive and in a prosperous condition. We have thirty-six members in good standing, and new ones coming in all the time. Brothers Davis, Freinheimer, Sparks, Morley and Morton have been promoted and are doing good work on the right-hand side. Business is better here on the road than it ever has been before at this time of the year. Brother Geo. M. Lovett, our efficient Master, has been promoted to the General Foremanship at Longview. Success to you, George, is the wish of all the members of 177. Fraternally,
Change.

OIL CITY, Pa., July 20, 1890.

MR. EDITOR:—In Brother Martin's correspondence from No. 383, dated May 12th, he states that the matrimonial fever is raging in this vicinity, but, in fact, the fever had abated, as Brother Lowrey was married in November, 1889, and Brother Bird in May, but it appears to have broken out again and this time Brother Martin is the victim and has taken Miss Maggie Tobin, one of Oil City's accomplished and highly respected young ladies, for his life partner. That they may enjoy life's journey together and live to a ripe old age is the wish of their many friends and brothers.
Sparrow.

Personals.

THE sympathy of our members is extended to Brother and Mrs. J. C. Crouch, of Lorain, Ohio, who have lost by death a sweet little girl, five years of age.

TOM MARTIN is the happy father of a twelve pound boy. Tom will soon have some one to help him keep the water glass mountings as bright as a dollar.

E. D. POST and W. H. Morrill, Collector and Receiver of Granite State Lodge No. 306, have been rewarded with promotion and are doing valiant service at the throttle.

THE Lodge at Concord, N. H., the only Lodge we have in the old Granite State, now numbers nearly sixty members in good standing of whom twenty-five are engineers.

BROTHERS DUNN and Bell, of Dominion Lodge, No. 67, have been united in the holy bonds of matrimony and at this writing are spending their honeymoon at the seaside.

THE boys of No. 57 secured the Salem Cadet band, one of the best in New England, to discourse music for their "outing," and it is needless to say that the music was superb.

W. F. STOCKER, member of St. Lawrence Lodge No. 15, a poet *par excellence*, is at the same time a Brotherhood man, as realistic when business is on hand as he is fanciful when dallying with the muses.

L. M. McLAHLAN, a member of the S. M. A. A., we found during our visit to Toronto, a most agreeable gentleman, fully alive to the wants of railroad employes, and one who discusses those wants intelligently.

NELSON J. MILLER, Elmer E. Brown and David H. Coburn, all of No. 306, exchanged the scoop for the throttle on July 1st. These brothers are employed on the White Mountain division of the Concord & Montreal railroad.

BROTHER WM. TAYLOR, of Fitchburg, erst-while a man of 200 pounds avoidupois, we regret to say is but a shadow of his former self, but during the "outing" of "57," evinced a robust purpose of regaining his vigor, and of being himself again.

BROTHER GEORGE E. CROWHURST, Secretary of Dominion Lodge No. 67, Toronto, who took an active part in making the union meeting in that city July 20th a success, is an active, earnest and intelligent brotherhood man, who is doing good work for the Order.

At the outing of No. 57, at Melville Garden, on Boston Bay, August 30th, we had the pleasure of meeting Mr. Cyrus Field Willard, correspondent of the *Boston Globe*, a most agreeable gentleman, a friend of the Brotherhood, and a great lover of roasting ears.

THE members of Phoenix Lodge, No. 23, are desirous of knowing whether Brother W. E. Sullivan, Master of No. E., has disposed of that choice lot of "huckleberries" he had on hand a few days ago. Brother S. is said to be a fine judge of huckleberries, especially those that grow on vines.

R. THOMSON, of Toronto, a member of the B. of R. C. and Master of Queen City Lodge No. 322 B. of R. T. is a gentleman whose advanced thought, relating to federation, exerts a healthy influence in all circles of railroad trainmen. He is one of a great army of thinkers who is doing good work for the cause.

It is a special pleasure for the *Magazine* to announce the promotion of Brother C. W. Arnold, of Reno Lodge No. 28. No truer Brotherhood man can be found than Brother Arnold and in his promotion the road that is so fortunate to secure his services will have an engineer whose fidelity to duty will know no variability nor shadow of turning.

At Toronto we had the pleasure of meeting two passenger engineers, Brothers Marks and Reddie, both of whom have crossed the three-score line, but who are yet, apparently, oblivious of the flight of years. They are two very young old men, who make their runs as regularly as youngsters and enjoy with as keen a relish, the speed of the machine.

BROTHER J. W. SINCLAIR and wife, of Phillipsburg, N. J., have our thanks for an invitation to be present on the occasion of their silver wedding, August 24th. Brother Sinclair is an old time member of Excelsior Lodge, No. 11, and we most cordially felicitate him and his good wife upon their great good fortune, and wish they may live to enjoy their golden wedding day.

It affords us pleasure to state that Brother John Kelly, a member of Garden City Lodge No. 50, B. of L. E. and a member of Eclipse Division No. 111, B. of L. E., has received an appointment on the Board of Examiners of Stationary Engineers for the city of Chicago. No better appointment could have been made. Brother Kelly is not only competent but conscientious and will see that justice is done to all parties concerned.

RECENTLY the *Magazine* had the pleasure of a visit from Brother W. A. Sheahan, Grand Secretary and Treasurer of the B. of R. T., and Brother F. Pratt, Assistant to editor Rogers, of the B. of R. T. *Journal*. We took pleasure in showing the gentlemen through the B. of L. E. Grand Lodge office, and were gratified to hear their expressions of approval of what they saw. They seemed to think arrangements for conducting business were first class at B. of L. E. head quarters.

It will be gratifying to the hosts of friends of Brother F. W. Arnold, P. G. M. of the B. of L. E., to know that he has secured the important and lucrative position of manager of the Lyceum Theatre, of Cleveland, Ohio. Whatever there may be in intelligent grasp of the situation and elegant courtesies in business affairs to secure success, the Lyceum Theatre at Cleveland will have in the management of Brother Arnold, and the *Magazine* wishes him the largest measure of success.

At Toronto, among other pleasures, we had the good fortune to meet Brother Robert Pearson, one of the ancient and honorable members of the B. of L. E., known to his army of friends and associates as "Pap Pearson," a man, who at three score or more, keeps abreast of the army of progress. He runs a passenger engine and is as sturdy as many a man of less years and what is better still, is an earnest advocate of federation, a proposition which commands the best ability of the B. of L. E. and which will eventually bring that order into harmonious alliance with other organizations of employes engaged in the train service of the United States and Canada.

A WEDDING card comes to us through the mail giving the pleasant information that Brother Michael Rabbitt, member of Desoto Lodge, No. 6, would be married on September 2d to Miss Mary Cain, of Desoto, Mo. Brother Rabbitt is worthy of the best woman in Missouri for a wife, and we will not doubt that his good fortune has secured the capital prize in Miss Mary Cain. We should be delighted to respond to the invitation to be present, but when the nuptial vows are being plighted we shall be in San Francisco, and can only wish that Brother Rabbitt and his bride may find in marriage all the fruits of which the poets have sung since the glad morning when our first parents took possession of Eden.

ERNEST B. MAYO, Master of Northwestern Lodge, No. 82, on Thursday, July 17, 1890, was married to Miss Mary Norris, at Emporium, Pa. Nothing could be more natural or more in consonance with the fitness of things. There is a time when love's young dream should materialize, when the dreamer should cease to dream, shoulder responsibility, "pop the question," obtain a license and call on the minister. That Bro. Mayo has done these things demonstrates that he has the courage of conviction, and the *Magazine* sends congratulations, with many wishes that the bonny matrimonial bark may bear him and his bride, what e're betide, safely o'er billows and breakers to a haven of prosperity and peace.

Union Meeting at Logansport, Ind.

On July 20th a grand Union Meeting of Locomotive Engineers and Firemen, members of the Brotherhood of Railway Trainmen, the Brotherhood of Railway Conductors, Order of Railway Conductors and the Switchmen's Mutual Aid Association was held at Logansport, Ind.

The meeting was held in the opera house which was elaborately decorated and was called to order by Brother Wm. Widgeon, a Vandalla engineer. In the absence of the mayor of the city, M. D. Fausler, Esq., delivered the welcoming address.

Following Mr. Widgeon the speakers introduced were: W. B. Daniels, Esq., Secretary of the O. R. C.; W. P. Robinson, of Vincennes, the First Grand Chief of the B. of L. E.; Col. George W. Howard, Grand Chief of the B. of R. C.; H. Butler, Esq., a member of the O. R. C.; Brother John F. O'Reilly, Secretary of Vigo Lodge No. 16 B. of L. E.; and Hon. S. P. Sheerin, of Logansport. At the conclusion of Mr. Sheerin's speech the meeting adjourned.

The attendance was large and those who were present refer to the occasion as one well calculated to advance the cause of federation.

TORONTO.

Grand Union Meeting of Railroad Employees July 20, 1890.

The Capital City of Ontario Ablaze with Enthusiasm on the Question of Federation.

On Sunday, July 20, 1890, one of the most notable union meetings of the year was held in the great city of Toronto, the capital of the Province of Ontario. The meeting was held under the auspices of the various Railroad Employés organizations of the city of Toronto, and there were present a large number of representatives of the Lodges of the surrounding country.

The first meeting, for all who chose to attend, was held in the afternoon at St. Andrews Hall, and was largely attended by members of the various organizations representing labor, and by those who sympathized with them, including a large number of the best citizens of the metropolis.

The meeting was called to order by Brother Geo. E. Crowhurst, Secretary of Dominion Lodge, No. 67, B. of L. F., who introduced Geo. Glocklin, Esq., President of the Trade and Labor Union, of Toronto, as chairman.

Mr. Glocklin, upon taking the chair, made a brief but stirring address. He clearly outlined the benefits accruing from the organization of workmen, and exhorted them to pull together. Mr. Glocklin's remarks were well received, showing that the audience was in sympathy with him.

At the conclusion of Mr. Glocklin's remarks the chairman introduced F. P. Sargent, Grand Master of the B. of L. F., and President of the Supreme Council of the Federated Orders of Railway Employés organizations. The *Toronto Globe* reports as follows:

Mr. Sargent, who is a fine looking man of medium height and good address, was received with applause. Commenting on the splendid meeting, Mr. Sargent spoke of the old days when railroad men were looked upon as men apart, who had no place among their fellow-workers. Organization had elevated their standing, until now they were as much respected as any class of men in the country. For many years there was one organization—that of the engineers—who had done much toward raising the status of railway men. Then followed the Brotherhood of Locomotive Firemen, an organization the influence of which is felt all over the States and Canada, far into Mexico, and even across the water to Europe. Reference was made to the labors of the Brotherhood of Trainmen and the new organization of Switchmen, who had in former days got more cuffs and kicks and ill-usage than any other railway men. Now that union stood upon an equal footing with the others, and was respected by all. The baby organization among railway men, the Brotherhood of Railway Conductors, founded on the principle of protection to its members, was alluded to and its officers spoken of as "broad gauge men," who were laboring for the advancement of the interests of the conductors in all respects. Turning to the internal working of the various bodies, the speaker pointed out that federation had placed the lowest and most humble of these organizations on the same plane as the others. The word brotherhood did not admit selfishness in the make-up of the organization. There had been in former times something of selfishness. The engineers had in some localities drawn to themselves a feeling of exclusiveness, of aristocracy—the feeling of an elderly, dignified gentleman, who did not care to compare himself with the young stripling by his side. The feeling by whomever held was wrong.

They were all wage-workers alike. Was there a man present who estimated the worth of a man by the wages he received? Such a man was in the wrong place. (Cheers.) It was wrong to estimate a man by his daily wages. He who did so put a poor estimate upon himself. In Canada there had been something of this feeling of exclusiveness, but it had been largely superceded by a spirit of brotherly love and the foundation of the "Brotherhood of Man," which would not take into consideration a man's wages or position, but his moral worth. Continuing, the speaker poked fun at the men who did not believe in the affiliation of the railroad organizations. There was a good deal of justifiable pride in the way Mr. Sargent spoke of the tea meetings at which representatives of all the brotherhoods met railway managers in their private offices and gained an advance for their constituents at home. Speaking of the federation movement, he said the federation adopted had come to stay. It was built upon a solid foundation which could not be destroyed or torn down. If the organizations outside desired admittance into the body there was a way provided, a door made by which they could come in, but federation would not be altered nor changed to their liking. But before coming in they must understand that they must affiliate with the switchmen as well as with the firemen. There must be no distinction between the man with brass buttons and punch and the brakeman who twists on the top. The men who sit around the council board of the federation must sit there as equals. In a happy frame the speaker described the difference between the man who sits on the right-hand side (the engineer) and the man on the left. A kind word that did not cost a cent was better than bickering, and brotherhood would help to bring it about. To the firemen he said, "Don't get your eye on the throttle before you handle the scoop," and to the engineers, "Treat your fireman as a man." A passing reference was made to the folly of the men who would like to federate with the firemen but "could not swallow the switchmen." In the old days there were plenty of bad engineers and firemen, and there were plenty of them yet. Organization had helped them to be better and it would help the switchmen. "Let us be brothers," was the theme of his closing words.

The address of Grand Master Sargent, was received with the most appreciative applause, and he retired, having impressed his audience with the supreme fact that in federation, as established by four of the Brotherhoods of Railway Employés, centered their hopes of the ultimate triumph of the right.

Following Mr. Sargent, Mr. D. J. Donohue was introduced. Mr. Donohue is a member of the Trade and Labor Council. He is an impressive speaker, and he did not fail to emphasize the great truths presented by Mr. Sargent. His arraignment of the aristocracy, was such as to command hearty applause, and during his remarks he extended an invitation to the members of Railway Employés organizations to affiliate with the Trades and Labor Council.

At the conclusion of Mr. Donohue's address the President introduced Mr. Charles Flanders, of the B. of R. T., and a grand trustee of that great and growing order. He took grounds in favor of federation and his remarks were well received.

Following Mr. Flanders, the President of the meeting introduced E. V. Debs, Grand Secretary and Treasurer of the B. of L. F., who, says the *Globe*—

In graphic terms spoke of the history of corporations and their treatment of wage workers, who were reduced to the position of serfs. It was to better the condition of its members, to secure an honest day's wages for an honest day's work that labor organizations had been formed. Federation was necessary as well as organization, for no single body or workers could cope successfully with a corporation extending over the country. It had cost the

engineers and firemen a million and a half of dollars to wage the fight against the C. B. & Q. railroad, and that fight never would have happened if the railway men had believed in federation three years ago. Capital in corporations had an organization, and the workmen also must combine to defend their rights. There was no disposition on the part of the organizations to antagonize their employers or create strife. It was simply to protect their own interests. He explained the federation movement as something very different from amalgamation, as a defensive organization calling all to the succor of one because an injury to one is the concern of all. During the year in which the railroad men had been federated more than twenty-five disputes had been settled without striking because of the existence of federation. The Pittsburg switchmen had received an increase of twenty per cent., although for years they had labored to that end unsuccessfully.

Turning also to the "I am holler than thou" idea, as he called it, the speaker dealt doughty blows at "the arrogant conductor, promoted after a few years as a brakeman, who turned up his head and buttoned his coat and looked down on brakemen who had more manhood in their little finger than such a conductor had in his whole make up." The underlying principle of labor organization was in the words of the Declaration of Independence, "all men are born equal," and in the words of Burns, "a man's man for a' that." His closing words were "agitate, organize and federate." And, as an example of what results from neglect of the duty he spoke of, he instanced the condition of affairs on the Philadelphia & Reading road, where the organizations were wiped out and the employes were forced to work under exasperating conditions.

The address of Mr. Debs closed the proceedings of the afternoon meeting.

In the evening a meeting was held in the same place, at which only Railroad employes were in attendance. This meeting, like the afternoon meeting, was called to order by Bro. George E. Crowhurst, who introduced Bro. J. Jameson, Master of Lodge No. 35, S. M. A. A., as permanent chairman. Bro. Jameson delivered a brief introductory address, brimful of good suggestions. And at its conclusion, by special request, the floor was granted to Mr. John S. Worr, of the Iron Moulders' Union. Mr. Worr stated the grievances of the moulders against the Gurney Manufacturing Company, in which a lock-out had been ordered, owing to the bad treatment of the men. Mr. Worr distributed circulars showing up the flagrant injustice to which the men had been subjected and the meeting took the matter under advisement.

As Mr. Worr retired the President introduced F. P. Sargent, Grand Master of the B. of L. E., who delivered a stirring address on the benefits of federation as inaugurated by the Supreme Council. Bro. Sargent reasoned cogently. His arguments were convincing and carried conviction to every mind, and his audience was in full accord with him, as was shown by frequent manifestations of approval.

Following Bro. Sargent, Bro. Hall, Chief of the local Division of the O. R. C., made a good speech, favoring federation, and following Bro. Hall, Bro. Pearson, of the B. of L. E., a veteran engineer, a grand old man, made a red-hot federation speech, which was applauded to the echo.

At the conclusion of "Pap Pearson's" address, E. V. Debs, Grand Secretary and Treasurer of the B. of L. E., was introduced. It is quite unnecessary to recite what he said. Is he not the editor of the *Locomotive Firemen's Magazine*?

The closing feature of one of the grandest Union meetings of railway employes was an excursion to

Niagara Falls, over the Grand Trunk railroad. The train consisted of about fifteen coaches, filled with railroad men and their wives and children who participated in the enjoyments incident to a view of one of the greatest wonders of the world.

As we write, we revisit, in fancy, the sublime scene. Not only Lake Erie, but the waters of all the great American inter oceans, the grandest inland seas of the world, send their waters to the ocean via Niagara. The dash, the resounding roar, the spray, the rainbows, the rapids, the whirlpool, and the peaceful gliding away to Ontario, to the St. Lawrence and to the ocean. It is enough. Such was the ending of the great Union meeting at Toronto.

The Magazine,

Brother C. W. Maier, Magazine Agent, of Great Western Lodge No. 24, at Parsons, Kansas, secured for the *Magazine* 105 subscribers, in five days, during the month of July, an average of twenty-one subscribers a day. The splendid work done by Brother Maier shows what could be done by others if they would try. Why not try? Why not take hold of the matter with a will? Parsons, Kansas, is a comparatively small city, and still Brother Maier experienced exceptional success in obtaining subscribers. Similar success awaits all our agents, if they will put forth their energies and avail themselves of opportunities.

The B. of R. T. at Hartford, Conn.

We are under obligations to Brother E. F. Cinclair, a conductor and member of Elm City Lodge No. 301, B. of R. T. for a copy of the *Hartford Daily Times* of July 21st, containing a lengthy report of a union meeting of the members of the B. of R. T. in that city on Sunday, July 20th.

There were two meetings during the day. First, a secret meeting in the morning and a public meeting during the evening. The attendance was large with representatives from nine states. Brother P. H. Morrissey, First Vice Grand Master, presided.

The speeches of those who addressed the public meeting exhibited a large comprehension of the purposes which animate labor organizations, of which the B. of R. T., since 1883 has advanced to a front place and is grandly holding its position. The meeting was a pronounced success in all regards and will be of great benefit to the Order throughout the east.

We are in receipt of a letter from Brother W. M. McKenna, Magazine Agent of May Flower Lodge, No. 415, giving an account of the death of Brother G. R. Barker, caused by an accident at Sulphur, Ky. Brother Barker was a most estimable young man, and was the main support of an aged father, three sisters and a crippled brother; he was loved by all who knew him, and his death is deplored, not only by his relatives, but by all his associates. A delegation of Brother Firemen went to Mildale, Ky., and took charge of the funeral. These tokens of brotherly regard won the thanks of the aged father and the older sisters. Misses Nettie and Clara took occasion to express their gratitude to Brothers G. B. Craig and McKenna. It is such expressions of sympathy for the bereaved that glorify our Brotherhood.

ANNUAL OUTING.

Boston Lodge No. 57, B. of L. F., Goes to Melville Garden, Downey Landing, in Boston Harbor, August 3d.

A Royal Clambake Where 1,500 Guests, Ladies and Gentlemen, Eat, Drink and are Merry.

Our Brothers of Boston Lodge, No. 57, set apart one day in the year for enjoyment, and as many of them as can get away to participate in the festivities. They call it their "annual outing" and look forward to it for a "good time coming," and are never disappointed. They know what is required to have a good time and every arrangement is made to secure success.

This year it was decided to have a picnic some fifteen or twenty miles down Boston Bay, at Melville Garden, Downey landing. No better locality could have been chosen. The voyage by steamer down the bay was one of exquisite pleasure. The fresh breeze, the view of the ocean, the white capped waves, "The blue above and the blue below" was an enjoyable introduction to the day's festivities at Melville Garden.

The guests of No. 57 were members of the Brotherhood from Concord, Fitchburg, Worcester, Hartford, Springfield, and other localities, as also a large number of engineers, conductors, trainmen and switchmen, members of their various organizations, together with a large representation of the Steam R. R. Men's Protective Association, of which Brother Charles Trenholm is President.

As a matter of course there was a full representation of ladies and their bright eyes, sunny smiles and inspiring words made the occasion throughout, all that the most exacting of the fifteen hundred pleasure seekers could have required.

Melville Garden for locality, for satisfaction of mind and in a word, for affording pleasure, fills the bill. The Committee of Arrangements of which Bro. F. F. Debby was chairman, had made no mistake. Everything moved like clock work and at the appointed hour the clambake was ready as per programme.

We shall not attempt to describe the clambake. It means everything good to eat—the luxuries of sea and land—a gastronomic feast—where the disciples of Epicurus love to be invited and to linger even after the battle of the knives and forks is ended.

The financial interests of "57" were in the hands of Brother A. W. Spurr, who attended strictly to business.

Brothers E. B. Chandler and M. F. Cleary, of Concord, N. H., contributed their full share to the enjoyments of the day and were so well pleased that they will doubtless be on hand when the next "outing" of "57," takes place.

Brother E. E. Nowell, F. L. Johnson and W. A. Clements, of Fitchburg, wished that Boston Bay was further inland and that clams grew on trees like chestnuts, in fact, our Brothers from Fitchburg, like those from Springfield and Hartford, were so fond of clams—so clamorous for clams, as to create no little anxiety in the mind of Grand Master Sargent, who makes no bones of being fond of clams himself, but,

fortunately the committee of arrangements had provided a full supply, as the mountains of shells, after the feast was over, bore convincing testimony.

At the conclusion of the feast a few attempts at speech making, as per programme, were made on full stomachs in which Grand Master Sargent was required to participate. We should do great violence to the eloquence and arguments of the speakers by any attempt at an outline of them. It is sufficient to say, the arguments were land sliders in force—something in the nature of an avalanche, and the eloquence was of the pyrotechnic style which created rapturous applause. The speech making over, the happy "outers" embarked for Boston where they arrived safe and sound at 8 p. m., voting unanimously that they had had a good time.

Union Meeting.

A large and interesting Union meeting of Railway Brotherhood men was held at Leighton, Pa., May 29, 1890. Bro. C. A. Wilson, member of Washington Lodge, No. 13, who was deputized by Grand Master Sargent to represent him at the meeting, reports the meeting as altogether successful. It was held under the auspices of R. H. Wilson Lodge, No. 384, B. of L. F., and Lodge No. 285, of the B. of R. T. The following B. of L. F. Lodges were represented: Nos. 11, 3, 13, 62, 228, 253, 251, 250, 149, 271, 272, 350, 354, 309, 291, 351, 211, and 303, and Nos. 285, 99 and 119 B. of R. T.

The public meeting was called to order at 1 p. m. by Bro. W. T. Haffords, Master of 384, and a number of addresses were delivered. Prominent in the list of speakers was Bro. Monessy, Vice Grand Master of the B. of R. T. Bro. Wilson expresses the opinion that the meeting resulted in great good to the Orders, as more men are joining the various lodges.

THE Helena, Mont., *Journal* devotes a column to the interesting ceremonies incident to the organization of Mount Helena Lodge, No. 423, B. of L. F., recently organized by Vice Grand Master Hannahan at Helena, Mont. The Lodge started out with twenty charter members, and with the following officers, viz: Master, Thomas McCarthy; Vice Master, A. H. McKay; Past Master, George Yates; Secretary, F. W. Lenzi; Collector, Joseph Wagner; Receiver, O. F. Whitehead; Warden, Edward Hawkins; Chaplain, Edward Foster; Conductor, John Gregory; Delegate to Grand Lodge, Edward Hawkins; Alternate delegate, W. J. Weatherhead; Outer Guard, J. J. Grant; Inner Guard, Wm. Bowen. The *Journal* says:

In the evening a fine banquet was spread at the Crystal restaurant, forty-four plates being laid. In the center of the table was an elegant center piece, the base being the stars and stripes; upon this was a miniature locomotive and tender surrounded by flowers, and a number of beautiful bouquets dotted the table. The following were present in addition to the officers mentioned:

James Martin, Master; Thos. Barry, Vice Master; Livingston Chapter, William Bowen, N. P.; Thos. Lynch, N. P.; Missoula Chapter, John E. Reilly, N. P.; J. L. Schute, M. U.; Butte Chapter, Ed Foster, N. P.; John Powers, N. P.; J. P. Moore, M. U.; William White, M. U.; Butte Chapter, J. M. Mortimore, M. C.; George Boomer, engineer, M. U.; Thos. A. Lynch, M. U.; C. Frederick, M. U.; Butte Chapter, Herman Granlich, M. C.; S. C. Dunn, M. C.; J. Sanders, M. C.; and others.

During the evening, Brother Hannahan was called

upon for an address, to which he responded, and referring to federation said that "national federation was bound to come; that the orders of the conductors, trainmen, switchmen, brakemen, locomotive firemen and a large majority of locomotive engineers were in favor of the federation and the only thing that prevented that grand result was the clause in the constitution of the order of the locomotive engineers, wherein it takes a two thirds vote to amend it, and that a minority of the order, led by Chief Arthur, year after year defeated the long wished for result, but he predicted it would be but a short time until the friends of federation would obtain the required strength and when the result was accomplished, there would arise the grandest order of railway men the world ever saw, standing shoulder to shoulder, demanding fairness, honesty and justice."

The meeting was in all regards a success, and the new Lodge starts out under auspices of the most encouraging character.

Field for Congress.

Wm. T. Field, of Livingston, Montana, member of Custer Lodge, No. 191, has been named for Congress by the Labor Party of his district. Brother Field has a record as a labor advocate which should enlist for him the support of every workman in his district regardless of party affiliations. He is intelligent and wide-awake, honest and conscientious and in him the people would have a staunch supporter of their rights. We hope that Brother Field may be triumphantly elected at the polls.

AMONG the many pleasant reminiscences of our visit to Toronto, none are more agreeable than our meeting with Brother Terrence Cunerty, who is *par excellence* the soul of good fellowship, and whether courting the muses as "Threlig Rhue," or weaving his fancies into his social prose, he manages to have the hours go by unobserved by those who are so fortunate as to be his guests. The twenty-year old friend, which we brought, by his request, to the Dominion of Hoosier, enjoys the climate and the repose which such restless spirits require, and grow better thereby.

It affords the *Magazine* great pleasure to state that Bro. J. F. O'Reilly, member of Vigo Lodge, No. 16, B. of L. F., and a delegate to the San Francisco Convention, has been appointed to the responsible position of Agent of the Treasury of the United States, and will probably be located in Arizona. The appointment, which is in all regards first-class, is credited largely to the influence of Grand Master Sargent, who is always willing to aid a worthy brother. Knowing Bro. O'Reilly's exceptional abilities we bespeak for him a large measure of success.

Address Wanted.

JOHN NEHER.—Who has been firing out of Denver on the Denver, Texas & Ft. Worth for the past year will learn something to his advantage by corresponding with the Secretary of Rocky Mountain Lodge No. 77.

CHAS. C. LIVINGSTON.—Formerly a fireman located at Boone, Ia., and Moberly, Mo., is requested to address Theo. C. Livingston, 1016, Howard street, Omaha, Neb.

Acknowledgments.

YOUNG'S CREEK, MO., July 24th, 1890.

To the Officers and Members of West End Lodge No. 18:

GENTLEMEN:—Please allow me to return my sincere thanks for your brotherly kindness in taking charge of and accompanying the remains of my dear son Gustavus Howard to Godfrey, Ill. I also thank you for the draft for fifteen hundred dollars which I received of Mr. George W. Michel July 7th. May our Heavenly Father keep and guard you all against similar accident will ever be my prayer.

Mrs. Maria Howard.

COKEVILLE, WYOMING, Aug. 12, 1890.

To the Brotherhood of Locomotive Firemen of Lodge, No. 88, Evanston, Wyoming:

I desire to return my sincere thanks to you for the prompt payment of the policy held by my husband, L. W. Putnam, also for your kindness shown my husband during his sickness, and to myself and children at the time of funeral.

My earnest prayer is for God's blessing to ever abide with those who were so kind to me in my sorrow.

Mrs. L. W. Putnam.

INDIANAPOLIS, IND., July 25th, 1890.

To the Brotherhood of Locomotive Firemen:

Allow me to state my love for the "Brotherhood." During the darkest hours of my life the kindness rendered me by the members of "Good Will" Lodge at Logansport has caused me to have a life long interest in the welfare of so good an Order and endless respect for men so true to obligations which they have taken. Allow me also to acknowledge the receipt of \$1,500. To a poor widow it is quite a benefit indeed. With best wishes for the Brotherhood, including the Grand Lodge.

I remain your humble servant,

Mrs. George Cumming.

ELMIRA, N. Y., July 8, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to offer my sincere thanks for a draft of \$1,500, the amount of insurance held by my late husband, Daniel Hogan. It was presented to me by H. F. Millins, who is prompt in his duties as an officer. My heartfelt thanks are tendered to Liberty Lodge No. 212 for their many acts of kindness to me in my time of affliction and sorrow and for the handsome floral design. May God bless each and every one of you and may the Brotherhood prosper and be to others as it has truly been to me, a friend to the widow.

Very respectfully,

Mrs. Daniel Hogan.

SPRAGUE, WASH., July 22d, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to extend my sincere thanks to the Hercules Lodge No. 63, Brotherhood of Locomotive Firemen, for fifteen hundred dollars (\$1,500), the amount due me by the death of my beloved husband, J. C. Burroughs. I also wish to thank the Lodge for kindness received at the burial of my husband. Thanks also to Terre Haute Lodge who attended. I wish to thank Sprague Lodge No. 133 for kindness received from them, especially Brothers Chunk and Stephens for their devotion toward a brother and kindness shown to me through those sad and dark hours. Thanks also to George Kendall who accompanied me east with the remains. May Heaven's blessing ever rest on the Brotherhood.

Yours truly,

Mrs. J. C. Burroughs.

U. S. PENSION OFFICE, Chicago, Ill., Aug. 4th, 1890.

E. V. Debs, Editor of Locomotive Firemen's Magazine:

SIR:—I have only seen one number of your Magazine, but I must beg for space enough to acknowledge my deep gratitude and sincere thanks to the engineers at Long Pine and at Chadron, Neb., for their tender loving care of Charles W. Heaton, who was

fatally injured July 4, 1890, at Long Pine. He was moved to Chadron, and died there July 24th. His remains were sent to our old home at Dixon, Ill., in charge of Mr. L. V. Bowman, a brother fireman, to whom I desire especial thanks for his care and sympathy. God bless such men as Charlie had for friends. God bless such men! The world is better for such brave, true, tender and great loving natures be where they may. If I am only Charlie's step-mother, I loved him very truly, and very very sincerely and gratefully thank everyone who was kind to him. Very respectfully,

E. A. Heaton.

POLITICS AND POLITICIANS.

Boston Labor Leader: We confess to little sympathy with those chumps who are all the time seeking to injure fellow-workers in organized labor by shouting, "He's a politician."

What is it to be "a politician?" In the right sense of the word, it is the duty of every citizen to be one. It has been well said that a man who does not exercise his political rights thereby shows his unfitness to have any such rights.

Things have come to a pretty pass, when it is held a crime for a man to speak and work for the advancement of political principles in which he honestly believes.

One might well make the answer to the accusation of being a politician, that Abraham Lincoln once made when as a law-student, he was reminded that there were many rogues in the legal profession.

"All the more reason," said the embryonic statesman, "that there should be one more honest man a lawyer."

When intelligent men look upon politics in this light, it will be well for them and for government.

Let us have less of this rot about politicians and a little more study of and interest in politics as the science of government.

SOMETHING NEW IN WEDDING PRESENTS.

New York Tribune: We learn from a valued Kansas exchange which comes to us weekly that an important wedding took place there recently, the eldest son of the popular justice of the peace of the village marrying the youngest daughter of another prominent citizen. This is not remarkable in itself, nor, perhaps, were the wedding offerings, though they are worth passing mention. "Among the many beautiful and costly presents to the happy couple just launched upon the sea of matrimony"—we quote directly from our contemporary—"were a fine double-barrelled shotgun from the groom's father and an excellent shorthorn cow, a remembrance from the bride's mother. Jim was already possessed of a good pointer dog, so he is now well fixed for housekeeping."

GRADY'S LAST CHRISTMAS.

Atlanta Constitution: There are so many little incidents of his life among us which are made up of pleasure and pain at this hour. Well do I remember how he spent his last year's holiday season, and the little story he told me of it as I sat in his office one morning after New Year's. He had visited his mother in Athens, Christmas week, and he said: "I don't think I ever felt happier than when I reached the little home of my boyhood. I got there at night. She had saved supper for me, and she

had remembered all the things I liked. She toasted me some cheese over the fire. Why, I hadn't tasted anything like it since I put on my round jackets. And then she had some home-made candy she knew I used to love, and, bless her heart, I just felt sixteen again as we sat and talked, and she told me how she prayed for me and thought of me always, and what a brightness I had been to her life, and how she heard me coming home in every boy that whistled along the street. When I went to bed she came and tucked the covers all around me in the dear old way that none but a mother's hands know, and I felt so happy, and so peaceful, and so full of tender love and tender memories that I cried happy, grateful tears until I went to sleep." When he finished his eyes were full of tears, and so were mine. He brushed his hand across his brow swiftly and said, laughingly, "Why, what are you crying about? What do you know about all this sort of feeling?"

THE WHITE MAN AND BUSHYHEAD.

Chief Bushyhead, of the Cherokee Nation, was here a while ago, says a Washington *Star* writer, and, seeing him crossing the lobby at Willard's, I asked a friend who was with me, named Van Wyck, if he would like to be introduced.

"Why," said Van Wyck, astonished, "you don't mean to say that handsomely dressed and distinguished looking man over there is an Indian?"

"Decidedly, yes," I replied. "Here he comes, now. Mr. Bushyhead, let me introduce my friend, Mr. Van Wyck."

"Happy to meet you, Mr. Van Wyck."

"Charmed to have the privilege of knowing you, Mr. Bushyhead. And really,—I hope you'll excuse the remark,—you are quite—er—civilized, aren't you?"

"I trust so," blandly responded the chief, ex-Governor of Indian Territory, and one of the very rich men of that enlightened and prosperous region.

"And are all the Indians in your tribe as civilized as yourself?" inquired Van Wyck.

"Oh, yes."

"Do you live in tents and wigwams?"

"Certainly. Here is a picture of my own wigwam."

And the chief drew from the inside pocket of his coat a photograph of a beautiful Queen Anne cottage, which could not have cost less than \$35,000.

"That is my summer wigwam," said Bushyhead, with great affability. "I have another for winter, in town."

Van Wyck, who had disregarded the nudges I gave him while he was putting his questions, "tumbled" at last. I understand that he has been kicking himself ever since.

THE Spanish government is a hard master. It pays the workmen in the Almaden quicksilver mines, which yield an enormous revenue, only 20 cents per day, and owing to the deleterious nature of the work the strongest men can only labor two days in the week. After five or six years' work the miner become disabled altogether, when the government magnanimously gives them a license to beg.

USUALLY GETS WHAT HE ISN'T AFTER.

The man who sues for slander usually gets it.—*Wilkesbarre Leader.*

A COLORADO PHILOSOPHER.

He stood by the fence of a mountain ranch,
 A pitiful sad-eyed burro:
 There wasn't an edible, leaf or branch,
 And the alkali ground
 For miles around
 Had never a sign of furrow.
 "Ah, me!" he sighed, "I'm sad it's so,
 But life is an endless tussle:
 They've let me go in the storm and snow,
 For they know I am used to rustle."
 "I can go a day on a sardine can,
 And two on a scrap of leather:
 I have lived a week on a Chinese fan,
 And it's even plain
 That I sometime gain
 On only a change of weather.
 The lazy ones feed on hay, indeed!
 But I, who have nerve and muscle—
 They say: 'He'll do; he will worry through;
 He's a wonderful brute to rustle!'"
 O! sorrowful burro, thin and sad!
 I feel to you like a brother.
 With the human race it's just as bad,
 For the tramp and shirk
 Must escape from work
 By the bountiful sweat of another.
 There are some that stand with glove in hand
 In the infinite toil and bustle:
 They sing and play, but they've lots of hay—
 They never have learned to rustle!

Charles P. Allen in Cosmopolitan.

ENGLISH MONOPOLIES THREE CENTURIES AGO.

Macauley in his introductory chapter of his History of England says: "The English sovereigns had always been intrusted with the supreme direction of commercial police. It was their undoubted prerogative to regulate coin, weights and measures and to appoint fairs, markets and ports. * * They therefore, as usual, encroached on the province which rightfully belonged to the legislature. The encroachment was, as usual, patiently borne till it became serious. But at length Queen Elizabeth took upon herself to grant patents to monopoly by scores. There was scarcely a family in the realm which did not feel itself aggrieved by the oppression and extortion which this abuse naturally caused. Iron, oil, vinegar, coal, saltpetre, lead, starch, yarn, skins, leather, glass, could be bought only at exorbitant prices. The House of Commons met in an angry and determined mood. It was in vain that a courtly minority blamed the Speaker for suffering the acts of the Queen's Highness to be called in question. The language of the discontented party was high and menacing and was echoed by the voice of the whole nation. The coach of the chief minister of the crown was surrounded by an indignant populace, who cursed the monopolies and exclaimed that the prerogative should not be suffered to touch the old liberties of England. There seemed for a moment to be some danger that the long and glorious reign of Elizabeth would have a shameful and disastrous end. She, however, with admirable judgment and temper, declined the contest, put herself at the head of the reforming party, redressed the grievance, thanked the Commons, in touching and dignified language, for their tender care of the general weal, brought back to herself the hearts of the people, and left to her successors a memorable example of the way in which it behooves a ruler to deal with public movements which he has not the means of resisting.

[FOURTEEN HOURS A DAY.

If the man who toils fourteen hours a day, wears overalls and a check shirt, and his wife wears a poor quality of calico, how does it happen that the fellow who never works at all, wears broadcloth and his wife wears silk? Please answer, some one who believes in taxing the many for the enrichment of the few.—*Alliance Herald.*

The man who toils fourteen hours a day to create products to exchange with those who work shorter hours, acknowledges by his actions that his labor is not worth as much as theirs, and if he continues to let plug hats and broadcloth tell him how to vote, his fourteen hours a day will be worth even less than now. No one will place a higher estimate on his labor than he does himself. The man who works the shortest hours gets the best pay. Short hours make high wages, and high wages make good prices for products and good prices for products make prosperous farmers. The farmer's long-hour day only tends to his impoverishment by compelling him to neglect the cultivation of his brain. As long as he does this, of course he will be a toiling serf for the well-fed non-producers. The mechanics of the country see this, and move for shorter hours so as to have time to think. Let farmers do likewise and cultivate less grain and more brains, and they will soon bring the whole world to their feet. The cultivators of the soil control the staff of life, and are masters of the situation. If they only knew it; but as long as they toil fourteen hours a day, they are not likely to find it out very rapidly, and they will continue to turn this "staff of life" over to "wheat rings" and "the big four."—*Industrial Age.*

COLOR BLIND TEST.

Dr. H. E. Lediard, of Carlisle, England, Surgeon to the Railway Companies in that district, has devised an instrument which he thinks will serve all purposes for color blind tests. It consists of a holder with a revolving disc of colored glass—purple, mauve, green, yellow, the equivalent of a white signal lamp, blue and red, which, it will be seen, include all the colors used on railways. The holder is held in front of a light, and the surgeon examines the color sight of the candidate by revolving the disc and bringing the separate colored glasses in front of the orifice through which the flame shines—thus exactly imitating the usual signal lamp. He suggests that the addition of a piece of smoked glass would make the colors much the same as they appear in a fog. It is not convenient always to test on an actual line of railway: but a test with this instrument, in which the examiner can change the colors quickly, would at least weed out those who are positively color blind.

HISTORY.

In 1517 Charles V. gave the Marquis de la Bresa a monopoly for eight years of importing slaves to the American Colonies; but soon a very extensive and profitable monopoly sprang up in which England procured its share of the peace of Utrecht (1713), when Spain was compelled to allow her to import 144,000 slaves for her American Colonies.

THE VELOCITY OF LIGHT.

Light moves with the amazing velocity of 185,000 miles a second, a speed a million times as great as that of a rifle-bullet. It would make the circuit of the earth's circumference, at the equator, seven times in one beat of the pendulum.

For a long time light was thought to be instantaneous, but it is now known to have a measurable velocity. The discovery was first made by means of the eclipses of Jupiter's satellites.

Jupiter, like the earth, casts a shadow, and when his moons pass through it, they are eclipsed, just as our moon is eclipsed when passing through the earth's shadow. Jupiter's shadow far surpasses in magnitude that of the earth. His moons revolve around him much more rapidly than our moon revolves around the earth, and their orbits are nearly in the plane of the planet's orbit. Consequently they all, with the exception of the fourth and most distant satellite, pass through the planet's shadow, and are eclipsed at every revolution.

Bemer, a Danish astronomer, made in 1675 some various observations in regard to the times of the occurrences of these eclipses. When Jupiter is nearest the earth, the eclipses occur about sixteen minutes earlier than when he is most distant from the earth. The difference in distance between the two points is about 185,000,000 miles, the diameter of the earth's orbit, or twice her distance from the sun.

It takes light, therefore, sixteen minutes to travel the diameter of the earth's orbit and half that time to span the distance between the sun and the earth. Light is thus shown to travel 185,000 miles in second, and to take eight minutes or, more exactly, 480 seconds, in coming from the sun to the earth.

It follows that we do not see the sun until eight minutes after sunrise, and that we do see him eight minutes after sunset. When we look at a star we do

TOWED BY A SWORDFISH.

A Block Island Fisherman Entangled in the Harpoon Line.

A letter from Block Island says: J. B. Allen, an Island fisherman, had a thrilling experience with a swordfish. Saturday, fishing in one of the Block Island schooners, eight or ten miles at sea. The harpooner had thrown the "lily iron" and fastened it deeply into a monster swordfish, and Allen attempted to throw overboard the float that goes with the harpoon. He became entangled in the line and just then the fish made a terrific plunge. Allen went overboard, with the rope coiled tightly about his body, and the great fish, lashing the ocean into a foam, made off rapidly, dragging the fisherman out to sea. Allen made a desperate effort to extricate himself, but half the time he was drawn along furiously beneath the ocean's surface. His companions on the vessel turned her prow in the direction he was being drawn, but could do nothing else to aid him. Every one believed that he must be drowned, as he went bobbing and plunging out to sea. But Allen preserved his presence of mind, and finally succeeded in releasing himself from the coils of the rope. He rose to the surface and floated. A few moments later his vessel came along, and he was pulled on board. He was almost completely exhausted. Then the vessel put chase after the swordfish, which was killed. It was the largest swordfish of the season. Its weight was 500 pounds.

THE STREETS OF PARIS.

Paris keeps the streets clean by not permitting them to get dirty. An American unsuspectingly tore a letter in two and dropped the pieces in the gutter recently, just as he had doubtless done a hundred times at home. A moment later a policeman invited him to retrace his steps and gather up the fragment of waste paper, on the penalty of being arrested. The American was a sensible man, and instead of protesting that America was the only free country on earth, he then and there learned a valuable lesson, and subsequently expressed his admiration of a city which showed such respect for itself.—*San Francisco Argonaut.*

WHO WON THE BATTLE?

St. Louis Republic: Two youths came out of the Colosseum the other night just ahead of me, and as I followed them down the avenue one of them observed: "That battle of Gettysburg must have been a awful thing!"
"You bet!" was the terse rejoinder.
"Glad we went."
"So'm I."
They walked a few steps in silence, and then the first one suddenly stopped and exclaimed:
"What fools!"
3. "Who?"
"We."
"Why?"
"We never asked nobody which side licked."

INFANTILE KNOWLEDGE.

The orderly mother with a walking baby in the house has a place for everything—and the baby knows where it is.—*Somerville Journal.*

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

SEPTEMBER, 1890.

Assessment Notice for September.

OFFICE OF GRAND LODGE, B. OF L. F.
TERRE HAUTE, IND., September 1, 1890.

ASSESSMENT No. 14, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 285. Thomas Higgins, of Black River Lodge, No. 216, was declared totally disabled by Acts of Leg, June 2, 1890.

CLAIM No. 286. Jos. Ottys, of Old Fort Lodge, No. 347, was killed in a Collision, July 14, 1890.

CLAIM No. 287. William Collopy, of Rochester Lodge, No. 99, died from Injuries received in a Collision, July 15, 1890.

CLAIM No. 288. James J. Day, of Magdalena Lodge, No. 261, was killed by Railroad Accident, July 18, 1890.

CLAIM No. 289. Daniel Broderick, of Folwell Lodge, No. 326, was killed in a Collision, July 17, 1890.

CLAIM No. 290. E. D. White, of Eureka Lodge, No. 14, died of Abscess of Liver, July 18, 1890.

CLAIM No. 291. Patrick Duffy, of Central Park Lodge, No. 257, was killed in a Collision, July 20, 1890.

CLAIM No. 292. Maurice C. Ready, of Tippecanoe Lodge, No. 36, died of Heart Disease, July 23, 1890.

CLAIM No. 293. George R. Barker, of Mayflower Lodge, No. 415, died from Injuries received in a Railroad Accident, July 27, 1890.

CLAIM No. 294. Fred M. Stebbins, of Cooke Lodge, No. 358, was Accidentally Drowned, July 30, 1890.

CLAIM No. 295. George M. Kohl, of Clifton Heights Lodge, No. 268, was killed in a Collision, August 1, 1890.

CLAIM No. 296. Charles G. Apgar, of Fairmount Lodge, No. 333, died of Brain Disease, August 1, 1890.

CLAIM No. 297. George A. Lighthart, of Rochester Lodge, No. 99, was killed in a Collision, August 1, 1890.

CLAIM No. 298. John H. May, of Adopted Father Lodge, No. 3, was killed by being Struck by Signal Pole, August 23, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each claim whose name appears on the rolls September 1, 1890, provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than September 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

... railway Companies in that district, has devised an instrument which he thinks will serve all purposes for color blind tests. It consists of a holder with a revolving disc of colored glass—purple, magenta, green, yellow, the equivalent of a white signal lamp, blue and red, which, it will be seen, include all the colors used on railways. The holder is held in front of a light, and the surgeon examines the color of the candidate by revolving the disc and bringing the separate colored glasses in front of the orifice through which the flame shines—thus exactly imitating the usual signal lamp. He suggests that the addition of a piece of smoked glass would make the colors much the same as they appear in a fog. It is not convenient always to test on an actual live railway; but a test with this instrument, in which the examiner can change the colors quickly, would at least weed out those who are positively color blind.

HISTORY.

In 1517 Charles V. gave the Marquis de la Bresse monopoly for eight years of importing slaves to the American Colonies; but soon a very extensive and profitable monopoly sprang up in which England procured its share of the peace of Utrecht (1713) when Spain was compelled to allow her to import 144,000 slaves for her American Colonies.

Alexander's Ready Reference

New 1890 EDITION For Engineers and Firemen.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK-ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the manner of handling are given. A diagram of SLIDE VALVE MOVEMENT, 16 1/2 by 18 1/2 inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICE EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on road are given, in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR REPAIRS. A careful study of the principal items of the old editions has qualified very many good FIREMEN FOR PROMOTION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without it," or, "It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Price \$1.50 per copy.

Address,

THEO. DEBS,
TERRE HAUTE, IN.

All other Editions of Ready Reference are sold and are out of print.

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

BAKER CITY, ORE., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe it far superior to any other Dinner Pail now in use, and will take great pleasure in recommending it to all railroad men.

Yours truly,
Dr. T. N. Snow,
Surgeon.

size of No. 2 Pail is $9\frac{1}{4}$ inches long by $5\frac{1}{4}$ inches wide by $9\frac{1}{4}$ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth Pail, order received we will refund the money and send the Pail free of expense. Try one.

Throwing a Switch

is tough work in stormy weather, and the switchman cannot be too well protected if he wishes to preserve his health. Every railroad man's life is full of hardship and exposure. The only garment that will fully protect the man whose business calls him out in stormy weather is the "Fish Brand Slicker." They are light, but strong as iron, handmade throughout, and good for years of service. They are worth ten times their cost, and will save you many a sickness. No other article of clothing will stand the wear and tear. Rubber is frail, will rip, tear, and let in the wet. Therefore get the right sort of coat. The "Fish Brand Slicker" is the only one for your purpose. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

Castner & Curran, General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1898.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employés in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We are confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E.

[SEAL.]

G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1898.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the principal representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

CHAS. T. BROWN,

CACTUS BLOOD CURE

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico Division 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with a like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

† A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

OUR CIVILIZATION.

In defining the term "Civilization," Webster quotes Burke, as follows:

"Our manners, our civilization, and all the good things connected with manners and with civilization have in this European world of ours, depended for ages upon two principles—I mean the spirit of a gentleman and the spirit of religion."

In speaking of the conditions of the human family, it is usual to begin at the bottom—"savage," and advance by grades thus: "savage," "barbarous," "half-civilized," "civilized" and "enlightened." The lowest order of savagery is the cannibal, and the most exalted type of civilized man is held to be the Christian. Africa furnishes the former, Europe and America the latter. Between these extremes, the world is supplied with conditions which for their proper characterization defy pen or pencil.

It is doubtless quite true, that there are men qualified to describe individuals of the lowest and the highest types of the human family—a fetich worshipping Hottentot, a New Zealand cannibal or a Sir Isaac Newton, and in doing this, men are able to arrive at conclusions more or less satisfactory of intermediate conditions. The difficulty that confronts the student is found in the fact that while it is possible to find an entire people sunk in savagery, it is impossible to find a nation fully civilized or enlightened. To make the problem still more perplexing, it is found in nations, the most boastful of their civilization and enlightenment, conditions well calculated to make even savages blush.

In the old school books, children were once taught that the aborigines of America—the savage red men, were chiefly engaged in "hunting, fishing and war." Let the student scan the records and with the facts before him answer, if since civilized and enlightened Europeans took possession of the new continent they have not pursued the same avocations, "hunting, fishing and war?" And now, after four hundred years of civilization and enlightenment, what have we to show for it all? The answer is ready. The wilderness has fled before the onward march of civilization; the savage has been driven westward; the wigwam is gone. As successive waves of population have moved westward, northward and southward, the city and the village dot all the land, the forest has given way to the farm, the church and

the school house tell of the triumphs of our civilization; the ring of the anvil, the click of the loom, the hum of machinery, the roar of the forge, and the plowman's song blend in ceaseless anthems of praise of our civilization. The statistician and mathematician work in harmony to estimate the wealth of the nation, and confess that facts exceed their figures, get beyond their grasp and dazed by the magnitude of sum totals they exclaim in the language of Sheba's Queen, "the half has not been told." Civilization crowned and glorified by triumphs and still striding onward to achieve new conquests is more boastful than was old Nebuchadnezzar, when he claimed to have built "great Babylon" by the "might" of "his power" and for his own honor. Then it was required to say "O King, live forever." Shall we say the same when speaking of our civilization? Under the shadows of our churches there are those who "know not God," and in many an aristocratic sanctuary (?) there is no place where the poor may listen to the glad sounds of salvation, as taught by one who confessed himself poorer than the foxes that have holes, poorer than the birds that have nests, and who, were he incarnate, could no more enter such a palatial sanctuary (?) than a camel could pass through the eye of a needle.

Under the influence of our civilization, the tenement house den, the abode of indescribable squalor, more repulsive than the huts of cannibals, where death, moral and physical, dirt, crime, and demoralization forever hold high carnival, stands beside the palatial home of the millionaire and hisses into the ears of the world "see what civilization has done to make life worth the living."

Behold the temples of justice! How beautiful to the eyes of those who admire art in architecture. To call them "temples of justice," is the climax of irony. A writer in the *Chicago Times* of recent date, discusses at some length court proceedings. The idea seems to be that there is too much litigation. This is doubtless true, and if true, it is because under our "boasted civilization" wrong and injustice flourish, until they become like the "pestilence that walketh in darkness" and like "the destruction that wasteth at noonday." The idea prevails that to arrest the scourges that afflict society laws should

be enacted, and thus we have it, that Congress, forty-three states and three territories are almost continuously making laws to remedy the evils of civilization. If statutes were bricks, we could duplicate Cheops. Our civilization, while greatly aroused upon the importance of law is shamefully disregardful about the men who administer the laws, and the cry goes up everywhere that the laws are right but that the courts are debauched. Says the Chicago writer:

As a scheme for using the courts exclusively as an instrument for the oppression of the poor by the rich and thereby destroying all hope of justice by law, this could hardly be improved. Look at the effect of it! A tenant is unlawfully evicted by his landlord, a man who is insured, commits the crime of dying, an employé under contract is discharged without cause and maliciously maligned. The sufferer goes to his oppressor and is threatened with interminable litigation unless he drops the matter. The landlord says: "I can't afford to take this case through all the courts of the country." The corporation says: "We pay our attorneys by the year and law costs us nothing to speak of." By such representations, practically true, unfortunately, the poor have been oppressed for many years, and to throw the burden of all cases on the litigant is to close the courts to all but the rich. When the poor find there are no courts open to them there will be some conversions to the doctrines of anarchy. To value a term of court by the amount of its judgments entered is singularly shortsighted because one man is sued for \$100 and has to pay it thousands of men pay similar amounts that they do not owe. At the present time in Chicago it is probably much better to lose \$25 or \$30 than to sue for it—that is, for the man who has no large business which puts him in the position that he can not afford to refrain from suing. To increase the burden of costs so that it would be unprofitable to sue for \$100 or \$200, would be to close the courts to the common people. Let that be done and the judges may wear crowns and scepters if they please. The people will settle their difficulties without troubling them. If one man, honestly and justly, owes another \$1 the whole people have infinitely more interest in his paying it than the creditor has, and if they furnish him a court of justice and pay all the expenses, including witness fees and attorney's fees, and even the plaintiff, for the time spent in securing his rights they will gain by so doing because the millions of men who owe small debts will know that they must pay them. And whether so or not, if the judicial department of the government is not worth its maintenance by the people, what department is? If the government does not wish to commit suicide it had better leave its courts open to the people so that even the poor may obtain justice without delay and cheaply.

What has our "boasted civilization" secured? A free open sanctuary where the rich and poor worship together? No, not at all.

Courts where the poor by virtue of the majesty of the law can obtain justice as certainly as the rich can defeat it? No. Such a conclusion would be as far from the truth as Sirius is from the orbit of the earth. If it were true, the huts of the Pennsylvania miners and Coke burners would cease to be the abodes of hunger and rags and would become the homes of people enjoying the comforts of life, ablaze with joy and contentment, fit places for children to be born and reared for the responsibilities of American citizenship. What is a civilization worth that forever panders to the rich and degrades the poor? that surrounds Christ's religion with pagan pomp and pride, and makes a temple of justice more repulsive than a "whited sepulcher?" Shall we estimate civilization by our material prosperity? by railroads and mines? by products of field, farm and forest? by factory, ships and commerce? If these be the standards let all the people chant the glories of our civilization for it is worthy of the loftiest strains of the oratorio, the grandest sentences of eloquence. But, if civilization means more than material prosperity—if it means that when Heaven's bounties provide for all, all shall share alike in the necessities and comforts of life—if it means that the right is triumphant and that justice prevails, then, it must be confessed, that civilization in all lands and climes, is a failure. And yet, there is a hopeful view to be taken of the situation. In the past, civilization has been for the few—the bloated, blear-eyed, proud and pompous few—and the more these "divine right rulers" were civilized, the more degraded became their victims. In the combination of throne, church and court, right, justice, truth, all were exiled. Things are somewhat changed now—civilization is having a new interpretation—Burke's "gentleman" and Burke's "religion," no longer answer the demand. Men no longer venerate the throne. The crowned head is a thing for flings and jeers. Democracy confronts autocracy and aristocracy in a way to create solicitude in castle and palace. The world is preparing for a better, a higher civilization. The Iconoclast is abroad. He is beating down images and shams. It is not worth while to discuss dates. A revolution is coming,

and there are ten thousand voices crying—not only in the wildernesses, but in cities, and on all the highways of progress—"prepare the way for the new dispensation." The workingmen are organizing and federating, they are reading and resolving. It is a new force in human affairs. The shibboleth of the mighty army is "Justice." The world beholds the dawn of its reign. The world needs it. Resist it? Who? The kings with their armies? The church with its anathemas? The rich with their treasures? As well seek to arrest the world in its whirling circuit around the sun, or by a decree, change the currents of the ocean. It is the coming of a civilization when the Pharisee shall be stripped of his phylactery, the king of his crown, the aristocrat of his power, and men, honest men, workingmen, shall walk forth sovereigns of the world, the absolute controllers of their divine birthrights, "life, liberty and the pursuit of happiness."

Men will doubt it; they will sigh for the old "flesh pots," for the old fetters and degradation, but the revolution will go on all the same. Faction will flourish for a time; there will be wrangling about leaders, there will be distrust, desertion and defeat, but there will be victories and progress. There will be apostates and traitors, but there will be strong men whose devotion will never waver, and whose courage will be equal to every demand. There need be no great social upheavals as harbingers of the new order of things. It may come as noiselessly as the seasons, as seed time and harvest, as bud and bloom and fruit, but come it will though every water course be transformed into a red sea. The will of God is to be probated, and the legatees, so long defrauded, are at last to be awarded their rights by decrees from which there is no appeal. Then let the morning stars sing together again, then let the sons of God shout for joy again, for then it will be seen that God, who is no respecter of persons has in His own good time, so shaped events that the workingman's badge is a passport to those high planes of life and light which since the world began, by crime and injustice, have been withheld from those whom it was God's will should enjoy them.

MULTIPLIED HORRORS FOR EUROPE AND AMERICA.

Those of our readers at all inclined to the contemplation of the horrific should purchase the *Arena* for August, and read "The Coming Cataclysm of America and Europe," by Prof. Jos. Rodes Buchanan, M. D. It is a paper abounding in the portentous and appalling, to an extent that would make an army of underwriters exceedingly despondent.

Prof. Buchanan has his theories well in hand. He has his catastrophes admirably classified and arranged as to time and extent. He quotes the ghost in Hamlet—"I could a tale unfold"—and then unfolds his tale in a way well calculated to make those who take stock in hallucinations wish they had been born on some other planet—and yet, the Professor is fascinating. There is a charm in his recitals of death and destruction that captivates, and the reader finds himself under the influence of enchantment which holds him to the text from Alpha to Omega; in fact, he half-way regrets when he reaches the end of the tale, when the last frightful picture in this panorama disappears. Notwithstanding the fearfully awful and harrowing character of the Professor's visions, he asserts that he is "naturally an optimist, a full believer in the noblest destiny of man," but he is of the opinion that reason, evidence, science and the teachings of history are against optimism, that is to say, that "all things are ordered for the best." If things could be ordered for the worst, or worse than the Professor paints them, it is difficult to see in what way the outlook could be made more deplorable. Some one, in describing the mountain scenery of Switzerland, said:

"Hills peep o'er hills,

And Alps on Alps arise,"

And Prof. Jos. Rodes Buchanan, M. D., has the terrible peeping o'er the horrible, while cataclysms on cataclysms arise.

The article begins by quoting Gen. Ben. Butler who, facetiously, is styled, "one of our ablest statesmen." It seems that a banquet was gotten up in honor of Gen. Ben. May 1st, 1890, in Boston, at which the General, among other things, predicted a "financial cyclone," which would leave "no

building or institution" standing. General Butler's statesmanship is of that common character which manufactures protected goods and exacts tribute from an over-taxed people, and we apprehend, should the "cyclone" of which the General speaks, strike his "bunting" factory, prices would be reduced and the universal Yankee nation, in that event, would be able to celebrate "labor day" at a reduced cost for banners.

Following Gen. Butler's prediction of financial disaster, we are told that the mortgage debt of American farmers amounts to the round sum of \$3,450,000,000, "which could never be paid." The cyclone would wipe out this debt. It would balance books, and then the farmers could hope for better times. The Professor is confident that a "settlement of the old feud between capital and labor" must be had, and he is of the opinion "the settlement must be a bloody one."

Prof. Buchanan writes like a seer; he sees himself up as a soothsayer, an astrologer, and he predicts universal ruin.

He notices that "Western farmers are becoming incendiary, and that the turbulent elements of cities are looking forward to blood." He sees "angry passions" and "social agitators and rhetorical exaggeration of the wrongs of labor," and predicts as a result, civil war. It is the aggressive power of organized masses on one side and on the other side "Plutocracy, political corruption managed by financial schemers" constituting "the serpent," which the millions have determined "must be crushed."

The Professor does not go astray when he points out the viciousness of legislation which has aided schemers to amass " princely fortunes," and his declaration that the Republic "cannot stand on a prince and pauper basis" is evidently correct. The error into which Prof. Rodes Buchanan, M. D., falls is, that existing evils are beyond peaceful remedy. Reference is made to the Chicago Anarchists, to Ku-Klux and White Caps, and even the Astor Place riot, as far back as 1849, is mentioned to prove that the "poison of vindictive anger has entered the life-current of the nation."

Along the wharves of Chicago the water is impure, but out in the lake it is pure.

The great inland sea cannot be contaminated. The great mass of the American people are not Anarchists, Ku-Klux, White Caps nor unimprisoned felons, a fact which the Professor fails to notice. "But one thing," says the Professor, "is necessary to insure a conflict," and adds: "The armies must be gathered and organized in two hostile camps, for mobs do not make war. The organizing is going on now as never before in the world's history. The labor party, the anti-capital party, will soon embrace from one to two millions of men, bound together by common interest, common sympathies, and common hatred of everything hostile to their interests, with a strong conviction that they are an oppressed class and small patience with their oppressors, while the consciousness of their physical power will encourage a defiant and uncompromising attitude. In such a condition the disturbances or mobs which are usually local and temporary, electrify the mass and become a national convulsion. A single individual may become the immediate cause of a civil war."

We protest against the Professor's estimate of the purpose of organized labor. Organized labor proposes peaceful remedies. Workingmen are builders and preservers. They see the drift of events. They know that in due time a remedy for crushing wrongs can be applied—not in war, slaughter, conflagration and mob rule. Workingmen are for law and order; when sufficiently organized they will see to it that unjust laws are repealed, that honest laws are honestly administered. The evils of which Prof. Buchanan complains have their seat in vicious laws, and in vicious courts, and it may be said that even just laws, as they stand upon the statute books of States, are made dead letters because of corrupt officials. Workingmen are in the majority, and their organization and federation is the hope of the country. There is no feud between capital and labor. Workingmen are not the enemies of capital. Their life-struggle is to obtain their fair share of it. They are the enemies of that class of capitalists who deny them their fair share of the wealth they produce. Workingmen know that their interests are all bound up in peaceful reme-

dies. They are determined to have righteous laws, righteously administered. To this it is coming. Every sign is cheering, and though here and there disturbances will come, and in the philosophy of mind as well as of matter, it is well they do come, since they are protests against wrongs, they are not to submerge the land in blood. As for Prof. Buchanan's predictions of earthquakes, tidal waves, the overwhelming of coasts and cities, etc., it is sufficient to say, they all belong to the Millerite theories relating to the day of judgment, white robes, resurrection, etc., and are entitled to little consideration. They are simply hallucinations, vagaries which have and can have no place in healthy minds.

The Professor has faith in "the science of periodicity," as he has explored it, and he finds "three periods of calamity for the United States." The first was the earthquake of New Madrid, Mo., 1811; the second was 1861, and now, sometime during the next twenty years, comes the third, "which in magnitude and horror will surpass anything of which authentic history has presented a record." The Professor says: "Do not ask me, kind reader, how I have reached so positive a conviction," but he says: "There is a realm of telepathic mind, which scientists are beginning to suspect and to seek. In the realm of mystery I have been a student for half a century for the purpose of bringing the marvellous and mysterious under the jurisdiction of scientific law." This must suffice as an explanation of the whys and wherefores of the Professor's wonderful knowledge. In the first place, meteors will fall. Agriculture is to be "crushed by cold seasons." "The Atlantic coast will be marked by submergence and tidal waves from New England to the Gulf of Mexico;" there will be no safety "below the hills." Galveston, New Orleans, Mobile, St. Augustine, Savannah and Charleston are doomed, and Richmond, Baltimore, Washington, Philadelphia, Newark, Jersey City and New York will suffer in various degrees." The Pacific coast won't fare much better, and thus the Professor, the student of the mysterious, proceeds, until a very large per cent. of the real estate of the world joins McGinty. Soon after

the catastrophe, a great many people will be engaged in fishing for buried treasures. Europe, Asia, Africa and South America will suffer greatly, but our estimate is that the United States comes in for much the largest share of loss. What the effect of Prof. Buchanan's paper will be in reducing the value of real estate in the doomed cities, remains to be seen. If there are believers in his theories dwelling along the coast or in the cities marked for vengeance, they will sell out and get away to the hills, but we doubt if any one heeds the warning. The American people don't scare worth a cent, and wizard-lore is at a discount. Still the Professor's story is readable, and if one, while reading, will give his imagination full play he may hear the mutterings of the coming storm, see the tidal waves and feel the shock of earthquakes.

THE MACHINE AND THE MAN.

To declaim against the machine is futile. The world will not only not listen, but it will adjudge the one who protests against the machine a crank. There are those who will listen when attacks are made upon men, when they are denounced as "tramps," as "paupers," who need to be watched, and who ought to be under constant surveillance, who will look upon poverty and all the ills and woes which accompany penury and destitution with stolid indifference, but let any one attempt to show that the machine is responsible in any degree for the privations and distress which prevails in the ranks of workingmen, and they become intensely aroused and at once go off half-cocked, and in many a rounded period of sky-scraping panegyric laud and magnify the machine. They point to the triumphs of the machine, and the world agape, listens and applauds. The result of this deifying the machine, for such it is, to an alarming extent, is to depreciate the man. In this connection we introduce the following from the *Laster*, which we suggest is well worthy of consideration:

It is questionable, says John Stuart Mill, speaking of labor saving machines, "If all the mechanical inventions yet made have lightened the day's toil of any human being." The reason is plain: it is not because of a desire to shorten hours of labor, or lighten the work of the toiler, that machinery is purchased,

but because so many men will not be needed, so much more can be gotten out of so much less workmen, and so much faster will the employer get rich. Machinery and invention is good considered in itself, but, like the abuse of a great many other good things, the abuse of machinery entails many evils. The workmen do not share in its advantages; they fall to the employer alone.

The industrial classes should therefore insist that they receive a share of the benefits of invention and machinery, and in no other way can it be better accomplished than by a shortening of the hours of labor. It is but just to ask that the hours of labor be reduced from time to time, in the same proportion as machinery supplements manual labor in the production of wealth. The danger that threatens the industrial world of this century is that the workman may become the slave of machinery, instead of machinery becoming the servant of the workman. In other words, labor falls under the control of a machinery monopoly, which is as much to be dreaded as a land, coal, oil, or any of the other monopolies.

In the foregoing the case is stated in a nut-shell. The point is clearly made. The machine lightens no man's toil; it has not reduced the hours of toil—such is not the mission of the machine. The machine is "labor saving" because it displaces men who want to work and must work or starve.

One machine does the work of many men. Capital is in love with the machine; was it ever in love with the man? The *Laster* says, "It is not because of a desire to shorten hours of labor or lighten the work of the toiler, that machinery is purchased, but because so many men will not be needed, so much more can be gotten out of so much less workmen, and so much faster will the employer get rich." (Can this statement be clearly demonstrated? Is it a fact? Can figures make it so plain that "a wayfaring man, though a fool, need not err?" It will be conceded that there are machines costing, we will say, \$5,000 which, with the attention of one man, will do the work of twenty men. In that case nineteen men are relieved—set adrift. We will suppose the machine will last ten years; that money is worth six per cent. interest; that it cost one per cent. a year for repairs, and that wages for workingmen are \$1.50 a day. We will take a period of ten years for our illustration: There stands the factory of Doe, Roe & Co. It employs twenty men at \$1.50 a day—300 days a year—amount paid out for wages in ten years, \$90,000. Now then, the firm introduces a machine costing \$5,000.

which is operated by one man at \$1.50 a day. In making the calculation, we must take into consideration the interest at six per cent. on the investment, which in ten years would be \$3,000; we must also allow one per cent. a year for repairs, which in ten years would amount to \$500, and the work of one man at \$1.50 a day, which in ten years would amount to \$4,500. Tabulated the account would stand as follows:

Twenty men at \$1.50 a day, ten years	\$90,000
Machine, original cost	\$5,000
Six per cent. interest, ten years	3,000
One per cent., repairs, ten years	500
Wages one man, ten years	4,500
	<hr/> 13,000

Clear gain to Doe, Roe & Co. \$77,000

We are not unmindful of the fact that machinery has diversified labor, and that it has created industries. We are not assailing the machine, we simply say that it has not lightened the workingman's toil nor reduced his hours of labor. So far the workingman is not the beneficiary of the machine. The time has arrived for a change, and the change must be in the reduction of the hours constituting a day's work, without any consequent reduction in wages. This done, and the workingman would share in the blessings conferred by the machine. In the first place, by enabling those in forced idleness to obtain employment—necessarily so. Suppose there is a job of work to be done requiring 1,000 hours; 100 men working ten hours a day accomplish it in one day; reduce the hours from ten to eight, and it requires 125 men one day to perform the work; as a consequence, there would be employment for twenty-five men, who otherwise would be idle. Suppose the twenty-five men had been reduced to idleness by the machine; then, in that case, the reduction in the hours of labor would compensate for the reduction of the number of men caused by the machine. As the case now stands, the machine helps the rich and not the poor. This is wrong from every possible point of view. To inaugurate idleness is a wrong of such colossal proportions that it cannot be contemplated without a shudder. And in proportion as the machine displaces men, the wrong takes deeper root and extends its cancerous fangs in all directions. To rejoice over the triumphs of the machine without demanding righteous compensations to the workingman is madness.

MACHINERY THE HANDMAID OF LABOR.

The *Boston Herald* not long since published an article the caption of which we have reproduced, prompted by "the act by which the steam plate presses at Washington have been directed to be removed from the Bureau of Engraving and Printing." The *Herald* expresses the hope that "the intelligent workingmen of America will not sanction the act." The proposition is to replace the steam presses and displace the hand presses—introduce steam and remove men—when men answer every demand. If the "intelligent workingmen" do not favor the machine instead of the man, the *Herald* is of the opinion that "they will be unjust to themselves and to the form of government for which they are largely responsible." The *Herald* is clearly of the opinion that the act of displacing the machinery in the Government Bureau of Engraving and Printing is opposed to the spirit of the age, and adds:—

The age is especially an age of invention. The inventive power of this era comes near to being its brightest glory. It does more for the advancement of civilization and, through this means, for the increased comfort and happiness of the human race than any other agency. As an element of human progress it is simply irresistible. The tides of the ocean may as easily be set back, provided our standard of intelligence is to be maintained. It is possible, of course, for enlightened nations to relapse into barbarism, or for barbarism to succeed to the status that they have occupied; but while men continue intelligent, and have that ambition which leads them to make the best use of their endowments and opportunities, it is out of the power of imagination to conceive them as resisting that spirit of the age which is shown in the increased mastery of man over material forces. This is only another name for the application of machinery such as that which it is decreed shall be put out of use by the government. The action may, by the decreed change, temporarily provide employment for a few more men at Washington. If carried out elsewhere, it will work to the detriment of hundreds of thousands of men. The short-sighted view that supposes machinery to be an injury to the workingman has been so often exploded that the demonstration surely does not need to be made against it at this late day. In countries where the workingman was less intelligent than our own, and in periods into which the enlightenment of experience had not penetrated, there was repeated resistance to the introduction of machinery. Even there it has been proved by experience that the workman was injured rather than improved by it. There is no civilized country in the world where wages are lower or employment is less than they were before machinery was invented. In our

own country there is less excuse for mistake on this point than in any other. No country has shown, in such marked degree, the inventive faculty. No people have introduced so many labor saving machines. Yet, with all this, the rate of wages and the opportunity for employment have steadily increased, and this in the face of the most remarkable immigration of labor that the world has ever witnessed. The American workingman who looks beyond his nose must see, therefore, that machinery does not hurt, but helps, him in his effort to obtain employment and wages. The American workingman, too, ought not to forget his own responsibility for this government. It is the only government of importance in the world which the votes of the workingman may be said to have made, and which they have for a century controlled. He has vindicated his right to establish government—his capacity to direct it intelligently. But he has not done this at all by yielding to any narrow prejudices such as have been displayed in this opposition to improvement in methods of work at Washington. Machinery has advanced in our government of the people—a government in which labor has always been in the majority—without obstruction, as the handmaid of labor. If machinery is to be tabooed now, it will be a retrograde step and one for the first time taken. We do not anticipate such a course: but we object to this first yielding to it. We do this on account of the conspicuous manner in which this action is made. It commits the workingmen who have engaged in it to action opposed to their own interests, and to the interests of that government which it especially concerns them to maintain with credit, both at home and abroad. We especially urge them to beware of the aid they are receiving from politicians in the matter. It is cowardly and insincere, and it will prove a snare in the end to the true interests of labor. These interests are best promoted by the advances of civilization. Opposition to the use of machinery is, in fact, opposition to the advance of civilization. It is impossible to accomplish anything effectual in it without civilization is set back: and if this altogether unlikely end should be brought about, the men who would suffer most from it would be the men who do the manual work for the world.

The foregoing ranks well up with the threadbare platitudes of the age, call it by whatever name the imagination may suggest; most anything will suit. Call it an age of invention, an age of civilization, an age of progress, and the vast majority will exclaim, "amen." Call it an age of gold, of silver, of iron, and the endorsement will be equally emphatic. Some people call it a christian age, the age of Bibles, the age of prayer, the age of churches and schools, some, there are, who call it an age which foreshadows the immediate coming of the millennial age, when Satan shall be chained, when nations shall learn war no more, and righteousness shall everywhere prevail.

Some very thoughtful people call the present an age of greed, of sordidness, of selfishness, of trusts, of monopolies, of crime, of educated and sublimated scoundrelism, an age in which corruption has its votaries in courts, legislatures and congresses, and those who designate the age by such adjectives can furnish any amount of testimony in support of their propositions. But who calls it an age of justice, an age of honesty? Not one. The present is an age of cranks. But where is the crack-brained unfortunate, the cheat, the impostor, the demagogue, the mountebank, the political or religious juggler, who calls the present an age of righteousness, of truth, of things of good report?

Let us be done with platitudes about "the age." It is an age in which the machine displaces the man. The machine has come to stay. It is to be multiplied. One hundred men, in one year, can make machines enough to displace ten thousand men. To say that the machine improves wages is shameless mendacity. To say that the machine supplies employment for workingmen, equal to the number of men it forces into idleness is notoriously false. As an illustration, in the business of book-binding, a machine has been invented which displaces nineteen persons previously employed. That is to say, where twenty were employed one is retained to run the machine, nineteen are forced into idleness. In a factory employing 100 men, one machine can be made every week, 52 machines a year, hence, the work of 100 men one year, would force into idleness 988 persons.

We do not belong to that class of croakers who "denounce the inventive power of this era." We are willing to admit that it is as "irresistible" as "the tides of the ocean." We think the "inventive power of the era" is to go on "increasing." At the same time, population is increasing. The time has already arrived when all the people in the United States who desire work at remunerative wages cannot obtain it. Multiplied thousands cannot find employment at any wages. The machines multiply, and children multiply and it were folly to disguise the fact that the labor problem is becoming the most important that challenges the attention of men, worthy of the title of statesmen or philanthropists.

How stands the case with all the glowing descriptions of our progress, our wealth, our civilization, education and culture? Our wealth swells beyond the comprehension of the most advanced economist. Our progress is a fact that lays fiction in the shade. A half million of school houses, from the district institution to the university do not require exaggeration to convince men that the mind forces of the country are to be kept in active operation. With a population of 65,000,000 and a ceaseless stream of humanity pouring in from Europe, the vast army of indigent people, already too large, is to be swelled to still more alarming proportions. Inventions will multiply. The age of invention has not yet reached its "meridian glory." The machine is to take the place of the man and the woman too, in many employments as yet open to them.

What can the ballot do for workingmen? Can it reduce the number or the power of the machines? Can it put an end to the birth of children and revoke the primal command to "multiply and replenish the earth?" Can the ballot eliminate the hoggish propensities or the cruel inclinations of human nature? Can the ballot destroy the machine when it is seen to take the place of starving men and women? In such cases, according to the *Herald*, the man must thank God for the machine and keep quiet. The *Herald's* taffy to workingmen is neither work nor wages, bread nor meat, shelter nor clothing. The *Herald* points out no remedy for the curses to toilers growing out of the era's "brightest glory." The question of questions is, how are workingmen to live above the level of squalor and degradation when "the inventive power of the era" takes the bread out of his mouth?

CUBA cigar makers manufacture a brand of cigars worth \$800 a thousand wholesale. Worth in the United States \$200 a box or \$2.00 each straight. The Astors of New York and the crowned heads of Europe smoke that sort, altogether.

THE standing army, navy and pensions of France, cost annually \$183,000,000 and Germany pays for the same items \$140,000,000 a year. The workingmen of the two countries raise the money.

THE VAGARIES OF A STATISTICIAN.

Hon. Carroll D. Wright, on September 3d, 1888, delivered an address before the American Social Science Association of which he is President, on "The Growth and Purposes of Bureaus of Statistics of Labor," in which he said that the first bureau was established in the State of Massachusetts in the year 1869, twenty years ago. Since that date twenty-two states have established such bureaus. Mr. Wright also says that "the agitation for labor legislation may be said to have commenced in the State of Massachusetts about 1845," though he admits there "had been some desultory attempts in that direction as far back as 1832." Conventions and meetings had been held in 1832, in which the farmers, mechanics and workmen of New England had participated. He says at these conventions and meetings "grievances" were discussed and resolutions adopted, setting forth the burdens under which the laboring classes were suffering from excessive hours, imprisonment for debt, the lack of a lien law, onerous militia service, and other causes. In 1845 an effort was made to establish "eleven hours as a day's work." In 1852 an effort was made to have ten hours constitute the legal day, but no action followed.

It will be observed that according to Mr. Wright's statements the agitation relating to legislation in the interest of labor began in Massachusetts in 1832. It was kept up till 1865 when by "several petitions for labor legislation," a commission of five was appointed to investigate the subject of the "hours of labor"—"to collect information and statistics in regard to the hours of labor and the condition and prospects of the industrial classes." It was therefore in 1866, the year that the commission made its report, that the Massachusetts Bureau may be said to have been established and the American Social Science Association was the direct outgrowth of the agitation to secure labor legislation in Massachusetts and yet, Mr. Wright would have the people believe that the Social Science Association is under no obligation whatever to the laboring classes for its existence or for the Bureau

of Statistics of Labor of Massachusetts, and he furthermore says "It is difficult to connect the various labor movements, as such, with the actual creation of the Bureau." As early as 1832 when labor conventions and meetings were held, and on down to 1865, labor was not organized as at present—but to assume that there has been any legislation in the country which was not the result of labor movements, is a deliberate perversion of the facts of history, as Mr. Wright himself states them. To further show the power of the labor movement in Massachusetts, Mr. Wright states that in 1869 petitions were presented to the Legislature for a "ten hour law," which were subsequently withdrawn and here Mr. Wright, shockingly stultifies himself, for he says that "it was generally believed that after the petitions had been rejected, fears began to be entertained by the leaders of the dominant party, that the labor vote of the state might be lost and it was suggested by shrewd politicians that it might be politic to grant some concessions to labor. It was at this session, 1869, that the Massachusetts Bureau of Statistics of Labor was finally established. After stating such facts Mr. Wright says they indicate that "the Legislature of 1869, for motives of its own, created the Bureau, and not the petitions and labors of workmen." Such stultification to avoid the recognition of workingmen is rarely found, and when found, it justly subjects the writer or speaker to merited contempt. No legislative body in the United States ever passed a law directly or remotely in the interest of the working classes, that was not due chiefly to agitations conducted by the working classes and even now should workingmen cease to agitate questions relating to their welfare not another act would ever be passed in their interest.

In Bismarck's land there are now 350,606 persons under sentence for offenses against the law. Sixty-one thousand eight hundred and six of these offended against the State religion, and the public peace; 134,670 against the person, 152,652 against property, 552 were sentenced for "insulting majesty," 482 for arson, 475 for bribery, 258 for offenses against the anti-Socialist law, and

969 for adulterating food. What is it, we wonder, to offend against a "State religion" and "insulting majesty." Rev. Myron W. Reid recently said:

A long time ago God said: "I am tired of kings." It will soon be time for all men to say the same thing. They are very expensive. They are, as a rule, useless. Most of them have been wicked, some of them crazy, a few of them fools. You can account for the career of Absalom by the fact that he was the son of a King—nothing for his head to plan or his hands to execute but mischief. He was caught by the long hair of his vanity and hanged. The sons of kings, with exceptions, are a bad lot. From the meager accounts we receive from Brazil the revolution has been bloodless, or nearly so. The mind of man has been thinking up to it and the question of what is the use of a useless thing has been answered gently, but decidedly. The principal factor in the world is the United States of America. People tend to support large families of kings and queens to the third and fourth generation simply look at America and say: "There are sixty millions of people more or less, who have lived considerably more than a century without a throne, or a count, or a duke, or a duchess. They are people from all nations of all colors, all sorts and conditions of men, and they are along. Why may not we?"

The people, like God, are getting tired of kings. They are a useless and an expensive luxury and in the year 1900 there will not be so many of them as at present. They may not all go as quietly as did Dom Pedro—but they will go all the same.

In the city of St. Louis there has been established a Workingman's Self-Culture Club. On Sunday afternoons a debating club meets for the discussion of practical questions. On Monday evenings a club of boys from 11 to 16 years of age meets under the guidance of a lady of education and culture. On Thursday evenings a Young Man's Reading Club meets, and on Thursday evenings the club meets to listen to a lecture. All the entertainments are free to workingmen and their families. The move is in the right direction, and such clubs could be established in every city in the country and ought to be established. Educated workingmen is one of the supreme demands of the times, and the labor press of the country can well afford to advocate the formation of workingmen's self-culture clubs. The country needs the educated mind force of its workingmen, to resist the overwhelming power of corporations, which is being exerted to crush labor organizations.

Organized Labor.

A RETROSPECTIVE VIEW.

Standing fiercely by our right,
We here defend it.
Nor hireling brood in savage fight,
Will ever rend it.
Nor tyrant's threat or traitor's pen
Will ever see
That such a race of noble men
Will cravens be.

GOING back one decade in the history of organized labor, we are given scenes and incidents that remind us forcibly of liberty's struggles in other climes and at other times. It is the same principle that is always involved. Tyranny on one side, justice on the other. I would say liberty, but justice is liberty. Liberty is justice in detail applied to the people as occasion demands. Labor is industry; it enriches the State. Organized labor is education. Its school is classical; its teaching is wide, liberal and elevating.

In this brief study of a great and worthy question, we may ask with propriety, who are the enemies of organized labor? Are they the advance thought in science and literature? Are they the professors of colleges and universities? Are they the great thinkers in political economy? Are they the reformers who devote their time and talents to the eradication of evil? Are they the poets and philosophers of the nation?

Before answering these questions, let us return to the records of the past ten years, and consider how organized labor has been hounded, maligned and calumniated by a subsidized press, and harassed by a gang of ruffians who had neither name, reputation nor country; a villainous horde, like the Huns in their barbarity, who had fallen upon Europe like a scourge from God. This flood of miasma rising from a Pinkerton pool fell upon the aspirations of labor; that is, fell upon the prosperity of the State; that is, upon the liberties of the people.

The machinery of a detective agency applied to organized labor is a horrid, poisonous compound, gathered for a fell disease and forced upon a healthy man—a patriot thrown into a dungeon with criminals—taxing virtue to sustain vice. These creatures had stooped to the most infamous methods to drag innocent men to prison and to the gibbet. Outrages of this character, continued by authority, make steel-bitter hearts that multiply with the repetition of the crime. The silence of such bitterness is ominous and fearful.

Notwithstanding this, organized labor progressed, advanced; an advance that was often encumbered by exaggerated mistakes. At any period in the history of organized labor it was, and at all times is, in advance, never following. It was always the teacher, never the pupil. Not a page of its record is blotted by a line of treachery to the Republic. Wherever organized labor existed,

liberty had an ally. It was always true to patriotism; it champions the cause of justice.

Let me mention another source from which came an opposition to organized labor; an opposition that was characterized by a coarse-hidden ignorance and vulgar stupidity, by which labor should be designated as a mark of toil; just as you would say: this is my horse; this is my cook. Of the two animals the horse received the greatest consideration. This opposition was buried in ignominy by derision. Remnants of this narrow and contracted school are yet to be found as proof of its existence, as specimens of extinct species that lived in prehistoric times are now dug from the sands of the drift-period. The imbecility of such teaching is worthy of our pity; it certainly is not worthy of our contempt. A drunken man should not be punished, he should be protected against himself.

Organized labor has called the nation's attention to some of the most dangerous evils and pointed out a remedy and its methods of application. It has given literature a wise philosophy, while elevating its standard of merit. It has given an impetus to the study of political economy, and solved many of its most intricate problems.

Every periodical to-day in Europe and America, that claims the attention of statesmen, scholars and students, is devoting its most prominent pages to its discussion. The ablest writers are engaged in defining its position and demonstrating the justice of its claims. Its rights are demanded from the pulpit of every faith in thunders of eloquent earnestness.

This is where organized labor stands to-day. Radiant, but not exultant; confident, but not defiant; patient, but fearless.

In contemplating this we are struck with the position that some railroads have taken towards it. They have decreed that it shall not exist. Why not decree that storms shall cease? that the harvest must not be gathered? that our worship, our conceptions of Christianity, must be under their direction? that our ballot shall be theirs? If the right to tell us what we shall not do is sustained, then the right to tell us what we shall do is guaranteed. They hold the right to organize. Is it theirs exclusive? we are denied it. If they boycott us, why deny us the right to boycott them? These corporations demand our labor, and take our liberties. They neither pay for the one nor respect the other. When this wrong is tolerated, then the seed of the whirlwind is planted. Every repetition of this crime makes it all the more terrible in its possibilities. It makes us shudder to see men submit to it in silence with teeth set, under the lash of poverty, with liberty haunted in their faces. The greater the dam, the fiercer the torrent when it bursts.

Tim Fagan.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

MR. EDITOR:—I want to use a little space for the discussion, or rather re-discussion, of that still unsettled injector problem. In July *Magazine*, "Vulcan" says, "While I have admitted that condensation has some effect, it still remains a mystery to me, and not me only but many other students, how the mixture of steam and water acquires power enough, to overcome the very power from which it derives its life." I have no doubt, that "Vulcan" will readily admit it to be a demonstrated fact, that the injector will force water, against a pressure fully five times as great, as the pressure working it: or, as Roper puts it, "* * * * * The injector with steam of from 80, to 90, pounds pressure, is capable of forcing water against a pressure, of from 400, to 450, pounds per square inch."

In the domain of natural law, I believe it is an axiom, that every effect is capable of being traced to its cause: This being true, why should the working of an injector remain a mystery to the earnest student? I think Roper has given us a plain, common-sense, explanation of the mystery; and I am compelled to believe, that if "Vulcan" thinks the matter over carefully, he will come to the conclusion that the law of hydraulics, which he places in opposition to Roper's explanation, is not involved: because the action of this condensed pressure, (Roper terms it accumulated power,) is confined entirely to discharge pipe, which is always uniform in area, throughout its length. According to my way of thinking, the question hinges on condensation alone; and if "Vulcan" admits it as playing any part at all, I think he will be compelled, as a logical sequence of such admission, to accept Roper's explanation as correct. There can be no middle ground. If condensation plays no part, then air pressure will work an injector, as well as steam pressure; if condensation does play a part, then it must be, that the steam being condensed, while rapidly in motion, imparts a large portion of the velocity with which it flows into the atmosphere, to the water with which it comes in contact. In this connection I want to ask "Vulcan," if he has ever thought of the reason why his injector will not start, when the waste-pipe becomes stopped up from any cause, thus obstructing the flow

of steam to the atmosphere. I think it was "F. X. II." that told us about an experimenting genius, who disconnected the discharge pipe of his injector from check, and held his finger in front of it when the injector was started, for the purpose of testing the velocity of current; the story is to the effect that as soon as the injector was started, he lost all interest in the experiment, and began looking around the neighborhood for his finger. Did not this experiment prove, that the velocity with which steam flows into the atmosphere, was imparted to the water by which it, (the steam), was condensed?

It may seem strange to "Vulcan," that I have let this matter rest for over two years: but he will remember, that at the time I published Roper's explanation he was the only one that rejected it, and the discussion which had been very spirited, all at once stopped: I did not at that time wish to enter into a technical argument with "Vulcan." I also felt sure the question like Banquo's ghost,—would not down; and hoped, that in some future discussion "Vulcan" would betray himself into an inconsistency. I think the time has come. I know not by what process of reasoning Dr. Wilson arrives at the conclusion, that I *unwillingly*, admit slack as a factor in the starting of freight trains. In any event, his reasoning is wrong, because it leads him to an erroneous conclusion. I have been intimately connected with the handling of freight trains, for about fifteen years, and for me to be *unwilling* to admit the virtues of slack, would be to deny all experience, but I do most certainly deny the correctness of the Doctor's method of showing me, (as he terms it) how trains are started. His figures have no foundation in fact, and are based entirely on what he would term a *suppose*.

The Dr. is inclined to find fault because while rejecting his figures, I offer none of my own; I am not egotistical enough to believe, that I can give the Doctor any information on this subject; I am afraid it will be a *suppose*, to the end of the chapter. The line of demarcation between the power of engine, and resistance of train, cannot be well enough established for me, or even the erudite Dr., to be able to demonstrate by actual figures, just what part slack plays in the starting of freight trains. The Dr. says, "I will answer one or two of his questions, to show how careless he reads, and how miserably he construes," and proceeds thusly: "No—I computed the part of the work that steam did in the whole run, nor did I give steam credit for doing it all, I am trying to keep steam separated from other forces that may, or may not, cut any figure in the case." I see it will be necessary for me to dissect the Dr.'s examples and see

how he has succeeded in keeping steam separated from other forces: but before doing so I want to say a word on the coal question. The Dr. attempts to dispose of the question I propounded on the coal subject, by indulging in ridicule, and refers me to "B. A.," "Vulcan," and "U. S." in a way that would imply the existence of a doubt on my part, as to the correctness of his figures. Now I have never sought to deny the correctness of the Dr.'s figures; what I did, and do say, is this; (and the Dr. will find it an awful hard statement to successfully contradict.) *There is not in America, and never has been, a locomotive that will pull, 4 coaches, 75 miles, - with 1440 pounds of coal.* Nor is there one that will pull 11 coaches, 14 miles, with 18 scoopfuls of coal. I don't know what he seeks to prove by his reference to the May articles by "Vulcan" and "U. S.," what the "fireman swears," any one can plainly see is mere hyperbole; and what "Vulcan" says, corroborates my position. Thus, " * * * This is supposing that every revolution in the 75 miles is made under steam pressure, *which is not a fact on any road.*" (Italics mine.) I also refer the Dr. to F. A. McInty's article, on page 793 of September Magazine. Now let us see how I have construed his examples. The Dr. says "a fireman on the Little Rock and Fort Smith road, * * * * * told me he went out from here, (Argenta,) with a 16"×22" locomotive, pulling four coaches, run to Russellville, - 75 miles, - averaging about 20 miles per hour, and he used on the trip 72 scoopfuls of coal: No. 3 scoop, say 20 pounds to the scoopful. Now how much steam energy did they have?"

Coal 1,440 pounds, ×50,000, =72,000,000 foot pounds, time 225 minutes, force required per minute 320,000, and this divided by 33,000, =9.7 horse power, all the *Steam* force that was required of the locomotive, including both cylinders, coal per minute 6.4 pounds." It is not necessary to comment on the Dr.'s method of computation, as it has already been shown to be incorrect, so I will take the example as I find it, and see if it will bear logical examination: Now it is a rule of logic, that in examining an argument, if any one of the premises can be shown to be false, the conclusion must necessarily be false. Now what are the premises? coal burned in 75 miles run, 1,440" 2. foot pounds of work from coal burned, 72,000,000.3, time used in expending this 72,000,000 foot pounds of work, 225 minutes. Now this latter is obviously a false premise, and does not warrant the conclusion that is drawn. Right here is where the Dr. brings in outside factors, (perhaps unconsciously,) to help his steam: It has been shown that this locomotive was running without steam, for a part of the distance run; and consequently this 72,000,000 foot pounds of work,

was expended in *less than 225 minutes*, therefore the conclusion, that the total steam force expended was only equal to 9.7 H P, is obviously false. Now I should have passed this by, on the hypothesis that the Dr. meant to say, *average* H P developed, and devoted my argument to the doctors methods of computation, but the Dr. would not allow me to do this.

For after giving some more examples, cut from the same piece of cloth, he sums up as follows:—in italics—Now "Vulcan" *honestly, don't you think it poor economy to take a 490 horse locomotive, to do 27½ horses work.* Now I tried by means of illustration, to make the Dr. see this weakness in logic, but he evidently thought I did not know what I was talking about: In this connection I am reminded of a saying, by "Uncle Silas," "With many men a negative sort of reasoning is more certain than to use argument, and with others a club does best." Now as an instance of careless reading, and miserable construction, note the following by the Dr, "Now "Vulcan" says the ragged edge of the expansion line in Pray's diagram, is caused by the steam not being able to keep up with the piston, how then in the name of common sense, will it keep up with the piston, in your No. 7, where the piston is moving nearly three times as fast? The whole thing is preposterous, and resolves itself into this: *Plain figures and facts, or indicators and supposers.* And the Doctor don't have any funny way of figuring; but it is funny how his plain figures get away with indicators." As a matter of fact, "Vulcan" *does not mention the expansion line in Pray's diagram at all.* And as another matter of fact, Pray's diagram *does not show any wavy lines*, and as another matter of fact, the Dr. in attempting to dissect those indicator diagrams, has only succeeded in more strongly emphasizing, (if that were possible,) his utter ignorance of the fundamental principles of indicator practice. One instance will be enough to illustrate this, he says: " * * * And as Thos. Pray has failed to give boiler pressure, let us assume it to be 140 lbs. and that it strikes the piston with 100 lbs." Now, it is not necessary to *assume* anything of the kind. All that needs to be done, is to take a rule and *measure* the diagram, and if one knows how, he can tell its power to the fraction of a pound. And yet this man who has to *assume*, that Pray's diagram indicates that steam struck the piston with 100" pressure, has set out to "knock out the indicator men." The Dr. indicts me as being "very voluminous, but without knowledge." To the first count, I plead guilty. I certainly have been more voluminous than the subject warranted; but the Dr. has certainly set us a good example in this respect. I am here reminded of Bassanio's remarks, anent his friend Gratiano. "His

reasons are as two grains of wheat hid in two bushels of chaff: You shall seek all day ere you find them; and, when you have them, they are not worth the search."

In regard to the second count, in the indictment, I am constrained to believe that my knowledge of steam, H P, traction, and kindred subjects, fully equals that possessed by the Dr.; and if I can bring the Dr. to the acknowledgement of a square issue, on simple questions of fact, I will then go into technicalities with him, on the subject of *steam*. "There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy." Vacuum.

CELBURNE, TEXAS, August 30, 1890.

MR. EDITOR:—At the risk of being cut off I venture this additional article on a subject which must be about worn threadbare, viz., the "Dr.'s" steam theory:

I beg leave to have this final say as the Dr. has prescribed a dose for me which must either be taken as *good medicine* in silence or rejected as the wrong prescription, and in a positive manner at that.

Now the Dr. did not diagnose my case worth a hardly, to use a slang phrase.

First, he takes my *big train* and starts off wrong foot foremost by saying a train of 466 tons of freight and 634 for weight of cars and locomotive; in this he falls many a ton short as will be seen by a perusal of these figures—12 cars of coal $27 \times 324 T$, 22 of steel average 26 ton = 572 and 6 cars of lumber the lightest of which was over 26 ton average $27 T = 162$; total, 1,058 tons of freight, to this add about 570 tons for weight of cars and engine and you have a total of 1,628 tons; quite a difference, and in all the Dr. said he never once told how he would pull this train with his 3.03 horses, but what did he say. He took his scalpel and cut the cylinder open and imagined he was dissecting a corpse, but he was not, and he will soon see that he was not if he peruses this article. He shows that I make more steam than I use and says I have proved that the water will not expand to 179 volumes of steam at 140 lbs. pressure, but I have not proved any such a thing nor has the Dr. proved it by my statement. All I have to say is that the Dr. forgot the fact that under all circumstances when engines are so worked there is a great deal of slipping and for a while your revolutions will reach a couple of hundred to the minute and of course take away a lot of your steam with it.

Then the Dr. says, in order to use the amount of steam I claim I generate, my pressure would have to be 220 instead of 90, but as a lot was *slipped* out—not by me but by the drivers slipping—you see the Dr. thought he had a case of *chills*, but instead,

it was only a common fever, and I am inclined to think he had best attend the lectures again and see if he can't improve his practice, as he has only proved to *my* satisfaction that the steam reaches the cylinder at a much higher pressure than is generally conceded to be the case, when working under such conditions, for there you have the wide-open throttle, no chance for wire drawing your steam then, the dry-pipe about 10 feet long by 7 inches diameter and the steam pipes and steam chests all in direct open communication with the boiler, and I am of the opinion that the steam is very near boiler pressure when it reaches the cylinders when working slow and hard.

Why did the Dr. attack my figures so vigorously and not answer or attempt to answer a solitary one of my questions? simply because he thought the readers of the *Magazine* were a gullible lot of people, and could be cajoled into anything when figures were produced, but I warn the Dr. that his figures must be on the right topic or they will not be guzzled down quite as promiscuously as he thinks. Let the Dr. say how he will draw my *big train* with 3.03 horses, or take my passenger train of 8 cars with 6 horses and make passenger speed of 20 miles per hour up a 50-foot grade, and then his figures will be altogether consistent and his prescription will be a pill for me to swallow, and a hard one to get down, but this every body knows he can't do, and the Dr. knows it as well as any one else, hence his utter silence on that part of my article. Now, Dr., do you *still* cling to the same horn? If you do, you had best to analyze your horn and see what it contains, for I fear you will discover that the Mogul diamond you hold in your *grasp* is but a piece of glass, and valueless, and as it has failed to carry you over the *grade* I gave you to ascend, I think you had best discard it, for it is like the Yankee's push pole, which he proposed to attach to the cross-head to help an engine up grades; the cross-head push was the *wrong way*, so it never turned out as he expected, nor will your theory, until you demonstrate with horses that the number you claim is the maximum power of a given engine; can perform the work of said locomotive. You claim 6 horse power for a given engine. Go and hire six horses for an hour, and hitch them to the train and do the work that that engine is doing, and myself and the balance of your readers will be convinced that you were really the radical, the revolutionist, and deserved great credit for your zeal in upsetting false notions and theories. But, Dr., do you think, even for a moment, that your six horses could start the train, much less attain the speed which the locomotive does? Come, now, get down to something tangible. I have given it to you and you passed it by with-

out a comment, and attacked a point which any fireman could have told you was a mere will-o'-the-wisp, but I must excuse you as any drowning man will clutch at a straw, and even as he sinks will bear the straw with him in triumph; but what a triumph it is? So with this triumph over my amount of steam, it is as short-lived as a dust whirlwind on a sultry summer day, and if you find any satisfaction in it you have my permission to hug it close to your heart and retain it forevermore, as it does not detract the fraction of an iota from my statement. All you have said has only fortified my position, while you thought you had put me to rout in utter confusion, but I assure you your guns were not properly loaded and every shot fell far short, so I await in perfect serenity and composure, something from you which can reach the Gibraltar on which I have taken my stand.

Now, listen to what the Dr. says: "Again, with all this surplus steam, you say you could only get a speed of six miles per hour. Then in the name of common sense why did you not cut off at $\frac{1}{2}$ instead of nearly full stroke? then your steam would have had 3.2 times as much 'efficacy.' This might have given you a speed of eighteen miles an hour."

Now, was ever a man known before to be guilty of such a blunder as this. How in the name of common sense does the doctor suppose that the pressure being reduced is going to overcome the weight.

What would you think, if a strong, robust man, who could lift eight hundred pounds, with ease, were to fail to lift a stone higher than his ankles, and some one should come along and say "take that consumptive individual over there; he can't lift more than two hundred and fifty, and as he is not so powerful as the other, maybe he can throw it over his head;" how much credit would you give him, as a man who understood whereof he spake. I guess just about as much as the little end of nothing, whittled down to a fine point, and just from that blunder the doctor made, I weigh his knowledge of steam and its use on that same basis.

As for "Fireman" making fifteen miles per hour up a 60 foot grade with 39 loads of coal, I will say I used to fire on the M. K. & T., myself, and all I ever saw a nineteen inch engine take into Denison was 21 loads, and there is not another grade of 60 feet to the mile on the entire Choctaw Division, and all any of the engines pull over the Division is 25 loads. He might have run them over some short hill, but pull them? never.

Again, I must show what a great blunder the doctor made, and this one shows conclusively that he is just in the act of drowning, for after having seized the straw see what a mighty lunge he makes for a pick handle, but he don't catch a pick handle at

all but the hand of a Seth Thomas clock. He says "Time accurately kept with a coal pick." Now did I intimate that I had set my coal pick up as a chronometer? Not that I am aware of. The fact is, we had an excellent Seth Thomas clock alongside of the steam gauge and to look at one was to look at both, and my coal pick statement was only to show how much steam the engine would make while I wielded my pick about 40 seconds by a clock, but the trouble with the Doctor is he jumps at conclusions too much, like a woman, but not with the same degree of success, for a woman would light on her feet every time, whereas the Doctor has measured his full length on the broad of his back, and all he can make out of my coal pick would not break a pigeon's egg.

And now I am over all the grades the Dr. gave me and am a mighty healthy corpse yet. Will the Dr. ascend my grades, take his 3.03 and his 6 or 7 horses and pull my trains? If he does I am vanquished, my Gibraltar has been demolished and I am utterly routed; but, until he does pull these trains with such number of horses, my flag is flying as proudly over my invulnerable position as the flag that crowns the heights of Gibraltar, and my army and stores rest as securely and safely from any other attack the Dr. can make, as does that fortress from the attack of a fleet of Chinese Junks.

Good-bye Dr.; may you reap much pleasure and profit from the triumph you achieved over me. I sincerely hope it will do you a great deal of good and may your scalpel always serve you as well in searching for the cause of mysterious deaths as it did with the cylinder of "E. S's" engine.

Now Bro. "Vacuum," as you said, to err is human, also to forgive is divine; but what of him who acknowledges the error? I was in error on that topic, and only a few days after I wrote as I did I took a pair of dividers and made measurements, as it struck me that I was wrong, and of course my investigation proved that I was wrong, for just as you say the measurement is accurate and easy.

Now see the difference between firing hard and soft coal. "Vulcan" gives an example of the amount of coal used on his Mogul with a 950 ton train: 35 scoops after leaving the yard in 22 miles and then enough to run 7 miles further without feeding any more. So there must be a big fire in the box before starting, whereas with soft coal about 12 scoops of coal to start as a body is generally sufficient, then with the final wind-up I never was able to go more than two miles without firing, and if it was up hill into the terminal, about $\frac{1}{2}$ of a mile from the top I would consider safe distance and then barely have enough to keep steam sufficient to pull in, and if any one tried the long distance

run with soft coal they would have no steam at all, as it must be fired light and often, the fire kept level and the grates loose; otherwise if your train is heavy you can go twice over the hill; if not very heavy you may blow up and slack over.

Eccentric Strap.

New Jersey as a Railroad State.

In last month's *Magazine* we had an item headed "The Great Railway States," in which some of the Western states were made conspicuous by the extent of their railroad mileage at the expense of some of the smaller states, who were not deemed important enough to even figure in the list as given. Some of the states in the West are as "big as all outdoors," as some one has expressed it, and have to have some means to connect their isolated borders; but when the railway mileage is figured in regard to size, we find that the palm should be awarded to New Jersey, as the Greatest Railway State in the Union, as the table below will show:

New Jersey	has 1 mile of railway to	2.1 sq. miles.
Pennsylvania	" 1 " " "	" 5.3 "
Illinois	" 1 " " "	" 5.6 "
New York	" 1 " " "	" 6.4 "
Iowa	" 1 " " "	" 6.8 "
Kansas	" 1 " " "	" 9.3 "
Texas	" 1 " " "	" 31.2 "

Upon looking at these figures it is at once evident that if taken according to size New Jersey has by far the most compact network of railroads of any state in the Union, having an average of $2\frac{1}{2}$ times as much as Pennsylvania, which comes next highest, and being 15 times as much as Texas. Upon comparison with the world at large, New Jersey is still ahead, for even The United Kingdom (England, Ireland, Scotland and Wales) do not have quite a mile of railway to 6 square miles of area, and the mileage of England is probably the highest of any foreign country on the Globe.

An Explosion.

On Monday, September 1st, as the Easton Mail train was going east over the Morris & Essex Division of the famous Lackawanna route, and just as the train was about to leave Waterloo, the boiler of the locomotive exploded with terrific force, throwing the scalding water and steam to a distance of over two hundred feet ahead on each side of it, but fortunately none of it was thrown toward the train or the platform on which a large number of people were still standing. The engineer in charge escaped unhurt, but the fireman was slightly scalded on the hand as he partly jumped and was carried down the bank at his side of the track by the rush of steam or air of the explosion. The second and third ring of the boiler plates were torn into pieces and

some of these pieces were doubled up again as if they had been that much paper in the hands of a man. The sandbox and bell were thrown high in the air and landed several hundred feet away, the former going through the roof and upper floors of the station building. The three outside rows of flues all around were bent out in the center and torn out of the sheets at each end and all the water bars in the firebox were bent down and torn out of the waterleg of the boiler. The ashpan was blown off, the frame was broken on the right side and a dent made on the rail where the main driver stood. The stack, headlight and front end were also blown off and sent whirling in space, landing in different directions. The firebox, with its crown and side sheets, was uninjured, and seemed to be the only parts which remained intact, as even the driving rods and guides were bent out of shape.

From the appearance of the wreck it would seem as if the outside sheets gave way first, that the steam between the flues forced these out in the center, thus tearing them out of the sheets, and that the steam was thus admitted to the firebox and front end and doing the damage there. How near this is right no one can tell, and even the promised examination by an expert may not solve the problem.

MR. EDITOR:—Some of the "boys" must have been busy packing their trunks for San Francisco during the last month, for the columns of the September *Magazine* do not show that they had any time to devote to its pages. While we miss their familiar signatures here, let us hope that their names will be found on the side of right and truth when we "stay-at-homes" shall scan the action of the second biennial Convention, which is now gathering at the "Golden Gate."

"Robert Grimshaw" leads off VALVE in the Mechanical Department MOTION, with an illustrated article on valve motion, in which he shows how to study the position of the different parts, and their relative movements, by the aid of diagrams drawn on paper or card-board. For a person used to drawings and patient enough to follow out the details, these loose and disconnected sketches will do, but the ordinary man, just in from his work with the clatter and tremor of the locomotive still pulsating through his system, does not feel like moving bits of paper with the nicety demanded by these drawings, and would rather find something that he could handle more freely and that would move all parts in unison. Hence the demand for sectional models which is springing up, and which bids to be supplied from several sources.

GOOD BYE, The "Dr.," after a long article, bids us "Au Revoir," and thinks "DOCTOR," that he has at least made some of us, who did not do it before, study to find out whether our ideas were founded on truth, and in this there is no doubt some truth, but whether it was good policy to make so many startling assertions simply to have them contradicted is still an unsettled question.

INDICATOR Our friend "Vacuum" presents us with a set of diagrams, DIAGRAMS, which show to a better advantage than the other ones, and says he is ready to answer our questions, having both the time and the facility to do so; so fire away at him.

LIGHT "McGinty" (who has not heard of him of late?) says the Big Firing. Annie was running down hill when she ran fourteen miles with eleven coaches on eighteen scoops of coal, and the same or like circumstances will no doubt account for other light fires we hear of.

ROCKER-ARM "W.," from Chicago, answers "Subscriber" on the OUT OF LINE. rocker-arm query in the same manner that I did in the August *Magazine*, and leaves no room to discuss the matter any further.

I'ulcan.

Locomotive Equalizing Beams, Etc.

Between the wheels of early American locomotives there was used ordinary equalizing levers; their method of attachment and arrangement varying according to the design of the engine and the whim of the builder. The main features of the system at present most used, are elliptical leaf springs, with convexity downward, and attached at their outer ends to links drawing on the bar of the frame, and at their inner ends drawing on a lever drawing at its centre on the frame also. By this means any excess of draft of the leading pair of drivers is partly thrown upon the springs of the following pair, and *vice versa*. For narrow gauge engines Rogers uses a long lever, from pedestal to pedestal, and having the two links drawing upon the two ends of the spring, which has its convexity upward and thrusts against the lower edge of the frame. For "consolidation" engines the spring over the central driving axle bears at its centre upon that axle, and its ends draw on the ends of two levers the other ends of which receive the pull of the inner ends of the springs of the first and third axles, the outer ends of the springs of these last axles drawing upon the top of the frame.

In 1834 Baldwin patented a manner of throwing a part of the weight of the tender upon the driving axles to increase the traction and thus make up for the tractive ad-

vantage that Norris had by having the drivers in front of the fire box.

Baldwin proposed to equalize the pressure between the two driving axles by connecting two air springs on each side by a pipe, Eastwick and Harrison having patented the equalizing beam.

Baldwin produced the "half crank," of which the outer cheek was omitted and the wrist fixed in a spoke of the wheel. This strengthened the axles and allowed the boiler to be lower down and larger in diameter; also permitted the driving axle to be back of the fire box, the connecting rods passing by the side of the fire box and taking hold inside of the wheel. This involved putting the cylinders outside of the smoke box.

Among the last engines on which the half-crank axle was used were those for the Erie road in 1849.

From 1835 for some years, Baldwin built his engines with cylindrical pedestals for the driving and tender wheels.

In 1852 the driving boxes were made with a slot in the line of the vertical bearing of the journal, to distribute the wear more evenly.

Robert Grimshaw.

Master Mechanics' Association.—The twenty-third Annual Convention began at Old Point Comfort, Va., June 17, with a large attendance. An address of welcome was delivered by Mr. M. E. Ingalls, after which Mr. R. H. Briggs delivered his annual address as President. The Treasurer reported a balance of \$1,081 on hand. The Secretary reported a total of 363 members, of whom 234 are active, 15 associate, and 14 honorary members.

A resolution was passed authorizing the appointment of a committee to arrange for the investment of the Boston fund in scholarships at the Massachusetts School of Technology, the Stevens Institute, and Cornell University.

The questions for discussion offered on the first day were the "Method of Fitting Bolts," and "Is it Safe to Run a Pony Truck under Fast Express Trains?" The committee on Compound Locomotives presented its report.

On the second day this report was discussed. The committee on the Establishment of Testing Stations presented no report, and was continued until next year. Reports were also presented by the committee on Position of Fire-box, and on Steel and Iron Axles.

On the third day the remaining committee reports were presented and discussed.

The remainder of the third day's session was devoted to the transaction of the usual routine business. It was decided to appoint a committee to confer with a similar committee from the Master Car Builders' Association to make arrangements by which the meetings of both associations can be held at the same place, and the time so arranged as to require less than the two weeks' attendance, which must now be given by those who are members of both associations.

The following officers were elected for the ensuing year: President, John Mackenzie, Cleveland, O.; First Vice-President, John Hickey, Kaukauna, Wis.; Second Vice-President, William Garstang, Richmond, Va.; Treasurer, O. Stewart, Boston, Mass.; Secretary, Angus Sinclair, New York.

The Wason Mfg. Co., of Brightwood, Mass., has a contract to build six passenger cars, each seating 50 people, for the new Pike's Peak rack railroad.

Railroad Accidents in the United States.

The following statement was compiled in the office of the Statistician to the Interstate Commerce Commission for presentation to the National Conference of Railroad Commissioners. The figures are obtained from

the returns made to the Commission for the year ending June 30th, 1889.

The figures given below make an exhibit of the number killed and injured under the three heads "Employees," "Passengers" and "Other Persons." They further show the classes of accidents, and the loss of life and injury to persons resulting from each. A summary of these facts is given in the table which follows:

RAILROAD ACCIDENTS FOR THE YEAR ENDING JUNE 30, 1889.

KIND OF ACCIDENT	EMPLOYEES.		PASSENGERS.		OTHER PERSONS.		TOTAL.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Coupling and uncoupling cars	300	6,757					300	6,757
Falling from trains and engines	433	2,011					433	2,011
Overhead Obstructions	65	296					65	296
Collisions	167	820	107	445	37	48	311	1,313
Deraillments	125	655	28	389	29	69	182	1,113
Other train accidents	18	1,016	26	247	522	515	737	1,799
At high way crossings	24	45	3	16	410	634	437	1,085
At stations	70	699	26	295	328	472	424	1,466
Other causes	539	7,729	120	754	2,215	2,397	2,874	10,880
Total	1,972	20,028	310	2,146	3,541	4,135	5,823	20,499

The railroads of the United States carried 472,171,343 passengers during the year covered by this statement from which it appears that one passenger in every 1,523.133 was killed, and one passenger in every 230.024 was injured. For the year 1888, the rate of casualty in England to passengers from railroad accidents was one passenger in 6,942.336 killed, and one passenger in 527,577 injured. In judging of the above figures, it should be noted that passenger mileage for a given number of tickets sold is much greater in the United States than in England, a fact which mitigates somewhat the severity of judgment upon railroad management in the United States disclosed in the above comparison.

In order to appreciate the above exhibit of casualties to employes of railroads, it is necessary to know the number of employes liable to the various sorts of accidents recorded. The total number of railroad employes in the United States is 704,736, which for the present purpose may be divided into Trainmen, Switchmen, Flagmen and Watchmen, and Other Employes. The number of employes in each class, as also the casualties to each class, is given in the following statement:

CASUALTIES TO EMPLOYEES.
ASSIGNED TO CLASSES NAMED.

CLASS OF EMPLOYEES	Number.	Killed.	Injured.	PER CENT. OF TOTAL.	
				Killed.	Injured.
Trainmen	137,334	1,179	11,301	0.86	8.23
Switchmen, Flagmen and Watchmen	33,341	229	2,155	0.69	6.46
Other Employes	517,820	556	6,360	0.10	1.23
Unclassified	16,238	28	214	0.17	1.32
Total	704,736	1,972	20,030	0.28	2.84

The above facts are presented without

comment respecting their significance, or respecting their bearing upon the general question of legislation providing for greater safety in the operation of railroads in the United States.

Slip of the Link-Block.

Will "Vulcan" or "W." or any one else please tell us what modification of the valve-gear is necessary to compensate for the slip of the link-block in the link, as this seems to be an unavoidable defect in the shifting link motion.

A. H. Tucker.

JUDGED by the standard of the number of roads actually entering the city, and taking the *Official Railway Guide* as authority, Chicago is the largest railway center in the United States, with twenty-four roads. Next come Cincinnati, St. Louis and Kansas City, tying each other, with sixteen roads each. Philadelphia is third with fifteen roads. New York City, counting in the Jersey City and Long Island roads, comes fourth in the list, with fourteen roads. Toledo fifth, with thirteen. Baltimore and Minneapolis tie for sixth, with twelve each. St. Paul, Buffalo, Indianapolis, Pittsburgh and Columbus, O., have eleven roads each, tying for seventh place.

WORK has been commenced by the Central, of Georgia, on 200 new freight cars at its shops at Macon, Ga. Several new passenger coaches are nearly completed.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

SUMMER WANDERINGS.

The Summer is ended. Outside of my window is a tall oak tree and the woodbine which twines about its rugged trunk blazes like a scarlet banner. Touches of crimson and gold gleam among the green leaves of the maple, and the slight haze of the approaching autumn begins to hover over the distant hills. The rays of the sun still glow with the ardor of August, but the night brings a suggestion of frost and the moonlight on the lake is scarcely sufficient to tempt one from the cheerful warmth of the blazing hearth. Since my last talk with our Woman's Department I have been roaming about the cool regions of the upper lakes, meeting old acquaintances, seeing some new sights and renewing former impressions and trying in an imperfect manner to put upon paper something which might be of interest to those whose cares and duties kept them at home during the heated season. To say that I am rested would be a perversion of facts, for I have not had an hour's leisure the whole summer, but I am wonderfully refreshed and strengthened and look forward with interest and pleasure to the work of the coming fall and winter.

I cannot remember where my last letter was written or whether I referred to a very pleasant sojourn at Bay View, the Michigan Chautauqua. Here, upon one of the finest locations of the many that border upon Lake Michigan, almost at the extreme northern point of the lower peninsula, is held a most delightful Assembly every summer. It has grown to be one of the most noted of these religious and educational gatherings which are founded upon the original Chautauqua plan. I paid a visit to this place three summers ago and described it for the *Magazine*, and am surprised at the rapid and substantial progress it has made. Upon these high and breezy terraces are four hundred pretty cottages and the average daily attendance this summer has been from three to four thousand people. Large and handsome public buildings have been erected, including the Auditorium, which seats several thousand people; Evelyn Hall,

with fifty rooms, dedicated to the use of the W. C. T. U. and its white ribbon workers; Loud and Hitchcock Halls, named for their respective donors, and almost equally as large, the former christened as the home for the College of the Arts and Sciences, the latter devoted to religious instruction, the study of the Bible and ancient languages, normal teaching for Sunday school workers and headquarters for the Epworth League and the Society of Christian Endeavor. There is also a very pretty Chautauqua cottage for the use of the Literary and Scientific Circles, also used as an Art Hall; and the chapel pressed into service as the College of Music. All branches of secular and religious study are taught here under competent instructors and large classes take advantage of these excellent opportunities. During the entire season a most excellent programme is put upon the platform, consisting of lectures, concerts, readings and various forms of amusement, and the auditorium is crowded to its utmost capacity. Space prevents a more extended description of this most entertaining place whose phenomenal success is largely due to its capable, judicious and energetic Superintendent, John M. Hall, of Flint, Michigan.

From Bay View we extended our trip to Sault Ste. Marie, on the extreme eastern point of the Upper Michigan peninsula, commonly called the "Soo." The St. Mary's river separates the United States from Canada at this point and connects the two great lakes—Superior and Huron. A rocky ledge a half a mile in length and extending from shore to shore produces the Rapids of St. Mary, which presented an insurmountable barrier to navigation for many years. At length, urged by the necessities of commerce, our government built an immense canal into which they turned these turbulent waters through a smooth and peaceful channel. But there was still another difficulty to overcome. In this short distance was a fall of eighteen feet; and it is a well-known fact that water does not run up hill nor can the most powerful steamer sail up an inclined plane. Therefore a "lock" was constructed which has been enlarged until now the "Soo" canal and lock are the largest in the world. At all hours of the day and night long lines of steamers are in waiting at either end to be passed safely through the lock and go on their way to the north or south with their great loads of freight or passengers. During the eight months of navigation last year 10,000 ships passed this canal, carrying about 28,000 passengers and \$84,000,000 worth of property. It is a magnificent sight to see five great vessels locked in and, at a signal, the immense gates, one leaf of which weighs 76 tons, swing slowly back, the ships lifted up eighteen feet and passed out into the deep waters without a

jar. It is a superb triumph of mechanical skill and people come from all parts of the world to see it. Eight huge engines are required to operate the lock, all under the direction of one engineer who is as proud of them as a mother of her baby or a husband of a new wife.

We went by rail, our train of six heavy cars being run upon a ferry at Mackinaw City and carried across to Point St. Ignace. We returned by boat which required more than twice the length of time but is a much more agreeable journey. We drift seventy miles down the St. Mary's river and at Detour Pass swing out upon the broad and beautiful expanse of Lake Huron. A few hours' ride to the west brings us to the Island of Mackinaw where we land and go up to the Grand Hotel, grand in one sense at least that it commands one of the finest views in this country. The Island is situated in the Strait of Mackinaw that separates the two Michigan peninsulas and connects Lakes Huron and Michigan. It is a high volcanic hill that rises abruptly out of the water and is crowned by a frowning fort. From the top of this hill one beholds an unsurpassed panorama of peninsulas, islands, lakes, straits and rivers, all the geographical phenomena. Here is built a straggling village whose inhabitants are mostly engaged in fishing, dreary enough in winter, one would imagine, but in the summer its numerous hotels are crowded and it is a delightful place to spend the heated season. The United States barracks are here, and there are many picturesque spots to visit. It catches every breeze that blows, there is good fishing and altogether it is unexcelled as a summer resort.

Crossing the state of Michigan from Grand Rapids to Detroit we took a Lake Erie steamer to Cleveland and from thence came to Lake Chautauqua where we will remain till the autumnal solstice assures us there will be no more hot weather. The Assembly, which is nearing its close, has scored the greatest success in its history. Never have the crowds been so large or the gate receipts so far up into the thousands. The College of Liberals Arts, with its splendid faculty of instructors representing twenty-five of the great universities of the country, has numbered about 800 students, while the number in less advanced classes is almost beyond counting. Every department has been crowded, music, art in all its forms, book-keeping, stenography, elocution, kindergarten, etc. The gymnasium has been unable to accommodate the applicants for instruction in athletic training, boating, boxing, fencing, swimming, the Swedish system, the Delsarte method and so on through the list. Women and girls have taken their full share and their skill and dexterity are quite wonderful when

we remember that a few years ago they were debarred from all such exercise. The various tennis courts have been occupied every hour, some fine games of base ball have been played, the bicyclists have been out in force, the pedestrian clubs have tramped over the country, there have been boating and bathing and many excursions and if everybody has not found recreation it certainly is not because it has not been supplied in abundance.

The programme has been interesting as usual, with a daily feast of lectures, concerts, readings, stereopticon exhibits, musical recitals, receptions, spelling matches, fireworks, illuminations and in fact everything that could amuse and please. For a happy combination of instruction and entertainment Chautauqua cannot be surpassed on the face of the earth. The most profound scholar can find here what his soul will take delight in, the musician or the artist may revel in his favorite pastime, the tired man or woman who wishes simply to be amused will be abundantly gratified, and nowhere are little children more thoroughly unconstrained and independent. It is a place of wonderful resources and it would be an inventive mind which could ask for what he could not find here. About this time I hear a chorus of voices from the Woman's Department crying out, "What about Housekeeping?" Is that not thought worthy of consideration?" Come with me down this shady street, into the prettiest and most romantic part of the grounds, and let us enter this great white tent so invitingly pitched under these big oak trees. Do you see these many chairs filled with eager and interested women, those white tables, that shining range, the matronly lady with the plump, pretty hands and the snowy apron? You are right in the midst of the School of Cookery, where this season over three hundred ladies have been most attentive pupils in the culinary art. Did you ever see such lightness in bread and rolls? Did you ever smell such delicious coffee and fried chicken? Did you ever taste such flaky pie crust and delicate cake? The Professor in this department every year is Mrs. Emma P. Ewing, Dean of Domestic Economy in the Iowa and the Indiana Agricultural Colleges and founder of the School of Household Science in Kansas City, where cooks are trained and graduated. I could desire nothing better for every one of our Department than that she might have a full course of Mrs. Ewing's lectures or, failing in this, might secure her *Manuals of Cookery*. Her family with one accord would rise up and call her blessed.

This letter is spinning out until I shall be afraid to lecture our correspondents upon the length of their communications. It is not easy to condense the wanderings of a

summer into a few short columns, even if but brief reference is made to each spot visited. There are many points of interest around this beautiful lake, whose shores are thickly covered with attractive resorts, the most widely known of which is Lakewood, with several handsome hotels and many picturesque cottages. Mayville stands at the head and twenty miles below at its outlet is the city of Jamestown, noted for its mills and factories. The scenery is exquisitely fair and peaceful, hills, meadows and forests, the perfection of nature's handiwork. The early days of September are the loveliest of the year, when the noisy, bustling crowds have gone away and we may enjoy the companionship of those who, like ourselves, remain because of the quiet beauty, the pure, sweet air and the welcome restfulness of lake and shore. Here at the pleasant country home of a relative we shall spend a few weeks before taking up the exacting duties of the coming year; duties which are appalling when viewed in the aggregate but taken in regular order may be easily disposed of in the future as in the past, and are infinitely more welcome than the prospect of an idle and aimless winter. And with this wish for our readers we will close: Plenty of work and the strength and ability to do it.

GOODLAND, KAN., September 1, 1890.

Editor Woman's Department:

I do enjoy the *Magazine* so much. It seems as though when each new one arrives it is better than the last; but looking over the old ones for two or three years back, I think they are all grand, and the B. of L. F. may well be proud of its *Magazine*.

I am sitting up with a sick child, and have just finished reading the first article in the July number, captioned "The Higher Education of Women as Marriage." for the second time. There is no name signed to it, so I presume Mr. Debs wrote it. It matters not who wrote it, as it has "more truth than poetry" in it. It seems the writer is terribly stirred up for fear, when women in general get a good education, there will be no one but some "illiterate" women left for men to marry. Now, don't you worry a mite about that, for as long as there are good and true men, so long will there be good and true women to marry them. And right here I would like to ask, would it not be better for the world at large, to have fewer marriages and more holy ones? How many marriages do you suppose are yearly performed, based solely on passion, financial or social positions?

There is a double meaning to nearly everything he writes. He speaks of a being by the name of "Allen" calling "educated women" "deplorable accidents." Sisters, hear ye! If an educated woman is an "accident," may accidents happen to us all. He has the grace to say the article written by Mrs. Armstrong is as good as he has ever seen, in regard to the "mission of educated women." He says "if the 'higher education' of women is to result in their 'turning their back upon marriage' then the world will be forced, inevitably, to regard this 'higher education' of women as the most stupendous evil that has visited the world since the deluge."

The education of women will not tend to "turn their backs upon marriage," but rather to elevate marriage to a higher moral standard. He also says, "allusions to the fact that husbands are not infrequently ready to accept assistance from the hands of the women they have undertaken to support," and

to the fact, that the moral sense is in educated women more highly developed than in men, go to prove that woman's higher education tends directly to create an antipathy to marriage, a dislike of man, and a low estimate of what is required to establish a home. Wrong you are there, friend. The more a woman knows about marriage, the higher estimate she puts on the ideal home. Now the "ideal home," according to my thinking, and that of thousands of others, is not where wealth alone, but love and kindness reign supreme. Some men must act differently toward their wives, and young men toward their mothers, or we, the women of America will earnestly do all in our power to prevent as many as possible of the "I'll-try-it-and-if-we-can't-get-along-we-can-easily-get-a-divorce" sort in the future. I am not laying the blame of unhappy marriages upon men in general, more than upon women. But that mighty bug-bear of what is man's and what is woman's work, must be killed. It is impossible for man's or woman's work to be in one place, the work should be where love and duty calls them.

To illustrate my meaning: I have for nearest neighbors, a family consisting of father, mother, three boys aged 18, 16, 12, a young lady of 23, and a girl of 9. They have a "claim," and the father is trying to hold that down, being sickly and unable to make a living for his family. As no one can make an entire living on a claim here, the mother and oldest daughter are compelled to make the living for the family, with the exceptions of an occasional "job" the boys get to do. So the daughter goes out west to one of our big cities, where she can obtain higher wages, and the mother toils patiently day after day over that most detestable of household articles, the wash-board, while these "young men," play base ball every day, Sundays not excepted. Now, if those were my boys, they would help, if washing must be the means of support, at least to carry the water. When advised to go to school and get an education, the oldest says, "Oh! I am too old." The idea, when men of more than twice his age are still striving to get an education. Do you suppose for an instant that that woman's estimate "is too low" on what it takes to maintain her home? Some time in the future the women of America will place so high an estimate on "Home," that they will pause before they accept a "stopping place" instead of a home. I have dearly beloved daughters of my own, and I should indeed be nearly frantic if I thought they would one day be compelled to support a family of idle boys by the wash-board. And young men, you may expect the young ladies, or at least the "higher educated" ones, to take care of themselves, rather than assume the position of the above mentioned. I have always heard it said that as a boy acted toward his mother, so he would to his wife. So, girls, let me advise you to get a husband that is not ashamed to be seen helping his wife, if there is a necessity for it. The boys will have to look to their laurels, for the girls are steadily and surely gaining ground with them. They may never stand side by side physically, but they surely will mentally.

With a wish that all our daughters may be in the foremost ranks of educated women, and for great prosperity to the B. of L. F., I remain as ever,

J. K. F.

FORT WAYNE, IND., August 17, 1890.

Editor Woman's Department:

In the August number I see several answers to "May's" letter, and think "F. M. Fortune's" and the answer of "A Friend" are splendid, but the one by "A Fireman's Mother" I do not approve of. You are mistaken, for my husband is not neglected for baby, for my time is not so occupied but that I can devote plenty of time to each.

Many thanks, Mr. Fortune, for your letter and I think you a very nice husband if you practice what you preach, and for your wife's sake I hope you do.

And the letter from "A Friend," at Newark, Ohio, receives my heartfelt thanks for your kindness and sympathy, and I hope you may never know the trouble and heart aches that a reckless or thoughtless husband can inflict.

May.

LA GRANDE, ORE., August 16, 1890.

Editor Woman's Department:

In this month's number of the *Firemen's Magazine* I see a letter which I hasten to answer. A fireman's wife describes one day's experience, with its unhappy ending, and asks some fireman or his wife to tell her who was to blame. As my husband was once a fireman, and I am interested in this woman's story, I beg leave to speak to the question.

Your correspondent's trouble all comes from one woman trying to do three or four women's work. The day's work which she planned was easily the work of three well women, and one sick woman tried to do it all. Her husband fires only one engine, and does nothing else. If his wife would undertake to be his wife and home-maker, and nothing else, she would be able to smile a healthy smile at the close of the day's labor.

Here is a woman making a home, doing cook's work, laundress' work, housekeeper's work, and also making dresses for other women. What would she think if her husband should fire the engine, run it, and then go into the round house and take the places of a hostler and a wiper? In proportion to his strength, he would not attempt much more than his ambitious wife.

To remedy the trouble, I would suggest, first, that she stop making dresses for any woman beside herself. In our American family life the woman who keeps house and does her own work, does more than enough, without taking any additional burden on her shoulders. Outside work of that kind is really reckless extravagance of nerves and health. It is like using a light passenger engine on heavy freight trains. The engine may do the work for a time, but the result is disastrous to the machinery. It's a sorry day when the mother of a family is consigned to the "scrap heap," and alas! when she "goes into the shop" to be "built over," she usually comes out an angel in another world. So, again let me entreat your correspondent to stop the dress-making business.

That particular day's work I should have done this way:

The overclothes would have been washed at some laundry—Chinese, steam, or any other in reach. Family washing is not easy work, but washing black and greasy overclothes is beyond the strength of the wives of the wearers.

The delayed ironing could have waited one day more, or until the headache was gone. Baking would have waited for the same happy time. Meanwhile, in anticipation of a sudden demand for lunch, I should have procured something from the baker's. I am not fond of "baker's things," myself, but there are times when it is better for my lord and myself to eat them than for me to be a martyr, and roast at the kitchen range.

I should also have done something for the headache. In the first place, find out what causes the headache. There is usually something that can be done in every case. Calined magnesia often works wonders.

When the dish-washing was once under way, it would have been finished. Peddlers are a nuisance, and any means of getting rid of them quickly seems justifiable. My pet method is to say that "I have no money." That never fails.

The neighbor, I should have asked into the kitchen, and my work would have gone on without interruption. If the caller is a woman of good sense and kind heart, she will not be offended, and if she has not those two qualifications, the sooner she stops calling the better.

This is not a fancy sketch. The suggestions I have offered are the outcome of my own experience, and I practice just what I preach. In the course of the day, I should, according to my plan, have had time for a little rest and a little nap.

The supper and the smile would both have been "on time." The next day's work would have seemed easy. The "dropped stitches" could have been taken up, and at the husband's return from that trip, the supper and smile would again have come in on schedule time.

There are unavoidable accidents which are liable to happen in any family, but tact and ingenuity can

usually be depended on to cheat them of serious consequences. If the supper and its accompanying smile are generally met at the end of the road, hubby will soon learn that something serious must be the matter when he does not find them, and he will make allowances accordingly.

"Daisy's" experience tallies with my own. My rides on the engine have not been in the morning; but, whenever it is possible, my husband asks me to go, and I never refuse. The chances always come suddenly, and I drop everything to go. We both come home tired, but we make the best of it, and I think we are happier, and get more enjoyment out of life, than many people in higher places. In fact, I hold that railroad men have more comfort with their families than professional men. To be sure, they are away from home half the time, and for that very reason they appreciate their home so much more the other half. Separation makes husband and wife more fond and considerate of one another. I do my work mostly in my husband's absence, so as to be as free as possible when he is home; and I have more of his company, and we have more "outings" together, than any lawyer or doctor and his wife of our acquaintance.

In conclusion, I want to ask the fireman's wife to take a leaf out of my book, and see if she is not healthier and happier for the experiment.

B. L. E.

[Many thanks for this most sensible and seasonable letter. It is sound to the core. We trust our correspondent will let us hear from her again.—Ed.]

COLO., August 18, 1890.

Editor Woman's Department:

I have read the *Firemen's Magazine* for the past few months, and like it better than any other magazine I ever read. I see that there is a great deal said on managing husbands, but I can say nothing about how to manage one, as mine makes out to manage himself. He always asks my advice about any new undertaking, and we get along quite well without any quarrels.

I think "May" has tried the right way with hers, and I sincerely hope that he will reform his evil habits.

I will give my recipe for washing overalls: After you boil your white clothes, put the overalls on in cold water, with plenty of soap and about three-fourths of a teaspoonful of coal oil, and boil about an hour and a half, then rub out and rinse. It is not necessary to rub before boiling, and do not use lye.

I think "Pansy's" is the right kind of a recipe for keeping husbands home evenings.

If this is worth reading I would like to see it in print.

With good wishes for all Firemen.

A Fireman's Wife.

GEORGETOWN, TEX., August 5, 1890.

Editor Woman's Department:

As Texas is not heard from very often through the columns of your paper, I will write. I am in receipt of my second copy of the *Magazine* and like it splendidly.

Texas has a number of fine Lodges organized. I have friends in two of them: one at Taylor, the Alamo, No. 233, the other at Palestine, the Naches, No. 156. I have an uncle that is a fireman. It is a noble calling, and one that requires a good deal of courage and bravery.

The annual picnic was given at Circleville, on the banks of the beautiful San Gabriel. At night the firemen gave a ball in Taylor. These occasions are pleasantly remembered by all who participated therein.

Most of the correspondents write about managing husbands; when I get one I will write advice how to manage them; that is, if I can manage him, but if he has the managing to do, I won't say anything about it.

Wishing you much success in your valuable work, and extending to your many correspondents my best wishes, I will close.

"Dad's Girl"

For Woman's Department.

DOWN BY THE SEASHORE.

Dreaming dreams by the seashore—
Indulging in visions bright,
I bask in the glowing sunshine,
That has dispelled the shadows of night;
And I think of the past and its pleasures,
The past that brought joy to me,
While the bright waves dance in the sunlight—
The waves of the beautiful sea.

Sitting alone by the seashore,
I trace in the glistening sand
Fond hopes that may ne'er reach fruition.
Though written with love's mystic wand;
And my heart thrills with joy while I listen
To what the bright waves are saying to me,
For they tell me that I'm still remembered
By my loved one far over the sea.

Sitting alone by the seashore,
I revel in day-dreams bright,
The world and its cares are forgotten,
While I bask in the sun's golden light;
And I think of the dear one so distant,
Who perchance is now thinking of me,
While hopefully I await his home-coming—
His coming from over the sea.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., Sept. 10, 1890.

CLINTON, ILL., August 8, 1890.

Editor Woman's Department:

I feel a desire to say something to "Pearl S." in reply to the question asked us. If the young lady she seeks advice for (of course it isn't herself) has gained the esteem and affection of one of "my ideal young men," she did so by means of ladylike deportment, and why may she not keep him loyal to her by the same means? No lady will "gush" over friends of her own sex, much less over friends of the opposite sex. She can show him, in a hundred ways, that he is preferred above all others, and that she is happy in his society, without allowing any undue familiarity: for, as sure as day follows night, "familiarity breeds contempt." But there is no sensible reason for her being "cold" in her treatment of him. I say to her, act naturally; then he will not be deceived into thinking her what she is not. She could not deceive him for any length of time, if she tried. If she is loyal to him, I think she can trust in his loyalty.

I do not want to show distrust, but I think when persons are too young by "three years" for marriage, they are too young to be engaged. It is hardly to be expected that they would fully realize the obligation they are taking on themselves, and if not understood and appreciated, it would be no obligation whatever, and either would feel at liberty to break the pledge, on short notice and on small provocation. Eventually, they would find very little harm had been done by so doing.

If this couple had reached a marriageable age, I would try to convince them that they were making a mistake in prolonging their engagement; provided, always, that they have enough to commence on without going in debt. I think a girl is deprived of one of the greatest comforts of her life when she is influenced or forced to wait till her intended husband has saved enough to complete the home before he takes her to it. My ideal girl will enjoy commencing on a small scale and helping to bring things to perfection. Although she would be a small additional expense to him, she would more than make it up, if economical, and they would have that sweet feeling of mutual dependence and mutual help which would knit their hearts together more completely than anything else; and when they have gathered the necessities and a share of the comforts around them, they will appreciate their home, and the effort it has cost them both will endear it to them and endear each to the other.

After a man has reached the age of twenty-one, he is more or less like a ship without an anchor until he is married and has a home of his own. In these days it does not take a fortune to get a home com-

menced, and after that he will be surprised to find how many nice little home adornments he can buy with the money he would have spent foolishly if he had no wife at home waiting for him, delighted with the merest trifle he brings her to beautify their home. I heard an intimate acquaintance of mine, who was married at the age of twenty-three, say if he had his life to live over, and could get the same girl, he would marry at sixteen. Yet they had nothing to begin with but loving hearts and willing hands, though now they are gray-haired, and comparatively independent.

If "Fireman's Wife" will not think me impertinent, I will ask her if she is not presuming on herself and trying to do more than she can do justice to? I think she would have her hands comfortably full without the dressmaking for the public. She did not say whether she felt obliged to do it or not.

I wish I could convince "May," and others of her opinion, that it is not such a terribly wicked thing to play cards in one's own home, with one's own family or with a few friends. My husband and I play and teach our children all the simple games, and I can see no bad effects as yet. My boy has no desire to go to the barn to play when he knows he is at liberty to bring his friends to the house and play on his own card table, a present from his mother. "Fireman's Mother" expressed my sentiments in her letter. "May" is just as conscientious in her belief that harm comes of card playing. We can not all see alike, nor can we know what the future will show us.

Mrs. Harper spoke of cleaning wall paper by a new process. I would like to know what it is. Good wishes for all.

Mrs. L. H.

[Mrs. Hincheliff is one of our most valued correspondents, and her letters are always full of good sense. The wall paper is cleaned by men who make it a business, and they are very careful not to disclose the preparation with which they do it.—Ep.]

WEST MARIETTA, OHIO, August 1, 1890.

Editor Woman's Department:

As I have never seen any communication in your valuable Magazine from the oldest town in the Northwest, I will try and write a few lines for the benefit of those who may never have the pleasure of visiting us. The very name of Marietta is historical. It goes back to a time when a handful of settlers planted civilization in this great state of ours. It is also a commemorative name, having been named about the time the unfortunate Marie Antoinette was led to the scaffold. The hands of the American people should always be extended to France, to whom they are under obligations for their independence. Over one hundred years have passed away since our forefathers settled here on the banks of the beautiful Ohio.

With what tenderness and love they guarded their wives and babes from the hated red men; what privations, want and misery they suffered we can never know. But could they see us now, after one hundred years of thrift, would their eyes beam with recognition? Hardly, for now we are a city with a population of 10,000 and rapidly increasing. We have wide streets and lovely shade trees, a beautiful park, electric lights, free delivery and a complete system of water works. The city lies on both sides of the picturesque Muskingum and is now being piped for natural gas.

Marietta has a High School for girls and in September will open a Seminary for the higher education of young ladies. It is located on the corner of Fourth and Wooster streets and is one of the most beautiful sites in the city.

The Marietta College for males is the oldest college in the state and held its fifty-fifth annual commencement last month. We have five railroads and a possible sixth. With the new Union Depot completed in a few weeks, no city, east or west, will have better railroad facilities.

And now if you will allow me a few words more, I will say my husband is a member of the Franklin

Lodge, No. 9, B. of L. F., of Columbus, and thinks there is nothing like it.

When I asked him how to manage a wife he only laughed and said, "They don't need managing." Well, that is my idea exactly. Now I attend to all the household duties and he attends to the work on the outside. It is just two years the 30th of this month since we embarked upon the sea of matrimony and in that time it would be hard to tell who did the managing.

But, wives, remember "whatever is worth doing is worth doing well." My husband has often threatened to take our cooking stove into the parlor to use as a mirror. But far better is it to have a rusty stove than a rusty brain and heart. Therefore, if it is impossible to keep both polished, neglect the stove. How many of us, I wonder gave up bright prospects for the future to marry firemen, and are there any that regret it?

Young men of the Brotherhood whatever your duty, "Never let your courage slack. Keep your hand upon the throttle and your eyes upon the track." And now, my dear Mrs. Editor, hoping this won't find its way to the waste basket as it may deserve, I remain yours with best wishes,

M. C.

[Come again.—Ed.]

C. P. DIAZ, August 4, 1890.

Editor Woman's Department:

As it has been some time since anything was said about 308 and not wishing our friends in the United States to forget us I will ask a small place in your columns.

No. 308 is improving, we have added several new members and have secured a new Lodge room and can now promenade the new members to their doom on a plank floor instead of our former dirt floor, and they are much harder when the goat is ridden.

Some of the members are wearing long faces on account of quarantine between C. P. Diaz and Eagle Pass as they are compelled to only look across the river where their best girl lives. I am glad mine lives a long way off for it would be awful to be so near and yet so far.

Something is going to happen soon, as our sober Secretary has been very happy of late and constantly sings "Listen to the Gypsy's Warning." He no doubt had his fortune told and it is about to be fulfilled. That's right, Frank, set us a good example and we will surely follow. The writer could tell more but is sworn to keep the secret.

"San Antonio papers please copy."

This road is soon to have a branch road from Hornos to San Pedro, a distance of about fourteen miles; a nice run for a young married man. "Frank, you might get it."

One of our engineers has been on the Gulf of Monterey road for the past two months and has just returned. He is as happy as a boy with his first pair of suspenders. We were told he had a trained monkey firing for him while there; when we went to see it fire it was our old friend "Dutch." Dutch speaks very highly of that part of Mexico, says it is the finest country he ever saw. He was raised in East St. Louis. Draw your own conclusions. He also says there are plenty of wild parrots in the timbered districts, but his story about being called every morning by one and being wakened up in the night by the old ones learning their young to say "cracker" sounds mightily like a cracker.

This road is doing an immense business as all the material for the Gulf and Monterey extension is being shipped over this road.

There is an abundance of fruit in Mexico this year and it is of a fine quality, owing to the unusual amount of rain. There has been a general rain all over this state and the crops are looking fine and the usual dry looking mountains are fast turning green.

Brother Scotty now wears a continual smile since winning a fine suit of clothes given by the Traveling Engineer for the cleanest engine for one month. Brother Rove also smiles for the same reason but his smile cannot be seen as far as Brother Scotty's which actually makes the 22's headlight look dim. "This is no parrot story."

There seems to be a very contagious disease on this road, but strange to say most every one smiles when they think they are going to have it. All the men quit their bachelor's quarters and go to house-keeping as soon as taken. I guess Frank and Harry will soon forsake us as they have been exposed.

Will some kind lady please tell us how to make good soda biscuit without milk or butter. We made some and invited a few of our most intimate friends to dine with us. Since then there has been a coldness between former friends and numerous visits to the dentist's.

With these few lines we must close and study a while about what we are to have for breakfast and figure how long it will take to steam a petrified soda biscuit so it can be broken with a hammer, and the quickest way to wash dishes without a dog.

P. S.—We have discovered a new method of making rubber. To any one wishing it we will forward our receipt for making and baking Angel Cake.

Keep King.

CORNICANA, TEX., August 17, 1890.

Editor Woman's Department:

Having finished reading your valuable *Magazine* for August, and not seeing any letters from Magnolia Lodge, No. 225, I will write a few words, myself, in its favor. The Lodge here is in a flourishing condition—a host of brave and gallant young men—men that are willing and ready to go forth and attend a helping hand to a brother in need or a friend in trouble.

The engines now are all draped in heavy mourning for Fireman Lee Hughes and Engineer Blake, who lost their lives in a collision, while in faithful discharge of duty, on the Central road, the 5th instant. Both leave affectionate wives and loving brothers and many friends to sadly mourn their loss, while the world loses two good men and Heaven gains two bright gems.

I wish the *Magazine* and Brotherhood long life and success, for there is no greater thing on this earth than a body of great and good men like the Brotherhood. May God bless them all when they are out upon the dark and lonely road, working and toiling for the loved ones at home.

Well Wisher.

ARKANSAS CITY, August 11, 1890.

Editor Woman's Department:

For more than one year I have been an interested reader of your valuable *Magazine*, and I have never seen any communication from any of the lady friends of the Canal City Lodge, No. 255, of which my brother is a member. The boys are as noble and true-hearted a set as can be found anywhere. I am glad that so many take an interest in the Woman's Department. For my part I think it is a grand thing. I have been silent because I was almost afraid to write, but I thought I would take courage as I wanted the boys to know that there was one that has not forgotten to give them their praise.

My brother was indignant when he read Kicker's letter in the April Number, but it was all right when he saw the storm he got from all of them. Wouldn't there be a change in his home if one of these ladies was boss. He would want to make himself scarce for a while.

But I am so sorry for May, poor thing. If her husband would read Kicker's letter I believe he would reform and be a kind and loving husband. He would be ashamed of himself.

It is a shame if Kicker is a member of the B. of L. F., he is not worthy of the honor.

I think that the railroad men are all nice men. My greatest pleasure is watching the trains coming in and going out. I know lots of the engines, especially my brother's. I always hate to see him start out for there are so many accidents. But I trust to God that he may come back safe and sound. He has never been in any wreck yet, and I hope never will. This being my first letter I will close with

God bless the boys of the B. of L. F.

A Fireman's Sister.

E. D.

OIL CITY, PA., August 15, 1890.

Editor Woman's Department:

I have been a most interested reader of the *Magazine* for some time, and find it as instructing as it is interesting, more so each number. I think the Editor very kind in allowing space for the women; we appreciate it highly. It is in our power to be of much benefit to the department, so let us use it as much as possible. None need lack for something to write about these stirring times. I see so many writing about managing a husband. I don't know how I would do but I do know that no woman ought to get married until she can manage a house thoroughly, or sooner or later they both will come to grief. My opinion is if a husband and wife truly love one another they won't need much managing, if any. Another thing a woman should have is a good education. Most women of to-day have one, I am happy to say. We also should know how to provide for ourselves the necessities of life. In these times a woman can have her choice of work; house work, school teaching or music, bookkeeping or telegraphy, etc., etc. Even if they do not need to provide for themselves they should know how, for our riches may fly away some time, so let us be independent, and when we get a home of our own we will be fitted for it, because we have not been idle. Also let us read good books and magazines, such as the *B. of L. F. Magazine*. I speak from a woman's standpoint, for I am one of them myself, battling with the difficulties that beset the laboring classes of to-day. I wish the *Magazine* in its mission every success, and the brave firemen, may God protect them all.

A Friend and Well Wisher.

BUFFALO, N. Y., August 5, 1890.

Editor Woman's Department:

I am a constant reader of the *Magazine*, and as I have never seen a word from Buffalo Lodge, No. 12, I will say that from all accounts everything is progressing finely. My brother has been a member of No. 12 about one year.

I think there are some very interesting letters in the "Woman's Department," especially those written on how to manage a husband. If all husbands were like "Kicker" and poor "May's" husband, I think they would need to be ruled with a rod of iron. Some men (my brother, for instance) do not have to be ruled or managed—they make good husbands without that.

If there are any stenographers and typewriters who are readers of the *Magazine*, I should like to hear a word from them through its columns, being a stenographer and typewriter myself.

Hoping to hear some more on that interesting subject. "Kissing Mother," I remain, a friend to all firemen and the B. of L. F. *Edna.*

WAYCROSS, GA., August 4, 1890.

Editor Woman's Department:

I do dearly love to read the *Magazine*. I am neither the wife, mother, daughter nor sweetheart of a fireman. It is a pleasure to see the engines come steaming and puffing along the R. R. and knowing not whether it is my dear brother who is keeping her moving along the rail or some of the other boys. I must bid my old *Magazine* adieu, wishing the B. of L. F. good success.

A Fireman's Sister.

[A Fireman's Sister from Waycross, Ga., writes very kindly of Lodge 325, of which three of her brothers are members.]

WINFIELD, KANSAS, August 14, 1890.

Editor Woman's Department:

I have had the pleasure of reading the second one of your *Magazines*, and am very much pleased with it. My brother being a member of B. of L. F. I am very much interested, and it is through his kindness that I will receive it for one year, and through it I hope to be benefitted in the year to come.

I remain,

A Fireman's Sister,

Little Massey.

THE BROOK.

Peep from haunts of coot and hern.
I make a sudden sally,
And sparkle out among the fern,
To bicker down a valley.

By thirty hills I hurry down,
Or slip between the ridges,
By twenty thorns, a little town,
And half a hundred bridges.

Till last, by Phillip's farm I flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I chatter over stony ways,
In little sharps and trebles,
I bubble into eddying bays,
I babble on the pebbles.

With many a curve my banks I fret,
By many a field and fallow,
And many a fairy forland set
With willow weed and mallow.

I chatter, chatter, as I flow,
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I wind about, and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling:

And here and there a foamy flake,
Upon me as I travel,
With many a silvery water-break,
Above the golden gravel:

And draw them all along, and flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I steal by lawns and grassy plots,
I slide by hazel covers;
I move the sweet forget-me-nots,
That grow for happy lovers.

I slip, I slide, I gleam, I glance,
Among my skimming swallows;
I make the netted sunbeams dance
Against my sandy shallows.

I murmur under moon and stars,
In brambly wildernesses;
I linger by my shingly bars,
I loiter around my cresses.

And out again, I curve and flow,
To join the brimming river:
For men may come, and men may go,
But I go on forever.

Alfred Tennyson.

RELIGIOUS INVESTIGATION.

Four-year-old asked if God made him, papa and mamma. Obtaining the answer, he asked:

"Did God make the trees?"

"Yes, darling," said his mother.

"And the birds?"

"Yes, dear—go to sleep."

"Who made God, mamma?"

"Do go to sleep, dear!"

"Does God wear a straw hat?"

"Pet, go to sleep—you must go to sleep?"

A long pause.

"Mamma, if God swallowed a fish-bone, would he choke to death?"

Exit mamma, to repress a disposition to smile.

The longest distance over which telephoning can be maintained is uncertain: 750 miles is a common daily occurrence, but two gentlemen recently carried on a protracted conversation between Charleston, S. C., and Omaha, Neb., a distance of about 1,500 miles.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

PUBLIC SENTIMENT.

Mr. J. R. Buchanan, in the *Labor Leader*, says:

But the greatest of all stumbling blocks in the way of the workingman protesting for his rights is that bugaboo called "public sentiment." It is a will-o'-the-wisp which has led many a well-founded strike into the slough of defeat. "If you don't allow the trains to run you will inconvenience thousands, and then public sentiment will be against you," is what you say. You are mistaken: the public hasn't any "sentiment." What you have taken for it has been the ranting of subsidized editors, whose whole aim is to misrepresent you and frighten you. Take the New York daily press during the New York Central strike. With one exception the prominent papers of the city began a campaign of misrepresentation and bulldozing on the second day of the strike. Their local columns were filled with garbled accounts and gross falsehoods intended to discourage the friends of the strikers. President Depew has not been filling the big editors up with wine and taffy for nothing. He knew when he ran off to Europe to avoid the trouble that was sure to follow the carrying out of the scheme to oust the Knights from the Central that the press would see to it that "public sentiment" went the right way. One can almost see the sparkle of Chauncey's champagne in the eyes of the editor who writes about the corporation "whose generosity and goodness to its employes has become a proverb."

There is such a thing as honest "public sentiment." We do not doubt that public sentiment is often wrong upon many questions. We do not hesitate to say that the press is often swayed by the money power to do strikers grievous wrong, but in such discussions it is always best to start out right.

It is on record that Mr. Holland declared that the strike on the New York Central was a "thoughtless" strike. It is also on record that it was ordered by a subordinate official of the Knights of Labor, and that Mr. Powderly advised against it, and did not know that it was to occur.

These facts were reported, and "public sentiment" is opposed to premature strikes. A strike should be the last resort. Had there been more deliberation, more thoughtfulness, had Mr. Powderly been fully advised, had the grievances of the Knights been known to the public (and they were righteous grievances) we believe that the preponderating power of public sentiment would have been with the strikers.

We do not doubt that Depew knew of the impending storm and went to Europe to avoid its force, but the public was not aware of its coming, and the Knights of Labor should have availed themselves of every avenue of communication to tell the public of what Webb was doing.

The record shows that this was not done. The storm came suddenly. Only the Knights knew where or how it was coming. We think this was a mistake.

Had their grievances been widely discussed the interest of the strikers would have been vastly promoted.

We do not attach undue importance to public sentiment, but it is a factor and a force well worth considering, and as a general proposition it is on the side of strikers and helps them to win victories.

When railroads have grievances they let the public know it, and seek for sympathy, and railroad employes, in this regard, may profitably emulate their shrewdness.

The *Commoner* of Pittsburg, is opposed to harnessing the water power of Niagara to wheels and shafts for the gratification of the "demon of industry," and exclaims:

The short-sighted narrow-mindedness of this present age, the perversion of thought and degradation of ideas, the subjugation of all that is high and holy, of all that is poetic and beautiful, of all that is inspiring, grand or ennobling to the mean mercenary grasp of commercial purpose, and the shameful, shocking, heartless vandalism of the time is pointedly brought to light in the persistent attempt of certain individuals to obtain control of that most beautiful work of nature and wonder of the world Niagara Falls.

The present is an industrial, money-making, mercenary age. So greedy that thousands of women, young, fair and beautiful are made to work and sing the "song of the shirt." Niagara Falls are very beautiful, very poetic, "inspiring, grand" and "that and a' that," but if Americans can without shedding a tear or feeling a twinge of conscience, see girls of "sweet sixteen" toiling for a mere pittance to keep their souls in their weary bodies, the *Commoner* may be sure its existence that the horse-power of Niagara Falls will be set to work at the earliest possible day.

We like Niagara, like its roar, its rush, dash, splash, spray and rainbows; as the Cockney said, "Its dom foin, well get up," but as sure as fate, "capitalists" will eventually make Niagara Falls get down to business. Something in that line has already been accomplished. Says the *Commoner*:

Some people believe that work is the whole end and aim of life. There is no such word in their lexicon as art, pleasure or beauty. Everything is measurable, filthy lucre. Has anyone ever gazed on the wonderful awe inspiring picture of Niagara and said to himself: "This should be harnessed to turn the miserly wheels of work"? Is there not enough of power in this broad land without degrading its fair face of nature. Allow these schemers to press and the silver stream of purest crystal will soon be reeking with the filth of industry and the now

water will run black. It will be polluted and poisoned, become an eye-sore and offence rather than an attractive picture. For a few paltry dollars those dull-sensed beings will destroy the work of ages, they will destroy something that all the wealth of the world, all the power or ingenuity possessed by man could not restore.

That is about the size of it. "Some people," and the number is large, and increasing every day, believe that work is, not only "the whole end," but they believe it is the *but* end of life, or, both ends of it. In the number, unfortunately, is included workingmen who antagonize the eight-hour movement and every other movement designed to reduce their burdens and better their condition, a fact far more humiliating than any movement intended to make the water power of Niagara go to work. Says the *Commoner*:

Have generations still unborn no right in the matter? Shall we arbitrarily deprive them of a privilege which we ourselves now enjoy? We hope not. We hope the world is not so selfish. Let this great nation rise up in its might and enter an earnest, emphatic protest against such an unholy desecration. Let a crushing rebuke be dealt to those unfeeling monopolists to whom nothing is too sacred for their grasp.

We should like very much to demand the "yeas and nays" on the Niagara question; as at present informed, we should vote "yea." "An honest man is the noblest work of God," and millions of them have to work, why should Niagara be exempt? Why should it do nothing but roar and tumble? As for "generations still unborn," they must take their chances, but all who come within the next hundred million of years, we think will have a chance to hear Niagara roar and see it plunge and possibly see its horse-power utilized. Already, we make women and children work. We make the winds and the tides work, we have harnessed electricity to the wires and to all sorts of contrivances and have compelled it to work, and if we could utilize the perpetual motion of the planets, we would do that. It does no good to kick. The Master said, "Hitherto my Father worketh and I work," and Niagara, while he need not cease singing anthems and may continue to deck his brow with rainbows, will have to get down to work.

W. E. BURNS has been nominated for the Lower House in the Fifth District. Mr. Burns is pre-eminently a representative labor man and ought to receive the vote of every workingman in the Fifth District. He is a man of ability, integrity, and in every way qualified to represent the interests of the people, and especially the working people, in the Legislature. If W. E. Burns is elected, which he assuredly will be, no one need fear that any corporate or other vicious influence will ever sway any action that he may take in the making or repealing of laws. His constituents may rest assured that every vote he casts in the Legislature will be in favor of honesty and fairness to every interest that is represented.

Some of the overzealous newspapers in a sneering manner class Mr. Burns with the political heelers that infest our political conventions, and refer to him as a member of the ruling race. If being an American of the third or fourth generation justifies such an inference, then he has been properly designated.

W. E. Burns was born in Baltimore County, Mary-

land, where also his father and grandfather were born. He has lived in Chicago for thirteen years; ten years of that time he has been running an engine on the Illinois Central Railway. He is an honored member of the Brotherhood of Locomotive Firemen, of which organization he was the Vice Grand Master from 1881 until 1883, and for eight years he has been a member of the Grand Executive Board. In 1888 he was nominated for the Legislature by the Labor party, and polled the largest vote in his district of any one running on the ticket. He is a broad-gauge man on every subject, and is thoroughly non-partisan when the interests of the people are at stake. Mr. Burns will be elected, he ought to be elected, but to make his election sure every workingman and every honest man, no matter what his business may be, ought to vote for him.

The foregoing from the *Rights of Labor*, published at Chicago, is transferred to our columns with pleasure. For years Bro. Burns has been an active member of the Brotherhood of Locomotive Firemen, and he is widely known throughout its jurisdiction as an earnest, conscientious and faithful supporter of the rights of labor.

The *Magazine* believes that in Bro. Burns the workingmen of his district would have an honest and capable representative who would use his influence to have just laws enacted, and therefore hopes that they will see to it that he is elected by an overwhelming majority.

A PECULIARITY about the numerous strikes that are constantly taking place among railroad men is that there is no complaint made of the hours of labor and the wages paid. The causes of dispute generally turn on the men not being permitted to manage the railroads they work for. The arbitration that calls for a settlement of a dispute is really the request for outside parties to decide whether or not the railroad companies shall manage their own business. The *Inter-Ocean* of Chicago puts the case very clearly in an editorial, which says: "There are a good many things which could with propriety be submitted to arbitration. Nearly all questions of a general nature, such as hours of labor and rate of compensation for a given kind of service, but when it comes to the discharge of an individual employed for cause, that is not a matter for arbitration. If the employé has a time contract he can enforce payment for all the time covered by the contract, no matter whether assigned to duty or not; but when both parties are at liberty to terminate the engagement without previous notice there is no room for calling in the good offices of an umpire, unless the cause of the discharge is in itself general."—*National Car and Locomotive Builder*.

The foregoing is sadly wanting in accuracy of statement. That is putting it mildly. The writer did not have the fate of Ananias in mind. "The peculiarity about the numerous strikes that are constantly taking place among railroad men is that there is" complaint made of the hours of labor and the wages paid. It is not true that the causes of dispute generally turn on the men not being permitted to manage the roads they work for. Such assertions are not made in the interest of truth and fair play. They do gross injustice to workingmen. They are made in the interest of the corporations. They are the unsupported pleadings of paid attorneys, and are made for the purpose of obtaining a verdict from the public in defiance of facts. It is not true that railroad

employés seek to "manage the road they work for." It never was true. It goes for nothing to say that railroad employés have made mistakes in their demands, or that their methods have sometimes been of a character which prudent men did not approve. But honest men, men actuated by a sense of justice, capable of understanding an honest verdict, will, in forming conclusions, reject exceptions and be governed by the rule. As a rule, railroad employés have kept their demands largely within the limits of justice. Such is the record since the first track was laid. They have made some headway. In less than three score years railroads in the United States have grown from 229 miles to 161,000 miles, and in all of these years railroad employés have been truer to the corporation than the corporation has been to the employé. Wrongs there have been, grievous wrongs, and wrongs still exist. Many wrongs have been assailed and have disappeared, in every instance, because railroad employés asserted their manhood, demanded their rights and secured them.

Never on any occasion has the corporation discovered the wrong, and of its own volition banished it. To the extent that employés have been emancipated, the work has been done by their own efforts, and in every advance society has been the gainer.

A certain class of writers will not see the facts as they exist. They are the suborned witnesses of the corporations, the subsidized clackers of railroad magnates, who use their privileges to degrade, rather than dignify labor.

Railroad companies are managing their own business, but it often occurs that in this "business" the rights of employés are seriously involved. In such cases, employés speak, protest and demand a hearing for the purpose of securing their rights, and these paid advocates of wrong, lift up their hands in holy horror and exclaim, "employés want to manage the railroads."

The *Inter Ocean* well says, "the discharge of an individual employé for cause, that is not a matter for arbitration," but the question of "cause," is a matter for investigation. There are multiplied instances on record, showing that "individual employés" have been discharged to gratify the spleen of some subordinate nincompoop, and when the facts, through a grievance committee have been brought to the attention of higher officials, the "individual employé" has been reinstated—and the fact knocks into smithereens all the lame logic of those publications which seek to substitute falsehood for truth; fawning creatures themselves, they would have others play the role of fleas and be content to live in the hair of the corporation dog.

PROGNOSTICATIONS seem to be in order now and in a recent issue of the *Forum* Professor Emile de Loeveleg remarks that "a hundred years hence, leaving China out of the question, there will be two colossal powers in the world, beside which Germany, England, France and Italy will be as pigmies—the United States and Russia." A contemporary follows this up by saying: "If the estimate which General Meigs makes of the population of the United States in 1940 is correct, the United States will be indeed a colossal power. It will then have a population of more than 1,200,000,000. The present population of Germany is hardly so much as 50,000,000. But it is to be hoped that by that time peace will prevail throughout the world, and that all the nations will have beaten their swords into plowshares and their spears into pruning hooks." The idea seems to be that Russia, with half Europe, will gobble half of Asia, and the United States will take all of North America—on the one side the triumph of despotism and on the other the triumph of democracy. Russia, under its present form of government, will not exist a hundred years nor the half of it; and when the United States is animated by territorial ambitions and crushes out all weaker nationalities to gratify it, her decline and fall will be written.

BISHOP HUNTINGTON, of New York, recently delivered an address on the "Emancipation of Labor. The Bishop has been a prominent actor in what is called the "Five Points Mission," of the City of New York for years an ulcer in the very heart of the metropolis. It never was a place of rest for workmen and women, but of filth, slime, the dregs, the putrefactions of New York society. To cleanse "Five Points" was never a work in the direction of the "emancipation of labor." The Bishop reported as "defining generally those people of the laboring classes who may be considered as suffering under the yoke. They were the poor. In speaking and thinking of the poor the Bishop said we were too soon to consider them as separated from us; it was too broad a line. Our habit of thought was to place them below us as something apart from us—worthy perhaps, but, generally speaking, of an inferior grade altogether. If this were true then we would be justified in our position. It would be proper for us to do all we could for their well-being—to improve them as we would horses or dogs, bringing out better strains in the breed, and that sort of thing. But this was not the case. The Roman slave who, on the sand-floor of the arena, cried out that he was man and that nothing human was foreign to him, was indorsed by a burst of applause from the Roman people, who, darkened, they were by their heathen religion, yet

saw the force of the sentiment. That sentiment was a flash which had grown into a steady flame through the incarnation of Christ. That incarnation made us all brothers and sisters, and every human being, degraded or poor as he might be, was our brother."

This is all very pretty, well enough in its way, and may have been, for aught we know or care, the right thing to say to "a large audience at the Epiphany church." But "Five Points" is not the right place to go to form any rational conceptions of the working people. As soon go to Sing Sing. The church is everlastingly mixing sin and crime and shame with the subject of labor. The church builds its palatial sanctuaries, frescoes the ceilings, lays down the richest carpets, upholsters pew and pulpit in gorgeous style, hires a big salaried preacher, sells the seats at higher figures than those of an opera house and then from time to time utters soft platitudes about the "incarnation of Christ." That is well enough, but the church has been preaching it for about nineteen centuries and little good has come of it to labor. What is wanted is for workmen to organize and then federate—and then demand their rights and wrest them from the grasp of men who combine to withhold them. If this is not done, the centuries of the future, like the centuries of the past, will find workmen begging for the privilege of living.

It will be of great interest and a matter of important information to the readers of this *Magazine* to know that the removal of the Westinghouse Air Brake Company from Allegheny City to Wilmerding, Pa., is now completed. The shops in Allegheny City are now occupied by the Fuel Gas and Manufacturing Company, another Westinghouse concern. A few days ago the last complement of Air Brake workmen left for the new shops in Wilmerding.

The General Offices have also been located near the new works, while the Company's city office is located in the Westinghouse Building, corner of Ninth street and Penn avenue, Pittsburgh, Pa. This building is the property of the Westinghouse Air Brake Company.

The new works at Wilmerding are now in full operation, and, owing to the increased facilities, the output of the Company is now much larger than formerly.

A CONTEMPORARY asks, "Shall immigration be restricted?" and advocates such restriction upon the ground that "one of the New York Commissioners of Immigration charges that the European governments are systematically unloading paupers and criminals in this country." It is further stated that immigration has fallen off during

the current year fully 100,000, as compared with 1888. Manifestly, Congress should pass stringent laws relating to paupers and criminals, and immigrants who come to our shores on contracts to engage in work at European or Asiatic prices. Such laws are already in existence, but are in numerous cases evaded. So far, the penalties have fallen upon the unfortunates who are shipped by European governments, or are induced to come by American citizens who are known to be the enemies of American workmen. It is held, and justly, too, that this business works hardships to American workmen, because it multiplies their numbers and reduces wages, and is, therefore, a form of robbery and a crime. By reducing wages poverty is increased, and the ills that follow in its train multiplied, but the laws, as they stand, permit the real culprit to go free, while the deluded victims are made to suffer and American workmen are degraded. What is wanted are laws which will punish the rascals who are engaged, directly or indirectly, in bringing laborers to the United States. In the matter of paupers and criminals, captains of vessels should be more responsible. Let the laws pronounce it a felony, and send the captains when convicted to prison. This done, we would hear no more of the arrival of paupers and criminals. The work of investigation would begin and end at the foreign port. In the case of the contract system, let the laws provide that the man, no matter how high his position, or how extensive the industry he controls, shall be deemed a felon and punished by imprisonment, and this done, the American enemy of workmen will desist from his nefarious schemes. They are the real criminals, the implacable enemies of the American workman, but they are permitted to practice their schemes of robbery and demoralization without suffering inconvenience.

THE *New York Railroad Men*, a sort of a pious publication of cracker and cheese Christianity, writes of the recent strike on the New York Central as a "deplorable event," and says:

The question involved in the recent strike was simply whether the officers of a railroad company should employ and discharge men according to their own best judgment, without submitting their action to any outside organization for review.

The Czar of Russia has the power and can discharge men and subject them to the pangs of starvation; he can exile them to a Siberian mine, or he can murder them, just as his Imperial Highness may elect, without "submitting" to any outside person, prince or potentate, for review his action. His subjects have no rights which he is under any obligations to consider, and

the *Railroad Men*, which is a flea in the hair of the Central's dog, claims the same autocratic power for Webb, the rich young autocrat, who has no more regard for an employé than he has for a railroad tie, frog or spike.

PRESIDENT GOMPERS, of the American Federation of Labor, says:

The hiring of thugs, loafers, drunkards and assassins by private corporations and empowering them to shoot down innocent men, women and children, is not only contrary to the law, but to the spirit and genius of the institutions of the State in which we live, and requires the severest censure and most withering scorn of our fellow-men.

Poor's Manual says there are 161,396 miles of railroads in the United States. On January 31, 1889, these roads had 31,062 locomotive engines, 23,464 passenger cars and 7,184 mail, baggage and express cars. There were 1,060,164 freight cars, a total of 1,090,813 cars. The passenger cars can seat at least 1,500,000 passengers, and the freight car capacity exceeds 21,000,000 tons. A pretty good showing for the railroad business of the country.

MESSEURS. DEPEW AND ARTHUR, it is said, contemplate reviving the Order of the "Golden Spurs," which was created A. D. 1559. Mr. Arthur is reported as preferring the creation of a new Order to be called "The Knights of the Golden Throttle," but Depew objected. He thought "Golden Spurs" preferable, as it indicated that the members of the Order were all mounted and were all drivers. He said that the "spur" was a symbol of authority quite as much as a scepter, and vastly more efficient. He thought that the seceders of the O. R. C. would get up an Order of "The Knights of the Golden Punch," and that with punch and spur, things in due time, would be hunk-a-dora.

MR. WEBB.

A New York letter to the *Philadelphia Enquirer*, paints Mr. Webb, of the New York Central, as follows:

Mr. Webb is a handsome young gentleman, who in his brief career has successively been a classical scholar, a chemist, an engineer, lawyer, broker, banker, man of leisure, bank director and Vice President of a railroad. He was born with a silver spoon in his mouth, and through the judicious marriages of the members of his family has managed to pass his life almost exclusively in the society of millionaires. Despite his wealth and position he is noted for his absence of generosity and utter apathy to all people who are not born under the same pecuniary star as himself. To say that he is not in sympathy is to say nothing. He has no conception of the wants, desires and tendencies of the working people, and no more feeling for them than for the ties and rails of his tracks.

Manifestly, the writer painted Mr. Webb to life. It is not required to add another tint. He is Vanderbilt's deputy and a sort of a private secretary to Chauncey M. Depew. When such creatures rule, God help the workingman!

"LET US WELCOME OUR COMPANY HOME."

Headlines of an editorial in daily paper on the day of the return of a militia company from the scene of a late strike.

Let us welcome our warriors home.

They are coming all crowned from the fray
Like a thoroughbred flecked with the foam
Which he blows from his nostrils away.

To a quickstep how gaily they tread,
As it rolls from a soul-stirring drum:
Oh! they conquered slaves struggling for bread—
Let us welcome our warriors home.

For the very brief space of a week

The undaunted lads went to the wars.

To protect every ulcerous freak,

That was coupling and switching the car.

They're returning all laureled and crowned

Like the conquering heroes of old:

And the streets with their praises resound

Half their valor can never be told.

Pray, what right has a toiler to strike,

Or suppose he's created a man?

He's presumptuous to think of the like.

Let him carry his chains while he can.

For if ever he tries to escape

From the shackles in which he is bound.

We can riddle his carcass with grape,

From the guns of our heroes around.

With the Pinkerton thugs and the guards

And the treasure which lies in the vault—

All the strikers are sure of rewards,

In the shape of ferocious assaults:

And the law and the question of right

For the moment are equally lost:

They are crushed by the moloch of might

Stalking onward regardless of cost.

To "our citizen soldiers" my song

Is inscribed with a poisonous will:

They're the boys who marched gaily along.

The "disorderly rabble" to kill;

Never pausing a stride to reflect

On the wrongs the poor devils may feel.

Who for once in their lives stood erect.

Asking justice and getting the steel.

I remember a few years ago

When the "higos" were ordered to march

To encounter a resolute foe,

All their limbs were deficient of starch.

They slunk off to the land of the queen

From a terror of Southern braves.

But their courage ferocious is seen

When they level their muskets at slaves.

Shandy Magazine.

America: Bride—Are there many tunnels on this railroad, Charles, dear?

Bridegroom—Quite a number, dearest. I select it on purpose. If I remember rightly we are coming to one in a few moments.

Brakeman (entering)—Select your partners for this tunnel, please.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month

AWAKE! AWAKE! AND GIRD THYSELF.

Would that I had some power to make
The whole world hear and some awake
From their calm lethargic slumber;
To realize at last their strength,
And tell Monopoly, at length.
Your days are short in number.

Awake! Arise! cast off for aye
That shameful, careless apathy.
The morning's light is breaking,
Know this each man, in whom the breath
Of life is: that from social death,
Earth's toilers are awaking.

Woe unto those, the gospel saith,
Who cry peace, peace, when naught but death
And dire oppression reigneth;
When men with faults like ours can sit
And squeeze from us, if they see fit.
What little joy remaineth.

Work not by tyranny or crime,
But gently striving, all the time.
To join men's hearts together;
That each may feel he has a part
To take, and try with earnest heart,
To loosen labor's tether.

Now just one word to that fire-boy,
Who joined the Lodge to get a toy
To pin upon his vest,
When he attends won't speak his mind,
But slides his chair a mile behind
And whispers to the rest.

Don't, if you prize your manhood's name,
While others take all praise or blame
Remain a silent brother.
Don't you be bashful, let it out.
In a short time you'll speak, no doubt,
As well as any other.

Think! Think! with all your soul and brain
On labor's problems and you'll gain
Ideas well worth the trouble.
Choose for yourself, for right or wrong,
Stand firm and don't be drawn along,
With each dissentient bubble.

W. F. S.

MONTREAL, CAN.

WATERTOWN, N. Y., Sept. 7, 1890.

Editor *Locomotive Firemen's Magazine*:

I know you have no room in our *Magazine* for nonsense, but I do want to let the boys know the kind of a boom 212 is taking in the first act. Bro. Snodgrass is proud of his bouncing boy and Bro. Bockus just as stuck up about his big boy and Bro. Nichols puts them in the shade with his beautiful twins. Bro. Dyllin just got married and is happy. Bros. Ames and Walker are building a boat and going to sail out on the matrimonial sea. Bro. Graham thinks he'll go wid' 'em and I ask some one to blow brakes on 212 before the members will all be gone, except myself and Bro. Cartwright, and we are a small body to attend all their funerals. But think of it! I am going to smoke free cigars for four months. If you can find room in our book for this danger signal and it does no good then my name is

Indigo.

AUGUSTA, GA., September 1, 1890.

Mr. EDITOR:—Death has visited our Lodge again and taken away another one of our beloved brothers. First it carried away Bro. Ferber, next Bro. Harrold, and this time our worthy Master William B. Haws. He was a member of the Methodist church, and died trusting in the promises of the Saviour. His example was one that any of us could follow and feel safe. He was also a member of the Young Men's Christian Association, and a faithful worker. His examples and faithful talk have caused many young men to see their folly and turn to Christ, and every one is a star in his crown. Dear friends, it is sad to part with such a one but God knows best and let us all try to meet him in heaven, not only him but all of our friends, for we all have friends and kindred there, and we can never see them unless we prepare to meet the Lord with a clear conscience. Brothers, you all know what a dangerous position we fill and maybe to-morrow your time next. We don't know, so let us *all* try and be ready when we are called to go to meet the Lord with a clear conscience and be saved, as our brother of whom I write was. It is the only consolation I have to know or believe he is at rest with Jesus. Brothers, this man was sent to my rescue, he was the cause of my being saved, and I do thank God to-night as I write this letter for sending him and saving me by his influence and the help of the Lord. It is one of the greatest consolations man has to realize the true love and grace of the Lord, in his heart. I only wish I could write a letter as I feel on the subject of a christian, but I am unable to do it. I hope this may prove beneficial to some prodigal son in the way of reminding him of death and where he will spend his eternity.

Call not back dear departed,

Anchored safe where storms are o'er,
On the border land we left him
Soon to meet and part no more.

Far beyond the world of change.

Far beyond the world of care,
We shall find our missing friends
In our Father's mansion fair.

A Friend.

WHITEHALL, N. Y., Sept. 1, 1890.

Editor *Locomotive Firemen's Magazine*:

Saratoga Lodge, No. 209, is still alive and on deck. Of our present membership of forty-three, there are eighteen on the right side. Among the recent promotions are Brothers Bradshaw, Herbage, Boyd and Reardon, who are giving good satisfaction. Brothers Lacrosse and Doreal are at present engaged in business other than railroading. Brothers McCoy and Hendrickson have joined the benedictians. We all wish them a long life of happiness. It is rumored there are more soon to follow. Brothers Holloway, Herbage, Collins and Ashton have each and all been passing around the cigars of late; upon investigating the cause, it was found that each was the happy father of a new arrival at their houses.

We have recently had three initiations, and there are more to follow, as there are several who have taken applications.

Business has been very heavy here for six months or more, until quite recently, when it became quite slack. Still the boys do not complain, they worked so hard during the rush that a slack time agrees with all.

We are in favor of federation as it now exists, and hope to see it maintained. Also, we want to keep the name of the Order as it now is; all of our brothers on the right side, and some of them are running their fourth year, say the old name is good enough for them.

Brothers Combs and Doreal have the sympathy of all in the loss of their little daughters.

Brother Stafford, our Master, and Brother Bert had to jump from their engine to avoid going into a landslide or washout, about twenty feet in depth, on August 27th, between Crown Point and Port Henry, into which the engine and seven cars were piled together. Brother Bert escaped with a slight shaking up, but Brother Stafford was not so fortunate, both his feet being badly sprained and ankles dislo-

cated. He is confined to his room, but comfortable and doing well, and the boys all hope to see him in his usual place soon. Three wrecking crews from different points on the line have been at work ever since, and have only got the engine about half way out of the pit into which it went. Travel was resumed after about forty-eight hours delay by crossing the slide-out on a temporary trestle.

The D. & H. C. Co. last year built a fifteen-stall round-house here, and are now erecting a shop building larger than the old one, which will soon be torn down to make yard room, as it stands in the middle of the freight yard. They have placed several new 19x26-engines on the road during the past year. They are from the Dickson Manufacturing Co.'s work: a few are passenger engines, but mostly Mogul freight engines.

Nearly all the firemen join our Order here as soon as they have fired the required length of time. We expect to be in our new Lodge room soon, which is far nicer than our old one. There is more interest taken in our meetings since Brother Sargent's visit to us a year ago than at any previous time since I have belonged to the Order. Would like to see him and all the Grand Officers here at any time. I believe a visit from them works a vast amount of good to any Lodge. We are all proud of our *Magazine*; everybody who reads it says it is best of the Railroad Brotherhoods' magazines.

A visiting Brother is always welcome here; to bring your credentials is all that is necessary.

Yours in P. C. S. & L.,

Red Man.

Protective Fund Dues

The attention of members is called to the notice which appears elsewhere in reference to Protective Fund Dues. The present quarter (ending October 31st) is the last quarter for which Protective Fund Dues will be collected until otherwise ordered by the Grand Lodge, of which due notice will be given. Collectors will make no collection for Protective Fund Dues for the quarter beginning November 1st, as section 215, covering the matter, was suspended by the late convention held at San Francisco.

Report of Convention Proceedings.

We are unable to report the proceedings of the late Convention at San Francisco in this issue of the *Magazine* on account of our delay in reaching home, but we will give our readers a full report of the Convention in our next issue.

The attention of our readers is called to the advertisement of Messrs. J. P. Walthier & Co., Chicago, which appears elsewhere in these columns. Messrs. Walthier & Co. come to us highly recommended as business men of strict integrity and we commend them as such to the readers of the *Magazine*.

Acknowledgments.

TAMAQUA, PA., September 2, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I hereby acknowledge the receipt of a draft for fifteen hundred dollars, (\$1,500), the amount of insurance due me on the death of my husband, William J. Dintinger. I desire to return my sincere thanks to the Brotherhood for the money and I also wish to express my appreciation of the kindness and attention shown my beloved husband, and the respect shown him after death. Words fail to express the gratitude I feel toward your noble order. I also tender my heartfelt thanks to the members and officers of the Anthracite Lodge.

With best wishes for the prosperity of the Brotherhood, I remain

Your sincere friend,

Mrs. Emma C. Dintinger.

ORILLIA, ONT., September 2, 1890.

To the Officers and Members of J. Scott Lodge, No. 156, B. of L. F.:

GENTLEMEN:—I simply wish to express my gratitude to you for the draft for (\$1,500) fifteen hundred dollars, in full payment of the policy held by my late husband, John Jefferies, in your Order. My sincere wish is that prosperity may ever attend you and that the richest blessings of an all-wise Providence be liberally bestowed upon you and all that uphold such a noble cause.

Yours very truly,

Kate Jefferies.

PHILADELPHIA, PA., Sept. 27, 1890

Messrs. John A. Boehm and Chas. H. Maul:

GENTLEMEN:—Please convey my thanks to the members of Fairmount Lodge, No. 333, for the prompt payment of the insurance due me on account of the death of my husband, Charles G. Appar, and also for the kindly feeling manifested during his sickness. May your Lodge prosper and continue in the good work for which it was instituted and Heaven's blessing fall on the members is the wish of

Mrs. Josephine Quick Appa

Addresses Wanted.

FRANK MURRAY—Was employed on the A. T. & S. F. as fireman in June, 1888, and located at Chicago. Anyone knowing his whereabouts will please correspond with H. T. and L. Helm, 69 Calumet Building, 189 La Salle street, Chicago, Ill.

JAMES COLLINS—Was employed on the A. T. & S. F. as switchman in June 1888, and located at Chicago. Was at one time employed on the C. B. & Q. Anyone knowing his whereabouts will please correspond with H. T. and L. Helm, 69 Calumet Building, 189 La Salle St. Chicago, Ill.

WELCOME.

[Fraternally dedicated to the A. F. of L.]

You are welcome, brawny toilers.

From work shops, forge and mill

Of this land of thew and science,

Endeavor, thought and skill,

No vandals you of vicious mind

To ravage or deface

But heroes, who would dare uplift

And elevate our race.

With counsel wise and words of peace

This pilgrimage you make.

To fan anew the fires of hope.

And discord's rampart shake.

From factory floor to dingy loft,

Where brain or muscle ply,

A hundred thousand welcomes ring,

O'er discontent and sigh.

From bench to bench and shop to shop

Swift flashes the refrain.

And weary fingers pause the while

'Midst bustle, cramp and pain.

A flush pervades the maiden's cheek

Grown pale from meagre bread.

And from her heart, o'er-worked, subdued,

The chorus speeds ahead.

Aye, twice a million welcomes fall

In showers, the anvil 'round.

And thrice a million shuttles swell

The cry at every bound.

Axe, hammer, trowel, pen, type and spade

Their greetings, too, extend,

To labor's truest, noblest friends

Who sense and justice blend.

Edward O'Donnell

IN France, Austria, Russia, Sweden and other European countries the railways either belong directly to the government or are under such a system of State control that they are practically being absorbed by the government and wherever the system of government ownership and operation have been adopted they have proven successful.

LARGE THINGS.

The largest suspension bridge in the world is the one between Brooklyn and New York. The length of the main span is 1,395 feet 6 inches. The entire length of the bridge is 5,989 feet.

Fortress Monroe is the largest single fortification in the world. It has already cost the American Government over \$3,000,000. The water-battery is considered one of the finest military works in the world.

The loftiest active volcano is Popocatepetl (Smoking Mountain), thirty-five miles Southwest of Puebla, Mexico. It is 17,784 feet above the sea level, and has a crater three miles in circumference and 1,000 feet deep.

The largest university is that of Oxford, England. It consists of twenty-five colleges and five halls.

The most extensive park is Deer Park, in the environs of Copenhagen, Denmark. The enclosure contains 4,200 acres, and is divided by a small river. The largest pleasure-ground in America is Fairmount Park, Philadelphia, which contains 3,740 acres.

The largest body of fresh water on the globe is Lake Superior. It is 400 miles long, 160 miles wide at its greatest breadth, and has an area of 32,000 square miles. Its mean depth is said to be 200 feet, and its greatest depth about 900 fathoms. Its surface is 635 feet above the sea.

The largest tunnel in the world is that of St. Gothard, on the line of railroad between Lucerne and Milan. The summit of the tunnel is 990 feet beneath the surface at Audermatt, and 6,600 feet beneath the peak of Kastelhorn, of the St. Gothard group.

The most extensive cavern is the Mammoth Cave, in Edmonson county, Kentucky. It is near Green River, six miles from Cave City, and twenty-eight miles from Bowling Green.

The largest trees are the mammoth trees of California. One of a grove in Tulare county, according to measurement made by members of the State Geological Survey, was shown to be 276 feet high, 105 feet in circumference at the base, and 76 feet at a point 12 feet above the ground. Some of the trees are 376 feet high and 34 feet in diameter. Some of the largest that have been felled indicate an age from 2,000 to 2,500 years.

The largest inland sea is the Caspian, lying between Europe and Asia. Its greatest length is 760 miles, its greatest breadth 270 miles, and its area 18,000 square miles.

The largest empire in the world is that of Great Britain, comprising 8,557,658 square miles (more than a sixth part of the land of the globe), and embracing under its rule nearly a sixth part of the population of the world. In territorial extent, the United States ranks third, containing 3,580,242 square miles, including Alaska: in population it ranks fourth, with its 60,000,000 people. Russia ranks second, 8,352,940 square miles.

The highest monolith is the obelisk at Karnak, Egypt. Karnak is on the east side of the Nile, near Luxor, and occupies a part of the side of ancient Thebes. Its whole length is 122 feet; its weight 400 tons. Its height, without pedestal is 180 feet 10 inches.

The Chinese wall is the largest wall in the world.

It was built by the first Emperor of the Tain dynasty, about 220 B. C., as a protection against Tartars. Its length is 1,250 miles. Including a parapet of five feet, the total height of the wall is twenty feet; thickness at the base twenty-five feet, and at the top fifteen feet. Towers or bastions occur at intervals of about 100 yards.

The largest library is the Bibliotheque National in Paris, founded by Louis XIV. It contains 1,400,000 volumes, 300,000 pamphlets, 175,000 manuscripts, 300,000 maps and charts, 150,000 coins and medals. The collection of engravings exceeds 1,300,000, contained in some 10,000 volumes.

The largest bell in the world is the great bell of Moscow, at the foot of the Kremlin. Its circumference at the bottom is nearly sixty-eight feet, and its height twenty-one feet. In its stoutest part it is twenty-three inches thick, and its weight has been computed to be 443,772 pounds.

The largest cathedral in the world is St. Peter's, in Rome.

A MOUNTAIN ELECTRIC RAILWAY.

One of the most interesting achievements in modern engineering is the electric mountain railway, recently opened to the public at Burgenstock, near Lucerne, Switzerland. The rails describe one grand curve formed upon an angle of 112 degrees, and the system is such that the journey is made as steadily and smoothly as upon any of the straight funicular lines. The Burgenstock is almost perpendicular; from the shore of Lake Lucerne it is 1,330 feet, and is 2,800 feet above the level of the sea. The total length of the line is 938 meters, and it commences with a gradient of 32 per cent. which is increased to 58 per cent. after the first 400 meters, this being maintained for the rest of the journey. A single pair of rails is used throughout, and the motive power, electricity, is generated by two dynamos, each of 25 horse-power, which are worked by a water wheel of nominally 125 horse-power, erected upon the river Aar, at its mouth at Buochs, three miles away, the electric current being conducted by means of insulated copper wires. The loss in transmission is estimated at 25 per cent.

HE DIDN'T PRONOUNCE IT THAT WAY.

New York News: An old fellow from the country, who has plenty of money invested some of it in an uptown hotel of the family sort, was approached on the first day of opening it by a natty young man with a debonaire smile. "Have you any rooms en suite?" he asked.

"Any what?" inquired the new landlord.

"Rooms en suite."

"See here, young man, how many of them are you?" asked the granger.

"Just me and Mamie—I mean my wife. We— we haven't been married long. She sent me around to see if you had any suites."

"Well, you go home and tell her to come right along. We've got plenty of rooms, and when you and she are in them they'll be too sweet for anything. If we haven't got rooms in sweets we'll have sweets in rooms. Come again, young feller."

OFT IN THE STILLY NIGHT.

Oft in the stilly night,
 Ere slumber's chain has bound me,
 Fond memory brings the light
 Of other days around me.
 The smiles, the tears, of boyhood's years,
 The words of love then spoken,
 The eyes that shone now dimmed and gone,
 The cheerful hearts now broken!

When I remember all
 The friends so linked together
 I've seen around me fall,
 Like leaves in winter weather,
 I feel like one who treads alone
 Some banquet hall deserted,
 Whose lights are fled, whose garlands dead,
 And all but he departed!

CHORUS:

Thus, in the stilly night,
 Ere slumber's chain has bound me,
 Sad memory brings the light
 Of other days around me.

Thomas Moore.

THE FUTURE OF RAILROADS.

Chicago Herald: Railway tracks were first placed on the surface of the ground because it was convenient to do so. Hauling cars by steam power was then an experiment, and it was not thought best to risk much money in making it. Even then it was acknowledged that there were great objections to running trains of cars at a high rate of speed on the surface of the ground. Stephenson thought that the tracks would be likely to become covered with snow, and that trains would make it dangerous for pedestrians and persons riding in vehicles of all kinds. He also anticipated danger from placing obstructions on tracks. He did not, however, anticipate all the objections to placing railway tracks on the surface of the ground. He did not calculate for the great increase of travel as countries became more populous, did not estimate the growing value of land, and probably did not think that trains would ever be run through cities of the size of Chicago.

We now see there is not room enough on the surface of the ground for the use of steam cars, carriages and pedestrians. If they all attempt to use it some of them will be delayed and all of them will be endangered. We see this in Chicago every hour. With all the precautions taken one person on an average is killed by steam cars at railway crossings every day in the year. A century of time is also lost in waiting for trains to pass. The faster the trains move the slower must teams and foot passengers go.

But there is not room enough on the ground's surface in and near large cities for steam cars, horse cars, heavy wagons, pleasure carriages, horsemen, cyclists, baby wagons and pedestrians to move on. We need thoroughfares two or three stories high quite as much as we require lofty buildings. Comfort and safety cannot be secured for all of them. Some of them will necessarily get in the way of others. There will be collisions resulting in the loss of property, life and limb.

The first railway trains were composed of both freight and passenger cars, but it was soon found necessary to make up trains composed exclusively of cars that carried human beings, live animals and merchandise. The mixed train, except on small

roads, is a thing of the past. A track on which both freight and passenger trains run will soon be a thing of the past. People are now living who will eat their supper in Chicago and take their breakfast in New York. They will not make the trip in a balloon, but by rail. The road, however, will be several feet above the surface of the earth. It will never be covered by water or blockaded by snow. The trains can run on this elevated road at the rate of a hundred miles per hour. The trains will not be required to stop, as they do now, at crossings. There will be no dust in the cars. The road-bed will not be washed away by rains. The steam whistle will not be blown to scare cattle off the track.

A COBRA JEWEL.

Kansas City Times: Last October there appeared in the Jewelers' Weekly a description of a wonderful jewel owned by a gentleman of Bombay, India. The stone is claimed by the owner to have come from the head of a cobra, the presence of the jewel proving the cobra to have been over 500 years of age. The jewel was held at the fabulous price of 100,000 rupees or \$50,000. The article in the Jewelers' Weekly was noticed by Mr. J. J. Speck, a diamond setter at the S. D. Mills jewelry establishment, and through curiosity he wrote to Cooverjee Shapoorjee, of Tarapur, its reputed owner. Mr. Speck wrote on a letter head of the S. D. Mills Jewelry Company and in answering the Indian gentleman addressed the letter to that company. It confirms as far as those interested can confirm, the existence of such a stone.

It seems that Cooverjee Shapoorjee does not own the jewel himself, but is interested in it, it being owned by his brother-in-law, Franyi Datablail. Mr. Datablail asserts that the stone spoken of is really in his possession, and had been taken from the head of a black cobra twice the length of an ordinary cobra and large in proportion, with a broad head, and having the "Marathi" figure 10 on the left throat. He then goes on to say that the Indian philosophers assert that such a stone called "Shaish Munnee" or "Mohora," in a cobra's head can only be found when he is more than 500 years old. He describes the stone as being about six annas silver coin weight thick on one side, and having a figure 10 in red and the rest a light brown. The stone has been in his possession forty-one years, and he ascribes to it the same qualities that are claimed for ordinary talisman stones. He says it is also a lucky stone, bringing happiness and fortune to the owner. Inside the jewel, he says, is the image of a beautiful male child on whose head is a hood like that of a cobra. A small tongue seems ever moving from beneath the hood. He claims for the jewel many miraculous qualities, which can only be brought out by a chemist or philosopher.

The writer seems to have little doubt about Mr. Speck's willingness and ability to buy the jewel and says he will wait for a telegram. It seems not have occurred to him either that the average man can might doubt the snake story and suggest that Mr. Speck's "trustworthy agent in Bombay" immediately enter into negotiations with Cooverjee Shapoorjee and agent at Tarapur.

A DRAPED ENGINE.

The somber streamers floating from the engine as it passes,
Festoon and fold that drape and swathe her brightly
polished brasses:
Rosette and band of black and white, concealing
gold and red,
Convey along the line the news, "An engineer is
dead."

Perchance some woman, overworn with grief, and
weeping,
Has left her heart within the grave where he, for aye,
is sleeping:
Perhaps some little orphaned child is sadly wonder-
ing why
The "dear papa" so long is gone—and why mamma
should cry.

What matter though I knew him not? Is he the less
my brother?
Or can a heart that bleeds for one be hardened
toward another?
Or may not we in verity, the old commandment
keep—
"Rejoice with them that do rejoice, and weep with
them that weep?"

Whether within a peaceful home, or at his post of
danger,
This engineer saluted death—I do not know; a
stranger
He was to me; yet tears will spring—I cannot keep
them back;
I am conquered by the pathos of the engine draped
in black.

—*Hartford Times.*

RAILROAD MEN AND THEIR INTERESTS.

One of the most extensive and important organiza-
tions in England is now in full working order. It is
called the General Railway Workers' Union, and is
absorbing the various local and other societies all
over the country. The three chief planks are:

1. Shorter hours. 2. Higher wages. 3. Removal
of grievances and improvement of conditions.

That shorter hours are in many cases of para-
mount necessity, is evident to all familiar with the
unnecessarily long hours often worked on the rail-
ways. The Parliamentary returns show that in one
month there were 252,209 cases of men being em-
ployed for 13 hours; 160,123 for 14 hours; 110,190 for 15
hours; 57,835 for 16 hours; 27,066 for 17 hours, and 25,-
325 for 18 hours and upwards.

The scale of wages, especially among the lower-
class men, is abominably small. It is impossible for
the men to keep themselves and families in ordinary
decency and comfort. The unions are carefully col-
lecting statistics respecting hours and wages, and
will make a determined effort to alter the present
abuse. In common with all corporations, many of
the under officials and foremen are tyrannical and
brutal in their conduct to others. They are cringing
toadies to their masters and cruel oppressors to those
who are under them. They often get increased work
out of the men in order to receive promotion or ex-
tra remuneration themselves. The officers of the
union are on the alert, and will expose any one
guilty of this petty behavior.

Last year \$55,000,000 were earned by the compa-
nies in England. The wages paid to the men who
earned this enormous sum was less than one third of
the total amount. The consequence of this unjust
and unfair distribution is that the majority, with
their long hours, and scant wages, are unable to en-
joy any rational leisure, and the higher enjoyments

of life are only accessible to the wealthy few who de-
rive their cultivation and pleasure from the sweat of
the masses. The ignorance and apathy which has
continued this one-sided system is gradually giving
way to a more intelligent view of manly require-
ments. The people are aware of the advantages of
education and mental culture, and will insist upon
receiving their proper share of the blessings of this
life. It is a curious anomaly that while the workers
of the old countries are trying to free themselves
from the slavish bonds which have shackled them for
many centuries, that the great capitalists in the
New World are introducing these very evils, and
grinding down their workmen to the lowest degree.
Their exactions are, however, recoiling upon them-
selves. The great labor organizations have begun
the struggle, and their concentrated efforts will
surely win.

THE NORTHERN LINE OF UNCLE SAM'S FARM.

Do any of our young people ever query how the
dividing line between the United States and the
Dominion of Canada is marked? writes M. Louise
Ford in the *Wide Awake*, and how travelers in those
wild regions northwest of the Great Lakes can tell
when they step from the domains of Uncle Sam into
those of Queen Victoria?

For many years the question of boundary between
the United States and the possessions of Great Brit-
ain was discussed, and at last, at the Convention of
London, held in 1818, the forty-ninth parallel of
north latitude was decided upon. A parallel of lati-
tude, however, being an imaginary line, is a very
poor guide to a traveler, so the next thing to do was
to mark that line so that all who pass that way
should know where it was located. Accordingly,
the country in that vicinity was surveyed, and mon-
uments were set up at even mile intervals, the Brit-
ish placing one between every two of ours. These
extend from the Lake of the Woods to the Rocky
Mountains.

Where the line enters forests the timber is cut
down, and the ground cleared a rod wide; where it
crosses small lakes stone cairns have been built,
sometimes being eighteen feet under water and
eight above; in other places earth mounds seven by
fourteen feet have been built.

The most of these monuments, which number
three hundred and eighty-eight in all, are of iron.
It was found that the most solid wooden posts were
not proof against the ravages of the Indians, prairie
fires and the weather, so that nothing but iron
would do.

These pillars are hollow iron castings fitted over
solid cedar posts and well bolted through and are
sunk four feet in the ground.

They are eight feet high, eight inches square at
base and four at top, and upon opposite sides facing
north and south are the inscriptions cast in letters
two inches high: "Convention of London" and
"October 20, 1818."

The pillars weigh two hundred and eighty-five
pounds each and were made at Detroit, Michigan.
So you see Uncle Sam's borderline is very distinctly
marked all the way from the lakes to the summit of
the Rocky Mountains.

TOUT LA LYRE.

With all trials thou hast tried me—
 Oh, my God,
 I have known not where to hide me
 From the rod!
 I have sinned not, yet my guerdon
 Is sharp pain;
 I am with my daily burden
 All but slain.
 Disappointments, fiery lashes,
 Smile me sore,
 And my honors seem but ashes
 At the core.
 I have plowed in bitter weather—
 Sown in tears,
 And have seen my worst foe gather
 All the ears.
 With my fame have Malice, Frenzy,
 Had their way.
 Like the lean-ribbed tigress, when she
 Rendeth her prey,
 I have dreamed so much! My reason
 Turns to doubt;
 Jealousy has with its treason
 Found me out.
 I have searched, pale-faced, forsaken,
 Heaven's dome,
 While my dead were being taken
 From my home.
 Do such sorrows make me curse thee,
 Woes like these?
 Nay, oh, God, I laud thy mercy
 On my knees;
 For my heart, however riven,
 Seared with pain,
 Has ne'er loved, and not been given
 Love again!

George Horton.

A GEORGIA EDITOR RISES TO THE OCCASION.

Thomasville, (Ga.), *Enterprise*: "I pronounce you man and wife," said Judge Mitchell in his office Wednesday morning to Miss Sallie Stephens and Dottie Myrick, a couple who had stepped into the Judge's office to be made one. And they walked down stairs, up the street and out into the broad and glorious country, where the birds were singing, the golden harvest being gathered, and the little rills singing on their way to the sea; where the sky was blue and the air pure; where the wild flowers were blooming; where the gentle breezes were whispering through the pines; where the aroma of new mown hay permeated the surroundings; where the song of the reaper was heard; where the grazing herds were seen; where the sunlight danced through the overhanging boughs; where the green grass—nature's carpet—was spread out; where field and forest and hill and dale alternated; where the husbandman tilled his field; where flower-bordered paths meandered through wooded lawns and where Dame Nature opened wide her arms to receive her children. Happy rural couple! Happier they than many who go from Hymen's altar to gilded halls, where wealth glitters and fashion sways; happier they than many who start on the untried journey of matrimony from flower-bedecked chancels; happier they, in their rural simplicity, than many bridal couples who tread on Brussels carpets; happier they, in their rustic country home, than many who dwell in stately mansions. Their wants are few and simple. A glittering diamond would have no especial attraction for the bride, and the groom cares not for a swallow-tailed coat. They are satisfied with their lot, and in this lies the secret of their happiness. Better 'tis 'tis so.

FROM NEW YORK TO PATAGONIA.

Frank Leslie's: The purpose of the recently incorporated Colombia Railway & Navigation Company at Richmond, Va., is said to be to construct a railroad from some point near the mouth of the Magdalena river in the United States of Colombia, southwardly along the eastern flank of the Andes and the head waters of the Amazon, to connect with the Peruvian and Argentinian system of railroads, now in operation or in process of construction. Connection from New Orleans will be made with the new railroad by steamships running to the mouth of the Magdalena river.

It is only surprising that some such enterprise has not been carried out long ago. While foreign nations have been subsidizing their steamship lines to the South American states, this government has permitted its competitors to secure annually millions of trade lying almost at our feet. Railroads should connect the systems in the United States directly with the systems of all the South American states. Their construction could be aided by our own government as well as by the South American republics. Routes are feasible, engineering difficulties can be readily overcome, and such a network of iron rails would inevitably lead to an enormous expansion of our trade relations with Central and South American countries.

It would be interesting to ascertain what the construction of railroads into Mexico has done for the commerce of the United States. It seems almost impossible to obtain accurate statistics of trade with Mexico, as there is a decided difference in the figures given by the official reports of each country, but there can be no doubt that the building of Mexico's railroad systems, and their extension across the border, have lent a wonderful impetus to the business of that land of past civilizations.

The American who lives to see the incoming of the next century, now only ten years distant, will, we believe, be able to take a car at New York City and make a journey not only to the City of Mexico, but southward to the leading capitals of South America or northward to Hudson's bay, possibly without a change of cars. We have not reached the golden age of railroad building on this continent, and there lies a future before our productive industries that no man can calculate.

WEARING OUT RAILROAD MEN.

A writer in the *London Railway News* says, that during the first four years men pass in the railway service, they, as a general thing, improve in health, but at the end of ten years they are tired out, and after fifteen years they are actual sufferers. Dr. Lichtenburg, of Buda Pesth, says that out of 10 railway employes, ninety-two, or more than a third, suffer from ear disease. Engine drivers are especially liable to rheumatism and pneumonia, and after several years' service a certain proportion of them become dull of sight and hearing. Others suffer from a mild form of spinal concussion, muscular feebleness, and continuous pains in the limbs. They are also apt to develop a peculiar mental strain—a sort of cerebral irritation—with excessive nervousness and morbid sensation of fear.

LITTLE MOCCASINED FEET.

Two little moccasined feet I heard—

Heard while I reveled in fancies quaint—
Treading unsteadily through the room,
Pattering soft in the twilight's gloom

There by the door. As the curtain stirred,
Soft came the sound of her laughter faint—
Clear as the ring of the tinkling chain,
Sweet as the nightingale's sweetest strain.

Two little moccasined feet that brought

Thoughts I'd been seeking an hour or more :

Seeking in vain, for my fickle muse,
True to her sex, would her gifts refuse,
Giving the caller the smile she sought,
Kissing her flower lips o'er and o'er,
Up to my lap then I lifted her—
Muse who inspired without demur.

Wonderful moccasined feet were they,

Guiding me into Elysian fields;

Wonderful, too, was that baby hand,

Leading me thither to fairy land :

Potent as well were her eyes blue gray,

Casting the spell that a siren wields.

Where was there ever a muse like this,

Bringing a charm with her baby kiss?

Two little moccasined feet—ah, me!

Where will they stray in the coming years?

Shall it be into a time less fair,

Marring her life with a cloud of care?

God give her strength for what is to be,

Robbing her sky of its rain of tears.

Leading the trend of her simple life

Far from the world and its vulgar strife.

Franklyn W. Lee.

TRADES UNIONS FROM WAY BACK.

George E. McNeill in the December *Arena*, says:

Trades unions are not the new creation of recent agitation: they can be traced back to the fourteenth century in Germany and doubtless existed prior to that time. They were, and are, the result of an awakened appreciation of the desirability of personal liberty and of a larger personal property; they are folk-mote of industrial circles; the meeting of craftsmen for the discussion of trade matters and polity; they are democracies ruled by majorities, not kingdoms ruled by edicts.

The so-called tyranny of the trades unions in this country then, must be of the same kind as that under which we live as a republic.

The active cause of human development is found in the democratic spirit that prompts organized resistance to encroachments upon the natural rights and acquired privileges of the great body of the people. The counteracting force of tyranny by its usurpations compels defensive resistance and finally aggressive warfare.

The progress of the manual laborers who were slaves, then serfs, and are now termed freemen, is marked by the associated efforts of members of their class, and by the opposition of those of antagonistic interests, the employers, the unemployed, the cultured, the comfortable, and those who govern or rule the political society called government. Whatever the motive of an association, the methods must partake largely of those of their antagonists.

Freemen combine, tyrants conspire. The combination of freemen to overthrow tyranny may be forced to work secretly, but such secrecy is not conspiracy, it is a confession of tyrannical power. The power of discharge, which means banishment or starvation, may be met with the freemen's power to strike, even to the enforced bankruptcy of the antagonist.

FACTORY WORKERS IN MASSACHUSETTS.

The *Textile Record* summarizes the results of the Massachusetts census of 1885 thus:

The total number of persons employed in all occupations was 1,943,141. Of these 394,381 were engaged in manufactures, being an increase of 78,125 as compared with 1875. The number of women employed in manufacturers was 112,762, being an increase of 29,555. Manufacturers occupied 20.32 per cent. of the whole population, and 30.21 per cent of the male population. Boots and shoes, building, clothing, cotton goods, machinery, metals and woolen fabrics employed 271,421 persons, or 68.78 per cent of all engaged in factory work. There were 99,746 persons employed in making textiles, of whom 49,819 were women. They were divided as follows: Cotton goods, 58,365; woollens and worsteds, 26,110; all others, 15,271. Some of the figures respecting aliens are both interesting and important. Nearly one-eighth of the persons engaged in manufactures were unnaturalized foreigners. The number so employed was 51,824, which was about half the whole number of aliens in the State. Of this number 11,338 are said to be illiterate. The number of children at work was as follows: At work only, 842 boys and 557 girls; at work and at school, boys, 1,065; girls, 576. One of the most gratifying facts developed in the report is that the decrease of child labor within the ten years has been very marked. We may add, also, that the census shows the average size of families in the State to be increasing, the gain, however, being almost wholly with mothers of foreign birth. But it is always a healthy sign when such an increase may be noted.

CHEAPER TO CARRY PASSENGERS FREE.

Detroit Free Press: On a Michigan Central train going west the other day, the conductor came to a passenger who had no ticket, and who owned to also being dead broke.

"How did you pass the gates at Detroit?" was asked.

"Bought a ticket to the last station back here."

"Well, you'll have to get off."

"Before you make up your mind let me show you some figures. Here they are: This train is now on time. You must stop dead still to put me off. To stop, start, and get under the same headway will consume four minutes. See? It is also figured out here by a statistician."

"Ticket or money."

"The extra fuel consumed is placed at 94 cents, and you must report to the train dispatcher at a cost of 35 cents. The delay to 75 passengers is put at \$25. The stopping and starting and extra strain to make up four minutes damages the train \$2.20 worth. Now, taen, I only want to go 30 miles further."

"Can't do it, sir!" replied the conductor, and he pulled the bell-rope, halted the train, and escorted the impecunious passenger to the steps.

"All right, old chappie!" said the latter as he dropped into the ditch. "The railroads of this country don't pay 2 per cent., and it's no wonder. When you'll spend \$30 to save 90 cents, it's a wonder a stockholder ever smells a dividend at all. Go ahead with your old caravan—the poor house isn't over six miles down the track."

NO QUARTER.

A sage once said to me:
 "Of two things warn I thee,
 And one is Death.
 No skill can stay his arm,
 'Gainst him avails no charm,
 Prayers are but wasted breath.

"When Death is standing near,
 All vain is friendship's tear
 Or love's wild woe;
 Then turn thee to the wall
 Away from friends and all,
 Only to wait his blow.

"That other thing: Want,
 Potent the soul to daunt,
 To curse and blight,
 On him that hath not gold
 The very sun shines cold,
 And maketh no day bright.

"Friends wait to see thee die:
 From poverty they fly,
 Nor heed its call.
 Who dies hath lived his day:
 The poor can truly say:
 'We have not lived at all!'"

George Horton.

HELPING THE ENGINEER.

Locomotive Engineer: No good fireman ought to let his engineer do any repairing on the road that he does not have a hand in, and learn how it is done. There should be a feeling of fellowship and a disposition on the part of both men to see that all the work to be done about the engine is done well and to the best advantage. A fireman should be willing to help pack or oil around, or the engineer be willing to help clean the fire when in a hurry on the road, and his own work is done.

Of course the fireman will help the engineer more than the engineer will the fireman—one is anxious to learn the business, the other is supposed to have learned it.

It often happens that a particularly helpful fireman will entirely spoil an engineer who is so built that his constitution will stand considerable strain. "Follow me around with the wrench and tallow pot," is an old gag used to illustrate their ways.

The writer has in mind a rather young runner, who got so bad this way that he needed a porter to wait on him, his firemen were asked to do everything, and they finally began to figure to get changed off—particularly as the engine ran by this man got to steaming badly. We had one bright boy firing on the road that cured the restless runner in one trip.

Harry was rustling for steam pretty hard, and was tired, having done all the oiling, switching and other work on the trip. When well out on the road, about the middle of the division, the engineer took a chew of plug, and smiling at the sweating youth, who was worrying over the position of the pointer, said for the tenth time:

"Son, you are younger 'n me, git me a drink, won't yer?"

Harry slid off his box, slammed in three or four shovels of coal, set his shaker bar on the stub, took down the wash bucket, drew it brimming full of water, put the tin cup into it, and set it over in front of the eagle-eyed steersman, saying:

"Just help yourself, I'm awful busy now."

GREATEST THINGS ON EARTH.

The largest cut diamond in the world is now on exhibition at the great Paris show. It was found in South Africa in 1885 and named the "Imperial" by the Prince of Wales. As soon as it was found it was taken to Amsterdam, where the diamond cutters worked on it for twenty-two months. It weighs 190 karats and is valued at 17,000,000 francs.

The three tallest trees in the world are believed to be a sequoia, near Stockton, Cal., which is 325 feet high, and two eucalypti in Victoria, Australia, estimated to be 435 feet and 450 feet respectively.

The lake which has the highest elevation of any in the world is Green lake, Colorado. Its surface is 252 feet above the level of the sea. In some places it is nearly 300 feet deep.

The largest advertisement in the world is that of the *Glasgow News*, cut in the shape of flower bed on the side of a hill back of Ardenlee, Scotland. The words *Glasgow News* can be seen and plainly read at a distance of four miles. The length of each letter is 40 feet; the total length of the line, 323 feet; the area covered by the letters, 11,845 feet. The borders of the bed are sown with white flowers, the center with red and purple. The effect is said to be startling.

The largest sheet or pane of plate glass in the world is set in the front of the D. Billigheimer building on Vine street, Cincinnati, O. It was made at Mar-sailles, France, by Z. Brazzard & Sons, and measures 186x104 inches.

Custer county, Montana, is, if it has not lately been sliced up, the largest county in the United States. Its area is 36,000 square miles. It is larger than the states of Vermont, New Hampshire, Massachusetts, Connecticut, Delaware and Rhode Island combined.

NORTHWESTERN STATES.

Nothing so vividly shows the remarkable possibilities of the Northwest as a little table giving the population of North and South Dakota, Washington, Montana, Oregon, and comparing these states with Pennsylvania. The figures are as follows:

	Estimated Population.	Area in Sq. Miles.
North Dakota	250,000	75,000
South Dakota	400,000	79,000
Washington	300,000	69,000
Montana	160,000	147,000
Oregon	325,000	96,000

The smallest new State, Washington, is half again as large as Pennsylvania, while the largest, Montana, is more than three times as large. The total estimated population of all the new states is a little over 1,000,000, which is probably not more than twenty per cent. of the population of the Keystone State to be shown by the present census. Compared to Pennsylvania the whole territory of the Northwest is comparatively empty. Nowhere are there better opportunities offered to the young and ambitious. The striking examples of Spokane Falls, Butte, Seattle, Portland and other fast growing Northwestern cities should prove sufficient inducements to draw brains and hands from the overcrowded East. The very best way to reach this land of promise is to travel over the Big Four route to Chicago and there make a rapid connection with the fast trains to the Northwest.

HOW A PITTSBURGER WAS CAUGHT BY GARTERS.

Philadelphia *North American*: There is one pawnbroker in Pittsburg who has registered a solemn vow that never again will he do the gallant for a pretty woman, even though she be in dire distress. His last experience in that line cost him \$2,000 worth of jewels and a big row with his wife.

A few days ago a remarkably pretty girl, richly attired, walked into his store and said: "I am stranded in this city. I am an actress and would like to borrow a little money."

"Certainly," replied the pawnbroker, smiling; "what security have you got?"

"Oh, I forgot," she said, and a deep crimson suffused her cheeks. "May I retire for a moment?"

The door of a private office was opened and the beauty entered. She soon came out and held a jeweled garter in her hand. It was worth about \$50. A little conversation and the broker advanced \$10. The girl started to go. She got as far as the door, turned, and blushing fiery red, said: "If you please, have, you a piece of string?" My—my—stocking is coming down."

He furnished the twine, and she again retired, emerging in a moment. The door was reached again, and again she turned. "The string's broke," she mournfully said, "and I can't go out upon the street. Won't you go next door and get me a pair of elastic garters?"

The unsuspecting pawnbroker took a dime and entered the nearest dry goods store. The girls at the counter laughed at him, and as soon as possible he pushed the garters into his pocket and hurried back to his store. It was empty, and about \$2,000 worth of diamond rings and watches had been taken. He forgot the paper parcel in his pocket, and went home a poorer and a wiser man. That night his wife found the garters in her husband's pocket. There was a scene in the household.

THE TEN-HOUR DAY.

Macauley, the great scholar and eminent English historian, was in Parliament at the time of the agitation for the ten-hour day, and made a speech which he classes his best. He said:

"Man is the great instrument that produces wealth. The natural difference between Complanice and Spitzbern is trifling when compared with the difference between a country inhabited by men full of bodily and mental vigor and a country inhabited by men sunk into a bodily and mental decrepitude. Therefore it is that we are not poorer, but richer, because we have through many ages rested from our labor one day in seven. That day is not lost. While industry is suspended, while the plow lies in the furrow, while the exchange is silent, while no smoke ascends from the factory, a progress is going on quite as important to the wealth of nations as any which is performed on more busy days. Man, the machine of machines, the machine compared with which all contrivances of the Watts and Arkwrights are worthless, is repairing and winding up, so that he returns to his labors on Monday with clearer intellect, with livelier spirits with renewed corporal vigor. Never will I believe that what makes a population stronger,

and wiser, and better, can ultimately make it poorer."

"You try to frighten us by telling us that in some German factories the young men work seventeen hours out of the twenty-four, that they work so hard that among thousands there is not one that grows to such a stature that he can be admitted to the army; and you ask whether, if we pass this bill, we can possibly hold our own against such competition as this? Sir, I laugh at the thought of such competition. If ever we are forced to yield the foremost place among the nations, we shall yield it not to a race of degenerate dwarfs, but to some people pre-eminently vigorous in body and mind."

Will any fair minded person say that these words and ideas, uttered a half century ago, do not equally well apply to the present agitation for eight hours? The ten-hour agitation in England brought about the nine-hour workday, but when it was commenced there was no such labor-saving machinery argument as there is now.

Some men will say: "I will work as long as I please," but that eight hours shall constitute a day's work is in the air, and you might as well try to stop God's sunlight from illuminating the world as to deny its recognition.

LASHED INTO WEALTH.

John James Mago, a quiet, middle-aged well-dressed man, has been in San Francisco, says the *Examiner* of that city, for a few days, waiting for the Mexican steamer to sail. He looks prosaic, but his career is as romantic as that of Monte Cristo. Mago is now a Guatemalan millionaire, who lives for nine months of the year at Paris. Fifteen years ago he was a poor English collector of insects in Guatemala, and also acted as British vice consul at San Jose. One day Commandant Gonzales ordered Mago to appear before him. Mago sent word he would come in a short time. This incensed the Commandant, who was ugly with drink, and he sent a file of soldiers after Mago, and when the bug collector appeared ordered seventy-five lashes laid on his bare back. This was done thoroughly, and when finished Gonzales shouted:

"Give him twenty-five more for luck."

When Mago recovered, which was only after careful nursing, as his back was badly cut up, he made formal complaint to the British Government. The result was Guatemala was ordered to punish Gonzales, and to pay Mago \$500 for every lash he received. In default of this English cruisers would shell San Jose and other coast cities. Guatemala readily punished Gonzales, but tried hard to evade paying \$50,000 to Mago. The British, however, were inexorable, and the poor bug collector was made a rich man in one day. As he had more coin than any one in the country then President Barrios entered into partnership with him.

Mago became one of the largest coffee planters and also secured the exclusive franchise for building docks along the ports. No one can land on or leave one of these docks without paying \$2 toll to Mago, while he also levies a tax on all freight. He also owns valuable mines and tracts of timber. His fortune is estimated at \$5,000,000, all due to 100 lashes on the back.

THE RESULT OF FEDERATION.

George E. McNeill in the Boston *Labor Leader*: A committee of a union of 10,000 members, who had \$10 per capita in the treasury—that is \$100,000—might get a respectful hearing, but a labor trust of a million members with \$10,000,000 would be waited upon by gentlemen in carriages. Dignity may go in rags, but no one would be surprised if it was not readily recognized. Membership in a trades union should stand for manliness and integrity in all matters, and short time contractors should be desired by those who buy labor, because of the security such contracts would give.

The Lasters' Union, the Cigarmaker' International Union and the Typographical Union will, in not many years, have to face the music of machinery. High dues will prepare them not for the fight against its introduction, but if the members of these unions were wise enough they would be rich enough to control the machinery. Civilization means the control of all natural forces in the interest of the people. If the masses of the people do not know enough to control their forces for the common good, the few will control them for the good of the few. The first thing for a man to control is himself. The first thing for a union to control is the amount of time that shall be sold as the day's work. Things are sold by standards, and such standards should not be changed but for very strong reasons. But under the present industrial system, in which the standard of wages varies every ten or twenty miles from the trade centers, and changes so quickly and so absolutely, the wage-worker of all kinds must control the output of hours of work, or go to the wall. The number of the unemployed and irregularly employed must be greatly reduced. Let not the robbery of the poor by the poor continue. Let not the union man increase the ranks of the non-union forces by withholding from them their share of the hours of work. The unemployed are on a strike against you. They knock down your wages. Knock off one-fifth of your working time, and the whole army of the unemployed are captured as willing prisoners, to the allies in fact, as soon as they are allies in interest. Stick to your union! Fill your treasury with money, your hearts with love and your heads with knowledge, join hands to lift up all union men, and win the non-union to your ranks by making their interests yours.

The most absurd superstitions are rife in Russia. At Serpookhov, near Moscow, an official announcement was recently placarded at the street corners. The common people are unable to read. They requested a man, who looked like a priest, to decipher for them the contents of the bill. He unhesitatingly and positively declared that it contained the warning that the city of Serpookhov would be swallowed in the ground. In less than an hour the news spread throughout the place, and the people abandoned their work and began streaming out into the fields in large crowds. All the factories were deserted by the laborers. It was some time before the frightened crowds were restored to reason and to their regular pursuits; but the originator of the trouble could not be found.

HOW TO SAVE DOCTORS' BILLS.

Never go to bed with cold or damp feet.
Never lean with the back upon anything that is cold.

Never begin a journey until the breakfast has been eaten.

Never take warm drinks and then immediately go out into the cold.

After exercise of any kind never ride in an open carriage or near the window of a car for a moment. It is dangerous to health or even life.

Never omit regular bathing, for unless the skin is in regular condition, the cold will close the pores and favor congestion or other diseases.

When hoarse, speak as little as possible until the hoarseness is recovered from, else the voice may be permanently lost, or difficulties of the throat be produced.

Merely warm the back by the fire, and never continue keeping the back exposed to the heat after it has become comfortably warm. To do otherwise is debilitating.

Never stand still in cold weather, especially after having taken a slight degree of exercise, and always avoid standing on ice or snow, where the person is exposed to the cold wind.

When going from a warm atmosphere into a cooler one, keep the mouth almost closed, so that the air may be warmed by its passage through the nose as it reaches the lungs.

Keep the back, especially between the shoulder-blades, well covered; also the chest well protected. In sleeping in a cold room establish the habit of breathing through the nose, and never with the open mouth.

THE CALLED JADE.

Arizona *Kicker*: It has so happened, every time we have been obliged to kill a man in this town in self defense, that the Coroner and everybody else was in a great hurry, and that the body was buried in the most convenient place. Last week we were struck with the idea of getting them all together in one common spot, and we bought an acre of sand lot of Colonel Hawkins for a ground-work. Our green-eyed contemporary got a hint of what was up and he went blowing around town and did his best to head us off; he failed, however, and during the thaw we had the five bodies taken up, removed to what is already known as 'The Kicker Corral' and each grave designated with a white headboard with the name painted neatly thereon. In the spring we shall see that each grave is covered with trailing arbutus—that is if arbutus will trail in this country. The names as they appear on the headboards, are: 'Mose, Pete, Jim, Sam and Jack.' We shall probably add a couple more to the list before the ides of May, whatever that is.

FAB ABOVE IT.

Truth: In Judge Duffy's Court—"Mrs. Maloney, this is the eighteenth time you have been up before me for theft."

"Sure, judge, an' it's me pride. There niver was one of the Maloney's as was so low as to beg."

WOMEN WORKERS AT HOME AND ABROAD.

One of the most independent couples in Talbot county are Mr. and Mrs. Holman, who live in the southeast corner of the county, near Howard, says the Macon, (Ga.) *Telegraph*. Mr. Holman is engaged at present as a farmer and a blacksmith, and he is a smith of more than ordinary skill. When he needs a striker his wife faces him at the anvil and wields the sledge hammer. Mr. Holman formerly lived in Tennessee, where he found regular employment as a blacksmith, and his wife was his regular and constant striker.

Jennie L. Dodge, a New Hampshire girl, has the reputation at present of being the only woman barber in Boston. Miss Dodge has been in the barbering business since 1881. A couple of years or so ago there were no less than a dozen of the sex engaged in that kind of employment and at first they did a thriving business. Miss Dodge, or "Jennie," as she is called by nearly all her regular customers, has had more than ordinary success in her occupation and averages \$22 per week.

Mme. Tkatcheff declares that Russia's factory operatives, male and female, sleep in the mills and cannot afford to buy leather shoes. Paper serves for stockings and shoes are of wood. Shocking immorality prevails. The Russian would rather do without his food than his weekly bath. The law allows children under 15 to work eight hours per day if they attend school three hours. Children cannot be employed in thirty-six dangerous industries. Women weavers and spinners must not work at night. Where over one hundred persons are employed medical attendance must be provided.

There is a paper mill in Fort Edward, N. Y., which is run day and night. Half the girls go on at 7 in the morning and work till noon. Then the other half go on and work till 7 p. m., at which time the girls who worked all the morning come on again and work till midnight. Then the afternoon girls take up the burden again and keep it up until 7 a. m. The work is very exhausting—the taking from the rolls of heavy sheets of manilla paper, counting and disposing of them. It involves constant activity and watchfulness and imposes a severe strain on muscles and nerves. For the ten hours during which it continues the working girl gets sixty-two cents.

A HAPPY MEDIUM.

Texas Siftings: A gentleman connected with a prominent Austin (Texas) newspaper, who belongs to a temperance organization and talks temperance very eloquently, was induced to go into a saloon with a friend who is a moderate drinker.

"I'll take a lemonade. What will you take?" asked the moderate drinker.

"Shall I fix you a lemonade with a stick in it?" asked the barkeeper.

"Well, no," responded the temperance crank; "but you may give me a stick without any lemonade in it," and three fingers dropped out of sight.

Total abstinence is a very good thing, but it should not be run into the ground. The most rigid abstainer should put a little water in the Austin whiskey, for sanitary reasons, if for none other. It is best not to be too extreme in anything.

DID THE SQUARE THING.

Helena (Mont.) *Herald*: The train was just pulling out of Weston, Mo., for St. Joe, when one of the passengers in the smoker put his head so far out of the window that a man near him felt it his duty to utter a note of warning.

"Yes, it is a little risky," replied the man as he pulled in his head and sat down. "but I was looking for a grave in that field. Reckon it has been plowed under and forgotten."

"How did they happen to bury him there?"

"It's a sad story, gentlemen—very sad. It was just ten years this month, and I was living here then. A stranger came in from the West with three horses to sell, and he acted so queerly that we clapped him in jail. He never denied that he stole 'em, and one night the boys turned out and hung him to a tree over there. That used to be our way of discouraging the business, and I believe it is still practiced farther West. We buried him near the tree, and it was his grave I was looking for."

"Never denied it, eh?" queried one of the listeners.

"Never did, although we gave him every chance. Just a week from the time he was hung we found out that he was an honest, honorable farmer, living about forty miles below us. While he hadn't stolen the horses, he had killed a man, and he no doubt believed that we were hanging him for that. We felt mean enough when we discovered that he was no horse-thief, and that all he had done was to pop a man over, and a Kansas man at that, and he must have been sadly puzzled over our conduct. We made such reparation as we could, however."

"In what way?"

"Oh, we rounded up the grave, passed resolutions of sympathy for the wife, sent the horses on home, and a few months later I went up and married the widow. She's in the next car behind."

A LITTLE RAILROAD THAT DOES A BIG BUSINESS.

The most diminutive railroad in all Down East, says an exchange, is that owned and operated by the Monson Maine State Company, running from the company's quarries to Monson Junction on the Bangor & Piscataquis Railroad. This little railroad has a two-foot gauge, is about six miles in length, and is thoroughly equipped with locomotive, passenger, baggage, express and freight cars, has several stations, regular time tables, and a superintendent. The superintendent is also conductor, baggage master, mail agent, passenger and freight brakeman, news agent and director—a regular Pooh Bah—and for performing all these offices he gets \$900 a year. Ten men constitute the entire force of the road. The trains average about fifty miles a day in summer and twenty-five miles in winter. The road is all down hill one way, so that a car will run from the quarries to the Junction without the assistance of a locomotive. If a passenger misses the regular train, \$5 will secure a special to carry him over the line. Last year this toy railroad carried 9,000 tons, and 4,200 passengers, who paid \$12,000 in fares, were transported at a cost of \$9,000. This little road has been in operation six years, and in all that time no accident of any account has occurred on its line.

HENDRICKS.

Pride of thy Westland, and Loved of the Nation!
 Leader invincible! Ruler most wise!
 Fevered nor flushed by the throng's acclamation,
 Steadfastly poised as a star in the skies!
 Paths that were night to us
 Thou didst make bright to us—
 Brightening still, till the transcendent shine,
 Swiftly withdrawn from us,
 Now thou art gone from us,
 Halos thy deeds with a glory divine.
 Versed as thou wert in the lore of the ages,
 Voiced as a master in lofty debate,
 Thine was an eloquence History's pages
 Rustlingly whisper in vain to relate—
 Mute there the wonderful
 Pathos, or thunderful
 Flashes of denunciation—not jeers!
 Silent the dutiful
 Scorn, and the beautiful
 Tribute of tremulous sobbing and tears!
 Thine, then, the meed of a people's affection
 Born above factional wrangle and fray;
 Still warmly homed in the heart's recollection,
 Naught of thy virtues shall vanish away;
 Still in security
 Rest, in thy purity
 Fixed as thy monument, tow'ring above—
 Ay, and outwearing it,
 All time declaring it—
 Bronze shall outbrave not the legends of love!

J. Whitcomb Riley.

NOT WILLING TO HELP A BUSINESS MAN.

New York *Tribune*: "I would like to get a stamp," said a gentleman as he entered a little Division street store with a sign of "Postage stamps for sale" in the window.

"Yessir—don't want to get a pair of dose kid gloves I s'pose?"

"No, I believe not."

"Jes got some new vons—only 40 cents a pair."

"No, I don't care for any."

"Haf a look at my derby hats—dose latest shapes with red linings—von dollar."

"No, nothing but a stamp."

"Ve keeps de boss 50-cent white shirt in de city—no troubles to show dose goots."

"No."

"Wouldn't care for dese button shoes at von-twenty-five, neider?"

"No, sir: I say I want a postage stamp if you keep them."

"Vell, all right. Ve haf a fine stock of dose vash ties at 6 cents if you want to look. No? Ikey!" and a small boy made a mysterious appearance in the back of the store; "Ikey, gif dis feller a postage stamp—he ain't baid for it." Then he added as he turned away: "Some peoples seem to t'ink we can lif off der broift on dose green stamps, but it aind't so."

BOUND FOR HADES.

The Oregon City *Courier* relates that on the evening of the last of a series of revival meetings at a church not a great way from that place the preacher made the request common at such meetings, "Will all those who will work for Jesus and desire to go to heaven please arise?" A few arose, mostly faithful sisters of the church. He then asked: "Will all those who desire to go to hell arise?" With a rush about forty stood up. The humor of the situation sent a roar of laughter throughout the congregation, and even the minister smiled.

GOOD BY, HOSTLER.

To the farmer boy who has never seen a horse cleaned except by hand, with the good old curry comb and brush, it would be quite a sight to visit some of the large city barns of the car or express companies or large livery establishments, and see the horses cleaned, so to speak. Should he visit the Palmer House livery stables, Chicago, remarks a contemporary in that city, he might see any day a horse undergoing his toilet—in stable parlance, "gittin' cleaned and curried."

In exactly forty seconds the animal is turned over to his keeper, as bright as a new pin—not a speck of dirt or a turned hair to be seen on his sleek, shiny coat. In two hours' time no less than 250 horses, big and little, receive their daily clean up and are made ready to prance out into society. This revolution in the art of horse cleaning, rubbing down and currying, all in one, is caused by a simple contrivance, a movable shaft at one end of which is a circular brush composed of fairly stiff bristles.

The brush, which is run by steam, revolves many hundred times a minute, and is guided by the cleaner. Two cleaners, operating with the brushes on one animal at the same time, can accomplish more in one minute than can four men with the old brush and curry comb in twenty minutes. As soon as the brush touches the body of the horse the dirt and dead hair fly in all directions, and it only needs a second "going over" to have the animal so clean that a glove would not be soiled in rubbing over the hide.

At first the horse appears frightened at the noise of the revolving shafts, but as soon as he feels the touch of the brush he edges up closer to the cleaner and gives every indication of pleasure. The harder the pressure on the brush the harder will be the rubbing, of course, and when the sensation becomes uncomfortable the horses move away. In this way the cleaners are easily informed how hard a rubbing the animal will stand.

SHE STUCK TO HER GUM.

Drake's Magazine: "George, darling," she murmured, as they strolled in the garden, "let us stop at that rustic seat yonder for a moment."

"Certainly, pet," answered the young man. "That is the place where I proposed to you last night. Do you want to stop for the fond recollections that cling about the spot?"

"No, not exactly. You see I knew that it was coming last night, and that you would want to kiss me, and so I took my gum out of my mouth and stuck it on the bench. If it is there yet, I want to get it. That is all, George, dear."

TWELVE GOOD MEN AND TRUE.

Exchange: Clerk of the Court—Gentlemen of the Jury, have you agreed upon your verdict?

Foreman—Yis, yer honor.

Clerk—What say you—guilty or not guilty?

Foreman—Will, sor, we, the jury, foinds the testimony for the prisoner vera sthrong, indade, sor: but we doubts if he's innocent: an' in accordance with ther instructions av ther court, we gives him the blinfst av ther doubt, an' foinds him guilty.

THE MEN WHO MISS THE TRAIN.

I loafe aroun' the deepo jest to see the Pullman scoot,
 An' to see the people scamper w'en they hear the in-
 gine toot,
 But w'at makes the most impression on my som'w'at
 active brain.
 Is the careless man who gets there jest in time to
 miss the train.
 An' some cuss the railroad comp'ny, an' some loudly
 cuss their stars,
 An' some jest gallop down the track an' try to catch
 the cars;
 An some with a loud laff and joke will poulitce up
 their pain,—
 Var'us kin'er people get there jest in time to miss
 the train.
 An' there is many deepos and flag-stations 'thout
 name.
 Along the Grand Trunk Railroad that leads to wealth
 an' fame,
 An' men rush to these deepos, as fast as they can fly,
 As the Train of Opportunity jest goes a-thunderin' by.
 They rush down to the stations with their hair all
 stood on end,
 As the platform of the tail-end car goes whirlin'
 round the bend;
 An' some men groan an' cry aloud, an' some conceal
 their pain,
 W'en they find that they have got there jest in time
 to miss the train.
 But the cars puff through the valleys, an' go
 a-whirlin' by.
 An' float their banners of white smoke, like flags of
 victory;
 They leap their flowing rivers, an' through the tun-
 nels grope,
 An' cross the Mountains of Despair to the Table-
 land of Hope.
 The Grand Trunk Railroad of Success, it runs
 Through every clime,
 But the Cars of Opportunity they go on schedule
 time.
 An' never are their brakes reversed—they won't
 back up again.
 To take the men who get there jest in time to miss
 the train. S. W. Foss.

LOCOMOTIVE FRAMES.

Mechanical News: Early frames were of plates with wood filling between, and the journal bearings were outside the wheels.

Bury introduced the bar frame, which is now exclusively used in this country, and is one of the distinguishing characteristics of the American engine. At first the whole frame was forged in one piece, but for convenience in repairing, the front and back ends were afterwards made separate and bolted together. Some narrow-gauge engines have the main frames in the usual position inside the wheels, but have a supplementary frame or offset bolted to this to carry the fire-box.

The old style of wooden frames was abandoned by Baldwin in 1839, and no outside frame whatever employed—the machinery, as well as the truck and the pedestals of the driving axles, being attached directly to the naked boiler.

In 1839 Baldwin invented a geared engine with an independent shaft or axle between the two truck axles and connected by cranks and coupling rods with cranks outside of the drivers. This shaft had a central cog-wheel engaging on each side with intermediate cog-wheels, which in turn geared into wheels on each truck axle; the intermediate having wide teeth so that the truck could pivot while the

main shaft remained parallel with the driving axle. This type not proving a success commercially, to accomplish the same purpose he invented in 1842 the six-wheel connected engine, with the four front drivers combined in a flexible truck; the rear box being rigid in the frames (usually behind the fire-box) and with inside bearings. The remaining wheels had inside journals running in boxes held by two wide and deep wrought-iron beams, on each side. These beams were not connected. Their pedestals were bored out cylindrically, and into them there were fitted the cylindrical boxes which Baldwin patented in 1835. A spherical pin running down from the frame bore into a socket in the beam, half way between the two axles. Thus each side beam independently could turn horizontally or vertically under the spherical pin, and the cylindrical boxes could turn in the pedestals. This was followed by a flexible beam engine with but four wheels connected, to compete with the standard "American" eight-wheel type with four wheels connected. Baldwin made the forward wheels of smaller diameter as leaders, but connected them with the front drivers in a flexible beam truck.

WHO ARE FELLOW SERVANTS.

Station Agent: The following are recent cases on the question, who are fellow servants:

A foreman of a bridge gang is a fellow servant with persons operating a freight train on the road. *St. Louis, A. & T. Ry. Co. v. Welch* 2 L. R. A. 839, 73 Tex. 298.

A brakeman is a fellow servant with the engineer. *L. & N. Ry. Co. v. Martin*, 3 L. R. A. 282, 87 Tenn. 598.

A section foreman, who is about the track and liable to be injured by passing trains, is a fellow servant of the conductor. *Elliott v. Chicago, M. & St. P. Ry. Co.*, 3 L. R. A. 383, 5 Dak. 523.

A superintendent, in respect to work properly belonging to a servant, is a fellow servant of the co-employees. *Hussey v. Coger*, 3 L. R. A. 559, note, 112 N. Y. 614.

A laborer employed by a railroad company to remove snow and other obstructions from the track is a fellow servant of a track walker and conductor. *Fagundes v. Cent. Pac. Ry. Co.*, 3 L. R. A. 824, 79 Cal. 97.

A station agent is a fellow servant with a brakeman. *Byrnes v. New York, L. E. & W. Ry. Co.*, 4 L. R. A. 151, 113 N. Y. 251.

A traveling auditor of a railroad company traveling on the cars from station to station is a servant of the company and assumes the ordinary risks of accidents. *Minty v. Union Pac. Ry. Co. (Idaho)*, 4 L. R. A. 409.

A locomotive engineer is a fellow servant with the freman. *Gulf, Colo. & Santa Fe Ry. Co. v. Blohn*, 4 L. R. A. 761, 73 Tex. 637.

A foreman of a gang of men employed in building a railroad is a fellow servant with the workmen under him while engaged in the work. *Lindvall v. Woods (Minn.)*, 4 L. R. A. 783.

The members of a city board of public works are fellow servants with the driver of a fire engine. *Coots v. Detroit*, 5 L. R. A. 815, 73 Mich. 628.

HUSTLING ALONG TO DIE.

Chicago Mail: "The poor I have always with me—walking under my own hat," gloomily remarked a young man as he paid the drug clerk for two or three prescriptions which he had just had filled. "I don't think poor people have any right to get sick; that is, I know they haven't any right to, because they haven't any rights at all; but I mean they ought not to get sick. It isn't a square deal. This great law of compensation which I hear rich folks talk so much about doesn't come into play here very hard, because if it did the poor folks, having to do all the work of the ill-managed world, wouldn't be called on to get sick when they can't afford it. Look at me, for instance. I've got a job that demands my daily presence. It is one of these 'must' positions, which I will lose if I miss a day. It doesn't pay me enough to enable me to do more than live, so I can't afford to lose it.

"That's a clear case, ain't it? Perfectly plain that I've got to work six days a week, eh? Well, here I am sick abed, with rheumatism, and fever, and ague, and sore throat, and biliousness, and a lot of other things I've forgot. I stayed them all off as long as I could with gargles and quinine and such stuff, but I had to go to the doctor just now. What does he say to me? Why, after sizing me up, he writes me all these prescriptions, tells me how to take medicine, and then says:

"Now, stay quietly in your room for five or six days and keep warm, and you'll come out all right."

"Five or six days in my room, eh?" I say.

"Yes," he says; "why?"

"How do you think the south of France would do?" I say, and he tells me if I want to die to hustle along my way and do it. I might as well, I reckon. It's no use to live if you lose your job."

HIS SEASON OF MOURNING.

Drake's Magazine: Neighbor—"Mr. Skrimp, I have sad news for you, terribly sad news."

Skrimp—"Hev ye? What mot it be?"

Neighbor—"Your wife, in attempting to ford the river this morning, was drowned."

Skrimp—"Hump, that is sorter bad; kinder onexpected, too."

Neighbor—"Yes, it's bad. She missed the road, someway, and got into deep water, and she and the horse were both drowned."

Skrimp—"Great grewhilkins, man! you don't mean ter say the hoss wuz drowned, too?"

Neighbor—"Yes."

Skrimp—"Wall, by jingoes, that is er heavy loss. That air hoss wuz wurth er hundred dollars clean cash, an' ther ole 'oman knowed hit. 'Peers like women folks is most dog-gond keerless. Dog-gone, neighbor, but the loss o' that air hoss is powerful hard ter b'ar up ag'in, shore."

NO OFFENSE.

Big Dark—"Nigguh, you's 'r fool!"

Little Dark—"Do yo' call me 'r fool?"

Big Dark—"Dat's what 'r sed!"

Little Dark—"Yo' do?"

Big Dark—"Ise call enny nigguh 'r fool what acks like yo' do?"

Little Dark—"Hub! Den yo' call enny nigguh 'r fool? Den I can't considah dat pussenel. Good day."

FIRST IDEA OF EMPLOYING STEAM.

The following extract from the life of George Stephenson, *Railway Engineer*, by Samuel Smiles, Boston, 1859, page 69, is of interest:

Solomon de Caus, who was shut up for his supposed madness in the Bicetre at Paris, seems to have been the first to conceive the idea of employing steam for moving carriages on land, as well as ships at sea. Marion de Lorne, in a letter to the Marquis de Clinquars dated Paris, February 1, 1641, thus describes a visit paid to this celebrated madhouse in company with the English Marquis of Worcester: "We were crossing the court, and I, more dead than alive with fright, kept close to my companion's side, when a frightful face appeared behind some immense bars and a hoarse voice exclaimed, 'I am not mad! I am not mad! I have made a discovery which would enrich the country that adopted it.' 'What has he discovered?' asked our guide. 'Oh,' answered the keeper, shrugging his shoulders, 'something trifling enough! You would never guess it. It is the use of the steam of boiling water.' I began to laugh. 'This man,' continued the keeper, 'is named Solomon de Caus; he came from Normandy four years ago to present to the king a statement of the wonderful effects that might be produced from his invention. To listen to him you would imagine that with steam you could navigate ships, move carriages—in fact, there is no end to the miracles which, he insists upon it, could be performed. The cardinal sent the madman away without listening to him. Solomon de Caus, far from being discouraged, followed the cardinal wherever he went with the most determined perseverance, who, tired of finding him forever in his path, and annoyed at his folly, shut him up in the Bicetre.'"

SHOP ITEMS.

The Richmond Locomotive and Machine Works, o Richmond, Va., are building 10 60-ton consolidation engines for the Richmond & Danville, with 20x24 cylinders, and two with 18x24 cylinders, for the Seaboard Air Line, and the same number for the Chesapeake & Ohio. The latter engines will weigh 65 tons, and the former 48 tons. Four 40-ton 17x24 passenger locomotives are being built for the Atlantic & Danville. The company also has considerable government work under contract. A large amount of new machinery has been added, and several extensions to the works built. A new machine shop, 100x106 feet, has been completed, and a new boiler shop, 185x92 feet, is being erected. Nearly 500 men are now employed by the company.

THE USUAL WAY.

Omaha World: "Omaha Dame—"I have come on a sad mission, my dear, prepare yourself for terrible news. Oh, how my heart goes out to you!"

Sweet Girl—"Mercy on us! Has that dressmaker spoiled my wedding suit?"

Omaha Dame—"Worse, dear, far worse. The young man you intended to wed came to our house last night in a state of beastly intoxication, and I have just found out that he has been for years a confirmed sot."

Sweet Girl—"Horrors! Don't for the world breathe a word about it. If pa should hear that he wouldn't let me marry him."

A THANKFUL PARSON.

A pious parson, good and true,
Was crossing o'er the seas,
When suddenly there fiercely blew
A wild and sweeping breeze.
He feared the storm the ship would wreck,
His heart was sore afraid.
He sought the captain on the deck
And found him undismayed.

The captain saw his awful fear
And led him up to where
The servant of the Lord could hear
The sailors loudly swear.
"You clearly see," the captain said,
"If danger hovered nigh
They'd all be on their knees instead,
And asking grace to die."

The parson felt his words were true,
And when the skies grew fair
He marvelled how the sailors knew
Just when to pray or swear.
But when the seas which wildly flowed
Had ceased to plunge and spout,
Unto himself he said: "It showed
They know what they're about."

But later on another storm
Came fiercer than before.
The parson heard with wild alarm
The ocean's angry roar.
He sought the deck in awful dread
To hear the sailors get.
He listened—then he bowed his head—
"Thank God, they're swearing yet."

ELASTICITY.

Nearly all solids, and certainly all metals, are elastic up to a certain point, that is to say, until a certain stress is brought to bear, after which they either become ductile or break.

The elasticity of solids is in two directions—elasticity under extension, and elasticity under compression. Liquids and gases have only elasticity under compression.

The vital difference between the elastic force of solid bodies and the elastic force of fluids may be expressed thus: Fluids possess elasticity of *bulk*; solids, elasticity of *form*.

When the elastic force of steam drives a piston, the force is due to the effort of the steam to occupy a larger space, the steam having, so to speak, no partiality in the matter, so that whether the cover is blown off, the sides of the cylinder split, or the piston moves, it makes no difference to the steam.

Increased bulk in any direction, or by any means will alone satisfy the expansive energy of steam or other elastic fluid.

Gases are said to have the property of "indefinite expansion," which comes to the same thing as saying that you cannot reduce the elastic force to zero, no matter how much space you give it.

The pressure which a gas exerts upon the sides of a vessel containing it can be accounted for by supposing the molecules of the gas to be perpetually in motion, flying about and colliding with each other, and cannonading against the sides of the vessel and rebounding again.

The velocity with which the molecules are flying about in all directions becomes a matter of calculation.

A velocity of 1,600 ft. per second in the particles of oxygen and nitrogen, which constitute the atmos-

phere, is sufficient to account for the ordinary atmospheric pressure of 14.7 lbs. per square inch.

A velocity of 2,500 ft. per second in the particles of water which constitute steam, is sufficient to account for a pressure of 150 lbs. per square inch in a steam boiler.

The elastic force of water is very great, but it must first be compressed if we are to get any elastic force out of it, and the force necessary to compress water appreciably is so enormous, that in all ordinary engineering calculations water is treated as incompressible.

A glass tube about half full of water, from which every trace of air has been expelled by continued boiling, behaves very much as if a solid lump of metal were contained in it. The water strikes the end of the tube when shaken up with a sharp crack, which has earned for the apparatus the appropriate name of "water hammer."

This experiment does not prove water to be incompressible or devoid of elasticity, but only that its elastic force is very high, when not masked by a cushion of air.

To observe the elasticity of solid bodies it is most convenient to alter their *form* rather than their *bulk*.

When a piece of india-rubber is stretched it becomes thinner and the bulk remains unaltered. So also when a steel spring is bent, it is the *form* that changes, and the effort of the steel to recover its original form constitutes elasticity.

When a batten of wood is bent to any considerable extent, it is quite obvious that the convex side becomes longer and the concave side, shorter than the original length. But it is not so easy to prove that the same thing happens to the most delicate watch-spring; and yet we know it must be so.

We cannot bend even a hair without one side being stretched and the other side being compressed an equal amount.

The resistance to bending is thus seen to be merely a resistance to stretching and compression; and the elasticity of a bent spring is made up of the elasticity of the material in extension and compression acting as a couple to straighten the spring.

The useful applications of the property of elasticity possessed in a high degree by tempered steel do not need pointing out; but it may not be amiss to observe that to the elasticity possessed in *some* degree by all materials employed in structures, do we owe the safety of those structures when subject to strains in ordinary work.

No structure could stand for a moment—no steam engine could make a single revolution without breaking down—were it not that the parts are continually giving and taking under their varying loads.

A. N. Somerscales.

THE interlocking switch and signal system completed a few days ago at South Plainfield where the Roselle and South Plainfield branch of the Lehigh Valley road connects with the main line, was tested on Monday night in the presence of a large number of railroad officials. The systems which was put in by Bridge Builder Pascoe, worked perfectly. A similar system is in use at the Broad street station, Philadelphia, and Wayne Junction on the Reading road.

A LYRIC OF LABOR.

Let us raise up a tocsin of warning,
 We toilers on shore and on sea;
 Our song is the song of the morning—
 Our theme is the right to be free.
 The light of the sky has been breaking;
 We see what the clouds had in thrall;
 The tyrants that hold us are quaking—
 "Upharsin" is writ on the wall!

We toil, but we do not inherit;
 We build, but we do not possess;
 The flower of our skill and our merit
 Blooms only those others to bless;
 It is time now that Right cried a warning,
 That Justice should thunder a call;
 Our song is the song of the morning—
 "Upharsin" is writ on the wall.

Sweet freedom is ours, if we dare it—
 Demand it with adamant will;
 And the gold that we coin, we shall share it,
 The fruit of the forge and the mill;
 The creators of wealth cry a warning;
 A new hope shines forth for us all;
 Our song is the song of the morning—
 "Upharsin" is writ on the wall!

Venier Voldo.

THE SOLIDARITY OF LABOR.

Journal of Knights of Labor: Among many other social changes wrought by the introduction of labor-saving machinery and modern industrial methods is the complete subversion of the old idea of trade isolation and the substitution of the broader view that all labor has common rights and interests. While the old system prevailed, the ideal of most trade unionists was that each body of skilled artisans, acting on its own account, should secure for its own members, as far as possible, a monopoly of the right to labor without thought or care for the interests of the unskilled workman. It was sought to establish an aristocracy of labor—to draw a hard and fast line between skilled and unskilled, and, while protecting the artisan from all encroachment upon his exclusive field, to leave the common herd of laborers to the mercy of competition.

Labor saving machinery and the revolution in the industrial system have changed all that. The field which the skilled mechanic can hold to himself is continually narrowing. A thousand and one processes formerly done by hand, and requiring long training and superior skill, are now done by machinery with the aid of a comparatively few men easily familiarized with their duties. Every day lessens the distance which formerly separated the skilled from the unskilled—the mechanic from the laborer—and makes it more and more difficult for the well-paid artisan to retain his position as the member of a superior caste. The leveling process due to machinery has been going on simultaneously with the educational process, by which the ideas of men have been broadened and the truth enforced that there is and ought to be no redemption for labor which does not include the poorest and most dependent of the toiling masses.

It is impossible for the intelligent skilled mechanic to hold his position, let alone improve it, without the co-operation and support of the unskilled. A trade can no longer successfully isolate itself from the general mass of suffering, struggling humanity and hope by stringent rules to keep up wages for its members regardless of the general condition

of the labor market. Some new discovery, some extension of the machinery system, may at any time rob it of its vantage ground and reduce its members to the general level. Many who in their day have assumed a position of lofty unconcern as to the lot of their less favored brethren of the world of labor, secure in their fancied monopoly of technical skill, have suddenly found themselves compelled by some unexpected change in processes to compete with a throng of machine-tenders or partially-skilled workmen. The days of handicraft isolation are over. Under the system of to-day skill in some special branch is becoming a matter of less importance, and labor of all kinds more on a common footing. The selfishness of class exclusiveness is giving way before a recognition of the great truth that the depression and degradation of the great body of unskilled labor inevitably and naturally drags down the artisan class to their level.

Improved machinery is placing all labor in the position of subjection to the capitalist. The old idea of keeping up wages here and there by close unions is becoming impracticable. The remedy lies, not in the weak defense of unions on the line of caste selfishness, formed to procure a little better conditions for a favored few, which are as powerless against the advancing tide of competition as Mrs. Partington's broom against the Atlantic Ocean, but in the organization of all labor to control the machinery and secure the benefits of increased production for the real wealth creators. "The Solidarity of Labor" is the watchword of the future. To enfranchise the few highly-skilled and more intelligent, leaving the mass in hopeless poverty, is impossible, and every true friend of humanity and progress, instead of regretting it, will rejoice that it is so and strive for the regeneration of labor as a class.

Invention: It is stated the New South Wales Government is understood to be desirous of promoting the establishment of a locomotive manufactory in the colony, to be properly equipped with all the modern improvements, and capable of turning out first-class work. It is stated that advertisements are to be issued, both in the colonies and Great Britain, inviting proposals in connection with the matter. There is a large demand in New South Wales for locomotives on the government railways for renewals and additions to stock, and it is currently reported that the authorities are prepared to give an order for 100 locomotives, to be delivered in three years, the first one not later than July, 1891, on the understanding that the cost of getting them made in the colony is not greater than the price of securing them elsewhere.

A RAILWAY paper tie has been invented. The inventor says that he can utilize in this way the ordinary paper-board, which is made from straw, grass or any cheap and coarse material. The straw-boards are cemented together and pressed in molds, making, he claims, a fire and water-proof tie, which is not affected by atmospheric changes, holds the spikes firmly, is sufficiently elastic and will outwear five wooden ties.

THE WEAVER.

Beside the loom of life I stand
And watch the busy shuttle go;
The threads I hold within my hand
Make up the filling; strand on strand
They slip my fingers through, and so
This web of mine fills out apace
While I stand ever in my place.

One time the woof is smooth and fine
And colored with a sunny dye;
Again the threads so roughly twine
And weave so darkly line on line,
My heart misgives me. Then would I
Fain loose this web—begin anew—
But that, alas! I cannot do.

Some day the web will all be done,
The shuttle quiet in its place,
From out my hold the threads be run;
And friends at setting of the sun
Will come to look upon my face,
And say: "Mistakes she made not few,
Yet wove perchance as best she knew."

Mary Clark Huntington.

THE EIFFEL TOWER.

Eiffel Tower, which stands immediately upon the south side of the Seine, is considered by many as the most magnificent building in the world. It eclipsed the Great Pyramid of Gizeh, which hitherto held that proud position. It is the exhibition which will appeal most strongly to sensation-seekers in Paris during the present year—the year that marks the anniversary of one of the most desperate social revolutions in the world's history.

The Eiffel Tower was erected, not in commemoration of any great man or deed, nor for any superlatively great feat, as the Tower of Babel, but as an example of the growth of science in modern times, the gigantic possibilities of invention and engineering, as developed to-day. Of course, besides the possible station for scientific experiment, it was also planned as a chief curiosity among the attractions of the Exhibition. As an engineering marvel, however, the roof of the Palais de Machines is not its greater marvel, though this will only be apparent to the eye of the trained mechanic; but the Eiffel Tower is always the novelty.

The base of the tower forms a gigantic archway, the main path leading from the bridge into the grounds of the Exhibition. Some idea of its proportions may be obtained when it is said that the ground distance from the axis of one of its four pylons, across the driveway, to the axis of the other upon the same front, is 100 metres, or about 328 feet. The tower is built entirely of iron girders and pillars, in the simple construction of four great shafts, consisting of four columns each, starting from the four corners of the base, and merging into a single great shaft which forms the main part of the tower. This shaft ends in the great cupola or the reception-room, which in turn is surmounted by a still higher lantern or look-out, the observation platform of which is upon the dizzy plane of 1,000 feet.

There are three galleries circling the tower. The great gallery, just above the archway, stands 5 feet above the ground, and measures nearly 300 feet each way. Here are placed cafes, restaurants, reading-rooms, smoking and lounging compartments, and all the amusements and comforts of a

French resort. Thousands of people at one time can be made at home on this great enclosure, far up in the cool air, without any necessity for crowding, or treading on one another's toes. Band concerts are given daily at this stage in the journey heavenward, so that the first gallery will probably become the great rendezvous and promenade, even though it is as high in the air as the towers of Notre Dame. The second gallery, still forming a part of the base of the tower, rests lightly upon its iron supports at a height of 380 feet, or about 15 feet higher than the highest part of Milan Cathedral.

The whole tower weighs about 15,000,000 pounds, or 75,000 tons. It is fitted up on the inside of the shafts with elevators, which can take up from 50 to 100 persons each, while the complete ascent will take four minutes, and it is possible to carry to the top 750 persons an hour.

M. Gustave Eiffel, the originator, engineer, and builder of this gigantic monument, is one of the ablest and most famous engineers of France, and although among his fellow-craftsmen all over the world he has long been known for the work he has performed, it is the bold conception and daring undertaking of his present work that has given him a world-wide reputation. Born at Dijon, in 1832, he is still in the prime of life. His technical education was obtained at the Ecole Centrale des arts et Manufactures, the national free school of industries where he graduated in 1855.

RAILROADING ON THE CANADIAN PACIFIC.

A passenger on a Canadian Pacific train tells of the following thrilling accident to the through express train in the mountains: "A rail gave way at a point on the mountain side high above the Columbia river. The engine passed over safely, but two coaches following swung about and toppled over. The bank there was very perpendicular, and the cars would have tumbled several hundred feet below into the flowing river had it not been that the coupling twisted around and held the tremendous weight. There were the two cars, one with its load of passengers, suspended between heaven and earth. The weight of the engine and the rest of the train prevented the suspended cars from drawing the whole train down. The suspense was dreadful. The frightened passengers were compelled to remain in their perilous position until train hands built a platform around and underneath the hanging cars, enabling all to make their escape. The place where the accident occurred is considered the most dangerous in the mountains."

NOMINALLY a car load continues to be 20,000 pounds. It is also 70 barrels of salt, 70 of lime, 90 of flour, 6 cords of soft wood, 18 or 20 head of cattle, 50 or 60 head of hogs, 90 or 100 head of sheep, 8,000 feet of solid boards, 17,000 feet of siding, 13,000 feet of flooring, 40,000 shingles; one half less of hard lumber, one-fourth less of green lumber, one-tenth less of joist, scantling and other large timbers, 340 bushels of wheat, 400 of barley, 400 of corn, 640 of oats, 360 of flax seed, 340 of apples, 340 of Irish potatoes, 380 of sweet potatoes, 1,000 of bran. It is generally as much more as the shipper can get sneaked in without extra charge.

HOW STATE RAILWAYS PAY.

Philadelphia Press: Victoria is an Australian colony with the size and population of Kansas in 1888, or 87,000 square miles, and a population of 1,000,000.

But instead of letting corporations build the railroads and giving land away to get them to do this, Victoria has kept its land and built its own railroads. The result is this thriving little community of about 1,000,000 souls, or the population of Philadelphia, had last year an income of \$41,000,000, and of this sum \$16,500,000 was in the shape of profits on the State railroads. Seven years ago the income from the railroads was only \$9,000,000; in 1886-7 it was \$12,255,000; and for the year just closed it has gone up to nearly double the income of seven years ago, and as no one can build roads but the State, and the State is an enterprising builder and a good manager, the profits on the railroads will in time pay all expenses of the government. In addition, Victoria owns not only the postoffice, as the people do here, but all the express business and all the telegraph business, and the profits on these, for this wise, thrifty little State last year was \$2,140,000.

Victoria has a debt of \$165,595,000, but as all but \$5,500,000 was incurred for railroad and water works, which pay a heavy profit, taxpayers feel tolerably happy over it, and the remaining fraction went into school buildings, which pay a profit in their way, too. As all the horse car lines are owned by the people also, the cities in Victoria get more and more profit from them the bigger they get, and the taxpayer again finds that it pays to own these means of communication, even if he has to run in debt for them.

The natural result is that the surplus last year was \$4,400,000, the revenue outrunning estimates by this amount. In the year just coming it will be bigger, and the "budget speech" of the Minister of Finance was principally taken up with telling the direct and indirect taxes which could be repealed.

TOO MODEST TO BE HONEST.

Washington Critic: "Are you the editor of the paper?"

"I am. What can I do for you?"

"Well, I just thought I'd step up and see how you are. My wife and I are going to Cape May to-morrow."

"Indeed?"

"Yes; but I wouldn't have anything said about it in print, of course. My name is Simpkins—Azariah Simpkins."

"Glad to meet you, Mr. Simpkins, I'm sure."

"Now don't go to puttin' anything into the paper about our going away. We start at 4 o'clock, and I reckon we'll be gone pretty near a month. I need the rest, and Mrs. Simpkins was getting kind of run down. Of course I know how anxious you newspaper men always are for an item, but we're plain people and don't want any notoriety. My wife always likes to see "Simpkins" spelt without a 'p,' but the old-fashioned way is good enough for me. Well, I know an editor's time is valuable, so I'll say good day. If I come across any murders or anything while I'm gone I'll let you know about them."

LOOKING FOR A MESSAGE.

Detroit Free Press: "Boy!" he said to the new-boy who had opened the door of the shop to sell "Papers!"—"boy, you vhas a shwindler, und I doan' buy some more papers of you"

"What did I do?"

"You sells me a paper last night, und I took him home und hunt all oaver und doan' find dot message."

"What message?"

"Dot message by der President."

"Why, the President don't have a message but once a year. It came out long ago."

"Ish dot so? He came oudt und I doan' see him. Und he doan' come no more?"

"Not for a good while yet."

"Vhell, dot explains, und I beg your pardon. You can leaf me a paper some more, und if he doan' send some message in, maybe I can find if somepody hurt himself or vhas killed. No President's message, eh? What vhas dot President doing all der time? Why do we pay him feefy tousand dollars a year?"

THE new census of India gives the population 2 March, 1888, as 269,477,728, of which 60,684,378 belonged to the native states. Distributed according to religion, in round numbers, the Hindoo population in millions, is about 190; the mohammedans, 41; "aboriginals," 6½; buddhists, 3½; christians, nearly 2; sikhs, nearly 2; jains, 1¼; while Parsees, Jews and others are comparatively very few. The Church of England has nearly 360,000 members, other Episcopalian churches 20,000, the Church of Scotland the same number, "other Protestants" 138,000, Roman Catholics nearly 1,000,000, and Syrians, Armenians and Greeks over 300,000. About 106,000,000 males and 111,000,000 females are neither under instructions nor able to read or write. Details are given of 109 different languages spoken. Hindustani comes first with over 82,000,000, then Bengali with nearly 40, Telugu with 17, Mahratti 17, Punjabi 16, Tamil 13, Gurmukhi, Canarese, Ooriya, Malayalam, Sinpi, Burmese, Hindi, Assamese, Kol, Southali, and Gondi come next in order. Next to Calcutta, Bombay and Madras, Hyderabad is the most populous city in India, Lucknow coming next.

Burlington Free Press: A worthy deacon in a Vermont country town was discovered by his pastor one Sunday morning sawing an armful of wood for the kitchen stove. The surprise of the discovery caused the deacon to drop his saw in consternation.

"I—didn't suppose you'd see me, parson!" he sterted.

"Ah," replied the good man, severely, "you must remember, deacon, that there is One higher than I, who sees every evil act you commit."

"Yes, parson," assented the deacon; "but then He doesn't make such an awful fuss about it."

THE Pennsylvania Railroad Company has changed its plans of elevating the tracks through Jersey City to meet the objection of the Board of Works. The track line has been elevated so as to avoid the cutting down of the grade of the street crossings, as at first proposed. There will be thirteen feet or more headway at each of these crossings. Green street, in Jersey City, will be closed.

NOT SO WEALTHY AFTER ALL.

New York *Star*: The statement was published Saturday that John D. Rockefeller, the president of the Standard Oil Trust, was worth \$129,000,000. The statement was made on the authority of a personal acquaintance of Mr. Rockefeller, who itemized the wealth as follows:

Standard Oil stock	\$40,000,000
Premium on Standard Oil stock	28,000,000
Real estate	10,000,000
Lead Trust	2,000,000
Railroad stocks and bonds	20,000,000
Natural Gas stock	4,000,000
Bank stock	5,000,000
Manufactured Gas stock	3,000,000
Steamboat stock	1,000,000
Mines in Utah and Wisconsin	4,000,000
Cash on hand	2,000,000
Miscellaneous	10,000,000

A reporter of the *Star* endeavored to verify the statement, but found it impossible to do so, as Mr. Rockefeller was at home sick, and his secretary could not be found at his office in the Standard Oil building, No. 26 Broadway.

William Rockefeller, brother of John D., although very busy, stopped his work long enough to make a brief and characteristic comment. "It's absurd, ridiculously absurd, on the face of it," he said. Several bankers and brokers were called upon, but they declined to give any estimate of the wealth of Mr. Rockefeller. Mr. Wormser seemed to voice the general opinion when he said: "I never saw Mr. Rockefeller's balance-sheet, and have no idea what he is worth, but I believe he is really in very comfortable circumstances."

It was the opinion of many of those seen by the reporter that if the amount of his wealth is correct, as stated, he is the richest man in the city, and, perhaps in the country. Sidney Dillon, who has been known for years as a financial giant, is supposed to have only about \$12,000,000. Pierre Lorillard is thought to have \$15,000,000, and H. O. Armour about \$18,000,000. Russell Sage, Charles L. Tiffany, H. O. Havemeyer and George Westinghouse are understood to be running a neck-and-neck race for fortune, with \$30,000,000 each. Above that figure are none, except John H. Starin, \$45,000,000, the Standard Oil people, the Vanderbilts and Jay Gould, the latter being said to stand at the top with a round \$100,000,000.

A prominent lawyer in the office of W. E. D. Stokes, No. 146 Broadway, who has watched the rise and fall of many fortunes, said: "The wealth popularly ascribed to the great millionaires is to a great extent fictitious. Their wealth is estimated not by what it is actually worth, but by the amount of income that it produces. For instance, a man buys a piece of property, we will say for \$1,000,000. By giving his whole time to it and handling it properly he derives from it an income of \$200,000. That is 20 per cent. of the original price, but he considers the property as being worth \$4,000,000 to him and as bringing in only 5 per cent.

"Some fifteen or twenty years ago John Jacob Astor bought a piece of property on lower Broadway, on which was an old hotel and a lot of tumble down shanties. He paid \$40,000 or \$50,000 for it, and in place of the old buildings he put up, at a cost of half a million, the Boreal building. Now they reckon that

building at two or three millions, simply because it produces a big income.

"Take the Vanderbilts. The family is considered to be worth two or three hundred millions. They are not worth anything like that amount. They own possibly, one-half the stock of the New York Central railroad. That road is worth very little more than it was when old Commodore Vanderbilt bought it up. Of course, there are more cars and engines, but many of the stations and much of the road-bed is the same as it was then. But they have increased the stock. By clever handling and careful, judicious management it has been made to pay a large amount of interest on the original investment. Whether they could sell it at their own price is still another question, and doesn't affect the real value of it or the amount they put into it.

"If they sold it slowly, in small lots, and bought in occasionally to cover their real design, they might succeed in getting rid of it at their own price; but if they were to declare that they would sell all of their property to-morrow the price would undoubtedly drop. It is the same with the Rockefellers. If the announcement was made that Mr. Rockefeller would sell out all of his property at once, it would lose three-fourths of its value, I have no doubt. And, by the way, I wonder what the Standard Oil Company would be worth if the supply of oil should give out suddenly.

"In the times of the oil craze a man would buy an acre of land for \$500. For \$5,000 more he would have all the paraphernalia of an oil well erected. Then he would strike a 300 barrel well, and would hold the land at \$1,000,000. The principal was really worth nothing. It was the interest or the amount of oil produced that was valuable. In a year or two the oil would stop short, and the man would sell his well and land for \$5. Sooner or later I think the oil will all stop in the same way, not to speak of the danger of losing the European markets, when the oil wells of Russia on the Black sea are properly developed. I understand, however, that Mr. Rockefeller was trying to get control of the Russian oil field a year or two ago, and he may have succeeded. That, however, doesn't contradict the truth of my proposition that the estimate of immense wealth is often to a large degree fictitious."

DOM PEDRO.

A Berlin paper relates this story by way of illustrating the kindheartedness of Dom Pedro: Some years ago a woman in Berlin was deserted by her husband. A few months later she received a letter and some money from him, but these missives soon ceased and the woman was left in the greatest poverty. When Dom Pedro was in Berlin, she begged for an audience and told him her story. He promised to do all he could on his return to Brazil. Some time elapsed and the woman thought the Emperor had forgotten her, when one day a letter arrived from her husband inclosing money for her to come to Brazil. He related that a high official had one day called on him and told him that the Emperor wished to see him the next day; and at their meeting Dom Pedro made him promise to send for her.

COST OF HORSE RACING.

Commercial Advertiser: A certain sage who lived long ago is credited with having said that for every wise man in the world there were ten full-fledged fools. Since then the proportion may have been increased somewhat. If the story told by a professional gambler last evening is true, the percentage of foolish persons has certainly not decreased any since the days of the sage.

"How much do you suppose it costs New Yorkers—by that I mean New York city and vicinity men—for horse racing every year?" said the gambler.

"Well, I've been figuring it up," he added, "and as near as I can estimate, it costs to support seven race tracks, hundreds of horses, jockeys, stable-boys, trainers, book makers and all other expenses of racing, at least \$8,000,000 a year. It costs about \$250,000 to keep seven race-tracks in order alone. These are the Westchester track, or Morris Park, Monmouth, Sheepshead and Brighton, the summer tracks, and Elizabeth, Clifton and Guttenberg, the winter tracks. Then there are small expenses like printing, advertising, say \$50,000, salaries of judges and starters, somewhere about \$30,000 or \$60,000 more, and endless other expenses. Now add to this the expense of feeding, sheltering and taking care of 500 horses, to say nothing of jockeys' fees, and the sum goes far into the millions.

"Do the owners of stables pay these expenses? Not much. All of the big stables come out ahead every year, so do the racing associations, jockeys, stablemen, trainers, starters and emphatically book-makers. The public pay for everything. They pour their money in at the gate; roll it out at the book-makers' stalls, pay double for everything sold at the track, and the book-makers, venders and others turn over a certain percentage to the racing association.

"Perhaps a round \$1,000,000 is spent in car fare by frequenters of the race tracks in a year, but the chief thing to be considered is the money the public pay for the privilege of backing their opinion. Right here let me say that there is but one way to bet on a horse race. Never bet unless you go to the track, and then make a small bet in the French mutuels. If you bet against a book-maker, remember you are betting against a man who makes a business of what you make a pastime.

"Racing associations fleece the gamblers or book-makers, who in turn fleece the golden public. Take, for instance, these small winter tracks over in New Jersey now. They couldn't exist if it wasn't for the privilege money paid by from thirty to fifty book-makers. This money pays for the keep of the track and purses, and the incidentals come from gate receipts. Figure the expenses of one day's racing at Clifton—a little one-horse-track. Say 2,000 persons go to the races and pay \$2 apiece to get there, including admission to the grand stand. That is \$4,000 gone somewhere. Of these 1,000 will lose an average of \$10 apiece, which makes \$10,000. Some will win, but fully one-half will lose on the best days although the average is oftener about two-thirds or three-quarters losers. The public pay, therefore, about \$20,000 to \$30,000 a day to the book-makers. There is a mistaken idea that book-makers dislike to pay money that is won. Some persons even taunt the

book-makers when they cash a ticket at the track. The truth is a book-maker is well satisfied to cash every fourth ticket, whether on a favorite or short horse. It gives him a customer or victim. All he wants is that his customers shall come again, come every day for a month, and then figure how the cash account stands. No man has ever followed horse racing for three seasons and come out ahead, when he was on the outside. Few can come out even on one week, month or season. The chances in favor of the book-maker in the long run are 1,000 to 1, and if it wasn't so horse racing would have died a natural death long ago.

"The regular summer racing season will be inaugurated next year with purses amounting to a fortune. Fully \$400,000 or \$500,000 will be staked on the result in bets. Of this fully one-third will go to the book-makers as clear profit. Should short horses win the the races, perhaps three-quarters will go to them. Now the question is, is horse racing worth \$8,000,000 a year to the 100,000 race-goers who pay it?"

THE DWARFS OF INTERIOR AFRICA.

London Times: The fact now seems clearly demonstrated that at various spots across the great African continent, within a few degrees north and south of the equator, extending from the Atlantic coast to near the shores of Albert Nyanza (30° north latitude), and perhaps even further to the east, are scattered communities of these small negroes, all much resembling each other in size, appearance and habits, and dwelling mostly apart from their larger neighbors, by whom they are everywhere surrounded. Our information about them is still scanty, and to obtain more would be a worthy object of ambition for the scientific traveler. In many parts, especially at the west, they are obviously holding their own with difficulty, if not actually disappearing, and there is much about their condition of civilization and the situations in which they are found to induce us to look upon them, like the bushmen of South Africa and the equally diminutive negroes of the Indo-Malayan regions, as the remains of a population which occupied the land before the coming of the present dominant races. If the account of the Nasamoniens be accepted as historical, the river they came to flowing from west to east must have been the Niger and the northward range of the dwarfish people far more extensive twenty-three centuries ago than it is at the present time.

THE BUREAU DRAWER.

A woman's bureau drawer will hold half a ton of clothes,
A parasol, some bandboxes, and goodness only knows
How many scores of other things within it she may store,
And yet there's always lots of room for twice as many more.
But give a man that self-same drawer and just one pair of socks,
An undershirt, some dirty cuffs, an empty collar-box,
And when he's put them in it, its capacity he'll glut,
And fill it up so awful full he'll never get it shut.
Chicago Herald.

THE VOLUNTEER ORGANIST.

The gret big church wuz crowded full uv broad-cloth an' uv silk,
An' satin rich as cream that grows on ol' brindle's milk;

Shined boots, biled shirts, stiff dickeys an' stove-pipe hats were there.

An' doods 'ith trouserlions so tight they couldn' kneel down in prayer.

The elder in his poolpit high, said, as he slowly riz:
"Our organist is kep' to him, laid up 'ith roomatiz,
An' as he hev no substitoot, as brother Moore ain't here,

Will some 'un in the congregation be so kind's to volunteer?"

An' then a red nosed, drunken tramp, of low-toned, rowdy style.

Give an interductory hiccup, an' then staggered up the aisle.

Then thro' thet holy atmosphere there crep' a sence er sin,

An' thro' thet air of sanctity the odor uv ol' gin.

Then Deacon Purington he yelled, his teeth all sot on edge:

"This man purfanes the house er God! W'y this is sacrilege!"

The tramp didn' hear a word he said, but slouched 'ith stumblin' feet,

An' sprawled an' staggered up the steps, an' gained the organ seat.

Hethen went pawrin' thro' the keys, an' soon there rose a strain,

Thet seemed to jest bulge out the heart, an' lectrify the brain:

An' then he slapped down on the thing 'ith hands an' head an' knees,

He slam-dashed his hull body down kerflop upon the keys.

The organ roared, the music flood went sweepin' high an' dry,

It swelled into the rafters, an' bulged out into the sky.

The ol' church shook an' staggered, an' seemed to reel an' sway.

An' the elder shouted "Glory!" an' I yelled out "Hooray!"

An' then he tried a tender strain that melted in our ears.

Thet brought up blessed memories and drenched 'em down 'ith tears;

An' we dreamed uv ol'-time kitchens, 'ith Tabby on the mat,

Uv home, an' luv, an' baby-days, an' mother, an' all that!

An' then he struck a streak uv hope—a song from souls forgiven—

Thet burst from prison-bars uv sin, an' stormed the gates uv Heaven:

The mornin' stars they sung together,—no soul was left alone,—

We felt the universe wuz safe, an' God wuz on his throne!

An' then a wail uv deep despair an' darkness come again.

An' a long, black crape hung on the doors uv all the homes uv men:

No luv, no light, no joy, no hope, no songs of glad delight.

An' then—the tramp, he staggered down and reeled into the night!

But we kweh he'd told his story, tho' he never spoke a word.

An' it wuz the saddest story thet our ears had ever heard:

He hed tol' his own life history, an' no eye was dry thet day.

W'en the elder rose an' simply said: "My brethren, let us pray."

S. W. Foss.
Yankee Blade.

ARE ALL MEMBERS BROTHERS!

A. O. U. W. Guide, St. Paul: This question naturally comes up to the frequent attention of Lodge rooms, when they hear the names of members called out by the financier as having paid their dues and benefits, but who otherwise are not known to the officers or members of the Lodge. There may be a long roll of names, but they never answer to the call. There was a time in the history of each one, when the term brother was applied; and doubtless at the time these members assumed the obligations they really believed they were becoming an integral part of the Order, and that indeed and truth they would become brotherly members of the Order. Now, there is a difference, even between the words brothers and brotherly. Apart from the idea of kinship, brothers in a society, in a lodge, in a church, etc., represent a body of men closely united by some common tie, interest, or rank, profession, fraternity, credit, or belief. In this meaning, the term is general, and does not reach the finer meaning of the term growing out of kinship. The term "brotherly," however, brings the members of the different classes into a closer relationship, affecting the emotion and sensibilities.

The mere fact that any person has joined a society or lodge, by which he comes under the designation of brother, does not bring him into that closer relation of brotherly member, without he becomes one of the members in the activities of the society or lodge.

Does the member of the society or lodge, who contents himself with simply paying his dues and assessments, regard the society or lodge as anything but a business agreement? Suppose every other man in the lodge contented himself with a passive membership, would he be among the first to step forward and say that he would assume part of the responsibilities of organization? We do not believe he would. Why, then, should he be regarded as a brother? He does not recognize any other member as a brother; why, then, should he be called a brother? 'Tis true, in a general way, we are kin to all mankind, and in this view, belong to the great brotherhood of man; but for any closer relation this member cannot be classed as a fraternal brother.

CHEWING-GUM STATISTICS.

New York Sun: Superintendent of the Census Porter recently received a letter suggesting that statistics be gathered relative to the chewing-gum habit. A visitor at one of the up-town hotels, last week, is the proprietor of a chewing-gum factory in Elkhart, Ind. Speaking of his factory, which is one of the smallest and least important in the country, he said: "Thus far this year we have made and sold \$400,000 worth of the stuff. We employ 150 men and girls, and we ship to jobbing houses in every large city in the country. There are in the United States alone fully a dozen large factories, employing as many people as we do, and in most cases more. The annual output of the factories will average \$450,000 per year, making a total production of more than \$5,000,000, and there are enough smaller confectionery establishments to increase the annual production to at least \$6,000,000.

OUR LODGE.

We are here a band of workmen,
All united, strong and true,
With the watchword of our Order
Evermore before our view.

And, as each day passes onward,
Let each workman do his part
In the glorious temple building,
Now so dear to every heart.

Let us build on good foundation,
Charity, the corner-stone,
So that all who may come after
Will rejoice at what we've done.

In the duties yet before us
Many bright hopes our bosoms cheer,
Nerving arm, and brain, and muscle,
Casting out all doubt and fear.

Knowing well that all around us
Whose Protection all may share,
Will not fail when called to render,
In that hour a brother's care.

In that hour, so near or distant,
When for each his work is done,
And the call to higher duty
Bids us hasten one by one.

Then the angel Death, whose coming
May be nearer than we think,
Will be met with welcome greeting,
As we stand upon the brink

Of that dark and silent river,
Whose cold waves now beat the shore.
Soon we'll see the loved ones waiting;
There we'll meet to part no more.
J. H. L., in Western Workman, Sioux City, Ia.

CHANGED HIS MIND.

A young man about twenty-three years of age, dressed like a farmer, had his feet on the car seat in front of him and was reading a novel, when one of the boys went over to him and observed:

"I've just made a bet of five dollars on you."

"On me? What is it?"

"I've bet five dollars that you will suicide within a week. I've been watching you very closely for the last half hour, and all signs indicate melancholy and despondency. Have you selected any particular line of killing yourself—poison, the rope, drowning or hanging?"

"Did you actually bet five dollars?" anxiously asked the young man.

"I did."

"Pay if you lose?"

"I'll have to."

"That's too bad. I wish I could have seen you last week."

"Why last week?"

"Because I then had the ager every day right along—two cows were sick on my hands—my girl had gone back on me, and I expected a windmill man was going to beat me out of four hundred dollars. I did kinder think of suicide."

"But now?"

"All is changed. Cows got well—ager all gone—gal has set the day for next Wednesday, and the windmill man is straighter than a board. Durn my hide if I hain't going to try and live five thousand years!"

A WATER POWER IN NEVADA.

[Alvin D. Brocker, Overland Monthly.]

One of the most remarkable instances of electrical transmission of power has only recently been accomplished in the State of Nevada. On the world-famous Comstock Lode and the almost equally famous Sutro Tunnel. At the Nevada Mill there is a 10-foot Pelton water wheel, which receives water through a pipeline delivering water from the side of Mount Davidson under a head of 460 ft., giving 200 horse power. Here the water is again caught up, delivered into two heavy iron pipes, and conducted down the vertical shaft and incline of the Chollar Mine to the Sutro Tunnel level, where it is again delivered to six Pelton water-wheels, this time running under a head of 1,680 ft. Each of the six wheels is but 40 in. in diameter, weighing 125 lbs.; but with a jet of water less than five-eighths in. in diameter they develop 125 horse-power each. On the same shafts, which revolve 900 times a minute, are coupled six Brush dynamos, which generate the current for the electric motors that drive the stamps in the mill above ground. The result is that, where it formerly took 312 miners' inches of water to operate 35 stamps but 82 in. are now required to run 60 stamps. This is the most enormous head of water ever used by any wheel, and by itself constitutes an era in hydraulic engineering. A solid bar of iron thrown forcibly against this tremendous jet rebounds as though it had struck against a solid body instead of a mobile fluid. The speed of this jet, where it impinges against the buckets of the wheel, is two miles a minute—176 ft. a second.

There is another quality of these extraordinary wheels which renders them absolutely without a peer in a large family of prime-movers. This is the immense power exerted per pound of weight. Those in the Chollar Mine, for instance, give out 1 horse-power for every 1.8 lbs. of weight. If there is anywhere a motor which begins to compare with them in this respect, I have never been favored with knowledge of it. And it seems there is no limit outside of that which sets bounds to the head of water itself, to prevent further progress of the wheel in the same direction.

THE BIRD OF JOVE.

Indianapolis News: A farmer named Frank Engleman, living a few miles west of Nashville, was attacked by a fierce, full-grown gray eagle on Friday evening when on his way to town. When first noticed the bird was at great height in mid air. A minute later it dropped down upon Engleman with a shrill scream, striking him with terrific force, and burying its talons in his clothing and flesh. Engleman was on horseback and at a great disadvantage. Before he could dismount he was badly clawed by the bird. He was without weapons, and could only defend himself with his bare hands. The fight lasted fully an hour, the eagle plunging at him from every quarter. Twice did the man attempt to run, but each time the great bird threw itself in his way and prevented his retreat. At length he caught it by its talons, and with hands and feet succeeded in slaying it. The bird measured six feet four inches from tip to tip.

THE LITTLE SOLDIER.

"When I'm big I'll be a soldier,
That's what I will be;
Fight for father, fight for mother,
Over land and sea!"
And before him on the table
Stood in bright array
All his little wooden soldiers,
Ready for the fray,
Then he charged his little cannon,
Singing out with glee,
"When I'm big I'll be a soldier,
That's what I will be!"

By the firelight sat the mother,
Tears were in her heart,
Thinking of the swift time coming
When they two must part.

Soon the shadow fell between them,
Soon the years flew by;
He has left his little mother.
Left her—perhaps to die.
All the laughter gone forever,
All the sunshine fled;
Only little mother praying
By his empty bed.

Then there came a dreadful battle,
And upon the plain
Crept the little mother, seeking
Some one 'mid the slain,
But she never found her darling
In the white moon gleam,
For the little cannon firing
Woke her from her dream.
All a dream! He stood beside her,
Singing out with glee,
"When I'm big I'll be a soldier,
That's what I will be!"
J. L. Molloy in Temple Bar.

THE TROUBLESOME "WELSH RABBIT."

San Francisco Chronicle: He was a San Franciscan in the played-out city of London. He came from the West, where he had developed that independence and self reliance which, combined with good looks and twenty-dollar gold pieces, made a man superior to all Europe. He strolled with graceful dignity into a gilded bar, over which presided a divinity of superb physical form, but still a woman, with an air which only an English bar-maid can possibly put on—an air of mingled conceit, pride, coquetry and humility. She awaited his order. He was dressed in the latest fashion. He threw the lapel of his coat back with a proud gesture, and fixing his fascinating eye on the bar beauty, he said:

"Tell me, my pretty maid, what can you suggest for a man who ate a Welsh rabbit last night and does not feel well this morning?"

She did not smile; she did not appear to be affected by the appearance of his swelling chest or his wicked eye; she simply said:

"Why didn't you heat two Welsh rabbits and let 'em chase each other?"

MISUSE OF THE WORD "OUTLAW."

New York Tribune: We are falling into a queer use of the word "outlaw." Properly it means a person excluded from the benefit or protection of the law; but as ordinarily used it simply means any criminal who succeeds in eluding the clutches of the law. There are no genuine outlaws in this country now, although we read of outlaws every day.

REUBE'S MISTAKE.

It was election day in a town in Tennessee, and while the crowd of men on the streets seemed good-natured and inclined to peace, there were several old pioneers who shook their heads and remarked that such a condition of affairs boded no good. One old farmer beckoned his son into a public stairway and said:

"Look-a-here, Reuben, don't you start no fuss around yere to-day."

"Fur why?"

"Kase the man who starts a fuss is gwine to get chewed to strings in no time. This crowd is ornery, Reuben."

"Hain't I gwine to tell old Parke that he stole our hogs?" queried Reuben.

"No, sir! He'd breed 'a fuss quicker nor scat. You jist hold yerself level, Reube—mighty level."

Reuben promised to, and then slanted his hat on his ear and sallied out to spit over his shoulder, hunt old Parke up and call him a hog-thief. He had scarcely got the words out of his mouth when something hit him and he dropped, and in less than two minutes there was fighting for two blocks up and down the street. Reube's old father was in the bar of the hotel taking a drink. The sounds of conflict brought him out just as Reuben crawled up the hotel steps. He had a broken nose, a broken jaw, two black eyes, a scalp wound, a cut hand, and was almost naked.

"Is that you, Reube?" shouted the old man, as he bent down to get a closer view.

Reube nodded his head.

"Found old Parke and called him a hog-thief, I reckon?"

Another nod from Reuben.

"Well, I told ye, and now, durn your good-fur-nuthin' hide, I hope you won't be able to dig sassafras fur six months to come! Howsumever, bein' as a row has started, and bein' I'm allus to home when thar's fightin', I'll sail in and warm up a leetle."

TOO MUCH "FERGITTING" FOR HIM.

New York Tribune: Senator Colquitt, of Georgia, delights in telling a story of his efforts at missionary work among the Afro-Americans in the vicinity of his home. He selected as a specimen text "Uncle Gabe," a former slave, who had learned to read in a very crude way, and to whom he had offered \$5 if he would read the Bible through to the end. Gabe accepted the offer and took away with him a brand new Bible and began his wrestle with the Scriptures. Two weeks later Gabe returned, Bible in hand.

"Well, Gabe, how did you like the book?"

Gabe hesitated to reply and was pressed further.

"Well, Marse Colquitt, I tells you how it is. I don't like de book, nohow."

"Explain yourself; I don't catch your meaning," said the Senator. "What part of the Bible did you read, Gabe?"

"I reads, sah, until I gits to whar Abraham fergits Isaac, and Isaac fergits Jacob, and Jacob he fergits Joseph, and den I reads no moah. Dere is too much fergitting, sah, to suit me."

WHAT WE WANT.

All hail the dawn of a new day breaking,
 When a strong armed nation shall take away
 The weary burdens from backs that are aching
 With maximum labor and minimum pay;
 When no man is honored who hoards his millions,
 When no man feasts on another's toil,
 And God's poor suffering, striving billions
 Shall share his riches of sun and soil.

There is gold for all in the earth's broad bosom.
 There is food for all in the land's great store,
 Enough is provided if rightly divided;
 Let each man take what he needs—no more.
 Shame on the miser with unused riches,
 Who robs the toiler to swell his hoard,
 Who beats down the wages of digger of ditches,
 And steals the bread from the poor man's board.

Shame on the owner of mines whose cruel
 And selfish measures have brought him wealth,
 While the ragged wretches who dig his fuel
 Are robbed of comfort and hope and health.
 Shame on the ruler who fides in his carriage
 Bought with the labor of half paid men—
 Men who are shut out of home and marriage
 And are herded like sheep in a hovel pen.

Let the clarion voice of the nation wake him
 To broader visions and fairer play,
 Or let the hand of a just law shake him
 Till his ill gained dollars shall roll away.
 Let no man dwell under a mountain of plunder,
 Let no man suffer with want and cold.
 We want right living, not mere alms giving,
 We want just dividing of labor and gold.

Ella Wheeler Wilcox in New York World.

AN UNFORTUNATE MILLIONAIRE.

Philadelphia Press: A tall, erect man, of forty-five years, strolled along Chestnut street, yesterday, idly looking at the passers-by who thronged the thoroughfare. He wore a derby hat, a dark top-coat, and carried a stick of the most approved pattern. His clothing was cut in the latest style, and his heavy Vandyke beard proclaimed him to be a man of fashion. For convenience he may be called Mr. Clinton, and he lives in New York. Mr. Clinton was left an orphan with \$60,000 income, when he was fourteen years old. Since then he has been everywhere, and has seen everything. He has made two trips around the world, has hunted silver-tips in the great divide, and has killed tigers in the jungles. He has been on a Polar expedition, and has tramped through portions of South America. Mr. Clinton is at home in Siberia, and would not be lost in Hong Kong's crooked streets. Yet, as he said last evening, he is the most miserable man on earth. He never married because so many girls lay in wait for his money, thus making him very suspicious. He doesn't know what to do now to kill time. He is by no means unknown as an ethnologist, and is an authority on certain gases. He is musical and fond of pictures and books. But everything bores him. Just now he is especially melancholy. Last summer one of his cousins was taken seriously ill, and a nurse from Philadelphia was called into requisition. The nurse is a magnificent specimen of womanhood, tall, lithe and agile, possessing eyes, and teeth, and hair that perfectly charmed young Mr. Clinton, who has been all over the world. Her manners and conversation captivated him. He fell in love, proposed—and was rejected. Since July he has been "getting miserabler and miserabler," so he says, and has proposed twice more to the nurse.

HUNGARY RASCALS.

New York Sun: A mare's nest of remarkable dimensions has just been discovered in Karlowitz, a small city in South Hungary. The rich patriarch Angyelic died there at 2 o'clock in the morning a short time ago. Within twenty minutes a high ecclesiastic, Lemajic, and a prominent financier and political economist, Stojanovic, had plundered his strong box of 6,000 florins, 1,600 of which they gave as hush money to the guards and chamberlain. Half an hour later Dr. Milan Dimitrijevic, Professor in the Karlowitz College and director of a savings bank, crossed off the patriarch's gold watch and a diamond cross. The next day Dr. Gruic, editor of the government sheet, *Serbski Narod*, secured through Lemajic two of the patriarch's marriage certificates, already signed and sealed, though not otherwise filled out. Gruic altered these certificates so that they read as the patriarch's notes for 5,000 and 12,000 florins respectively, payable to him on demand, filed them in the proper court, and got a judgment against the dead patriarch's estate for 17,000 florins. One of his fellow conspirators betrayed him to the police, however, and he, Lemajic, Stojanovic, and Dimitrijevic are now behind the bars. The whole affair has turned Karlowitz topsy-turvy. The arrest of Dimitrijevic was followed by a run on the bank of which he was director, and the police had to be called out in a body to prevent a riot. In commenting upon the scandal, a Hungarian daily says that Angyelic's estate is only one of forty or more which, within the last twenty years, have been plundered immediately after the death of the owners. Before the body of the patriarch Rajacsic was sold, it says, six big chests full of gold and silver were stolen from his bed chamber. Twelve thousand florins were removed from the cap on the head of the dead Bishop of Vojnovics within five minutes after he breathed his last. The ducats were stolen from the hat of the dying Bishop Hranislav while he was still conscious. In Croatia and Slavonia, the region around Karlowitz, the high ecclesiastics protect as much of their money as possible from theft by carrying it in their caps. On this account a Bishop in that part of Hungary always keeps a tight hold of his cap when it is not on his head or locked up in his strong box at home.

HELL IN JAPAN.

The Japanese language has no equivalent for our word "hell," but has the word "jigoku," instead. Jigoku consists of: (1) Eight immense hot hells, ranging one beneath the others in tiers. Each of these hells has sixteen additional hells outside its gates, like so many ante-chambers, so that there are in all 136 hot hells. (2) There are eight large cold hells, each with its sixteen ante-hells, making the same number of cold that there are of hot hells. Besides these 272 hot and cold hells for the offenders of the common sort, the wily Japs have arranged for twenty mammoth hells of utter darkness, into which will be consigned the lost spirits of children who take the name of Dai Butsa, or Great Buddha in vain.

A SNAKE-BITE CURE.

An Indian in Southern California Has Found a Sure Antidote.

[California correspondence New York Tribune.]

Hereafter when camping out parties are formed the demijohn full of snake bite cure will have to be replaced by a bundle of weeds, for T. K. Fisher, an old citizen of Santa Barbara, who is familiar with the habits of the California Indians, claims to have found out their remedy for rattlesnake bite, which is a species of the plant *Euphorbia*. Dr. S. Weir Mitchell, of Philadelphia, recently stated in an article, which has been copied by the California press, that no specific was known for the virus of the rattlesnake. Mr. Fisher saw this statement and contradicted it, saying that the plant referred to was a sure cure, and he even goes so far as to state that the snakes themselves, when bitten, will make use of the remedy. This receives corroboration from Frank Smith, who lives at Whitewater, in San Bernardino county, on the edge of the Desert. He speaks most of the Indian dialects. The weed, he says, is a *Euphorbia*, and is common through California and Arizona. It is a vine-like plant, radiating from a center, growing close to the earth; the leaf resembles the clover, but is less than half as large. When a stem is broken a milky exudation follows, similar to that of the "milkweed" of the East. Mr. Smith gives this as the method of application: The green weed should be mascerated in water, the skin about the bite scarified, and the pulpy mass of the plant placed on it and rubbed well into it; this should be repeated at intervals for fifteen or twenty minutes, and then a poultice of the same plant should be bound on and left. Mr. Smith holds that within forty-eight hours all symptoms of poison will disappear. So confident is he that in "The Banning Herald" he offers to settle the discussion with Dr. Mitchell in Western style by offering to bet \$500 or \$1,000 that with the *Euphorbia* he can cure any case of rattlesnake bite, and he will allow Dr. Weir to pick out his own snake. The Mexicans know the weed and call it *Golondrino*.

A FAITHFUL MECHANIC.

Jay Harper, a blacksmith of North Harpersfield, N. Y., according to a local paper, has stood by the same old forge in the same old shop almost every week day for thirty-eight years. The old shop and tools show marks of service. The floor where Mr. Harper stands by the forge has worn through twice; the bellows handle that was made when he commenced business is still used, but it has worn off until it is sharpened to a point by the constant wear of his hand upon it. A hickory hammer handle shows the impression of his thumb and fingers from long and continuous use.

The brick of the forge chimney have been worn away more than an inch by wagon tires being turned against it while heating on the forge. The cinders that fall from the hot iron when pounded have been allowed to accumulate around the anvil block all this time, to the amount of ten or twelve bushels.

The large pine tree that now overshadows his shop was but a sapling when he commenced business.

PENTECOST'S IDEAS OF FREEDOM.

The following appeared in a recent issue of the *Twentieth Century*, and express in terse and pointed sentences friend Pentecost's ideas on the following subjects:

As a human being who should be free I demand:

1. Absolute freedom to think, write, speak and print whatever I please.

2. Absolute freedom to use vacant land.

3. Absolute freedom to issue money.

4. Absolute freedom to trade.

5. Absolute freedom from compulsory taxation.

To accomplish this personal freedom I demand:

1. The immediate and unconditional cessation of all censorship of the mails and the press.

2. The immediate and unconditional cessation of property in vacant land.

3. The immediate and unconditional cessation of restrictions on the issue of money and on trade.

4. The immediate and unconditional cessation of compulsory taxation.

And I call on all editors, writers, speakers, clergymen, and all other men and women to coöperate with me in attempting to influence public opinion in favor of such absolute personal freedom.

MUTUAL APOLOGIES.

Scottish Nights: The head waiter of the B—Hotel, Edinburgh, is rather a pompous individual and the frequenters of the hotel quickly learn that he is not to be trifled with. One day at dinner an old Englishman lost a valuable silk handkerchief, and as the head waiter was standing before him he accused him of stealing it. The waiter, speechless with anger, pointed to the chair on which the Englishman was seated, and the latter rose and observed that he had been sitting on the missing article.

"I—I beg your pardon, sir," said the Englishman, penitently.

"I beg your pardon, sir," replied the waiter, firmly.

"Why?" asked the astonished Englishman.

"Oh, because you only made the slight mistake of taking me for one of your countrymen, but I made the great mistake of thinking you a gentleman."

WATER WITH GOOD BODY IN IT.

Washington Post: Mr. E. D. Price, the manager of Richard Mansfield, was about to take a drink of water at the Continental hotel, in Philadelphia, the other day, when he stopped and said to a porter:

"This water smells as though it had seeped through a graveyard."

"Yes, sah," said the porter, "it do run through de cemetery, sah, but it's de mos' fashionerble cemetery in the city, sah, an' de mos' respecterble folks is buried dar."

HE WOULD TAKE CARE OF HER.

Munsey's Weekly: Marie—I am willing to marry you, Charles, even if you are poor, but do you think you can take care of me, anyway?

Charles—Oh, darling, by this strong right arm raised to heaven I swear that I will support you always, even if I have to take in washing for you to do.

And they were married.

THE PRAYER OF THE ENGINEER'S WIFE.

New York *Railroad News*: [Who thinks of the engineer on the railway train and of our dependence upon his character for sobriety and devotion to duty? Some of this calling are pious, prayerful men. A lady, devoted to her Sunday-school duties, visiting the home of an engineer's family, was unspeakably moved by the account the wife gave of her anxieties and of her prayers and of her husband's reliance upon her intercessions. Night after night she was accustomed to await the whistle of his train as it flew by her little cottage. Its meaning and use between them this young Christian has turned into verse, that truly extracts poetry out of the railway. I trust the public will excuse the "anonymous," for once, as it is the writer's "first appearance," and she is as modest as she is gifted. I greatly admire the deep sense of sympathy with the *heroic virtue* of an ill-appreciated class, which so young a writer has embodied in touching verse.

A. Cleveland Coxe.]

The night has led her sparkling stars

Far up the evening sky:

Before me all the dewy fields

In peaceful silence lie;

The gentle murmur of the stream

Falls sweetly on the ear,

And evening lamps begin to gleam

In dwellings far and near;

Slowly the creeping, silvery mist

Velleth the woods in white.

Dear Lord, to Thee I lift my heart,

Protect my love to-night.

For as the sweet departing day

Looks backward with a smile

To tell us it will come again

To gladden us a while,

From yonder busy railroad town,

Where ceaselessly all day

The noisy engines, up and down,

Ply their resistless way.

At this calm moment, clad in strength

And terrible in might,

Flies forth the train my dearest drives

Along the track to-night.

I hear the thundering sound afar,

And through the darkness dim

I strain mine eyes—perchance I may

Catch one swift glimpse of him.

And hark! the friendly engine shrieks

Right loud and merrily!

Through it my love, my dearest, speaks,

Bidding "Good-night" to me.

And as the cheery signal sounds,

My anxious heart grows light.

It speaks so clear: "Pray for me, dear,

In my wild race to-night!"

HE.

"Pray for me, dear; for all who drive

The swiftly speeding train

Need watchful eyes, courageous heart,

A steady hand and brain.

It is no light or common weight

The engineer must bear;

Hundreds of lives the burden great

Intrusted to his care!

But knowing that my wife doth pray,

I feel that all is right;

That God will guard me on my way

Along the track to-night."

SHE.

"As far amid the mighty hills

The distant rumbling dies,

From this dark earth I look above

To yonder starry skies.

While all is wrapt in gloom below

All shines in brightness *there*,

And he who dwells on high, I know.

Will grant my earnest prayer.

O Thou, to whom the darkness deep

Shines ever as the light,

Whose Watchful Eye doth never sleep,

Protect my love to-night."

THE MEANNESS OF RICH WOMEN.

[Mrs. Lynn Linton.]

To women, who are housekeepers and marketers of the nation, is primarily owing this rage for cheapness which is to be had only by sweating and grinding the faces of the unfortunate workers and producer. It is the women who beat down prices. The richest will do it without a blush. Women to whom £100 more or less in the year's expenditures mean an inappreciable nothing will haggle with a laundress over a penny. They will beat down a flower woman and make her take penance for a shilling, and their conscience will not prick them, and their self-respect will not suffer.

They hold themselves justified in taking away their custom from the local trades-people, if thereby they can effect a saving, which cripples the poor folks and does not benefit themselves. They grudge all percentages which enable the poor to live and save. They think wages are extravagantly high for the under servants, though pride and that severity which commands the market make them pay illegally for pampered upper-class domestics.

At clearance sales they buy "bargains" they do not want, when they are perfectly well able to pay the full price for things they really want. More than this, they—these ladies of birth, education and means—come down into the labor market, and by their capital and connections thrust aside the small workers who have neither. In the exhibition of ladies' ware, now so fashionable, how much is done by women really needing money, and how much by those who simply desire to have more than they need? All of us know women of ample fortunes who do not disdain to make money by means which take away so much bread from the hungry. This, by the way, goes deeper and lower than the class-called of ladies.

In the well-to-do middle classes, where the girls of a family have no pressing need to do anything at all, they add to the general income by keeping themselves. As they have only themselves to keep, and this not of absolute necessity, they pull wages still lower down than need be by working for small pay. These well-to-do workers damage the labor market for women more than might appear at first sight.

MAUDIE'S HAIR.

Boston Courier: Yellowy, who is waiting for his sweetheart to dress, is being entertained by her little sister.

"What beautiful curling hair you have," says Yellowy to the little girl; "does it curl naturally?"

"No," answers the little one, frankly; "Sister Maude does it up in papers for me every night."

"And does your sister Maude do her own up in papers, too?"

"Nop. She just throws hers on the bureau and curls it next morning."

THE RIVER CLYDE VS. THE ST. LAWRENCE.

[Glasgow Correspondence Boston Herald.]

The Clyde is the most astonishing of rivers. It astonishes you, in the first place, by seeming so little worthy of its majestic reputation. It is very narrow, so narrow, indeed, that, if you are accustomed to the arts which the canny Scots practice, you will wonder how they contrive to launch the giant steamships which have carried the renown of the Clyde to every quarter of the planet; for some of these steamships are half as long again, or nearly half as long again, as the river is wide.

The Clyde astonishes you, in the second place, by its horrible color and by the horrible stench that arises on occasion. For the stream serves not only as a river, it not only bears a very large share of the commerce of the world, but it also serves as a sewer for a district containing a round million of inhabitants, and some of the greatest and busiest and dirtiest manufactories which it is possible to conceive. The Glaswegians are confronted with a serious problem, which is nothing less than the purification of the Clyde. This is quite the subject of the hour. For narrowness and dirtiness, no river of repute can compare with this, which flows through the commercial capital of Scotland. But even these attributes are not the most astonishing things about the Clyde. What is most interesting, I think, is the fact that the Clyde, as you see it to-day, is the work of human achievements. There is an old story which is worth repeating here.

A patriotic Glasgow man, who was taken to the noble eminence of the Dufferin terrace at Quebec by an equally patriotic native of the Dominion, was expected by his guide to gaze with wonder and with awe upon the magnificent St. Lawrence.

"Now," said the Canadian, in a moment of natural enthusiasm, "now, there is a river. You can show nothing like that in Scotland."

"Ah! I dinna ken so much about that, my friend," replied the Scotchman, "there is the Clyde."

"The Clyde," scornfully retorted the Canadian, "why, you could pour a dozen Clydes into the St. Lawrence and not raise the water line on the cliffs a single inch."

"Ah! weel, weel," responded the gentleman from the land o' cakes, "weel, weel, that may be so, but you must remember that the St. Lawrence is the work of the Almighty, and we made the Clyde ourselves!"

The Glasgow men certainly did "make the Clyde themselves." One hundred years ago, or thereabouts, this renowned river, which now gives the world its greatest vessels of iron and steel, had a depth of water, at low tide, in what is now the harbor of Glasgow, of only eighteen inches. Now the largest steamers are built on the banks of this very stream and great numbers of them ply regularly up and down. The river has not only been deepened, but in various places it has been widened to three times its original breadth. The work of dredging has been constant, and is constant still. But something more than dredging had to be done by the energetic Glaswegians. At one part of the river there was a bed of rock, 900 feet long and 300 feet wide, through which a channel was excavated.

During the last forty-five years the dredging machines of the Clyde have worked 509,095 hours, and they have raised 35,205,242 cubic yards of material. Last year the dredgers worked 12,928 hours and dredged 1,530,500 cubic yards of material. Figures of this sort enable the stranger to form some idea of the work that has been done, and has continually to be done, to give Glasgow rank as the third city of importance in the United Kingdom.

ONE of the most curious characters in all Maine is a man of the name of George McIntire, who is a monomaniac on the subjects of mathematics and poetry—a unique combination of hobbies, by the way, that is probably without a parallel in the history of this if not all other countries. McIntire's abnormal appetite for algebraic problems, trigonometry, logarithms and the like is equaled only by his fondness for poetics, and his remarkable propensities for these has gained for him a more than local reputation. Over sixty years of age, he has led an existence that has been precarious to say the least. His natural aptitude for, and proficiency in the branches mentioned, has never so much as obtained for him the price of a single meal. He lives in a miserable garret in the poorest quarter of Biddeford, and subsists upon the scraps given him by charitable friends. No problem in the higher mathematics is too abstruse for his solving, nor any poem of note too lengthy for his remembrance. He has but to read a poem once to recite it verbatim, which he is prepared to do at any future time. From the writings of Shakespeare, Milton, Dryden, Pope, Scott, Byron, and most of our prominent American writers of verse, he recites at random, nor, is he a recitationist only, for he turns a rhyme himself with dainty neatness, which, he invariably destroys, disdaining to sell the products of his muse for publication, preferring it appears to be supported by charity or starve. He is in verity one of nature's interesting freaks.

A TELEGRAPHIC DECLARATION.

'Twas last summer, when vacation brought a blissful breathing spell,
And the townsman sought the pleasures of the rural hill and dell,
That I saw her at the station as her fingers white and small
Moved with dextrous grace in answer to the telegraphic call.
And now, down in my pocketbook, 'mongst papers worn and dry,
Is a fragment upon which I often look with fondest eye:
I found it on the floor one day, when all her work was through,
And upon it there was written simply:

How many times I've wondered who the happy soul could be
Whose name was lingering in her thoughts and wished that I were he!
She had a smile as winsome as the daisies that were bright
In the moonlight by the roadside when I saw her home one night.
I had talked to her quite often as the days went swiftly by,
And when I took the train at last I did it with a sigh.
I like to gaze upon it when I've nothing else to do—
That little scrap of paper with its

Washington Post.

A WOMAN'S POCKET.

He's new to matrimonial cares
Who volunteers to run upstairs
And fetch a trifle, more or less,
His bride left in some other dress.
Believe me, Nature ne'er designed
That mortal man should ever find
A woman's pocket.

He opens wide a closet door,
Each hook so full of robes galore,
That ere he finds the proper gown
Each dress in turn has tumbled down.
Into the packet hole at back
He thrusts his arm. Alas! alack!
'Tis not a pocket.

He drags it out in his despair,
And spreads it over an easy chair.
Lifts up each tuck and fold and seam,
Walks round and round as in a dream.
He's much too good a man to swear,
Yet undevoutly wonders where
She keeps that pocket.

He grabs it up and rushing down,
Upon her lap tosses the gown;
"In truth you are the 'better half'
If you can find— Why do you laugh?"
"I laugh because you've brought me here
A petticoat, my hubby dear,
To find a pocket."

COULD NOT LIE.

An Anecdote of a Clerk and a Famous Merchant.

St. Louis Republic: One day A. T. Stewart walked into one of his departments, and taking up a piece of goods, asked one of his salesmen if it was all wool.

"No, sir," he replied, "it is not all wool, but it would sell easily for all wool."

"Well, sell it as all wool," said Mr. Stewart.

"But it isn't all wool, Mr. Stewart," pleaded the young man.

"You do as I want you to, please," responded Mr. Stewart, as he walked away.

Some time later in the day a buyer was looking over these goods, and the same man was selling him.

"These are all wool, are they not?" the buyer asked.

"They're not all wool, but very near it," answered the salesman.

The next day Mr. Stewart sent for the salesman and said:

"I understand that you propose to represent my goods differently from what I wish you to. If I overlook the mistake of yesterday will you do as I wish in the future?"

"I will be very glad to do anything that you wish me to do, Mr. Stewart, except to lie," responded the young man.

"Do you consider it a lie to call a piece of cloth all wool, when, with a little cotton it contained, it was really a better material than all wool?"

"Yes, sir."

"Well, you can draw your money and go."

Before the young man had left the store he was brought back to Mr. Stewart's office, received important instructions and was sent to Europe to carry them out. He was afterward frequently employed by the merchant prince to transact business which required strict integrity.

THE TYRANNY OF CORBIN.

National Car Builder: The Philadelphia & Reading is nothing if not paternal with its employes, but the evidences of fatherly care are generally of the Draco order, that delights in inflicting suffering. Several decades of the most ruthless oppression appears to have crushed the spirit of resistance out of the men who have had the misfortune to be thrown, by force of circumstances, into the service of this corporation, whose methods would be a disgrace to Russian despotism. But the practice of meek submission to unmanly edicts does not appear to relieve the men from numerous new acts of petty tyranny. The average officer of the road appears to be above trampling wantonly upon the wretched employes, even when the spirit controlling the corporation encourages them to do so; but there is one superintendent, named Bonzano, who seems to delight in prodding new goods into the wounds which the blows from his iron rod always keep raw. This creature, some time ago, intimated that the Reading would tolerate no man in its employ who belonged to labor organizations, and an order was sent into effect which resulted in chasing all the men off the road who had failed to quit the Brotherhoods. Encouraged by this success and the weakness of the men remaining on the road, this man has been pursuing a course which makes onlookers believe that he is trying to see how much petty tyranny American citizens can endure without revolting. The latest product of this animal's ingenuity for torture is the enforcing of an order that trainmen shall trim their beards after a special Reading formula. This followed an order regulating the buttoning of coats. The penalty of disobeying the idiotic orders of this asinine martinet is dismissal from the service. This human terrorist cannot torture the people who come in his way without the connivance if not the encouragement of his superiors. The Reading company has been practically ruined through fighting with the employes, and the officers now responsible for the acts of such contemptible reptiles as Bonzano, ought to remember that there is a limit to human endurance, even for men who have no union behind them. Apart from the disgusting immorality of the senseless oppression is a very expensive luxury indulged in toward railroad employes. We know of no employer who is more dependent on the hearty cooperation of his help than a railroad company trying to operate economically. With hostile help the richest railroad will soon find its way on the road to ruin.

A PUZZLED GRANGER.

New York Ledger: A farmer read in an agricultural journal: "A side window in a stable makes a horse's eyes weak on that side; a window in front hurts his eyes by the glare; a window behind makes him squint-eyed; a window on a diagonal line makes him shy when he travels, and a stable without windows makes him blind." The farmer has written to the editor of the agricultural paper asking what effect a window without a stable would have on his horse's eyes.

A NEW CLUB CAR.

One of Four Carrying Commuters Between Plainfield and New York City.

The Howard Club, a body of New York business men living in Plainfield, N. J., and headed by Mr. L. E. Howard, of the fancy goods trade, has exchanged its old club car on the Central New Jersey for a palace on wheels. The new club car cost \$15,000, and comes from the Harlan & Hollingsworth shops at Wilkesbarre. It is 72 feet long and 9½ feet wide. The exterior is painted an olive green, with the name Howard in plain gold script on the sides. The rattings and brakes are of iron and coppered brass, and the whole car is as solidly built as a Pullman sleeper. Two six-wheeled trucks carry it comfortably along, while the lucky members privileged to occupy it with their families loll in big mahogany arm chairs. You enter by a narrow little aisle at one end, on each side of which are closets for a lot of purposes. The steam heater is boxed up by itself. A swinging door opens into the first compartment, richly furnished and carpeted. The decorations are in mahogany and oak, with a light pencilling in gold color on the ceiling. Gas lamps with brass ventilators hang from the ceiling, and the sliding ventilators running along the car top are fitted with stained glass. The windows have double panes 2x3 feet in size with flexible cloth curtains. Between the windows are mirrors fitted into false doors unlocked with keys. The little closets are for cards and other things to make the moments fly. Below the mirrors card tables are laid against the wall. There are four leather cushioned chairs to each table, and on the other side are twelve Bank of England arm chairs with leather backs and foot cushions. A swinging door opens into the next compartment for the smokers. It has ten arm chairs and four card tables. The decorations are as in the first compartment. The door at the end has a little aisle and storm door, with leather-seated alcoves on each side instead of closets. The partition dividing the car has a big leather-cushioned sofa three feet high on each side, and above that the partition is of plate glass, the swinging door being to one side instead of in the center. When full this traveling palace will hold seventy-five persons. It is attached to the 7:58 train leaving Plainfield in the morning and makes the return journey at 5:30 in the afternoon. The old club car is being refurnished for a new commuters' club. When it is put on the road again there will be four club cars running on the Central from Plainfield.

ABOUT MEN.

Atchison Globe: A man who attempts to flatter you takes you for a fool.

Man, like the fire, is apt to torment women by going out at night.

A good many are unable to prove that the world owes them a living.

A lucky man: a man who marries a widow whose first husband was mean to her.

The poorer a man is the more apt he is to refuse the pennies you give him in change.

There is always something for a man to do: when everything else fails he can worry.

SLEEPING CAR TROUBLES OF WOMEN.

Buffalo Express: This is the season when thousands of people who have comfortable homes are cherishing vivid impressions of nights spent in uncomfortable sleeping cars.

People of wealth and refined breeding are returning from the summer resorts, from Europe, the sea shore and the mountains. For most of those who live in inland cities this return necessitates a long journey in a sleeping car. One night at least, perhaps two or three days and nights of continuous travel, are passed in the sleeping or drawing-room coaches.

Not even the most fastidious can reasonably find fault with the construction of these cars, on purely æsthetic grounds. Beautiful woods, polished metals, beveled mirrors, embroidered hangings, silk upholstery and rich carpets are lavishly provided. Possibly—there is room for doubt—the best ventilating arrangements that can be devised, consistent with keeping out cinders and dust, are made, but waive that. Certain it is that during the hours of daylight the discomforts of travel are transformed into pleasures by occupancy of the shining carriages with which the name of Pullman, or Wagner, or Mann is associated.

It is, however, with a sleeping car as a car for sleeping that a man's inventive genius lags. Especially in woman's behalf ought some new devices to be hit upon. Most women who travel in sleeping cars are accustomed to considerable privacy in their hours of retirement at home. When they travel in the sleeping car, how is it?

When the porter has made up her berth, madam crawls behind the curtains. Let us mercifully suppose it is a lower berth, and omit the disclosures of the top shelf. If madam would get any rest behind those loosely buttoned curtains she must at least unfasten her clothing, let down her hair, and take off her shoes. More than this she seldom does attempt. A tight-sleeved dress-waist is about as comfortable a thing to sleep in as a suit of armor would be, but unless she is a veteran traveler, or more than ordinarily indifferent to possible observation, she will not attempt to remove it. In the morning she puts herself together as well as she can behind the curtain, and scurries to the toilet room, where every woman in the car contends for the use of limited privileges. When all this ordeal is over and madam resumes her seat in the midst of the confusion, the porter is making up the berths, one after another, as their occupants leave them, and there is a procession back and forth through the narrow aisle of unwashed men, most of them far more undressed than the refined woman cares to see.

It is not necessary to finish the picture by painting in more of the disagreeableness with which every one who travels is familiar. The wonder is that the experiment of providing separate sleeping apartments for women has not been tried ere now by the builders. A bulkhead across the car which should cut off certain sections adjoining the women's toilet room and reserve them for the night use of women travelers, while not an ideal arrangement, would commend itself to the traveling public, and would reduce in the eyes of the modest woman the terrors of a night and morning in a sleeping car.

W'EN DE CRICKETS AR' A-CHRPIN'.

W'en de summer days ar' come, an' de air ar' pure
an' sweet
Wid de perfoom ob wild flowers fum de lea,
An' de yell-heart daisies 'spray de green grass
'neaf yer feet.
An' yer h'ar de buzzin' ob de honey-bee:
When de sun hit ar' a-hidin' 'hind de cloud-banks
in de wes',
An' de peaceful ebenin' twilight's come at las',
An' de hull airf seems at res'—dat's de time whut I
laks bes'!
W'en I h'ar de crickets chirpin' in de grass.

W'en de yowls dey ar' a-hootin', and de whippo'
will ar' callin'
Fum de woods down by de clear an' tricklin'
stream,
An' de lightnin' bugs ar' sparklin' troo de shadders
dat ar' fallin',
An' de bright light from de glow-worm hit ar'
seen—
Den I sits outside mer cabin-do' upon mer liddle
stool,
An' dreams ob all de good ole day's whut's pas',
W'ile de ebenin' breeze ar' blowin' fum de medder,
fresh an' cool,
An' de crickets ar' a-chirpin' in de grass.

W'en de ole toads ar' a-pipin' dere sharp notes fum
'mong de trees,
An' de song-birds dey hev all gawn to der res',
An' de lowin' ob de cattle comes a-stealin' on de
breeze—
W'y dat's de time dis yere coon luks de bes'
An' I jes' sits dar a-lin'nin' an' a-starin' all aroun'.
W'ile a magic spell appears to hol' me fas';
But 'bove de res' I loves to h'ar de dreamy, lullin'
soun'
Ob de chirpin' ob de crickets in de grass.

W'en life's pilgrimage am ober, an' I'm laid beneaf
de sod,
Fur away fum scenes I lubs so mighty well,
Dis aperit' 'll return—wid de sankshun ob its God—
Mebbe, I say, an' who kin surely tell?
But whut I'll sometimes sit yere in de golden twi-
light glow,
An' fore my aperit's eyes loved forms 'll pass.
W'ile I listen to dat dear ole soun'—dat soun' whut
I loves so—
De chirpin' ob de crickets in de grass!
George W. Sounden,

THE VOICE OF LABOR.

Cosmopolitan Magazine: The world seems to be stretching its limbs and turning uneasily in its second stage of the dawn which precedes awakening to the dignity and necessity of labor, for it is now fashionable to believe that not part but all of its sons and daughters must learn to labor. No longer do we hear the crude cry of the French revolution: "Down with the rich man," but the more civilized one of "Down with the idle classes." "There must be no idle classes," says the optimist, and further, "If the interests of production do not require it, the interests of morality do." Tolstoi goes to his plow to teach the world by example; Bellamy writes a book that has already profoundly stirred a million hearts; Henry George, in England, and Padre Agostino, in Italy, all discuss the one subject—equitable division of property, and still more important, equitable division of toil. The things they say are uncomfortable for some of us. We yawn and rub our eyes. Can this be an awakening to the purer Christianity, which means highest civilization? The world has become alert: it is listening for every footfall along its pathway of advance.

A LOCOMOTRESS.

"I ran across a woman engineer once," said an engineer to a Chicago *Herald* reporter. "Her father used to own a big saw mill, and, being an engineer himself, he taught the trade to his daughter. She was a little wild, I guess, and ran away from home to take an engine on a little narrow guage track in the Arkansas woods, dressing like a man and wearing her hair short. Then she got a freight train on the Iron Mountain road from Poplar Bluff to St. Louis. She held that until she went to sleep one night and ran plump into a freight on a crossing. Then she skipped, and turned up afterwards on the 'Q' road at the time of the big strike. I knew her father well and he often asked me if I saw her. Finally one morning when I was pulling out of Chicago on a Rock Island train I saw her backing a 'Q' engine down to the yards. I called her by name, and when I started out next morning she came to my cab, got on and rode out a way.

"I never saw her again till just before I quit the road. She came to me at Council Bluffs one night and wanted to ride to Chicago. She had no money and was discouraged, and I let her ride, although it was against the rules. She sat before me and ran my engine half the night. She seemed to be watching for something, and didn't talk much. At last, just before midnight, while we were passing through a stretch of woods, she threw over the lever, set the air brakes, and fetched the train up with bump inside of a hundred yards.

"What's the matter?" I asked. "Man on the track: don't you see him?" she said, and jumped to the ground. There was a man on the track, but I hadn't seen him before, and I didn't believe that she saw him when she stopped. Just then I heard a shot fired, and looking back saw a group of fellows trying to smash in the side door of the express car.

"Go ahead if you can, John," yelled the conductor. "Go ahead, for God's sake," came from the express messenger, and I let on the steam again. The man who had been lying on the rails was gone. We gathered headway rapidly and the fellows who had been pounding the door tried to get on the cars. But as the train went faster they jumped to the ground and escaped. The woman is in with a gang of train robbers and is doing good work for them. I shouldn't wonder if she made her scheme work some night and her pals will get a big haul. But they didn't take anything out of my train, and if I ever see her again I'll send her where she'll have lots of time to be despondent, and where she'll wish she never saw a steam gauge."

Scientific American: Nilsson remarks that the weight of the great Greenland or right whale is 100 tons, or 220,000 pounds, or equal to 88 elephants or 440 bears. The whalebone in such a whale may be taken at 3,360 pounds and the oil at from 140 to 180 tons. The remains of the fossil whale which have been found on the coast of Ystad, in the Baltic, and even far inland in Wangapanse, Westergothland, betokens a whale which although not more than between 50 and 60 feet in length, must at least have had a body twenty-seven times larger and heavier than that of the common or right whale.

DANTE.

The singer who in Italy of old
Grew lean of sorrow and his great endeavor
To lead life by a passage high and bold
To gaze upon its destiny, while ever
Love to the living should out mercy hold—
They say was proud; nor could his own worth
sever

From what he claimed its due from men who went
Up and down Florence on light aims intent.

True! He who with an unclugged purpose lifts
His heart beyond whatever his eyes may reach,
Lays hard hands on himself and sternly sifts
For what in him is best and none may impeach;
So that unto mankind Heaven's gracious gifts
He may impart, and their high uses teach
By means most potent—he of joy forlorn,
May seem to meaner men a man of scorn.

With eyebrows drawn and sad, averted face
He walks beyond the outskirts of the crowd,
And with austere hand holds his robe in place;
Most silent when men's laughter is most loud:
A blind severity to all the grace
That vice from virtue steals. Men call him proud;
Yet he himself knows well what is his loss,
And his own hand his heart nails to the cross.

Had Love a secret that she hid from him?
Her graciousness and glory he had seen,
Her all-sufficing beauty was made dim,
He knew, because the purblind race of men
Sought first to find in her the Seraphim
Of their desires exalted to be queen,
Dethroning her they knew not; but he knew,
Yet, was there something hidden from his view?

Nay! All that eye could tell of her he knew,
And all that brain conceive or fancy draw.
Rapt in majestic vision high he flew,
Till on the clear steps of God's throne he saw
Her full beatitude, and to him drew
The sweetness of her look. Still pain did gnaw
His heart. But had she come with gentle breast
And leaned to him, perchance he had found rest.
Macmillan's Magazine.

IT MAY BE SO.

Indianapolis News: The Chicago & Alton Railroad, in its annual report, suggests the ownership of railroads by the General Government, and the organization of a corps of railroad operators, who shall remain in the service during good behavior, and be in no greater degree under the influence of politicians or political parties than the army militant. It elaborates its suggestions, meaning it all to be what Artemus Ward calls "sarkasum." And yet it is not highly improbable that the railroad's sarcasm may become a very binding paraphrase of the truth. The governments of other people control the railroads, and yet no other people on earth has been so plundered by railroads as we American people. Aside from this there is a general awakening. There is a tendency toward having for the common weal that which is created by the common industry; such as the value of franchises, for example. In this age of machinery, too, the means of transportation have come to be such an enormous and unique necessity and power that earlier views on the subject are not applicable. It made no difference beyond inconvenience, what a stage coach line might do; whereas a railroad line holds the industry, property, and, so to speak, the life of the contributory country in its grasp. As railroads are a new mode of locomotion, they have created new conditions, and may require yet other new regulations for common justice and the general welfare.

A TRUE WOMANLY ACTION.

A Street Incident That Carries a Lesson of Kindness.

"A fellow feeling makes one wondrous kind," said Garrick; and all tender helpfulness springs from the faculty of instantly putting one's self in another's place. The Rochester *Democrat* narrates a pleasant incident as having taken place in that city.

A gypsy woman was carrying a bouncing young "Romany," and the gay handkerchief she wore twisted about her head instead of a bonnet was on the point of slipping off and falling on the dirty sidewalk. Having both arms full of baby she could not readjust her headress, and her evident distress over what seemed a rather trifling matter seemed a fit subject for laughter to the bystanders.

Just then a handsomely dressed lady came along, and evidently took in the situation at a glance. She walked directly to the gypsy woman, smiled an "Allow me," reached across the not overclean baby, and with her dainty gloved hands tied the handkerchief under the woman's chin. Then she gave the repaired headdress a little twitch at the sides to set it straight and with another smile and that final pat with the hollow of the hand, with which all women put the finishing touch to a bow, went on her way.

We should be sorry to think such an act worth telling because it was unusual—though too many in the same circumstances would have considered it beneath caste to lend hands to a gypsy. The lady certainly did what any real lady would do.

HOW MANY AND HOW THEY LIVE.

Philadelphia Record: The human family living to-day on earth consists of about 1,450,000,000 individuals; not less, probably more. These are distributed over the earth's surface so that now there is no considerable part where man is not found. In Asia, where he was first planted, there are now approximately 800,000,000 persons, densely crowded; on an average about 120 to the square mile. In Europe there are 350,000,000, averaging 100 to the square mile—not so crowded—but everywhere dense, and at all points over-populated. In Africa there are 210,000,000. In America, North and South, there are 110,000,000 relatively thinly scattered and recently settled. In the islands, large and small, probably 10,000,000. The extremes of the white and black are as five to three; the remaining 700,000,000 intermediate brown and tawny. Of the race, 500,000,000 are well clothed, that is, wear garments of some kind to cover their nakedness: 700,000,000 are semi-clothed, covering inferior parts of the body; 250,000,000 are practically naked. Of the race, 500,000,000 live in houses partly furnished with the appointments of civilization; 800,000,000 in huts or caves with no furnishing; 250,000,000 have nothing that can be called a home, and are barbarous and savage. The range is from the topmost round—the Anglo-Saxon civilization, which is the highest known—down to naked savagery. The portion of the race lying below the line of human condition is at the very least three-fifths of the whole—900,000,000.

MY FIDDLE.

My fiddle? Well, I kind o' keep her handy, don't you know?
Though I ain't so much inclined to tromp the strings and switch the bow

As I was before the timber of my elbows got so dry,
And my fingers were more limber-like and caperish and spry.

Yet I can plunk and plunk and plink
And tune her up and play,
And I lean back and laugh and wink
At every rainy day.

My playin's only middlin'—tunes I picked up when a boy—

The kind o' sort o' fiddlin' the folks call corduroy;
"The Old Fat Gal" and "Ryestraw" and "My Sailor's on the Sea"

Is the cowillions that I saw when the ch'ice is left to me.

And so I plunk and plunk and plink,
And rosum up my bow.

And play the tunes that make you think
The devil's in your toe.

That's how this dear old fiddle's won my heart's endurin' love!

From the strings across the middle to the schreechin' up above—

From her aperrn, over bridge, to the ribbon round the throat,

She's a woolin', coolin' pigeon, singin', "Love me" in every note!

And so I pat her neck and plink

Her strings with lovin' hands,

And list'nin' clost, I sometimes think

She kind o' understands!

James Whitcomb Riley.

THE TELEGRAPH SUGGESTED IN 1661.

The Rev. Canon Jackson, of Leigh Delamere, 'Chippenham, writes as follows to the *Bath Chronicle*: "Joseph Glanville, sometimes called 'Sadduceismus Triumphatus Glanville,' rector of Bath from 1666 to 1672, was a learned writer upon abstruse and mystical subjects, but in a style of which it is not always easy to catch the meaning. In one of his treatises, called 'The Vanity of Dogmatizing,' printed in 1661, chapter xxi, he is speaking of 'supposed impossibilities, which may not be so.' In the concluding sentence of the following passage he seems to have anticipated the electric telegraph: 'But yet to advance another instance. That men should confer at very distant removes by an extemporary intercourse is a reputed impossibility; but yet there are some hints in natural operations that give us probability that 'tis feasible, and may be compassed without unwarrantable assistance from daemoniac correspondence. That a couple of needles equally touched by the same magnet, being set in two dials exactly proportioned to each other, and circumscribed by the letters of the alphabet, may effect this 'magnale' (i. e., important result), hath considerable authorities to avouch it. The manner of it is thus represented. Let the friends that would communicate take each a dial: and having appointed a time for their sympathetic conference, let one move his impregnated needle to any letter in the alphabet, and its affected fellow will precisely respect the same. So that would I know what my friend would acquaint me with, 'tis but observing the letters that are pointed at by my needle, and in their order transcribing them from their sympathized index as its motion directs: and I may be assured that my friend described the same with his; and that the words on

my paper are of his inditing. Now, though there be some ill-contrivance in a circumstance of this invention, in that the thus impregnated needles will not move to, but avert from, each other (as ingenious Dr Browne hath observed), yet this cannot prejudice the main design of this way of secret conveyance: since it is but reading counter to the magnetic informer, and noting the letter which is undistant in the abecedarian circle, from that which the needle turns to, and the case is not altered. Now though this desirable effect possibly may not yet answer the expectations of inquisitive experimenters, yet 'tis no despicable item, that by some other way of magnetic efficiency, it may hereafter with success be attempted, when magical history shall be enlarged by riper inspection; and 'tis not unlikely but that present discoveries might be improved in the performance.'"

JOSH BILLINGS' PHILOSOPHY.

New York *Weekly*: I haven't much doubt the man sprung from the monkey; but what bothers me, iz, where the cussid monkey sprung from.

Most enny boddy thinks they can be a good paze and they can, but tew play the pool good iz nett handy.

It may be a little vexashus, but I don't konsider enny disgrace tew be bit bi a dog.

Abuse generally iz helthy, but sometimes it cum from so low a source that it don't do a manent good.

It takes more time and tallents tew be a suckers ful hippokrit than it duz tew be a Christian.

There are but few things that we suffer more misery from than we do from cowardice.

The cluss intimacys ov old age seem tew konsist: kompareing gout and rumatiss.

Mankind in general seem tew take about as mu pride in bragging ov their faults az ov their vices.

About the best that enny ov us kan do iz tew ke ceal our phailings.

Persons ov the koldest naturs, when they doler love the fiercest; so green wood when it grins burning makes the hottest fire.

Most ov the eccentricitys we meet with amunt men iz mere affektashun.

Pashunce iz a good thing for a man tew hav, provided he don't hav too much ov it; there iz a pou at which pashunce begins tew be ignorance.

Take the mystery out ov things and they lose w thirds ov their attackshun.

When a man iz thoroughly lazy, he iz good for nothing only tew shoot at.

There would be but mighty phew sekrets in th world if folks would tend tew their own bizness.

A BEERY BAD HABIT.

Danville Breeze: "Papa, what makes you hold your cup of tea up and blow across the top of it always? There are no flies on it, are there?"

"No, Johnny, no flies. But it is the result of a bad habit that you will probably know more about when you get older. I wouldn't mention it again if I were you."

TO UTILIZE A GREAT WATER POWER.

Fire and Water: A business transaction has just been consummated, according to advices from St. Paul, Minn., which involves a scheme to utilize the water power of the great Kakabikika Falls, a few miles from Port Arthur, Ont. Deeds have been recorded by which Thomas Marks, of Port Arthur, conveys to Dr. A. M. Eastman, of St. Paul, and R. J. Anderson of Minneapolis, representatives of a wealthy St. Paul, Minneapolis and Philadelphia syndicate, the property known as Kakabikika Falls, containing 480 acres and the water rights to the Kaministiquia River at that point. The river there is 350 feet wide, with a perpendicular fall of 100 feet, and can be developed to furnish 200,000 horse power.

The new proprietors propose to build at that point a Canadian Minneapolis. With this end in view a large tract of adjoining property has been secured which will give ample space for a city. A large amount of capital is behind the scheme, and it is proposed to build there flouring mills equal to those of Minneapolis for grinding Manitoba wheat; pulp and paper mills for utilizing the poplar forest adjoining; reduction works for turning the silver ores of the neighboring mines into bullion; blast furnaces, saw mills and factories of all descriptions for the output of which a market can be found.

Eventually it is intended to use a portion of the power for generating electricity, to be used not only for local purposes, but also to operate the silver mines. The Port Arthur, Duluth & Western Railway is extending its lines two miles to the falls. A branch of three miles will connect the Canadian Pacific with the new city. Engineers are now on the ground to make a complete topographical survey, in order that the plans may be made as complete as possible.

BRIGHT'S DISEASE.

Physicians Don't Know Much About and Can't Do Much With It.

Louisville Post: "What is this Bright's disease which carried off Judge Jackson, Mr. Wilder, Mr. James Carter and seems so prevalent among prominent people?"

"It is a name applied," said the physician, "to certain maladies first investigated and described by Dr. Bright, an English physician. The seat of the disease is the kidneys, and certain forms of it are inevitably fatal. Doctors make a distinction between four or five different maladies, all of which are called Bright's disease. But they all consist in some sort of degeneration of the kidneys. There is waxy degeneration, fatty degeneration, a shriveling up of the organ in question, and so on—but every one kills the sufferer in the end by means of uraemic poisoning. Sometimes a man may have the disease for years, while in other cases it may prove fatal in a few weeks. It comes on in the majority of cases so insidiously that the patient may not know there is anything the matter with him until he is past permanent relief."

"What are the causes?"

"It is frequently attributed to excessive use of

liquor, especially malt liquor. But this cause is by no means so frequent as the public imagines, and some leading medical writers deny that drinking has anything to do with it at all. I have known many cases where it killed men who were total abstainers from liquor all their lives. In my opinion it is much more often due to over eating than to over-drinking. It seems to be one of the results of this nervous dyspepsia, our national disease, caused by over-work and constant nervous strain. Heavy feeding with constant mental labor and lack of exercise is, I think a prevailing cause; while among the poor a low diet, damp houses and exposure will produce it. The doctors can't do much with the disease. Sometimes a patient seems to get well, but the physicians really can't tell what produced the improvement. A sufferer with chronic Bright's disease is very apt to drop off suddenly with some supplementary malady—especially pneumonia—which is almost always fatal in a nephritic sufferer. Forms of heart and brain trouble are also superinduced. The symptoms of Bright's disease are not distinctive until the last stages. So don't imagine you've got it unless a reliable physician tells you so. The prevention for it? Observe the common-sense rules of health as to diet, exercise, fresh air, sleep and work."

THE RARE URANIUM.

Uranium is classed among the rare metals. Its rarity is indicated by its market price, which is about \$12,000 a ton. This metal is found in Cornwall, Saxony and Bohemia; but up to the present time it has only been met with in isolated pockets and patches. A valuable find, however, of a continuous lode has been made at the Union mine, Cornwall. This discovery is regarded as unique in the history of the metal, for the lode is what is known as a true fissure vein, and the ore is found to contain an average of 12 per cent. of the pure metal, the assays going up as high as 30 per cent. in some parts of the lode. It is anticipated that this discovery will enable several important applications of the metal to be followed up. Uranium may, for instance, be used as a substitute for gold in electro-plated ware, inasmuch as with platinum and copper it forms two beautiful alloys, each having the appearance of gold, and the former also resisting the action of acids. On account, too, of its high electrical resistance, it is likely to be largely used in electric insulations.

THE MILE RECORD.

The English and American mile is . . .	1,760 yards.
The Scotch mile is . . .	1,984 yards.
The Irish mile is . . .	2,240 yards.
The German mile is . . .	8,106 yards.
The Dutch and Prussian mile is . . .	6,480 yards.
The Italian mile is . . .	1,766 yards.
The Vienna post is . . .	8,296 yards.
The Swiss mile is . . .	9,153 yards.
The Swedish and Danish mile is . . .	7,341.5 yards.
The Arabian mile is . . .	2,143 yards.
The Roman mile is . . .	1,628 or 2,025 yards.
The Russian verst is . . .	1,167 or 1,337 yards.
The Tuscan mile is . . .	1,808 yards.
The Turkish mile is . . .	1,826 yards.
The Flemish mile is . . .	6,800 yards.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

OCTOBER, 1890.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1st, 1890. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 50 of the Constitution, you are hereby notified that the dues for the quarter ending January 31st, 1891, (such an amount as may be determined by the several Lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable, and must be paid to the Collector of your Lodge on or before NOVEMBER 1st, 1890. This amount will be in full payment of all Subordinate Dues and Beneficiary Assessments levied by the Grand Lodge for said quarter, as provided in section 134 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to January 1st, 1891, are liable for the full amount of Quarterly Dues for said quarter. All members initiated during January (from the 1st to the 31st inclusive,) are exempt from payment of Quarterly Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect November 2d, 1890, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1, 1890. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 51 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their Quarterly Dues for the quarter ending January 31, 1891. The names of said members must be reported to you by the Collector of your Lodge not later than November 2d, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold Subordinate Lodges liable for their assessments, as per Section 55 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Protective Fund Dues Notice.

OFFICE OF THE GRAND LODGE B. OF L. F.,
TERRE HAUTE, IND., October 1, 1890. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to the action of the Second Biennial Convention of the Brotherhood held at San Francisco, Cal., from September 8th to September 15th, 1890, inclusive, you are hereby notified that Section 215 of the Constitution, providing for the collection of Protective Fund Dues, is suspended on and after November 1st and until otherwise ordered by the Grand Lodge, and Collectors will therefore make no collection of Protective Fund Dues, for quarter ending January 31st, 1891, nor until otherwise directed by the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Custodians of Protective Fund.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1, 1890. }

To Custodians of Protective Fund:

SIRS AND BROTHERS:—Pursuant to Section 215 of the Constitution, you are required to forward to the Grand Lodge, not later than November 1st, a report of the Protective Fund of your Lodge for the quarter ending October 31st, 1890. Two blank forms have been forwarded to your Lodge for this purpose; one copy of your report is to be filed with the Lodge, and one copy to be forwarded to the Grand Lodge as above provided.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1, 1890. }

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 56 of the Constitution, that no beneficiary assessment is required for the month of October, 1890, and that therefore none has been levied for said month.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Beneficiary Statement.**RECEIPTS.**

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., September 1, 1890.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month of August, 1890:

GRAND SPECIAL SALE —OF THE— RAILWAY MEN'S FAVORITE WATCH!

We are making a strenuous effort to introduce our Goods among railway men throughout the United States, and in order to attain our object we are well aware that it is necessary to offer you the best goods, at prices so low that you cannot afford to buy elsewhere. **BEST IN THE WORLD!**

The Deuber-Hampden Watch! Cheapest House in America

The John C. Dueber movement, made by the Hampden Watch Co., is suitable to the railway service in every respect. It is solid nickel, handsomely damasked, full ruby jeweled (4 pairs in gold settings) chronometer balance, patent pinion and escapement, Breguet hair spring, patent regulator, and accurately adjusted to heat, cold and position. This movement is specially guaranteed by the manufacturers to be the best time-keeper in the world. It will not make any noticeable variation of time, and is, consequently, almost indispensable to railroad men.

We quote the John C. Dueber movement in Sil-

14 K Gold-Filled Case, Hunting, Louis XIV. style (see cut), handsomely engraved, in assorted designs, warranted to wear 20 years, with the John C. Dueber movement . . . \$25.00
Any watch described above will be shipped by express, C. O. D., subject to a thorough examination on receipt of \$1.00 as a guarantee of good faith, which amount will be credited on the bill.

All goods guaranteed exactly as represented.

References: Your local Bankers, Managers of Express Companies doing business in Chicago, and Prairie State National Bank of Chicago.

Our 160 page illustrated catalogue will be sent to any address on receipt of 25 cents in postage stamp. This amount will be credited on your first order.

Our Watch and Jewelry Repairing Department is the best equipped in America. Fine and complicated work promptly done at wholesale prices.

Established 1874.

JOS. P. WATHIER & CO.,
Manufacturers, Importers and Wholesale Dealers in Watches, Diamonds and Jewelry, 178 W. Madison St., Chicago, Illinois.

THE FIREMEN'S MAGAZINE recommends the above firm as thoroughly reliable.

All Our Goods Are Warranted!

verine, Coin Silver and Gold Filled cases. Silverine cases are guaranteed to retain their color, equal to coin silver. Our Coin Silver cases are of full standard value. The Gold Filled cases are made of two heavy plates of solid 14 K Gold over fine composition metal and are warranted to wear 20 years.

READ OUR PRICES

- 4 oz. Silverine case, open face, with the John C. Dueber movement . . . \$25.00
- 4 oz. Coin Silver case, open face, with the John C. Dueber movement . . . \$25.00

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

BAKER CITY, ORE., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe it far superior to any other Dinner Pail now in use, and will take great pleasure in recommending it to all railroad men.

Yours truly,
DR. T. N. SNOW,
Surgeon.

Size of No. 2 Pail is 9½ inches long by 5½ inches wide by 9½ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth 'tall order received we will refund the money and end the Pail free of expense. Try one.

To the Agent obtaining the SECOND LARGEST number of

PAID SUBSCRIPTIONS

On the books of the Grand Lodge December 1st, 1890,
one HANDSOME

GOLD WATCH.

The LOCOMOTIVE FIREMEN'S MAGAZINE is known to be the best publication of its kind on the continent.

MAGAZINE AGENTS need not hesitate to recommend the MAGAZINE to Railroad men—and to all others who are interested in labor problems.

NOW IS THE TIME TO SUBSCRIBE.

Throwing a Switch

is tough work in stormy weather, and the switchman cannot be too well protected if he wishes to preserve his health. Every railroad man's life is full of hardship and exposure. The only garment that will fully protect the man whose business calls him out in stormy weather is the "Fish Brand Slicker." They are light, but strong as iron, handmade throughout, and good for years of service. They are worth ten times their cost, and will save you many a sickness. No other article of clothing will stand the wear and tear. Rubber is frail, will rip, tear, and let in the wet. Therefore get the right sort of coat. The "Fish Brand Slicker" is the only one for your purpose. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Do not accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER, - Boston, Mass.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1899.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1899.

To BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the unprincipled representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division, No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name, one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

CHAS. T. BROWN,
Special Agent, Mechanical Department of Railroads, Indianapolis, Ind.

CELEBRATED

Pocahontas Semi-Bituminous Coal

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1888. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,800,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

NON-MAGNETIC WATCH.

CACTUS BLOOD CURE

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico DIVISION 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with a like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1899.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,
Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

† A. P. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

ANOTHER UKASE AND AN- OTHER CZAR IN THE SADDLE.

The wires, controlled by J. Gould, have never flashed over the continent a more cruel edict than the following. It bears date New York, October 2d:

OFFICE OF THE THIRD VICE PRESIDENT:
Messrs. J. M. Toucey, Gen'l Man'gr; Theo. Voorhees, Gen'l Sup't.; Walker Katte, Chief Engin'r; Wm. Buchanan, Sup't. Motive Power and Rolling Stock.

The recent strike, the acts of lawlessness committed in connection therewith, the published correspondence between the leaders of the organization that ordered it, and the fact that many men now seeking re-employment state that they quit work from fear of personal violence, and did not dare to resume work for the same reason, compel the management of this company to announce that it objects to its employes being members of the organization known as the "Knights of Labor."

The management is satisfied that membership in this particular organization is inconsistent with faithful and efficient service to the company and is likely at any time to prevent it from properly discharging its duties to the public. You will at once take such action as will bring this circular to

the attention of the employes in your respective departments.

H. WALTER WEBB,
Third Vice President.

In what we have to say on the foregoing pronunciamiento of the autocrat Webb, we do not propose to debate the question of the strike on the New York Central & Hudson River Railroad, except in so far as it relates to organized labor.

There was a strike on the New York Central Railroad, ordered by the Knights of Labor. It was not successful. The Knights were defeated. The corporation was victorious.

The Knights charged that members of their order had been discharged because they were members of the order.

This was denied, but the facts did not substantiate the denial. All subsequent proceedings indicated very conclusively that the men had been discharged because they were Knights of Labor.

At an important juncture efforts were made to induce H. Walter Webb to recognize the Knights of Labor, as a labor organization and, by conference, seek to find out if the discharged men had not been wrongfully treated.

The proposition was eminently right, founded in justice, and recognized as proper by all fair minded men. But Mr. H. Walter Webb peremptorily refused all such overtures. He claimed the right to discharge men, singly, by scores or hundreds, without reference to any organization. He maintained that his will was supreme, and drawing inspiration from the maxim that "the king can do no wrong," treated with

haughty disdain every proposition indicating that the discharged men had any rights that he was under any obligations to respect or consider. He went so far, that when F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen, and President of the Supreme Council of the Federated Orders of Railway Employés, put the question to him, "if, in the event of a grievance on the part of firemen, members of the Brotherhood, he (Webb), would treat with him (Sargent) as its chief executive officer," he declined to make a direct reply. He evaded the question, the meaning of which was, that he would not recognize the Grand Master of the Order of Locomotive Firemen.

In this, we have, not only the position of H. Walter Webb, Third Vice President of the New York Central R. R., but we have the position of the first and second vice presidents, and the position of Chauncey M. Depew, President of the corporation, and the position of the millionaire Vanderbilts, principal owners of the road, and that of the directors of the corporation and the stockholders and bondholders of the road.

It is not supposable—the proposition is not to be entertained for one moment—that H. Walter Webb, Third Vice President, an exceedingly small man, would take the liberty of dealing a blow squarely in the face of organized labor if he were not backed up by all the official and moneyed power the corporation could command.

This H. Walter Webb concluded to make his first attack upon the Knights of Labor employed on the Central. It is in testimony that he made the attack on these men, anticipating a strike, for which he asserts he was not altogether unprepared. He had had his "eye out" for scabs and Pinkertons. He was ready, as he said, to spend millions to beat the Knights, and from all quarters the scabs and thugs swarmed upon his roads and the defeat of the Knights was assured.

But another movement was required to satisfy the public that the time had arrived for robust treatment. It did not take long. The country was horrified by the account of an infernal plot to wreck a train.

It was alleged that the awful crime was perpetrated by Knights of Labor, and im-

mediately men were arrested. Then came alleged confessions. This done, the way was prepared for H. Walter Webb's proclamation.

Suppose it be true that the men who wrecked the train were Knights of Labor: does any one believe, therefore, that all Knights of Labor employed on the Central should suffer the penalty of a discharge from employment?

The declarations of Chauncey M. Depew, President of the Central corporation, are in direct conflict with such a monstrous perversion of justice.

The Associated Press dispatches report Mr. Depew as follows:

NEW YORK, September 22.—Chauncey M. Depew was to-day asked what he thought of the train wreckers.

"This is a matter," he said, "which I think concerns the public much more than it does the New York Central. The people must be the prosecutors, not the company. The loss of property which the company has suffered is a mere bagatelle compared to the awful jeopardy in which human life has been placed. I do not think we have yet begun to realize what an awful crime train wrecking is. It is the worst and most brutal form of murder."

"Do you think that the Knights of Labor are largely implicated in the matter?" he was asked.

"Most certainly not. Of course not. No large body of men could be got together anywhere in this country who would sanction such work. There are some bad men in all organizations. I know the Knights of Labor are not responsible for this work. But it looks as if some bad men who are Knights of Labor are responsible for it."

"Do you believe that Lee was an accomplice in any way?"

"I am a lawyer by profession. I do not, therefore, believe that any man is guilty of a charge made against him until he is conclusively proven guilty. It is too soon to say that of Mr. Lee."

Mr. Depew, in the foregoing, completely exonerates the Knights of Labor as an organization from any knowledge or complicity in the crime of wrecking trains. He says: "*I know the Knights of Labor are not responsible for this thing.*" It looks to him as though "some men who are Knights of Labor are responsible for it."

Admit it for all that it is worth, admit it as absolutely true, why does H. Walter Webb impose a penalty for it on all Knights of Labor employed on the Central?

And how does it happen that between the 22d of September and October 2d, just ten days, Mr. Depew permits an underling to

issue a sweeping order against all Knights of Labor in the employ of the Central?

The conclusion is inevitable that the officers of the New York Central & Hudson River Railroad Company have determined, as soon as practicable, to banish organized labor from their system. They have determined to Corbinize their road.

The Supreme Council of the Federated Orders of Railway Employés, at its meeting held in Terre Haute, August 25th, 1890, said:

The course pursued by H. Walter Webb towards Mr. Powderly and the Knights of Labor, notwithstanding his declarations to the contrary, evinces a purpose to disrupt and destroy labor organizations on the New York Central & Hudson River Railroad, as was done by Austin Corbin on the Philadelphia & Reading.

Does the order of H. Walter Webb, which is reproduced, demonstrate the prescience of the Supreme Council's declaration?

It is the view taken of the situation by the New York *Herald* of October 3d. The article (editorial) is so opportune, so clear in its utterances, covering as it does the whole field of discussion, that we reproduce it entire, as follows:

The New York Central issued an order yesterday which is as startling as it is radical.

Third Vice President Webb declares that the corporation "objects to employés being members of the organization known as the Knights of Labor."

He thereupon intimates that the road will hereafter make it a condition that all laborers shall resign their membership as Knights or be dismissed.

So important a step could not have been taken without the concurrence of the entire management. It therefore indicates the deliberate attitude of the road toward organization on the part of wage earners.

It is a perilous but interesting experiment on the part of associated capital to exterminate associated labor.

We are curious to know what will be the end of this remarkable beginning. It is presumably a first step which will make others necessary. The Knights are not the only class of men who have united for mutual protection. The Switchmen, the Firemen, the Brotherhood of Engineers, the Federation of Railway Employés, have also compact organizations.

Does the Central propose to stop with the Knights, or has it in mind to break up all the forms of organized labor now on its pay roll? The logic of events seems to make that course inevitable.

It will be admitted, of course, that a private corporation has a legal right to make its own rules, and to enforce them if it can. These rules may be wise or foolish; the legal right remains. It may, if it chooses, employ none but Presbyterians or Catholics, or blacks or Mongolians.

But the Central is something more than a private corporation, and the people are directly interested

in its management. It exists by permission of the public, is primarily for the convenience of the public and depends on the public for its charter. It is in a broad sense one of the institutions of the State, although incidentally its profits are distributed among the holders of stock.

We are therefore justified in asking whether it is expedient or for the benefit of the people that employés shall be restricted in any of their natural rights as citizens, one of them being the right to organize for their own benefit.

This movement seems at first blush, then, to have an element of unfairness in it. President Depew, as the head of that commanding financial enterprise, has resorted to measures whose severity is hardly warranted by the circumstances.

Let it be understood that those train wreckers are double dyed scoundrels who should be treated to the utmost penalty of the law. But it would be eminently unfair to insist that they represent the prevailing spirit of the Knights of Labor. It is not true, as every fair-minded man will admit. To hold the whole accountable for the crime of the few is a dangerous precedent to establish. Such a policy rigorously applied would exterminate every banking house and every church, for there are rogues everywhere. All you can ask of the whole is that they shall repudiate the rogues who have taken shelter under their roof, and that, the Knights have done boldly and squarely.

This order is all the more startling because it seems to prove that the Central was neither frank nor truthful during the recent strike. The Knights declared then that certain men were dismissed simply and only because they were Knights. This statement Mr. Webb vehemently and indignantly denied. He repeatedly asserted that no man had been discharged because he was a Knight; that the Central made no war on the Knights and did not propose to do so.

On the very heels of that denial he issues an order that the Knights are obnoxious because they are Knights, and they must either resign their membership or give up their places.

It is impossible to say that new facts have made this decision necessary. There are no new facts. The condition of affairs is precisely as it was when these assertions were first uttered.

We haven't any doubt that in times past the Knights have been insolent, obstreperous and oppressive. We have ourselves fretted and fumed at their folly and read them many a sharp lecture on their stupidity.

We have also criticised combined capital in the same or even severer terms, have asserted, and now stand by the assertion, that organized capital has itself created the necessity for organized labor; that the employer and employé have a vexed problem to solve, and that forbearance and fair play are prime factors in a successful issue.

But the Central has entered upon a different and we are inclined to think a dangerous policy. It proposes to throw its whole weight against labor organization with the distinct purpose of crushing it. It is an experiment so interesting that we shall watch the progress of events with unflagging curiosity, but

we greatly mistake the mettle of the American people if they regard so revolutionary a measure as entirely justified by the facts.

The *Herald's* article triumphantly vindicates the Supreme Council and every word this *Magazine* has said upon the subject.

The New York *Herald* is one of the great papers of the continent. It is absolutely independent. It cannot be subsidized. It cares no more for the New York Central corporation, than it does for a lodge of the humblest workers on the Central system. It is on the ground. Its representatives are everywhere, and they tell the truth. It knows H. Walter Webb as well as if it had furnished the sawdust of which he is made, and it is the *Herald's* conviction that the attack upon the Knights is an attack upon all labor organizations, and that ultimately it will put into operation forces designed to overthrow them all.

It will be observed that the *Herald* says the New York Central derives all its power from the people. It exists by law. The people are sovereign. They can by the fiat of their votes take the charter from the men who now hold it and give it to others. There is no wrong in governmental affairs in the United States that the sovereignty of the people cannot reach and remedy.

If a constitution is wrong, it can be repealed or amended, and the same is true of statutes, and a railroad charter. If the rights and privileges it confers are used, as in the case of the New York Central, to perpetrate grievous wrongs, then it is in the power of the people to find and apply a remedy.

It is conceded on all sides that workingmen have a right to organize. It is an inalienable right. To strike it down, is despotism pure and simple.

If this right exists, and it is not denied, the laws should see to it that no wrong is visited upon workingmen because they exercise an inherent and indisputable right.

But H. Walter Webb, acting for the New York Central railroad corporation, issues an order to deprive Knights of Labor of employment, because they are Knights of Labor, imposing a penalty for the exercise of a right which constitutions and laws recognize.

Manifestly, if H. Walter Webb can in-

flict penalties upon men because they are Knights of Labor, he may with equal impunity, when it suits him to do so, pursue locomotive firemen and engineers, brakemen, switchmen and conductors, and visit upon their heads his vengeance.

What can organized labor do in the matter? A wrong exists. How can it be uprooted and swept away?

The season is at hand when legislatures will be in session in most of the states.

The members of labor organizations should demand of their representatives the passage of a law which makes the issuing of such an order as H. Walter Webb has directed against the Knights of Labor a felony, subjecting the scoundrel or scoundrels whose name it bears to incarceration in the penitentiary.

Webb's order ought to arouse universal indignation. In view of what has been accomplished on the Philadelphia & Reading Railroad, and in view of what the officers of the New York Central contemplate, every organization of railway employes should at once federate.

The dark shadows of coming events already lie athwart the pathway of the organizations of railway employes.

We sound no false alarm. The logic of facts warrants our declarations.

The New York Central, by the employment of scabs, thugs and money, has won a victory over a few hundreds of its employes, and now, flushed with victory and vengeance, sets the innocent adrift to freeze and starve, penalties scarcely less than death.

Indignation meetings are in order. If men cannot be aroused by such an order as H. Walter Webb has issued, then, to all intents and purposes, they are dead—dead to every idea of liberty and independence.

It is not long since that hod carriers were regarded as quite unworthy of the notice of bosses. Things have changed, at least in St. Louis, where hod carriers get \$3 a day for eight hours, while carpenters receive only \$2.80 for the same time. The hod carriers organized and had the courage of conviction.

CUBA sent us 95,000,000 cigars last year.

LOCOMOTIVE ENGINEERS AND FEDERATION.

In a recent issue of the *National Car and Locomotive Builder* there appears an article captioned, "Locomotive Engineers and Federation."

The article in question was written in the interest of railroad companies. This crops out in the opening paragraph as follows:

The Brotherhood of Locomotive Engineers will meet in convention at Pittsburg this month, and the delegates assembled will be called upon to settle a matter that is of considerable importance to railroad companies.

Here we have it stated that federation is of "considerable importance to railroad companies."

The statement is true. But why is federation of "considerable importance to railroad companies?" In answer we should say that federation is of "considerable importance to railroads," just as in 1776 the federation of the colonies was of "considerable importance" to the British.

Now, it will be remembered, and we commend the historic fact to the *National Car and Locomotive Builder*, that in that dark period of the Nation's history, Tories and British emissaries tried to defeat federation. They favored kingly rule. They were in league with the English aristocracy. They said federation is of "considerable importance to England," and as they were trying to visit English oppression upon the colonies they sought to defeat federation. These Tories used arguments against the federation of the colonies in many regards similar to those put forth by the *National Car and Locomotive Builder*. In Virginia, Pennsylvania and New York the Tories said, "Why federate with such little, weak and unimportant colonies as Rhode Island, Delaware and Connecticut?" In the little colonies the Tories changed their tactics and said, "If you federate with the great colonies they will destroy you; your influence will be so small as not to be recognized by them." These enemies of federation, were working for England, just as the *National Car and Locomotive Builder* is working for the railroad companies. Let us see if it is not so. The *National Car and Locomotive Builder* says:

The proposal to make the Brotherhood of Locomotive Engineers a part of a federated organization of railroad men has been for years urged upon the engineers by the weaker orders of railroad men. In the Eastern states the prevailing sentiment among engineers is to remain independent, but the federation idea is reported to have taken such firm hold of Western men that they are ready to fight the battle for change at the coming meeting. It is easy to understand the motives of the Brotherhoods of Firemen, Conductors, Brakemen, Switchmen, etc., in seeking for a coalition with the engineers, for it is the weak seeking the aid of the strong, but we entirely fail to understand what equivalent the weaker orders are prepared to give to the strong to pay for the sacrifice that would be made if the engineers undertook to make the cause of all railroad men their own.

There you have the old Tory argument to defeat the federation of the colonies when fighting the battles of liberty and independence. It is an appeal to the basest passions of human nature, an effort to array one class of workingmen, with identical interests involved, against other classes, because they are "weak." It is the argument, as we have said, of the Tories in favor of British rule, used now in favor of railroad companies and against the interests of railroad employes.

Quite likely "it is easy to understand the motives of the Brotherhoods of Firemen, Conductors, Brakemen and Switchmen." What is the motive? Is it dishonorable? Is it a motive that should occasion a blush, or demand an apology? Admit as a fact, or for argument, what the *National Car and Locomotive Builder* asserts. What of it? Let it be said that the firemen, conductors, brakemen and switchmen do appeal to the engineers to federate, because the engineers are strong. What of it? Did not the little colonies appeal to the great colonies to federate in 1776 because they were strong? Did the great colonies say to the little colonies, "We will not federate with you because you are small and weak?" No, never! Their interests were mutual and it required them all to achieve emancipation, and never in all of that eight years war, from the time he drew his sword at Cambridge, till he sheathed it at Yorktown, did George Washington tell the weak colonies to "mind their own business," intimating that he could achieve victory without them.

But as a matter of fact, while the Brotherhood of Engineers is great and strong and

influential, it is not as great and strong and influential as the federated orders—the firemen, the conductors, the brakemen and the switchmen. Nor can the Brotherhood of Engineers do more for the federated orders than the federated orders can do for it.

Let us prudently examine this phase of the subject.

The Brotherhood of Engineers claim a membership of 27,000. Admit it. The federated orders claim a membership of 50,000. Admit it, and the federated orders are stronger by 23,000 men.

These figures disclose the fact that the weak are not appealing to the strong.

Can it be said that the federated orders are appealing to the engineers at all?

Unfortunately for the argument of the *National Car and Locomotive Builder*, organ of railroad companies, it has put upon record the denials of its own assertion. It says the demand for federation comes from "Western men," members of the B. of L. E., who "are ready to fight the battle for change."

Here, we have it, that intelligent, wide-awake, progressive members of the Engineers' Brotherhood, are demanding federation, and they know "what equivalent" the federated orders "are prepared to give" to them, in case of trouble.

The *National Car and Locomotive Builder* prates of the "skillful workman and the crude laborer," for the purpose of establishing antagonisms between men who move railroad trains, and without whose assistance trains would not move at all. It is an argument in favor of *caste*, of aristocracy in labor. It is an exhibition of servility, totally unworthy of consideration.

Again, says the *National Car and Locomotive Builder*:

Transcendent moral sentiment calls for the strong to give their support to the weak on the abstract principle of common humanity; but individuals have not generally responded to the high requirements of sacrifice, even when they are united as a Brotherhood. When men's interests cease to be identical discord is certain to ensue, and discord is the beginning of disruption.

It should be said, at the expense of repetition, that the "weak" are not asking support of the Engineers, upon any "moral argument," or principle, abstract or con-

crete. It is held that the interests of all railroad employes, engaged in moving trains, are mutual, reciprocal, common, interchangeable. It is true. These mutual interests must of necessity exist and continue as long as trains require engineers, conductors, brakemen, firemen and switchmen. They ought to be in the most harmonious relations. Anything less, is in the interest of the corporation, which profits by their dissensions, and to create such disagreements and strife, appears to be the ambition of the *National Car and Locomotive Builder*.

Again, says the *National Car and Locomotive Builder*:

Should a federated organization of railroad employes, by a consolidation with the locomotive engineers, be made sufficiently powerful to present unreasonable demands on railroad companies with the probability of success, the tendency would be to level pay upward. The engineer would be called upon to lift the condition of the brakeman, the switchman, and probably the trackman, to his own level, and take his share in paying the expense of any fights necessary to bring about this elevating process.

In the foregoing, the objection is made to federation, that the engineers would be called upon "to help level pay upward to lift the condition of the brakeman, the switchman, and probably trackman, to his own level," etc.

In this, the basest instincts that degrade human nature are appealed to.

The Engineers, having reached success in any given conflict with the corporation, by the united efforts of *all employes engaged in the train service*, are sought to be swerved from the pathway of honor because of the fact that they might be asked to level up the pay of other men as necessary to the train service as themselves; the assumption being that in such cases, in fact, in all cases, the demands "on railroad companies" would be "unreasonable."

The idea is that engineers are entirely independent of all other men engaged in the train service of the country; that no mutual interests exist, and that federation on the part of engineers with firemen, conductors, switchmen and brakemen, would be a preceeding without one redeeming feature. "It seems natural," says the *National Car and Locomotive Builder*, "for every man to magnify the importance of his vocation. It

would be difficult to find a conductor who did not consider that his duties were more important than those performed by an engineer, and that he ought to be paid accordingly. Switchmen and brakemen reflect that their occupation is more dangerous than that of an engineer and that their pay ought to be based on the extra hazard to life and limb. Those interested in leveling pay upwards find no difficulty in making arguments to support that view of the case." Such stuff can influence only those who are totally devoid of sympathy for workmen, who antagonize "leveling pay upwards" and are helping those who *level pay downwards*, and seek to degrade labor.

To level pay upwards is to level up humanity, to level up home, women and children, to enable workmen to obtain fair wages, and live as becomes citizens of a free country, and those who oppose such leveling up processes, as railroad employes have adopted, by whatever other names they may be known, are corporation parasites, fleas in the hair of the corporation dog.

In the case of the *National Car and Locomotive Builder* its purpose seems to be, is in fact, to array the engineers against other men with whom they must forever be in the closest association. To them it says: "The engineers are now the aristocrats among labor organizations, and their members have never failed in obtaining justice from railroad companies when their demands appealed to popular support." Here is an exhibition of flunkeyism rarely equalled, and fortunate it is that ten thousand engineers, members of the B. of L. E., treat such declarations with becoming disdain. They are men who cannot be cajoled and imposed upon by the paid sycophants of corporations, but who know the right and dare defend it. They have faith in their fellow-workmen; they know the value of conductors, firemen, brakemen and switchmen; they throw to the winds the aristocratic ideas of vocation, and regard honest, self respecting men their equals. They know the future is full of perils to organized labor, and that the only hope is in federation.

Already ominous clouds are gathering along the horizon of labor. In railroad af-

fairs stockholders want larger dividends, and bond holders want more interest. High officials level pay upwards for themselves, and downwards for employes. If the men who do the work are to receive fair pay and fair treatment, they must come into close, compact union—nothing else,—nothing less will answer the demand. Federation is feasible, honest, just and right. To approach men, as does the *National Car and Locomotive Builder*, with despicable propositions—appealing to low and vulgar prejudices, is an exhibition of sycophantic fealty to corporations which honest engineers will be quick to discover and rebuke.

If a wrong is to be removed, the way to accomplish the work is to agitate and keep at it until the object in view is gained. This is shown by the recent Anti-Pinkerton victory in New Jersey. An exchange says:

Governor Abbett has signed the bill known as the Anti-Pinkerton bill, which was passed by the New Jersey Legislature the last week of its session. The main object of the bill is to prevent the employment of Pinkerton detectives to quell strikers. It is a sweeping act, and forbids the sheriff of a county, the Mayor of a city, or any other person authorized by law to appoint special deputy sheriffs, special constables, marshals, policemen, or other peace officers, to appoint as such any person who shall not be a citizen of the State, and no person shall act as a peace officer without having an appointment in writing from a person authorized by law to appoint him. The second section of the law makes it a misdemeanor, punishable with a year's imprisonment in State prison and \$500 fine, for any person to exercise, in any way, the functions of a peace officer without the authority provided for in the first section. Several years ago a boy was shot and killed by a Pinkerton detective, who with many others, was employed by a railroad company during a strike in Jersey City, and the law is partly the effect of the excitement caused by that affair among workmen and others.

There are sometimes found those in the ranks of labor, who sneeringly refer to labor agitators; men but for whose courage workmen would all be scabs.

THERE were fifty-five strikes in the month of June last, and 25,672 workmen and women were involved. Of these, fourteen were for an advance in wages, three against reduction of wages, one against an abnoxious foreman, six were for unionism, and others for various causes. Nearly all were successful.

THE GROWING IMPORTANCE OF LABOR TOPICS.

The *North American Review*, the *Forum*, the *Arena*, and the *Overland Monthly*, and other similar publications that could be named, have been for some time giving special prominence to topics which at some point, more or less directly, touch the interests of labor. We have on our table the *Overland Monthly* for August, which contains a paper captioned "Corporations, Trusts, Labor and Capital," in which the writer evidently desires to deal fairly with labor. The point we desire to make just here, is, that labor is now receiving more attention from writers of ability than at any other period in its history. It is not only receiving the attention of writers of splendid intellectual equipment, such as can sell their thoughts to such publications as we have named, but in the Congress of the United States, and in legislatures, statesmen of national renown deem it wise, prudent and patriotic to pay special attention to the rights and interests of labor. In this connection, it would be difficult to estimate the advantages accruing to labor by such discussions, but it is not a serious task to tell the reason why such an interest has been awakened; on the contrary, the explanation is both easy and truthful, and it is stated in the fact that labor is organizing and preparing to assert its rights in the press and in legislative halls. Labor is no longer supine, inert, careless or cowardly. It is awake, aggressive and determined. It no longer crawls, and begs permission to live in a world that would roll in space a dead orb, but for its building, restoring and vitalizing power. As a result, as a natural sequence, labor counts its champions on every battlefield where Truth confronts Error, from the master workman in the shop, to the grand old man, Wm. E. Gladstone in the British Parliament.

The writer in the *Overland Monthly* remarks that "laborers claim that they are not free to accept or refuse the terms offered by employers," since "their capital consists solely of their labor, and upon their ability to sell this, depends their daily bread," and adds, "to a certain extent this is true." The term "daily bread" means food, cloth-

ing and shelter. The wild beasts of the forest and the birds of the air are provided with clothing and shelter, but the "laborer" must provide all or suffer and die; his sole capital being his labor, he must "sell it" for what he can get, or submit to hunger, nakedness and the pitiless storms. Or, if under present regulations, the so-called "labor market" is overstocked to an extent that he cannot sell his "sole capital," then, in that case, the means of escape from the calamities we have named are, beg or steal—for, says the writer, "the laborer must have employment to live;" "he cannot wait but must take what comes." And just here, the inquiry is, what comes? Labor being "continually on the market for forced sale," the price goes down and the "corporation," the "trust," the capital combination, by whatever name it is known, taking advantage of privileges granted them by laws as iniquitous as were ever conceived since the serpent beguiled Eve, permit no opportunity to pass, to reduce the price of labor to the lowest point that piratical greed demands.

The writer proceeds to arraign labor organizations as follows:

"The organization of labor is a good thing, but the action of organized labor has not always been wise. In fact it is hardly an exaggeration to say that it has generally been unwise. In the nature of the case such un wisdom was inevitable. The laboring classes are necessarily the least educated; the struggle for existence has been too fierce to leave them time for more than a common school education, and it is doubtful whether many, save those reared under the shadow of the public school have received even this. What hope was there, then, that they should be able to solve correctly the most difficult industrial and economic questions. They have struck for higher wages or shorter hours when the pinch of poverty made itself felt, the very time when such a strike was least likely to be successful. They have demanded a voice in the regulation of private business where they have no right to speak, and have tried to compel employers to strengthen trades unions by refusing to employ any save those who subscribed to those arrogant demands and bound themselves to enforce them. They have attempted to exercise a tyranny over those who refused to join with them such as the world has not seen in centuries, save in the barbarous countries of Asia. And in the enforcement of this tyranny, they have countenanced if not committed lawlessness and crime."

The italics are ours, required for the purpose of permitting the reader the more readily to note what the writer evidently

believed was specially crushing in his arraignment. The writer starts out by saying "organization of labor is a good thing." In saying that he admits all that labor ever claimed for organization. It is a good thing. In grammar, we say, "good, better, best." In saying that "the action of organized labor has not always been wise," is for the thousandth time to introduce an old "chestnut," which subjects the whole arraignment to ridicule. No one has in the past, no one in the present, contradicts the assertion. To make such a charge against labor organizations is supremely absurd, because, with equal propriety it could be asserted of every human organization; indeed, God himself repented that he had made man and viewing the mistake, the "unwisdom" of the proceeding, concluded to destroy man; and later, when Christ selected his apostles he found one who betrayed him, and another who denied him, and who is so bold as to deny that the church "has not always been wise?" And since fallibility is inherent in human nature, the charge that the action of any human organization "has not always been wise," is sheer gabble, unworthy of a place in any argument relating to human affairs.

But the writer proceeds deliberately to knock himself down, and referring to his arraignment of labor organizations, says:

.. Yet these are but the excesses of suddenly acquired and hitherto unsuspected power. It is *scarcely a century* since the condition of the most favorably situated laborer was *little better than a slave*. The industrial progress of the century has *bettered* the condition of the laborer *immeasurably*, and one of the most important effects of this is the *laborer's ability to assert himself*."

Here again we introduce italics to show the more readily that the arraignment of labor organizations is all the more absurd, because of the attempt to make it serious and weighty.

In no well informed circle, is it required to say that anything indicative of the bettered condition of workingmen is owing entirely and absolutely to the "laborer's ability to assert himself." And how, we ask, has he asserted himself so as to insure a better condition? Not by individual assertion, that sort of assertion never did better a workingman's condition. This self assertion has been by

organization, and only by organization. The writer begins his article by saying that "the organization of labor is a good thing," and all the charges of "unwisdom" brought against such organizations, do not make them a *bad* thing. The charge that the laboring classes are "least educated," or at the best have but a common school education, and are therefore unable "to solve correctly the most difficult industrial and economic questions," indicates a purpose to discredit workingmen for the intelligence they have manifested when dealing with such questions. Moreover, the writer should have named those who have "solved correctly the most difficult industrial and economic questions." Manifestly, laboring men have achieved as much success in that line as others can boast. During the "century" of which the writer speaks, workingmen have reduced the hours constituting a "labor day"—two, four, six, and in some cases, eight hours. That was a "difficult industrial question." They have, on an average, advanced wages of labor fully twenty-five per cent., and that was a "difficult economic question," and all this has been done through labor organizations, which makes them a "good thing." What does the writer mean, when referring to "the laborer's ability to assert himself." Seemingly he approves of this self assertion. Does he mean that the laborer is more of a man and less a slave than formerly? Does he mean that the laborer esteems himself, and that the world esteems him of more importance in the body politic, social and industrial, than formerly? Does he mean that the laborer is better educated, better paid, better fed and sheltered than formerly? He must mean these things, else his encomium is flatulent twaddle. If he means such things, why does he talk of the "training" of labor organizations? of the folly of striking for "higher wages or shorter hours when the pinch of poverty made itself felt"? Who talks of "tyranny" of a government when under its sway its subjects are steadily growing in independence and prosperity, though it may evince "unwisdom" sometimes in its acts?

"Already," says the writer, "there is an advance observable in the discredit into which the professional organizer has fallen

among the labor organizations." Here again the writer metaphorically opens his mouth and puts his foot in it. He has already said "the organization of labor is a good thing;" how then, does it happen that the professional organizer has fallen into discredit among the labor organizations? The statement is not true. All the great organizations of labor have their organizers, and if active and efficient, they are honored for their worth and work.

The purpose of the writer to cast odium upon labor organizers is apparent. He would encourage employers to direct their shafts at men who dare go forth and publicly declare their principles. The corporations everywhere regard such men as dangerous, and to suppress them a duty and the writer who assails them, in the interests of the corporations, after declaring that "labor organizations are a good thing," stultifies himself in a shameless manner rarely equaled. The writer admits that there is "widespread discontent of the laboring classes," which he thinks "is sufficient to raise the presumption" that "the division of the profits of industry is unjust." To counteract the iniquity is the purpose of labor organizations, and is the reason why the professional or official organizer is held in high esteem by his fellow-workmen.

The purpose of a labor organization is to better the condition of laborers, whether in the organization or out of it. This bettered condition relates to many things: Increased wages, shorter hours, better treatment by bosses, more independence, intellectual culture, the development of mind forces, more knowledge, and therefore more power and influence, better dwellings, better food and clothing and so on, in everything advancement in all that pertains to the welfare of men, women and children; in a word, to make the workingman's home what it should be in America. The men who oppose labor organizations are the enemies of workingmen. This enmity on the part of employers is prompted by mercenary motives and by aristocratic ideas of superiority on the one side, and on the other, by scabs whose ignorance and degradation render them oblivious of their rights and make them servile creatures, content with such conditions as their masters may impose.

Necessarily, labor organizations regard such creatures, high and low, as enemies—and nothing is more natural than that the scab should be looked upon with contempt and loathing. It is in no sense tyranny. Labor organizations simply let scabs severely alone. Degraded creatures, who would bring all workingmen down to their level and subject them to the tyranny of the corporation, reduce wages and create conditions of poverty, rags and dirt, labor organizations treat them with merited disdain.

Workingmen, those who organize, are satisfied that their only hope is in union. Only in union can they maintain their rights and secure justice; hence to oppose labor unions is to seek the degradation of labor, and those who are engaged in the business, no matter who they are or what methods they employ, are the enemies of labor, and should be treated as enemies.

The writer in the *Overland Monthly* seeks to carry water on both shoulders, though it is easy to read between the lines that, were it in his power, he would suddenly crush every labor organization in the land.

Fortunately for the country, labor organizations are so numerous and powerful that they are in a position to defy the combined power of trusts, corporations and other organizations of capitalists. They are not only strong in membership, but they are strong in mind power, in practical knowledge. They are ceasing to be pupils, and have become schoolmasters, educators. They grasp and solve problems; and when the time comes and it is coming—when all labor organizations shall federate, the corporation, the trust, the syndicate, the pool, the bucket-shop method of robbery will cease and justice will be introduced.

LOYALTY OF EMPLOYÉS.

In a recent issue of the *Railroad Gazette* appears an editorial article with the above caption, "Loyalty of Employés." We quote:

However small or great may be the difference between the actual and the ideal in the prosperity of a railroad or the smoothness of its workings, its condition is always largely attributed to the fidelity and efficiency of its servants, high and low. Directors often give expression to this idea in annual reports, and the public prints testify to the fact every day. Loyalty of employés is an important factor, and to

ignore its influence is to waste a valuable power. But it is remarked that loyalty often is not properly fostered, and that in many cases it is even repressed; and it is an undoubted fact that the prosperity of many valuable properties is thereby impaired. The contrast between railroad organizations where it is known that all grades of employes have a well-defined status, with those where the opposite is equally evident, is too clear to admit of any other conclusion. Some roads prosper in spite of bad management, and others fail in spite of good; in the majority of cases good management and bad are mixed together so that causes and results are not so clear; but the real connection is nevertheless discernible if the examination is minute enough.

In the nomenclature of railroad officials and writers upon industrial subjects, we find such terms as the "Labor Market," "Labor as a Commodity," "Loyalty of Employes," and so on indefinitely.

It should be understood, that whatever "loyalty" means, it is as much due from the employer to the employe, as it is from the employe to the employer; there is absolutely no difference, and to intimate that there is a difference has a vicious tendency.

An employe contracts to perform certain services for so much money or other stipulated consideration. The obligation is mutual. The parties are independent. They are under no obligations to each other, except such as the contract imposes.

On the part of the employe the obligation demands what the *Gazette* writer points out: "fidelity and efficiency" in performing the work specified in the contract, and the employer, with equal fidelity, must pay the stipulated wages. But this term "loyalty," as used by railroad officials, is made to mean far more than "fidelity and efficiency." It is made to mean servility, obedience to orders that have nothing to do with the contract. A few illustrations will suffice:

On the C., B. & Q., Stone & Co. interpreted "loyalty" to mean that if an engineer, fireman, brakeman or switchman left his work, the conductor was bound to play scab, or do anything else demanded of him, regardless of his contract. The corporation was not satisfied with the "fidelity and efficiency" of their conductors as conductors, but assumed that it was sovereign, and its conductors subjects, to be directed as kings might direct their subjects; that the mere fact of employment gave the corpo-

ration power to reduce their employes to menials—and a great many conductors became the willing, degraded tools of the corporation. On the Philadelphia & Reading railroad, Austin Corbin looked upon his employes as so many slaves, owing allegiance to him, and that their loyalty should require them to abandon labor organizations. Such contemptible creatures, "dressed in a little brief authority," while subjecting their employes to the degradation which "loyalty," as they interpret it, imposes, swagger around in all the pomp and circumstance of royalty, issue their edicts, and if they are not obeyed, inflict such penalties as their power enables them to prescribe.

In the discussion of labor questions, writers, speakers and legislators, are continually doing violence to truth, justice and common sense, by the use of words which are not the signs of correct ideas; as for instance, we hear frequently of "pauper laborers." When was a laborer a pauper? He may have been a slave; he may have had his rights cloven down; he may have been the victim of oppression, but to call a laborer a "pauper" when living upon his unjust pay, the victim of robbery and piracy, well calculated to send a thrill of horror through hell as well as heaven, is not only to add insult to injury, not only to strike a man when he is down, but to do the grossest violence to language.

It is not only fashionable in certain quarters to talk of "pauper labor," but of the "labor market," of "buying and selling" labor as a "commodity"—the influence of which, in so far as it exerts any influence at all, is to degrade workingmen.

A workingman owes no allegiance to any man. He is no man's subject or serf. Loyalty to obligation, to the terms of a contract, is loyalty to one's self, to manhood, self respect, to personal independence and ends there. Between employer and employe, this thing of "loyalty" is mutual, and therefore becomes meaningless. The purpose, however, is to impress upon the employe that he is under some obligation to a boss, similar to that which a Russian is under to the czar, or a Turk to the sultan. We have had quite enough of that sort of literature.

PARTIES.

The history of parties, factions, cabals, cliques, juntos, leagues and alliances, would doubtless be exceedingly interesting. If the historian should begin at the beginning his researches, we conclude, would ante-date the deluge. Indeed, there seems to be good reason for believing that in Heaven itself, at one period remote, a party under the leadership of satan existed, whose ambition it was to supplant God himself in controlling the affairs of the universe.

"To set himself in glory 'bove his peers,
He trusted to have equal'd the Most High,
If he opposed: And with ambitious aim
Against the throne and monarchy of God
Raised impious war in Heav'n, and battle proud
With vain attempt ———"

We mention such things merely to emphasize the fact that the existence of parties, whether good or bad, is not a modern invention. Manifestly there was a party largely in the majority which took no stock in Noah's declaration that a deluge was coming. He preached it for a hundred years, and during the entire period was showing his faith by his works, for he was all the time getting his ark ready for the impending storm. And from the time that the tribes formed a sort of a co-operative association, and attempted to build a tower which would reach to Heaven, and as a result had their language so confounded that orders could no longer be given, there have been parties dividing the inhabitants of the earth.

We are of the opinion, whether a man gives the subject a casual thought or devotes to it years of investigation, he will find that parties are just now more numerous than ever before since history was rescued from fable. He will find that every nation, tribe, kingdom, and tongue is a distinct party—a primal condition which the centuries have neither changed nor modified. But the investigator will find that as civilization has subdued barbarism and savagery, parties have multiplied, and now, whether it be sunrise or noon, in civilization he will find more parties in existence than in any other period of the world's history. It may be interesting to inquire why? We think the answer easy enough. It is because the human mind has been in the process of

emancipation, and when most enfranchised, when the semblance of a shackle no longer appears, when the disenthralment is complete, and man expands to the full stature of a free man, there will be found the greatest number of parties. It is said of creation and of the Creator, that while He bound all nature fast in fate, He left free the human will. That may have been the intention, but so far the human will has not been free, and of all the slavery that an inscrutable God ever permitted to curse the earth, that of the enslavement of the mind, the will, is the most abhorrent.

The immortal Irish orator, John Philpot Curran, on one occasion while pleading for the liberty of his client, and speaking "in the spirit of British law," which he said, "makes liberty commensurate and inseparable from British soil," said, "No matter in what language his doom may have been pronounced, no matter what complexion incompatible with freedom, an Indian or an African sun may have burnt upon him; no matter in what disastrous battle his liberty may have been cloven down; no matter with what solemnities he may have been devoted upon the altar of slavery; the first moment he touches the sacred soil of Britain the altar and the god sink together in the dust; his soul walks abroad in its own majesty; his body swells beyond the measure of his chains, that burst from around him, and he stands redeemed, regenerated and disenthralled by the inevitable genius of universal emancipation."

But an Irish (?) judge and an Irish (?) jury did not take Mr. Curran's view of the subject and his client, because he dared be free on Irish (British) soil, was sentenced to pay a fine of \$2,500 and to be imprisoned two years, and to give bond for good behavior in the sum of \$10,000. Mr. Curran's client belonged to a party which advocated the liberty of the Irish people and that was his only crime.

It is one thing to break the fetters from the body, but a far different thing to emancipate the mind, the will, the soul, to establish free speech and a free press, a free Bible and a free religion, and when this mind deliverance is secured parties and sects will multiply.

There is a form of freedom which is illusive, the body, the physical man walks abroad, but the tongue is mute and the lips move not to give utterance to sentiments showing that the mind shares the freedom of the body. Poets have sung of the

"Eternal spirit of the chainless mind."

The figure is strong and captivating. It refers to what ought to be rather than to what is. In what land, blessed with even twilight rays of civilization, can be found a healthy intellect which does not realize this existence of penalties ready to be imposed upon opinions if men dare express them, give them to the world? In one land the penalty is dungeons, in another exile, in another death, and in others social, political and religious ostracism. Who are the world's heroes? Accepting standard theories, they are the Cæsars and Bonapartes whose monuments are human bones and skulls, and whose bloody tracks, from battle fields to their palaces, are the records of their rise and fall. At their command the nations bled until

"* * * Bloodier than the torrent flow

Of Iser, rolling rapidly,"

all of the rivers ran crimson to the sea. But the real heroes of the world are the men who have battled for the emancipation of the mind, who have warred for the sovereignty of the soul, who have given thought and opinion and speech the freedom of the universe. It is not required to build monuments of bronze or brass to perpetuate the name and fame of such men. We would as soon think of building a monument to bear testimony to the glories of the noon-day sun. They are the pathfinders for men living and coming, who will strike down penalties for opinions and emancipate the mind—

"For Freedom's battles oft begun,

Bequeath'd from bleeding sire to son,

Tho' baffled oft, is ever won,"

and the multiplication of parties shall bear testimony that the "thorny stem of time" has at last budded, blossomed and borne the delicious fruit of mental emancipation.

In this connection we are led to inquire how it happens that within the past decade we have in this country what is known as a Labor party? Is it not the result of mind growth and mind emancipation? Does it

not betoken the dawn of a new era? There is a labor party. There is a distinct labor literature. It may be said, and it is doubtless true, that the Labor party as yet, is crude, somewhat discordant. To admit such things is to compliment the workingmen of the country, because it is proof positive that workingmen have minds of their own and that their differences of opinion relate to methods rather than purpose, and he is a very superficial observer who does not see in this success instead of defeat. If we were required to point out a sign of the times triumphantly indicative of the success of the Labor party in the United States, we should refer at once to the deliberations going forward in the ranks of labor. Propositions are exhaustively analyzed. Obstacles arise and are removed. Breaks occur, faction impedes progress, rivalry disconcerts plans, but in spite of embarrassments and barriers organization proceeds, the party grows and victory invites to effort.

There are those in labor organizations who occasionally evince distrustfulness in ultimate triumph, because of the large number of workingmen who do not come in and keep step to the music of organization. We do not share in their doubts, because we believe in the triumph of right, justice and truth over ignorance, prejudice and superstition. We believe that old ideas are to give place to the new. We believe in the final emancipation of mind. We believe that error and the idols of error are to go down, not immediately, but ultimately, as certain as that the sunshine will dispel fog, or that draining a marsh will decrease malaria. It should be remembered that the idea of organizing a labor party is recent. Its years can be counted on one's fingers. Everywhere is missionary ground. The press has but just begun its work. Old parties, barnacled and moss covered, stand in its way and are jealous of its progress, but millions of men are reading to-day where but hundreds were reading yesterday and but tens the day before, and as they read and meditate the scales fall from their eyes and fetters from their minds. The work of emancipation goes grandly on. More drums are beating, more banners are flying, more men are coming into line. The

Labor party grows. Labor is organizing. Lodges are multiplying, workmen are coming together, and now comes the battle shout of Federation. Men whose eyes first touched by the mighty oculist abroad in the land saw "men as trees walking" now see clearly that men are marching with stately strides towards the goal of triumph. Men who but yesterday complained that when the angel came down and troubled the waters they could not step in and be healed because no one was there to help them, are now standing erect, cured. All the pools of thought have been agitated and the commotion continues, nor is the angel to take his flight until the mind is completely unfettered and walks abroad knowing no master but reason, sanctified by conviction.

We care not how many parties exist, only those will remain which have a mission to accomplish. Labor has a mission. It is the mission of self-emancipation. For untold centuries it has appeared bare headed and bare footed on all the highways of progress and civilization. But it is going to wear hats and shoes in the future. In the past it has fed the world, in the future it will feed itself more abundantly. In the past it has built palaces for kings, aristocrats, monopolists and millionaires. In the future it will build pleasant homes for itself. In the past labor has woven broadcloths and silks for others and been content with rags. In the future it will wear good clothes, and will have its equitable share of the wealth it creates.

" There's a good time coming, boys,
A good time coming.
The pen shall supersede the sword,
And Right, not Might, shall be the lord,
In the good time coming.
Worth, not Birth, shall rule mankind,
And be acknowledged stronger;
The proper impulse has been given:
Wait a little longer."

THE STANDARD OF LIVING.

Hon. J. R. Dodge, Vice President of the Section of Economic Science and Statistics, delivered a carefully prepared address at Indianapolis during the meeting of scientists in that city, in which he referred to the advantages enjoyed by the producing classes

of the United States over the same classes in other civilized countries. The subject is worn threadbare. It is treated in the same hackneyed style by politicians, statesmen, economists, scientists, and statisticians. The monopolists, the syndicate barons, employers of large numbers of workmen and women, follow suit, and tell their overworked and underpaid employes, when they seek to better their conditions, that as a class they are more comfortably situated than are the workmen of Europe, and therefore they ought to be content.

In Europe there is primogeniture, compulsion of social distinctions, which Mr. Dodge thinks operate as barriers to ambition, which have "no existence here."

"In the nations of Europe," says Mr. Dodge, "there are still little chains of mediævalism which fetter the action and repress the spirit of the citizen," and further, that "the deference to superior station degenerates into servility in the subordinate official, while humility in the servant falls into flunkeyism."

As for primogeniture, it is only required to make a note of what has been going on with the Vanderbilts and the Astors for three or four generations, and deference to superior officers in civil affairs is carried to the extreme limit of servility in national and state affairs, and has extended to railroad management, where, in numerous instances, the exhibition of slavish, cringing, sycophantic obsequiousness defies proper characterization.

The growth of flunkeyism in the United States during the past quarter of a century is known to be most extraordinary. As an example of this, take the Philadelphia & Reading railroad and in all Europe a more degenerate class of workmen cannot be found; base minded and submissive, they are too beggarly to be described. Without independence, courage or self-respect, spineless and groveling, they exist as an example of the growth of European servility in the United States, and demonstrate that the slave pen and the lash are doing effective work on the "sacred soil" of Pennsylvania.

It has been recorded that Robert Toombs once said that he "would call the roll of his slaves under the shadow of Bunker Hill

monument." The remark was regarded as characteristic of a fool and a fanatic, but now, under the shadow of old Independence Hall, where the immortal Declaration of Independence was first read that gave birth to a nation of freemen, Corbin called the roll of his slaves, and Corbin's successors are doing the same to-day.

Mr. Dodge boasts of the superior "standard of living" in the United States as compared with European countries. He says:

In the use of food our people are profuse and even wasteful. All classes use meat freely, ordinarily three times daily. A great variety of fish, oysters that have a fame extending beyond the seas, and various forms of crustacea, enrich the national dietary. According to accepted statistics Great Britain consumes an average meat ration not over two thirds as large as the American, France scarcely half as large, Germany, Austria and Italy still less. The more favored and fortunately conditioned laborer of continental Europe gets meat on Sundays, and two or three times during the week, yet the statement of one of our consuls in Germany that "the workingman rarely eats meat, except in form of sausage, and his wife and children scarcely know the taste of it," is fairly representative of large districts of many countries. Another, writing from Italy, refers to laborers as "living on what our workmen would despise." A large proportion of the meat used by the peasantry and other continental laborers is in the form of soups to give a flavor and a suggestion of fatness to the vegetables which constitute the substance and nutrition of the daily diet. The water in which our meats and vegetables are boiled, which is sent to the sewer, would suffice as the basis of palatable and nutritious food for millions of Europeans. If solid food is preferred to liquid, it may be had in Italy and elsewhere; a "thick porridge, made of vegetables, flour and corn meal, boiled in water, an adhesive mass of the consistency of clay, cut with a wire like soap."

Such statements are made by "scientists" to reconcile American workingmen to their lot.

It will be observed that Mr. Dodge, the "scientist," in glorifying the American "standard of living," bases his conclusions on the amount of meat consumed by American workingmen, and to further demonstrate the fact that American workingmen are the real meat eaters of the world, he says:

The American negro, even in the days of slavery, was usually allowed a weekly ration of three pounds of bacon and a peck of meal besides vegetables and other products either of the plantation or his own garden patch. This made at least 150 pounds per annum, not to mention the occasional opossum and

chicken that were respectively his legitimate game and his legitimate plunder.

In the foregoing the climax is reached. The negro slave had plenty of meat. His "standard of living" was high, and with his stomach full of meat, he forgot that he was a chattel, a commodity, as much so as the swine, whose meat he ate.

In such talk, we have the standard by which Mr. Dodge, the scientist, measures manhood. He estimates that the American workingman consumes 175 pounds of meat annually—while in England he must be content with 100 pounds, and in other European countries he consumes only 50 pounds and, in some of them, a less quantity.

The student of history will not find it recorded that the men who laid the foundations of civilization and government in the United States, were animated by considerations of "meat," that they might have more "meat." The Declaration of Independence does not refer to the meat question. The battles of the Revolution, from Concord to Yorktown, were not fought on the meat question; but now, after more than a hundred years have elapsed we find an American "scientist" seeking to demonstrate, that the meat question is the all absorbing topic, and if workingmen have plenty of meat, or more meat than workingmen in other countries, they should be content, and, thanking God for larger supplies of beef, pork and mutton, permit the "upper crust" to manage affairs, while they devour their meat and remain silent.

Mr. Dodge, the scientist, ignores the declaration of the Master that "man shall not live by bread alone." There is something in the standard of living better than meat. Patrick Henry's immortal words were not "Give me meat or give me death."

Mr. Dodge has shown that the slaves, in old plantation times, were well fed, and that their "standard of living" was high. Did the fact condone the crime of slavery? Why continue to tell American workingmen that they have more meat than the workingmen of Europe? What purpose prompts the everlasting rehash of such statements? The simple purpose is, to teach American citizens to eat and be silent,

to eat and obey, to eat and permit those who feed them to control them in all matters whatsoever.

In numerous instances the degrading work goes bravely on, and as it proceeds, the meat supply is reduced, and in ten thousand instances, here in the United States, with cattle on a thousand hills, with herds of swine and sheep, almost past numbering, with overflowing granaries, with surplus food products for the famishing of other lands, workingmen and women suffer the pangs of hunger—suffer, because workingmen are the victims of vicious laws and still more vicious methods of conducting business, and while such things are going forward, scientists (?) read papers in the presence of other scientists to show, that because American workingmen devour large quantities of meat annually their ambition should be satisfied.

Such scientists (?) have greatly mistaken the purpose of American workingmen, as a body. They will continue to eat meat, as do other citizens. They will use knives and forks, have tables and dishes, sit in chairs, live in houses, dress decently, and do such other things as are becoming. They will be masters of themselves. They will read and think, meet and talk, agitate and organize, and in the near future, they will dictate policies, enact laws and teach scientists that the "standard of living" means much more than a large supply of meat however desirable that may be.

It was Beau Brummel's idea that the royal family of England should cease eating asparagus, because it had become so cheap that "every tinker in the Kingdom had it on his table." It is said that when mackerel were one cent apiece the English aristocracy discarded them, but when they advanced in price to 30 cents a pound they figured at once as a fashionable delicacy. When Chauncey M. Depew, who receives \$166.66 a day, dines, his palate is doubtless tickled with delicacies that an average engineer, fireman, brakeman, switchman or conductor never dreams of—not even when they industriously "mind their own business."

ELECTRICITY will, at an early day, dispense with the horse and the mule, says an exchange. "It is estimated that at least fifty thousand horses now in use will be thrown upon the market presently, owing to the rapid development of electricity as a motive power. The exactness of this estimate does not matter, but it is a fact from which there is no getting away that soon the horse breeding industry will be seriously disturbed by the encroachment of the electric motor, the use of which will eventually become universal. The carriage of the future, both public and private, will be moved by the electric motor, the power to operate which will be furnished by a light and efficient storage battery. Electricity will be the motive power of the future because it will be cheaper than horseflesh. An electric motor has only to be fed when working; a horse's digestive organs have to be kept in food at all times, whether working or not." In this advance of science and invention not only the horse is retired but the driver, also, has to go.

DURING the last twenty years there have been mined in Pennsylvania 110,352,715 tons of anthracite coal, or an average of 5,517,636 tons annually. And during the twenty years named, the owners and operators of the mines have studiously and steadily gone forward in robbing and degrading men who have mined the coal, until neither the archives of Heaven, earth nor hell contain more revolting records of man's greed and guilt. The crimes perpetrated are blacker than the coal, and of all the misshapen monsters who have earned the devil's recognition and hell's diploma, Austin Corbin ranks No. 1.

ONE of the signs of the times which bears testimony that the spirit of '76 is not quite dead, is here and there a revolt of workingmen against some contemptible boss, who insists upon treating them as if they were plantation slaves.

"BE a leader yourself; don't get into any man's harness and let him drive you."

Man.

What is man, that Thou art mindful of him?
—Psalms.

What is man, that Thou shouldst magnify him?
—Job.

SUCH queries, as will be noticed, date from "away back." They are of a character which indicate profound ignorance of man, his origin and mission. Job and David were seemingly in the dark when seeking to know the whys and the wherefores of man's existence.

Job wrote 1,500 years before Christ, and David propounded his inquiry something more than a thousand years before the dawn of the Christian era. Both of these ancient worthies asked, What is man? Neither of them answered the question, and had they lived in this age of electricity, steam and "horse-power," of trusts and monopolies, syndicates and piracy, church and school, they would still exclaim, "What is man?"

Fortunately, the anthropologists, the philologists, the mythologists and the archaeologists are answering the question.

Pope wrote:

"A little learning is a dangerous thing;
Drink deep, or taste not the Pierian Spring."

Scientists are telling the world that man has been evolved from some beast or reptile. They say that "the records are on his very bones in characters long undeciphered, but to which the clue has at last been found. The human body abounds in indications of the pathway by which humanity has climbed from darkness into light, from bestiality to civilization—relics of countless ages of struggles, often fierce, bloody and pitiless." Originally, man was a four-footed animal; he locomoted on all fours; he was not man at all. This is the view taken of the subject by Dr. Frank Baker, of Washington, D. C., a scientist, who has drank deep of the Pierian Spring, and is still gulping down more of the fabled liquid of which the muses drank.

The anthropologists, the philologists, the mythologists and the archaeologists have determined to demonstrate that the Bible account of man's creation is an absurdity, an arrant imposition, a Munchausenism of the rankest type, and should be abandoned as unworthy of the present age of wealth and want, ingenuity and ignorance, pride and piracy, and many other things, which, whether men look forward or backward, are well calculated to make them exclaim, as did old Job, thirty-four centuries ago, "What is man, that Thou shouldst magnify him?"

Does it seem probable that Job would have asked such a question if he had been familiar with the declarations: "Let us make man in our image, after our likeness";

* * "So God created man in His own image; in the image of God created He him; male and female, created He them?"

Job was a remarkably well informed citizen of Uz, but he does not seem to have been posted in the Mosaic account of man's creation, for had he known that God created him in His own image and likeness, he would scarcely have asked God, "What is man, that Thou shouldst magnify him?"

The fact is, Job seems to have had a poor opinion of man generally; and even David, 500 years later, asked God, "What is man, that Thou art mindful of him?" In both instances, the questions embody covert sneers, as if the querists had a lurking suspicion that man, proud, boastful, domineering, ruling or rioting, fawning or fighting, saint or savage, was simply an animal once of the lowest type, a crawling creature, whose ancestors in pre-historic times were toads or tadpoles—the dream of a dream and shadow of a shade!"

It appears reasonable, if Job had known that God created man "in His own image and likeness," he never would have asked Him, "What is man, that Thou shouldst magnify him?" Job would have recognized in the sublime miracle of man's creation in the image of his Creator, the reason why He magnified him. But Job, like Dr. Baker, would have it that man was originally a worm, and refers to "corruption" as his father, and to the "worm" as "his mother and sister." Job had exalted ideas of the Creator, and referring to the stars as not "pure in His sight," exclaims, "How much less man, that is a worm, and the son of man, which is a worm?" And even David declares, "I am a worm, and no man." And Pope wrote:

"Man is a very worm by birth.
Vile reptile, weak and vain;
Awhile he crawls upon the earth,
Then sinks to earth again."

Dr. Baker, the anthropologist, takes Pope's view of the subject, and says: "The erect position of man is often quoted as evidence of his higher position and dignity. The erect position is, however, gradually acquired, and the difficulty that an infant experiences in learning to walk erect is strong evidence that it is an accomplishment acquired by the race late in its history. The human body gives evidence of a previous semi-erect position. The special changes of structure which secure the erect position are less marked in children and in the lower races. In the course of evolution of these changes there is a period of struggle before the body becomes thoroughly adapted to them. Such struggle is still going on, the adaptation being far from complete. Hence, the liability of man to certain deformities and diseases to which quadrupeds are not so much disposed." The point is made that the Bible

account of the creation of man is totally barren of truth, and that man as man, originally, did not exist at all; and thus the whole theory of creation, from a glow-worm to a star, is exploded.

Here, then, taking scientists as the climax of the evolutionary theory, which finds man a worm, tadpole or toad, a molecule, mollusk, or a mole, ape, baboon or gorilla, anything reptilian or beastly, all the sublime ideals of man's origin disappear. He is no longer allied to superior beings. God is not his Father—he has not the image and likeness of God. He is not a living soul. The scientists have discovered his reptilian origin, and now their disciples come forward and declare that everywhere a tendency is discovered on the part of mankind to relapse into their original reptilian or beastly condition.

It is on record that men of splendid mind equipment saw the tendency some centuries ago; as, for instance, Paul, the apostle to the Gentiles, than whom the world has seen few superior logicians or casuists, had a convert by the name of Timothy, addressing whom, he said:

"O Timothy, keep that which is committed to thy trust, avoiding profane and vain babblings and oppositions of science, falsely so called."

The scientists of the present, of whom Dr. Baker professes to be a shining light, take human skeletons, and profess to read in their bones testimony which, in spite of every mind manifestation of man's God-like origin, consigns him to a place among reptiles or beasts. Surely, "a little learning is a dangerous thing;" but then scientists profess to have investigated the heights and depths of learning; they have read bones, from toe to skull, and, summing up the lessons of their lore, say man was originally—in pre-historic times, millions of years or ages in the past—a reptile.

It will doubtless occur to some people that Dr. Baker and other scientists have a right to the belief that their ancestors were toads or tadpoles, fleas or ticks, lizards or scorpions, while others, who are mind readers rather than bone investigators, contemplating the unexplainable triumphs of thought, of human mind forces, are still more certain that their origin was from on high. Amazed and enraptured by their far-reaching and towering aspirations, forever yearning for a higher and a better existence, they discard the "vain babblings and oppositions of science, falsely so called;" are content in the belief of the immortality of the soul—that something, mind or spirit, or both in one, blended with the fancy, the imagination, that

Takes all the pleasures of all the spheres
And multiplies each through endless years.

and then exclaims:

"One minute of Heaven is worth them all."

Deo Gratias.

"Then Said I, Lord, How Long?"

THAT is to say, how long will it be to the end of the world. From time to time for centuries past, men have been predicting the end of the world. These people are usually denounced as charlatans, victims of superstition, or impostors who victimize the ignorant for the purpose of realizing "spot cash," or other valuables. That the world will come to an end is admitted by scientists as well as by soothsayers, nor do they differ materially as to the character of the calamity.

Just here the question arises, ought implicit faith in the declarations of the Bible be charged to superstition? All through the Bible we have declarations more or less explicit, that the world will come to an end, and in some instances the catastrophe is sharply outlined. Saint Peter says:

But the day of the Lord will come as a thief in the night: in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

There is no circumlocution in such language as we have quoted. It is terribly definite. The calamity is to come as "a thief in the night," without warning. If a man knows a thief is coming some time, he will get ready for him. Just here lies the trouble. Men, once alarmed about the coming of thieves, are likely to lose their wits and become cranks on the subject. How much more so if the coming of the thief is simply used as a warning to Bible readers of the coming of the end of the world—without warning. Coming with a great noise and a great fire, with a heat so intense as to melt the earth and transform it into gas.

Mr. Jacques Leotard, in *La Nature*, a scientist who has given the subject much thought, fully agrees with St. Peter and other Bible authorities in the proposition that the world will come to an end and that the time is not known. Still, Mr. Leotard is swift to deride those who, taking their cue from the Bible, predict the destruction of the world at an earlier date than he deems probable. He says:

It would seem impossible that, in our epoch of civilization and progress, there could still be found people to announce the approaching end of the world, and, what is much more extraordinary, that there could be found other people to give credence to them. Such is the case, however. A few charlatans, who perhaps descend from the middle age astrologers, whose ridiculous methods of divination

"Wings its flight from star to star,
From world to luminous world, as far
As the universe spreads its flaming wall;

they doubtless employ, have recently predicted that the world is shortly to come to an end, the date being fixed by some at 1898, and by others at 1901. These grotesque predictions, born of ignorance, have suggested to us the idea of succinctly presenting to our readers the rational causes that, according to the present state of scientific knowledge, might lead, not to the end of the entire universe, but only to that of our world—that is to say, to the disappearance of life from the terrestrial globe.

We are informed that during past centuries astrologers have been able to create great alarm in Europe by absurd predictions of the coming catastrophe to mundane affairs, and far more recently, in the United States, men and women have been able to palm off their vagaries in communities popularly supposed to be exempt from the superstitions of the ignorant and uneducated. But they planted themselves squarely on Bible declarations, except that the Bible did not authorize them to fix a time, but as a thief may come any time, they did not experience special difficulty in that regard. And it may be affirmed, we think, with great propriety, that they rendered society special service by enabling the census taker to designate idiots with unerring certainty, also helping the fool-killer indefinitely in carrying forward his work.

Mr. Leotard, while admitting the final destruction of the world, if not of the universe, puts forth a number of theories as to how it may be accomplished.

In the first place, he thinks if everything else fails, the world—that is, the people and necessarily everything having life—will certainly perish by freezing. In this he antagonizes St. Peter and Bible authorities generally, as they all seem to rely on fire to do the work, a theory which the French *scientist* does not entirely ignore.

In support of the frigid theory, it is contended that the sun is losing its heating force. The sun spots, he holds, are conclusive on that point. They indicate that a crust is forming on the sun's surface which will effectually shut out light and heat in about 20,000,000 years, but that this light and heat will be so reduced in 10,000,000 years as to destroy human life.

Several million years before the final collapse the human family will be driven towards the equator where they will live as Laplanders and Esquimaux now live, but will finally succumb to cold immeasurable.

In all this there is nothing like the unannounced approach of a thief in the night, and it is quite probable that astronomers are in error regarding sun spots, since instead of showing a scarcity of fuel it is possible that they are caused by a superabundance of the commodity. At any rate, those who believe Mr. Leotard, will not, for at least 2,000,000 years, lose sleep because of sun spots.

But the French scientist is of the opinion that there is only one chance in 280,000,000

that the earth may be struck by a comet, in which event a big conflagration might occur. He says:

In order that a collision may occur between a comet and the earth, the orbit of the first star must intersect the orbit of the second, and the latter must be at the point of contact of the two orbits at the time of the passage of the comet. It will be understood that such a combination of circumstances, although possible, has few chances of occurring. In fact, when a comet appears that is to approach the sun as near as we do, a calculation of the probabilities demonstrates that out of 280,000,000 chances, there is but one that it will collide with the earth!

The admissions of the astronomers are in striking accord with the declarations of the apostles. If in the destruction of the world a comet is to be selected as the agent, the appalling visitation will be all that St. Peter describes. This Mr. Leotard admits. He does not believe the tranquility of the world should be disturbed, but as the possibility of a collision with a comet is admitted he regards it prudent to outline probable results. The world, he says, travels at the rate of "eighteen miles per second," 64,800 miles an hour. A comet flies along its course with equal velocity. With regards to results of a collision, Mr. Leotard says:

If the comet had a consistent nucleus, the terrestrial crust would be stayed in by the impact, and the torrents of lava that it conceals would produce a terrible commotion in contact with the waters of the ocean. In addition, the axis of the earth would be abruptly displaced. This is the sole plausible hypothesis to explain the inclinations of the axis of planets upon their orbit: but it is only right to say that no comet with a consistent nucleus has as yet been observed.

Were the comet formed of dense gases, it would cause an enormous pressure upon our atmosphere, and would bring on a hurricane a hundred times more terrific than the great cyclones, and would level the surface of the earth. It might also render the air unsuited for maintaining life by altering its chemical composition through the introduction of a new gas, or kindle an immense fire, such as the temporary stars sometimes offer us the spectacle of.

It is difficult to imagine the frightful consequences of such cataclysms for the animate beings who would be liable to perish amid this chaos of unchained elements. Shooting stars, those strange meteors that shine for scarcely a second in tracing a line of fire upon the celestial vault, are now considered by numerous astronomers as having a cometary origin, they being, so to speak, the debris of the haired stars. There exists a convincing example of this that will prove to us the possibility of a collision between the earth and the erratic bodies under consideration.

It will be noticed that St. Peter boldly states results. There is to be a "great noise," "fervent heat," in which "the earth and all the works therein shall be burned up." Mr. Leotard thinks the collision would produce "a hurricane a hundred times more terrific than a great cyclone." Here we have Peter's "great noise" graphically explained. Then the French scientist refers to chemical changes in the atmosphere, the introduction of "a new gas" and an "immense fire," a scientific confirmation of Peter's prophecy.

There is much in Mr. Leotard's theories well calculated to quiet the nerves of over

sensitive and susceptible minds. As, for instance, if the world is to be destroyed by ice, by cold, for which there is no thermometric measure, the catastrophe is some millions of years distant; if by collision with a comet, the world has 277,999,000 chances in its favor to one against it. But the facts as admitted by Mr. Leotard, and affirmed by the Bible, are those that soothsayers, astrologers, quacks and cranks seize upon to widen the area of insanity and multiply suicides.

Mr. Leotard is of the opinion that on several occasions the world has had a narrow escape from a collision with a comet, as for instance, in 1832, when missing its head by thirty days the world swooped through its tail and was treated to a shower of meteors such as was never seen before or since. "Let us hope," says Mr. Leotard, "that fate will protect our globe for numerous ages by preventing it from running against a good healthy comet."

It will be noticed that in conclusion Mr. Leotard appeals to "Fate" to protect the globe from the catastrophe he so graphically describes. Fate has no ears, no eyes. Fate is blind and relentless. Fate is the inevitable, it is doom. Fate ignores an overruling Providence. As well appeal to stones as to Fate. If infinite wisdom and power create worlds to roll in space, dead orbs, then creation, in all of its sublime operations, is simply playing ball, a matter of caprice, and omniscience and omnipotence are words which cease to be signs of rational ideas.

It occurs to us that common sense, of which there is considerable in the world, teaches men that in their efforts to tell why God made worlds and what He is going to do with them, whether they are astronomers or astrologers, are vaguists, the victims of hallucinations who are deserving of pity or contempt—or both.

The crazy cranks who are everlastingly keeping feeble-minded folks in hot water by predicting the last day, and preparing ascension robes, etc., demand no consideration; nor are scientists greatly in advance of such people when they, leaving the line of prudent investigation, assume to know when and how creation will collapse. In such cases they abandon the rational and pander to the superstitions they affect to despise.

A. Picket.

A PLEA FOR EIGHT HOURS.

Do you hear the crying, brothers,
Then hark to the voice and have care,
The cry that nothing e'er smothers.
The words of men in despair:
The voice of the people, the workers
Who are weary of slavery's toll.
Who are sick of the few favored shirkers
That possess all earth gives to enjoy:
While their own is wearisome toil,
And their vineyards but dead barren soil—
The cry of the many in cities

Whom none encourage—pities,
And who seek in vain for employ.

And they cry from the cities congested
In their hovels and rookeries nested.
Like swallows who must live on the crumb,
By chance they to gather are able,
The drops from the dives' rich table,
And be grateful for that and be dumb.

The grapes in the vineyard are gleaming
The rivers to the ocean are steaming,
The shuttle of industry hums.
The gold jingles bright in the mart,
And the rich count their profits and sums,
While the workers are forced to stand idle,
And the hunger of children must wheedle
With a jest that masks a sad part.

The corn bend heavily windward,
But they every day drop behindward.
In the struggle of labor and life,
And they ask, Oh, give us employment.
Let us go into your wheat-fields and reap,
For labor is life's true enjoyment,
And our children beg for bread in their sleep.

But the answer with refusal comes chilled,
"Our fields and our workyards are filled,
And labor we have none for you."
Forgetting that into the bitter brain trickle
Designs of rebellion and rue;
Forgetful that the mouth which is hungered
May ope like the tiger's when angered,
And the hand that swings not the sickle,
May clutch revolution's red knife,

Oh, you boast of our age and invention,
The genius and depth of its intention,
Scourge antiques with loquacious rods,
Our deeds we admiringly mention,
Our engines puff, roar on and rattle
Progress, faster, faster we prattle
Our age's a Pantheon; we are its gods;
We count our discoveries electrical,
Telegraph, telephone, steam;
Of ourselves alone we are unscceptical,
Think nothing our advancement can stop,
And hold all but lucre a dream.

"Practical, sensible"—our lenders
And changers dub it—why bless
You 'tis folly the sole thing our venders
Heap their measures with, in costless excess
Our philosophy smells of the shop.
Then heed and give toilers less hours,
Let the favored come out of their bowers,
And help the worker and thrall,
We live not for self but each other,
The slave is the task master's brother,
The world rolls from night to the sunward,
Civilization is hastening onward,
Let its blessings be given to all.

Let all be glad earnest workers,
Let us deal with the obdurate shirkers.
As the bees deal with the drone,
Let the toilers crook no more o'er the wheel
Of labor from morning to dark,
Tied there like the fabled Ixion,
Till their heads are heavy and reel
And their hearts are aching with care,
Till life is a slow crucifixion,
And naught remains but to moan.

"God forgive them, for they are unknowing
Of the wrong and the woe they are doing."
Give us chance to go out in the meadows,
To the hall, school, highway and church;
Let our days be not darked by the shadows
Of the shop, its whirl and its smirch.

— *The Last*

"THE people never give up their liberties
but under some delusion."

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Slide Valve Proportions.

The exhaust port of the valve should have a width equal to the cylinder exhaust port and the two bridges, *less* a trille to insure against leakage by wear or by lost motion.

The bridges may be of the same width as the end ports. With this arrangement, if no cut-off is needed, the width of flange or "cover" of the valve will be just equal to the width of end port, *plus* a trille to ensure against leakage from wear or lost motion. If it be desired to cut off, there must be "outside lap" or "steam lap" at each end of the valve.

The following table shows the amount of steam lap to be given to effect cut off at $\frac{1}{2}$, $\frac{2}{3}$, and $\frac{3}{4}$, being the earliest point at which a plain D valve can cut off without choking the exhaust, and $\frac{1}{2}$ being as late as expansion can take place to do any real good:

VALVE TRAVEL, INCHES.

Cut off at	2 1/4	2 1/2	2 3/4	3	3 1/4	3 1/2	3 3/4	4	4 1/2	5	5 1/2	6	6 1/2	7

Robert Grimshaw.

MR. EDITOR:—Reports of the proceedings of the recent session of the Grand Lodge have reached here, and we are thus informed that our Order still has faith in the men who have had charge of its affairs for several years, and has put the seal of approval on their acts by re-election for another term of years. The conduct of the *Magazine* and the establishment of this Mechanical Department having been sanctioned and approved by our Grand Lodge in convention assembled our Editor will no doubt feel encouraged to work on, and endeavor more than ever before to make the *Magazine* a worthy advocate of the interests of the intelligent and progressive engine-man, and to have it stand far in advance of any other labor journal in its advocacy of a fair day's pay for a fair day's work of faithful and intelligent labor. Some portion of satisfaction will no doubt be felt by the correspondents of this department, for while they must certainly know that the

score or so of writers are but a very small part of our Order numbering nearly 19,000 men, yet having been endorsed by the Order they ought to feel that they have "good backing," and continue to work with renewed vigor and zeal.

INJECTOR

PROBLEM.

"Vacuum" having accorded to his statement "caught me napping" wishes to press home some of the points on the action of the injector, and while it has been a question how steam could leave a boiler at one point, gather up a lot of water and force an entrance at another point against the same pressure that first sent it out, "Vacuum" quotes "Roper" to prove that 80 to 90 pounds of steam in an injector has forced water into a boiler against a pressure of 400 to 450 pounds. It would be an interesting point now to find out what the utmost limit of difference in the pressures could be and also the comparative size of the steam opening from one boiler and the opening by which it found entrance into the other one. I wish that it was not quite so energetic an agent to investigate, for it is extremely difficult to watch steam at work, and as for feeling for its force, that is "played out" ever since the finger episode. I reasoned that steam to a great extent partook of the nature of its parent-body (water) in transmitting pressure and even in a late number of our contemporary the *Locomotive Engineer* I note an article, in which it is clearly intimated that a valve even if it was built like a pyramid, would have to bear just as much pressure as a flat valve of the same area on the seat. This was the point I made that even if it was a large steam opening with a contracted opening to enter the boiler, a part of the pressure would be expended on the pipes and prevent the concentration of the whole pressure due to the large opening on the smaller one. If "Vacuum" has any further data about the limits of working and comparative area of the openings it is to be hoped he will give them for I would like to be able to arrive at some satisfactory conclusion, not simply to accept "Roper" or any other man, as I think "Vacuum" has also expressed it.

THANKS.

As I have retired from the vain fight with the "Dr.," I can only thank "Vacuum" and "Eccentric Strap" for the manner in which they are still waging the battle, and applaud some of the telling hits they have made in the October articles, but regard it as a hopeless case to spread reason before him.

SLIP OF THE

LINK-BLOCK.

Bro. A. H. Tucker wants to know what to do to compensate for the slip of the link in the block. This must be treated as any other lost motion by giving more lead to the eccentric cams. Whenever the valve has been pushed or pulled to the extreme end of its travel it comes to a stop, and is

held there by the action of the steam pressure on its back until the eccentric cam has taken up all the lost motion in the straps, rods, links, blocks, rockers, valve-stem and yoke. Each of these losses must be provided for by having the cam far enough in advance of the valve to take up the slack and have the valve in position to open the port at the right time. In many shops they measure the lead by the thickness of a tin, and it is at once apparent that this lead could easily be lost in the six joints it takes to establish connection between the cam and the valve. The slip of the link-block in the link is one of these losses at the joints, and unless compensated for along with the other losses would leave the valve not only without lead but would make her hold the port closed during a part of the return stroke, thus greatly impairing the efficiency of the locomotive and making her slow and sluggish instead of "smart" as she would be with the proper lead. *Vulcan.*

Topics before the Master Mechanics.

At the recent Convention of the Master Mechanics, committees were appointed to study up and prepare reports on the following subjects:

1. Best form and size of exhaust nozzles and pipes and steam passages in proportion to the cylinders.
2. Testing laboratories, both mechanical and chemical.
3. Advantages and disadvantages of placing fire-box above frame.
4. Relative value of steel and iron axles.
5. Purification or softening of feed water.
6. Present status of the car coupling question.
7. Examinations of engineers and firemen.
8. Operating locomotives with different crews.
9. Locomotives for heavy passenger and fast freight service.
10. Electrical appliances for railroad use.
11. Standards of the association.

These subjects are interesting and some of them are of vital importance to the rank and file of locomotive men, and it may be possible that some of our readers desire to express their views on the subjects. At any rate a little thought and study of these subjects and a comparison of ideas on them cannot fail to be profitable, and we hope that they will be discussed even if we should not have much new to offer or should make mistakes.

Some of these subjects are of vital interest to locomotive men and we commend them to the thoughtful consideration of such of our readers as are interested in keeping abreast of the progressive spirit of mechanical inquiry and investigation. It is scarcely necessary to add that the columns of the Mechanical Department are wide open to all who are inclined to express their views upon the several subjects proposed.

The Velocity of Steam.

The following article, written by Jearum Atkins, on the velocity of steam, appeared in *Power and Transmission*, a mechanical journal of which Mr. Robert Grimshaw is Mechanical Editor, in the December number, 1887:

The velocity of steam escaping from under pressure is known to be very great though few are aware that even under a moderate pressure of say twenty or thirty pounds to the square inch, it is equal generally to that of a projectile fired from a cannon. A notable example of the high velocity of escaping steam is that of a steam whistle, in which a jet of steam little thicker than ordinary writing paper produces a sound that can be heard further than the loudest thunder. The writer has often heard a railroad whistle eighteen to twenty miles, while thunder is seldom heard over ten or twelve miles. Every engineer knows how little his safety valve lifts, while the whole current of steam required to run his engine escapes therefrom, and how small a leak in a valve will cause his engine to "creak" provided his piston packing is tight.

To understand the reason of the very high velocity of steam or other gaseous bodies on escaping under pressure, we have to consider that *such velocity is as their pressure and the square root of their density inversely*. Thus at given pressure, if we double the density of the mass we reduce by one half the height of a column that would produce (by its quantity, such given pressure, and the velocity due to any head or height of fall, being as the square root of such head or height, it follows that increasing the density with a given pressure, reduces the velocity and contrariwise reducing the density with a given pressure increases the velocity.

Thus the spouting velocity of mercury under a given head, as one foot, would be equal to that of water under the same head, namely, eight times the square root of such head, or eight feet per second (nearly), while the spouting velocity of mercury under a head that gives the same pressure as a head of one foot of water, or something less than one inch, being still as the square root of the head would be only about 1.82 feet per second; and the velocity of water under a head whose pressure is equal to one foot of mercury, or over thirteen feet would exceed twenty-seven feet per second.

All these calculations are in round numbers. We have not taken the exact specific quantity of mercury as a basis of these calculations as we are only dealing with general principles.

It is understood that it is the height of column that determines the velocity in all cases, the density, with a given height not effecting such velocity.

Now the velocity of steam under a given pressure is in a like ratio as that of any dense body and for a like reason, and to calculate such velocity it is most convenient, first to ascertain the ratio of the density of steam at the given pressure above atmospheric pressure as compared with water. Tables giving such relative density will be found in almost any work on steam engineering. This data once obtained, next calculate therefrom the height of a column of steam, considering it to be homogeneous of equal density throughout, that would give (by its weight) such given pressure.

To ascertain such height of column, we first calculate the height of a column of water, calling the weight of such column 2,304 feet in height equal to one pound, that would give the required pressure, and the height of this water column multiplied by the ratio of the density of steam at the given pressure to that of water, gives the homogeneous steam that would give (by its weight) the required pressure, and eight times the square root of such height in feet is the required velocity in feet per second.

The rule then, (to make the statement a little more explicit) is, multiply the height of a water column that would produce the given pressure, by the ratio of the density of steam to that of water, at such pressure (above the atmosphere,) extract the square root of the product, and multiply by eight; this gives the required velocity in feet per second.

Practically the results do not agree exactly with the above rule. There is some waste of power from friction at the point of discharge. If the discharge pipe is short, its length being no more than its diameter and properly enlarged inside, there will be but little loss of power, whereas if the steam escapes through a pipe of considerable length, the steam will expand very considerable in passing its length, and while thus expanding exerts a back pressure on that back of it; thus retarding the velocity of that just entering the pipe and rendering the flow of steam correspondingly less.

Any one who will calculate by the above rule the size of a circular orifice that will give vent to thirty horse power of steam at a pressure of ninety pounds to the square inch, will find its diameter to be less than three-eighths of an inch, and to vent 120 horse power, such orifice would be less than three-quarters of an inch, and to vent 480 horse power it would be less than one and a half inches.

"Further this deponent sayeth not," at present, but if any additional explanations are asked for, will try to give them.

The article expresses in plain and easily understood language the recognized rules governing this subject and may be a help to such readers of the mechanical department as are interested in the subject and are not familiar with the rules to decide for themselves about how much guess-work enters into these matters. I will have something to say concerning indicator diagrams in my next.

Vacuum.

The Master Mechanics.

The twenty-third annual convention of the American Railway Master Mechanics' Association was held at Old Point Comfort, June 17 to 19, both inclusive. The Address of Welcome was delivered by Mr. M. E. Ingalls, President of the Chesapeake & Ohio Railway. Mr. Ingalls confessed that he knew "little about engines, wheels, axles or cars," but he demonstrated pretty conclusively that he did understand taking a railroad from a condition of bankruptcy and making it worth owning.

Mr. Ingalls gave the master mechanics to understand that he had studied Old Virginia—that he knew all about her ancient history, historic localities, her finances, politics, and her race difficulties. He was familiar with her coal and iron resources, and was eloquent in his predictions of her future greatness. He threw wide open the gates of the Chesapeake & Ohio to the M. M.'s, and invited them to ride as they might have inclination, and encouraged them to mingle as much pleasure as possible with business.

The address of President Briggs was exceedingly felicitous and appropriate. We quote a few paragraphs which show that Mr. Briggs has a level head. He said:

As we contemplate the immense work that our locomotives are made to perform in the transportation of the harvests from the prairie to the seaboard, in the movement of all living and dead freight, creating cities, establishing markets, breathing life and civilization, making the "desert even blossom as a rose," let us not forget the grand army of faithful engineers and firemen to whose care these vast machines are

entrusted; an army of men larger in numbers, stronger in discipline, richer in intelligence and higher in bravery than any of whom Alexander could ever boast. These men, largely recruited from humble life, form a perpetual monument to the mothers who gave them birth, true types of our American womanhood, who sent her boys to school and struggled so often with poverty and privation that her children should have every opportunity for gaining knowledge, and who by a lifetime of devotion has encouraged and fortified us all in the development of our progression.

Such brave words, coming from a man who *knows*, and has the courage to say what he knows, are in the highest degree complimentary to engineers and firemen. We do not remember having seen in print sentiments better calculated to awaken in the minds of firemen high ambitions to succeed in their chosen calling. Master mechanics, more than any other class of railroad officials, have opportunities for knowing all about the men who handle locomotives, and the testimony of Mr. Briggs will be fully appreciated by them.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of October, 1890, and are now free to be used by anyone, viz.:

Dumping platform, J. W. Harrison.
Car coupling, S. A. Otis.
Hand car, L. H. Kenyon.
Running gear for car, J. S. Lester.
Locomotive headlight, W. Westlake.
Signal, W. Wickersham.
Rail joint, T. Rodes.
Tie, P. S. Devlan.
Time signal, G. B. Cummings.
Car axle box, L. Schulze.
Car wheel, A. F. Cooper.
Electric apparatus for signaling between trains, R. K. Boyle.
Electric railway signal, S. C. Hendrickson.
Rail, B. Myers.
Automatic signal, H. S. Evans.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

REPORT has it that "one of the mechanics of the Pennsylvania lines is working on a device by which coal will be fed to the fire-box of a locomotive in the same manner that a base-burner is fed. It is claimed that if the device is perfected it will greatly increase the heat in the fire-box, as no cold air will rush in, as is the case when the door to the fire-box is opened to throw in coal." That looks like a good thing, but as yet, the fireman is required to "keep her hot."

LOCOMOTIVE builders have a sure thing of it. The demand for the machine is constantly increasing, and last year 1,664 new ones were brought into service.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

MOVING THE HOUSEHOLD GODS AND GOODS.

So many of our correspondents have given us a leaf from their own personal history, and we have all found these bits of real life so interesting, that I am tempted this month to add a chapter of my own experience, with the belief that I shall strike a sympathetic chord in the hearts of many members of the Woman's Department. As a general thing I believe people are not so much interested in the writer as they are in what is written; if that be entertaining it matters not whether Mrs. Harper wrote it, or Mrs. John Smith, or Mrs. Brown, Jones or Johnson. It seems to me this evening, however, that I could not possibly write upon any other subject than Moving; in fact, I am very strongly moved to discuss this topic. Perhaps some of our readers have had more experience in this line than I have, perhaps they do not consider it so much of an undertaking, perhaps they are better managers; but my opinion just at this moment is that whether I find contentment and prosperity in my new home, or the reverse, here will I stay the rest of my natural life rather than move again.

Before the grand upheaval commenced I was rash enough to say that a fire which would sweep all my goods out of existence would be most welcome, for then I could collect the insurance money and start in again with everything fresh and new, and no trouble of moving. But now that it is all over and I look about me and see each familiar picture and beloved book, and may rest in my favorite rocking chair, and write on my desk, consecrated by so many hours of pleasant work, I wonder how I could ever have made so reckless a wish. And how quickly it all was done. Tuesday morning the first tack was drawn, Thursday morning the goods were here waiting to be unpacked, not a thing lost, broken or damaged. There is an old saying that "three moves are as bad as a fire." I will testify that one move is not one-third as bad as a very small blaze.

But of course there was a great deal of

preliminary work, and "there was the rub," the hardest part of all; what to take, what to dispose of, what to save, what to destroy. It is only in an event of this kind that we realize how much we have accumulated, and yet how we cling to these relics of past days. Common sense tells us to consign them to the flames, sentiment pleads for their preservation. Here are letters, yellow with age; we shall never see the writer again, but we do not need these silent witnesses to keep alive a memory that is fading, and yet we cannot give them up. Around these wedding cards the fragrance of the orange blossoms still seems to linger, although but a few days since came the nuptial cards of the children who blessed this union. Here are locks of hair, softly wrapped in tissue paper—gold, brown and gray; sacrilegious indeed would be the hand that could destroy these vital mementoes of the beloved. And here are the school-girl essays, tied with blue ribbon, and recalling triumphs filled with a pure and unalloyed delight that comes not with all the plaudits of later victories. As we delve among these keepsakes, so carefully treasured through all the years, we come upon the little mementoes of our childhood—earlier life—the examination papers and promotion cards so proudly exhibited at the close of school, the crude drawing books, the first trembling and irregular attempts to write, all inestimably precious to a mother's heart. Then come other treasures—the first garments the baby wore, recalling all the tenderness and anxiety that were woven in with the dainty stitches; the tiny shoes that covered the little feet which now have strayed so far out in the wide world; the playthings which filled the childish soul with joy, long since cast aside for the glittering and unsatisfying baubles of life. What pen can enumerate the cherished things that we take from the recesses of trunks and boxes when the time comes which demands their resurrection and, alas, their annihilation?

There are other valuables which must be destroyed when the limitations of space demand it—the newspaper clippings, the statistics, the references, the pamphlets upon various subjects, which one has been years in collecting. I spent half a day burning up such articles, feeling certain as each one was laid upon the fire that some day I should have the most pressing need of it in my work. And after many sacrifices which almost broke my heart I still brought a large trunk filled with letters and pamphlets that I know will have to follow the rest when I find time to go through them.

But the destroying of the old relics is not the only hard trial one must meet in changing locations. There are so many "last things" one has to experience—the

SAN ANTONIO, TEX., September 21, 1890.

Editor Woman's Department:

last hour in church, surrounded by the familiar faces one has seen change from youth to age in the passing years; the last walk down the well-known streets; the last farewell to friends who have borne the test of time and proved faithful; the last night spent in wandering through rooms whose very walls seem to speak of the happiness and sorrow of the past. To turn away from all these associations, a part of one's daily life for nearly twenty years, requires a courage and resolution understood only by those who have experienced it.

I write to-night with hands so lame they can hardly hold the pen, and any devotions which require a bended knee would be out of the question at present. "He who by the plow would thrive, himself must either hold or drive;" and even with the most competent help the housekeeper must herself be in the midst of the fray.

This has been a beautiful Sunday, the last in September, with the slight chilliness of the air tempered by a golden sunshine. Across the street from my new home is a handsome park, and within one block are the five largest churches in the city. With the hundreds of handsomely-dressed men and women flocking to church, the long lines of carriages, the crowds of children going to Sunday school, and the groups of people wandering through the park, the scene is animated and inspiring. The winter will be filled with pleasant and congenial work, and busy people have no time to be lonely. It will be November before these lines will reach our readers. May every one find some cause for thanksgiving and not neglect to celebrate this day of pleasant cheer and friendly reunion.

IN MEMORY OF MESSRS. HUGHES AND BLAKE.

One more sad and fatal mistake,
Ending the life of fireman Hughes and engineer Blake,
Around the curve two great engines rush,
Each unheeding the other they were about to crush,
Till, alas, it was too late
Each had sealed the other's fate.

On and on the great iron steed
Rushing and roaring with terrific speed:
Till they came face to face
Each trying to take the other's place.
One more minute and the deed was done
The seventeen rushed into the forty-one.

In this collision two noble men
Were brought to death by a friend;
How should they know that just ahead
They should lie wounded, bleeding and almost dead,
That in a few minutes more
They should be ready to cross to the other shore?

But now that with this world they are done
Let us hope Heaven has two more angels won:
And when they arrive at Heaven's gate
May a crown with many stars for them await.
Now, let us say to them, farewell
But they shall be in our memory wherever they dwell.

A friend to the railroad men.

Trina.

COESICANA, TEXAS, Sept. 7, 1890.

As I am reading the *Magazine* I find one lady wishes to exchange patterns for fancy work and receipts. I think that a good idea. You know Christmas will be along soon, and those of a giving nature always like to give something pretty to their friends. So let us have some patterns soon. I am so glad Kitty Wadden's forgery is at last known to be a fact. I knew before I had read it half through that I had read it before, and that it was not her own composition and wanted to say so; did say so to my husband, but as I could not find the paper in which I had read it, I said nothing about it, thinking surely some one of the *Magazine's* numerous readers would denounce her.

Blanche, of Chicago, tells us to always have our husband's meals ready on their return from work, their clothes laid out and shoes or slippers polished, etc. That is all very well if we know just when they will be at home; but sometimes I have been expecting my husband for three days. Now, when he went away last, he said he would be home about 6 o'clock this morning; well, I was up early to have his breakfast ready when he got home. It is now 2 P. M. and he is not here yet. Now how am I to know when to have his meals ready? Do you know what I'll do when he comes? If he comes between now and 6 tomorrow morning, he will eat a cold lunch. I have left plenty on the table for him, and if he comes in during the day and I am not certain at what hour he will be in, I will not prepare for him, but will say: "Hubb, are you hungry, or have you had dinner?" If he has had none, then I will get it just as quick as possible. If he wants clean clothes he knows just where to look for them, and the chances are that he is no more tired than I am, and as I am getting dinner, of course, I have not time to get them, and he must have something to keep him busy till dinner is ready. Then about his shoes, I think he has plenty of time to keep them polished when he is off duty. Now I suppose Blanche will say: "Shameful thing; she does not love her husband." I do wait upon him sometimes and I don't altogether hate him when I don't wait upon him; but just let me tell you, a wife is not a husband's slave, or at least she should not be. I have my work to do, my children to care for, and I never idle my time away, and when night comes I am generally tired and, although I am willing and do wait upon my husband when it is necessary, yet I believe in drawing a line, so to speak, and let my husband depend upon himself and wait upon himself occasionally. Now, see here Blanche, I suppose your husband has had sometimes a "lay off" of a few days, you cooked, washed, scrubbed and cared for the children just the same as when he was at work. When you finished your washing did your husband bring you a clean dress and shoes and lay them before you and have your dinner ready for you? And oh! how tired you were, and there were the children with dirty faces and hair uncombed, and you to clean them up and dress them, as well as yourself, and I would like to bet your husband was lying asleep somewhere, and came out just as you felt like you didn't want to live to see another wash day, and said in his gruff voice, "Blanche, I'm about starved, when are you going to have that dinner ready?" Then you said, "Yes, dear, I'm sorry to keep you waiting, but I'll not be long about it."

Now when my husband has one of those lay offs he builds the fires and often gets the dinner and does the sweeping. Don't think he is a henpecked husband, for he is not, and I do not impose upon him, but he knows I am busy and also knows it is a relief to me to not have it to do, so he does it for me, not every day but sometimes, and I wait upon him sometimes when it is convenient and I think we "get along" as well as most people. We somehow have a silent understanding that we will each do our part and neither of us will outdo ourselves to wait upon the other; and should my husband try to impose upon me I would in some manner let him know it could not be done and he would do the same by me. In a word, we both manage ourselves, and I believe that is the best in the end.

I can say to the lady of Keokuk, Ia.: "Them's my

sentiments too," when she says that "Women no more than men should have abundance of authority over the home." I thought my husband, when I married him my equal and continue to think so, but I think I am his equal also. I suppose you will think I have a good opinion of myself. So I have, and of my husband too, but I do not believe in a wife humbling herself to her husband and humoring him like a sick child, or like she was afraid of him. We have enough cares with our children; we have to take things as they come, why should not our husbands? It is all very well to have everything in order when they come home. A wife who does her duty will try to have her husband's clothes clean and whole when he needs them, and his meals ready if she knows when he will be home, but if it should happen that he comes home hungry and dinner not ready, let him keep his temper. It is just possible that she for some very good reason could not have it ready, just as she sometimes does not have that button sewed on those overalls. That reminds me that my husband's blouse needs a sleeve patched, and I have put it off for a day or two, and so I'll just close and do that yet before I go to bed. I will bid you a hasty good night. Yours, Belle.

[Come again. Your letter is quite refreshing.—Ed.]

COLTON, SAN BERNARDINO COUNTY, CAL., }
September 11th, 1890. }

Editor Woman's Department:

I am a constant reader of the *Magazine* and have thought several times of writing, so I forward you the following essay, hoping you will find space for it in your valuable columns:

No word in the English language calls up so many pleasant or unpleasant memories as the word home.—Pleasant memories if home is what it ought to be, and unpleasant if it is a mere stopping place.

You may ask a dozen different persons what is home, and you will receive as many different answers. Each one will give a definition in accordance with that which is uppermost in his mind. To one it means simply love at the hearth, to another a loaded table, to a third industry in the affairs of his trade or occupation. Home may mean devotion at the altar, intelligence at the books, a wall covered with pictures, and rooms richly furnished, dress and appearance, or a splendid mansion. To others home may mean want, looking out of a cheerless fire grate, "kneading hunger in an empty bread tray," as Talmage suggests. Home gives us character; home influence extends through our whole life. It makes the first impression upon our nature and gives that nature its first direction onward. It makes the first stamp and sets the first seal upon the plastic nature of the child. These impressions are indelible and durable as life. It is either a blessing or a curse, either for good or for evil. What is true of impressions in the material world is true in the mental. Every act or word of ours makes an impression upon the minds of those under our care, and those impressions cannot be effaced. Mind is shaped by means of these impressions, hence in our home-school, we are unconsciously making impressions that train our children for honor or disgrace. We grow by means of impressions, and the home and the street give the impressions that shape the child's life. The attraction of home should overcome those of the street, and hence the whole responsibility rests upon the home. Then we take great responsibility upon ourselves as teachers in our home. The home should be made the brightest place on earth in order that the children may be charmed to the higher paths of virtue.

Our homes should be cheerful, innocent joy should reign in every heart. There should be domestic amusements, fireside pleasures, quiet and simple it may be, but such as shall make home happy, and not leave it that irksome place which will oblige the youthful spirit to look elsewhere for amusements and happiness. Ireland exports beef and wheat and lives on potatoes. There are parents who are the life of every company which they enter, but dull silent and uninteresting at home among the children. Like

the natives of Erin, they fare poorly by reserving their social charms for companions abroad and keeping their dullness for home consumption. If they have not mental activity and mental stories for both, let them first provide for their own household. It is better to instruct children and make them happy at home, than it is to charm strangers or amuse friends. Send them out into the world in the belief that there "is" no place like home, "be it ever so humble," and even if the old home should in the course of time be pulled down, or be lost to your children, it will still live in their memories. Some years ago Jenny Lind, the Swedish nightingale, sang to an audience of about twenty thousand, in the Castle Garden, New York. She had been singing the beautiful compositions of Beethoven, Handel and others, when at length she thought of her home. She paused and began to pour forth with deep emotion "Home, Sweet Home." The audience could not restrain their emotions. An uproar of applause stopped the music. Beethoven and Handel were forgotten. Home was the word that held spell bound twenty thousand souls. Thus Howard Payne triumphed over the great masters of song. When we look at the brevity and simplicity of this home-song we are ready to ask, "What is the charm that lies concealed in it?" The answer is easy. Next to religion the deepest and most ineradicable sentiment in the human soul is the associations of home. What a hallowed name! How dear to the heart! What tender memories cluster around home!

A distinguished poet says:

I've been where pleasure's silken bands
Are thrown around the heart.
Where fancy weaves her fairy dreams
And bids all grief depart:
Where lords their servile slaves command
And bid them go and come,
Yet found no pleasures half so sweet
As in my cottage home.

Home is the place of rest and of refuge. We may find joy elsewhere, but it is not the joy, the satisfaction of home. Of the world the heart may tire, but of the home never. In the home there is a mother's watchful love, a father's sustaining influence, and the circle of loving brothers and sisters. In what Christian country can the mother's influence in the home be denied. George Washington said "I attribute my success in life to the moral, intellectual, and physical training I received from my mother." Others with the best and the bravest and tenderest hearts, have acknowledged a mother's influence. Home is one of the evidences of civilization and the chief safe-guard of the nation. The nation finds its stability resting upon a pure home sentiment. The most illustrious statesmen, the most eloquent ministers and the greatest benefactors of human kind owe their greatness to the fostering influence of home. The homes of the American Revolution made the men of the Revolution. Their influence reaches into the inmost frame and constitution of this Republic. Considering how much depends on home, thinking of it as a place of refuge and rest, a school from which all the noble men and women of the world have and will come, should it not be regarded as a treasure of untold value?

With best wishes for the Woman's Department.
I am most truly,

Emily Finlay.

[We hope to hear again from this new contributor.—Ed.]

ABBOTSFORD, WIS., August 21, 1890

Editor Woman's Department:

We have taken the *Firemen's Magazine* since the beginning of the year. I read it in preference to the "Engineer's Journal" which my husband has taken for years, being a member of the B. of L. E.

The Woman's Department is especially interesting to me, and as the subject of Managing a Husband is yet under discussion, concluded to give a little of my experience. It is no task whatever in my estimation when people are rightly wated. Instead of growing apart, as a great many people do, we have grown nearer and nearer. I think "Daisy's" letter in April number about right, especially where she leaves her

work to accompany her husband, as that is precisely our way of doing. Since we have been without our horse, we walk, but we continue going out together just the same, leave the dishes and work if it is undone, and do it up together on our return. My husband has the preference any time.

His run brings him home every other night at midnight, so he is deprived of the much talked of smile, as well as myself, but we make up for it the following day. When he leaves the next night he is convinced once more, also myself, that we need not necessarily grow "colder" although we are growing older.

In regard to playing cards I agree with "A Fireman's Mother" in August number: allow them to play at home and they'll not go elsewhere, that is the principle that I work on and it has proved a success. If husband and children are fully satisfied at home, they will be contented and not seek other quarters. My husband prefers home to any place on earth. There was a time when cards, liquor, tobacco, etc., were an attraction to him, but that was before my time. It is not so now. Furthermore I never requested him to leave off these habits. I have little faith in such promises. He did it of his own free will, and was encouraged with a happy home. To break off smoking was the hardest task: when he said "quit" he meant it. Although he struggled with the appetite for about two months, he did not soil his lips or breath with a cigar or any other bad odor. He is as near perfection as can be found and the handsomest man in the State.

Winter evenings we play cards at home, as well as other games. I fail to see the harm.

Mrs. H. C. Perkins.

[You are very fortunate and so is Mr. Perkins.—Ed.]

FT. WORTH, TEXAS.

Editor Woman's Department:

"We must not hope to be mowers,
And to gather the ripe golden grain
Unless we have first been sowers,
And watered the furrows with tears."

If this life gave us all we desired, then we would wish for no better place. If our present life were unmixt with sadness or disappointment, we would have no desire for that happier country where there is joy and happiness forever. Let us then try to bear our trials here bravely and patiently, and they will eventually become easy. The greatest burden of care may by God's grace be turned into a blessing, that will, not only brighten all our future lives, but will add to eternity glowing memories that may forever increase our happiness. It is only what we have wrought into our character in this life that we can take away with us. The sorrows, worries, troubles and poverty will all be left behind and nothing will remind us of them, save the added sweetness, patience and soulful sympathy for others, which will have pervaded our hearts and lives, made our souls white, our actions gentler, our faces sweeter, even if those cares have left our faces seamed and wrinkled; taken the luster from our eyes and hair and left only a pure heart and faithful soul looking from the frail tenement.

Why then do we give so much more time and thought to the cares and troubles of life than to its beauties and joys? Why not nerve ourselves to bear all wrongs and troubles that we cannot remedy and try faithfully to bring good out of evil.

If our husband has been unusually cross and peevish this summer, not near so thoughtful and considerate as he used to be, are we wholly blameless? Have we remembered always to do as we would be done by? Have we offered the first causes and been refused. Have we taken into consideration the fact that the weather has been most trying, that he has had many troubles that we know of and perhaps others that we do not know? Have we too not been depressed by all this and in wise tried to hold the high place in his home and affections that was rightfully ours?

This is not for the pretty young wives who have only to pout and be kissed but to the weary sisters who have grown old in well doing, yet have battled

with care and trouble until weariness and discouragement added to summer heat have almost caused them to lay their armor by and give up the fight.

Be not discouraged, oh weary one, life holds for you many blessings and joys yet. You can not see through the clouds at present. No one ever did until they burst or rolled away and let the rainbow of promise through. It may yet be your lot to be the motive power in a happy home; which, by undying patience and love, and attention to the little things of life, may be made into the most holy and beautiful on earth. And yourself be so loved, honored and respected, even revered by its inmates that heaven will have few attractions for you until some of your loved ones have flown to its portals.

I met an elderly lady not long since who through misfortune long years ago had lost all her worldly wealth, but she still retained her sweet, thoughtful disposition, her loving, careful sympathy for others, strengthened and broadened by patience and experience. Every one who knew her loved her. She was the counselor and adviser of old and young; her friendship was esteemed, her acquaintance coveted by all. Yet she had no special gift, no great learning. She was only a woman, good, pure and truthful, just as we all may be if we so desire.

We cannot all be strong pillars in a great cause, yet nails are often as essential in a building as are the costly columns.

Many of us have no time or influence to devote to the great questions of the day. No field of work like other women. We can only wish them success in their greater calling, but we can all be brave, helpful mothers, sisters and friends, can make the world better for having lived in it, can live our lives so that all who are burdened with care, discouraged, weary and troubled may be encouraged to try once more to take up their burdens and bear them bravely to the end.

I have been very much interested in the letters lately on "how to manage a husband" and all the others.

Why did not Mother Jones give us one on the subject? She seems to understand the art most thoroughly.

Thanks, dear Mrs. Miller, your articles are most interesting and highly appreciated at this end of the line.

We received a call from Mr. Theodore Debs. He is a pretty boy, as the girls say, and I liked him even as well as the rest of you do. I have been spending the summer away and have not yet seen the September Magazine but am looking for it every day.

Irene.

[We are glad to hear from Irene again. Theodore Debs is a big, married man now, with a lovely and lovable wife.—Ed.]

MATTOON, ILL., August 31, 1890.

Editor Woman's Department:

I come again for admission to your charming circle to say Beacon Lodge, No. 111, is in a flourishing condition with seventy members all in good standing and a large attendance every Sunday afternoon at meeting. From what few I have had the pleasure of meeting, I think they are an honor to their Order and trust they will live up to their beautiful motto. W. P. Fitzgerald, Secretary of No. 111, went to San Francisco to the Convention as a representative. Wm. McShane and Johnny Cook have been confined to their rooms with typhoid fever, but I am glad to say they are both able to be out again. Collector F. W. Neidheiser is running a switch engine in the yards of nights.

Died, Sunday morning, August 10th, Walter Kirby, after an illness of ten days, of typhoid fever. He was nearly 22 years old and a devoted member of No. 111, which Order took charge of the funeral, leaving here Monday morning at 3 A. M. for East St. Louis. Funeral services were held at the residence of the mother of the deceased. After the funeral services they marched to Belfontaine Cemetery and there laid their brother to rest with the last sad rites of the Order. Walter was a sober and industrious young man, respected by all who knew him. No. 111 has lost a worthy member and they feel their loss

deeply, but when they all pass over to the other side they will still be one united brotherhood. These few lines are dedicated to the memory of Walter Kirby:

Ah, no, he sleeps while seasons change.

And fast recede the long, long years.

We may not rouse him—'tis in vain.

From feelings fast spring up the tear:

Sad, sad, 'tis ever to behold

Life's cherished objects swift decay.

But there's no sorrow keen as that

We feel when loved ones pass away.

May God ever let his richest blessings be with the
B. of L. F., is the earnest wish of

Mrs. J. W. Taylor.

THOSE HANDS.

"Just look at those hands!" you murmur, as you gaze at them with a frown.

How black, and hard, and dirty, how coal-begrimed and brown:

I'm sure I scrubbed them hard enough, before I came in to-night.

And I thought them all O K, dear, till clasped in yours so white."

And then you're off to the Kitchen, to scrub them and wash them once more.

And I am left a thinking, thoughts I've often thought before.

For you surely know, my dear one, that those hands you so despise

I'm proud of and I love them, they've beauty in my eyes.

For they're brave and strong and gentle, oh! so gentle when I'm in pain.

As they smooth my aching brows till I can smile again.

They're hands I know I can trust to, for tho' they're black to the sight.

They're honest and hard-working, they strive to do the right.

And I'm so glad you're not a lawyer, or doctor, or minister, dear.

But just my bonny *fireman*, and soon my engineer. What does it matter for looks, dear, so long as we aim to do right.

And try the "whatsoever," to do "with all our might?"

F. M. P.

WEST TORONTO JUNCTION, ONT., August 1890.

GOOD TEMPER.

There's not a cheaper thing on earth,

Nor yet one half so dear:

'Tis worth more than distinguished birth,

Or thousands gained a year.

It lends to day a new delight,

'Tis virtue's firmest shield;

And adds more beauty to the night

Than all the stars can yield.

It maketh poverty content,

To sorrow whispers peace;

It is a gift from Heaven sent,

For mortals to increase.

It meets you with a smile at morn,

It lulls you to repose;

A flower for peer and peasant born.

An everlasting rose.

A charm to banish grief away—

To snatch the brow from care:

Turn tears to smiles, make dullness gay,

Spread gladness everywhere.

And yet 'tis sweet as summer dew

That gems the lily's breast:

A talisman for love as true

As ever man possessed.

What may this wondrous spirit be,

With power unhard before—

This charm, this bright amenity?

Good temper—nothing more.

Good temper—'tis the choicest gift

That woman homeward brings—

And can the poorest peasant lift

To bliss unknown to kings.

THE WOMANLY GIRL.

Why She Enjoys the Genuine Respect of Everybody.

In the hurry and artificial life of this nineteenth century there is yet cause for hope in the genuine respect shown even by bores to the womanly girl. Whatever stands in the way of a girl attaining to the highest goal, that of Christian womanhood, becomes in comparison as mere chaff. The girl who gives up her love of home and sneers at the cares of housewifery in order to pursue what she deems a "higher education," has sold her birthright for a mess of pottage. She has measured her acquisitions by the waverer values of this world. Only when a woman is gentle and wise enough to attain to high intellectual powers, and use them, not as coarse women do for their own aggrandizement, but as a means to minister help and hope to others, has she learned the use of her power. Intellectual training is like physical training—a means by which woman may receive more power for her work, in her home or in any field outside to which she is called: it is no more. Without it she may be a weak hand where she might have been a strong one, just as a woman who is crippled is unable to accomplish as much good as one who is robust and strong. Yet the woman who devotes herself to intellectual pursuits merely for her own glory is not less silly or cumbersome to the earth than she who devotes her entire time to personal adornment from motives of vanity. Both fail to sustain even the admiration of the world. The woman who has attained to intellectual heights and has not been gentle and wise enough to use the "tongue of learning to speak a word in season to him who is weary"—her mission has passed her by. She has lost the sweetest pleasure of a true woman, that of ministering to and helping those who else were helpless and hopeless. Instead of living in the broad sunshine of Christian life she is imprisoned in the narrow cell of her own selfishness.—N. Y. Tribune.

USES OF PAPER IN JAPAN.

The Japanese use paper at every instant, says the *World's Progress*. The string with which the articles you buy are fastened is made of paper. Do you want a piece of string? Tear a sheet of paper, fold between the fingers; it requires a strong wrist to break it. The handkerchief thrown away after use is paper! The partitions dividing the houses are paper! The pane through which an indiscreet one looks at you is paper! The pane is truly wanting in transparency, or not at all transparent, and the Japanese, especially the ladies, who are as curious as they are in other countries, are none the less embarrassed to see, without troubling themselves, what is taking place outside. The method is very simple. One finger is passed through the paper—that is all! When one has had a good look, a small piece is stuck on this opening with a grain of rice. The yakouné hat passing is paper; the porter's cloak, who carries his burden, singing a cadence, through the rain; the garment of the boatman who conducts you on board; the tobacco pouch, cigar case—all are paper! Those elegant flowers ornamenting the beautiful hair of the Japanese ladies and those robe collars, which are taken for crape—paper!

TABLEWARE.

Queen Victoria's usual dinner beverage is champagne, and she drinks it from a beautiful gold cup, which has come down to her from her predecessor, Queen Anne. The table is always lighted with candles placed in golden candelabra. King Humbert's table is entirely spread with hammered gold plate service, which is used every day. The Comte and Comtesse de Paris eat off silver plate; they possess two complete services—one of French and the other of English manufacture. The latter is used at the midday meal, while the former is used for dinner. The plate belonging to the Spanish court is very fine, but is never used save for ceremonial dinners. The gold dinner service at Buckingham Palace is also only brought out of the strong room on state occasions.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE B. OF R. C.

The Second Annual Convention of the Brotherhood of Railway Conductors—Report and Address of Grand Chief Geo. W. Howard—Toledo, Ohio, Chosen as the Headquarters of the Order.

THE PURCHASE OF THE RAILWAY SERVICE GAZETTE, WHICH WILL BE THE ORGAN OF THE BROTHERHOOD.

The Brotherhood of Railway Conductors held its second annual Convention in the city of Toledo, Ohio, commencing September 15th, 1890.

The B. of R. C. is not an ancient order. It was founded at Los Angeles, Cal., Nov. 15, 1888. A more vigorous child was never born. It seems to have come into the world fully developed, mentally and physically. There was a demand for it and a place for it, and the Brotherhood of Railway Conductors, with G. W. Howard at its head and as its head, strode into the arena where older champions of the rights of labor were assembled, and without red tape or circumlocution, took its place beside the foremost, and displaying its banners began its conquering march.

The first convention of the Order was held at Los Angeles, Cal., September 16, 1889, when thirty-seven divisions of the Order were in line. A year later, when the Grand Chief called the convention to order, there were representatives of eighty divisions present to respond to the roll call. Such facts demonstrate beyond cavil that the new Order was wanted; that the O. R. C. had proved a failure; that it did not meet requirements; that it was like "a painted ship on a painted ocean"—pretty, perhaps, but serving no practical purpose.

Under such circumstances, it is not surprising that the Brotherhood of Railway Conductors has had phenomenal growth, so extraordinary indeed, as to make it in two short years, an Order of commanding power and influence.

The second annual Convention of the Order began its sessions under the most favorable auspices. The people of Toledo vied

with each other in their efforts to make the conductors feel at home. Their welcome was of right royal proportions. The city fathers, the press, the Board of Trade, the tramways and the railroads and the church, all took a hand in doing the agreeable.

The opening meeting was held at Wheeler's Opera House, and a vast audience assembled to witness the exercises.

Grand Chief George W. Howard read a number of letters and telegrams from distinguished persons who had been invited to attend the meeting, all breathing sentiments of friendship and good will, and when the necessary preliminaries were completed, proceeded to deliver the following stirring address:

MR. CHAIRMAN, LADIES AND GENTLEMEN:—This meeting was arranged for the purpose of giving the people of Toledo and of our country an opportunity of getting acquainted with the Brotherhood of Railway Conductors, its aims and objects.

Up to November 15, 1888, no protective organization of railway conductors existed in this country. True, associations of conductors had been formed and existed that provided protection, so far as insurance went, but that is not altogether the kind of protection to meet the requirements of the railway conductor of to-day. He must be protected against unjust encroachments of all kinds, that he may the better be enabled to protect his family, and with this object in view, the Brotherhood of Railway Conductors was instituted. Starting with but a handful of men on the Pacific Coast, it has fought its way into every State and Territory in this country, and into Mexico and Canada as well, and as it is the first real protective association of conductors, its founders may well look upon it with pride. It has been thought, and even wished for by some, that after a while the various labor organizations of this country would get to fighting each other, and that partial if not total annihilation, would be the result, but please allow me right here to disabuse the minds of such. I am positive that your ideas in this direction will never materialize. The leaders of the various organizations of labor throughout this country, although differing somewhat in minor affairs, thoroughly understand each other, and stand as a "unit" upon the maintenance of true principles involved.

It has been asked: Is the Brotherhood of Railway Conductors a striking organization? I answer yes; not that we advocate or encourage strikes, for this we do not, but what does any organization amount to, or what will it ever amount to, without some means of defence. I know you will agree with me in saying "nothing." All railroad men know that conductors have their troubles and grievances the same as other people, and I assert here positively that where a grievance committee of conductors is met in the proper spirit on the part of railway officials, in the spirit of reason, and a desire to do that which is right and just, a strike will never occur. There are not axes enough in the whole city of Toledo, nor men enough to wield the axes, who could cut clubs enough to drive the American people or any portion of them into a strike, unless some principle dear to them was at stake, and we are Americans in every sense. No other organization in the United States would turn out more true men in proportion to its membership to protect this country or its affairs, than this same Brotherhood of Railway Conductors, if necessary, and we court a call of that kind at any time. We have no time or use for Anarchism, Socialism, or Internationalism, or in fact any "ism," save American patriotism; nor have we any respect for the red "rag" that has been flaunted in several of our principal cities within the past few years, nor for theimps of hell itself, who have flaunted it, but we do stake our all on that banner of all banners, the pride, yes, the life of every true American, our star spangled banner, under whose folds this country and all its people shall forever prosper.

I must touch upon a subject also, which will in time be sure to bring disastrous results to us, if not checked and stopped. I refer to the matter of allowing a Pinkerton to recruit an army at will, and of sending it to any desired point, to be used upon any occasion as he may direct. I did not intend to say anything about the innocent people who have been murdered or injured by Pinkerton men, but the point I wish to make is this: If Mr. Pinkerton is allowed this privilege, should it not be accorded every other citizen of this country? And if generally started, can any one say where it would stop? The precedent is a bad one, and I sincerely hope that the law makers of the various States will pattern after the last Indiana legislature in the premises.

Wage earners in this country, if you take my advice you will never vote for another millionaire for any legislative position. Pay no attention to any promises they make, for remembering the first law of nature, you know what they will do. If they wish to make so much of a sacrifice toward helping you, just ask them to begin at home. It is not necessary, and it is wrong for you to send them abroad and deprive them of the comforts of home, to serve you, when the field is so wide for the same kind of work right at home. Let them prove their sincerity there, not by words alone, but by deeds.

The tendency of the present day is to crush out the middle men in all mercantile pursuits, and through the agencies of the various combinations, trusts and syndicates, this is being successfully done; and while we know that this must continue if as a nation we progress, we think the same rule ought to apply to the middle money changers of our country, and to that end we insist on the doing away with our National Banking system, and want this government to issue its money direct to the people. To day we have the spectacle of the bankers of the country, demanding of our government that it must deposit its surplus in their National banks. Was ever a greater amount of gall displayed on the earth? But thanks be to Secretary Windom and men of his stamp, it will never be done. Again, the bondholders are demanding of Secretary Windom that he pay them their own price for their bonds, but he, it seems, has a mind of his own, that he knows how to use. It may seem to some of you that I am somewhat partial to Mr. Windom, but let me assure you such is not the case. I don't know the man; never saw or communicated with him in my life, and never expect to, but a Greater than you or I has said: "By their fruits ye shall know them," and I am judging that tree by the quality of the fruit which it has borne.

Some of our ablest writers, seventy-five and a hundred years ago, taught that labor was a commodity to be bought and sold in open market, but that unlike any other commodity the buyer had the exclusive right of naming the price to be paid for it, and that the laborer had no right to any voice in the premises. Now, if our money kings have the right to name the interest that they shall receive for their money, you have a right to say what your services are worth, and if, regardless of actual conditions, the various combines and trusts have the right to make "corners" on the products of the earth, the necessities of life and establish a supply and demand to suit themselves, then you too have the right to handle labor in the same manner regardless of the actual supply and demand. Of course you understand that in order to be able to treat with knowing men you must acquire knowledge yourselves, and the worst trouble in connection with the wage earners of this country is that they do not read and keep posted. Knowledge is power and the only power that will enable you to make progress sure. Don't think for a minute that all of your ills can be cured by legislation either. We have too many useless or idle laws now, and this world will never see the time when its laws will provide for all emergencies, and it's just so with railroading also. There never lived a railroad man who was smart enough to make a time card or other rules sufficient to meet all emergencies of the business and there never will. You must help yourselves whenever you can at all make it possible to do so, remembering that God Himself helps that class of people, and don't try to have unnecessary laws made, for you ought to and can be engaged in better and more profitable business.

The Brotherhood of Railway Conductors is on the best of terms with all of the other protective organizations in the country. It advocates conservatism in all things, will always be fair, open and upright in all its dealings and only asks that it be met with the same spirit of fairness. It is federated with the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen and the Switchmen's Mutual Aid Association, and represents a compact organization of nearly 50,000 men, the strongest combination of railroad men in the world, and is working under the laws of a Supreme Council, which consists of three executive officers of each of the organizations named, making twelve in all, who when they are met with a spirit of fairness, will never fail to amicably adjust any and all differences between employees and officials and strikes cannot occur. This being the case and since nearly all officials, strictly speaking, employees, would it not be best for them, best for their interests generally, to encourage organization and general federation on the part of the men subject to them? All subordinate officials will in time, I am sure, agree that men can be best handled when they are in condition to handle themselves and through their laws handle each other.

Nothing transpired to mar the harmony of the meeting. It was everything that could be desired, and the Second Annual Convention of the Brotherhood of Railway Conductors was an assured success from the start.

When the convention met for business, Grand Chief Howard submitted his annual report, as follows:

To the International Brotherhood of Railway Conductors:

OFFICERS AND BROTHERS:—Our second annual convention is upon us, and much work is before us, and at the outset I wish to enjoin the utmost economy on all. Our Constitution and By-Laws, our rituals and our installation books, must all be overhauled, corrected and improved. Would suggest that some regular voting sign be established and that we do away with the old "aye" and "nay" manner of voting. A change of headquarters must be established to some point more central than Los Angeles. Grand Officers are to be elected, and in choosing them I hope you will not be influenced by anything of a personal character in the premises, but select men of good moral character, with the highest ability in our Brotherhood. The B. of R. C. is no longer an infant, and energetic men with steady nerves and clear heads must lead us through the coming year. Make no mistakes in your choice. Two members of our Executive Board must live in close proximity to headquarters, that they may be readily summoned when necessary. This is a matter of great importance. Page 33 of our constitution and by-laws, provides that the Grand Secretary and Treasurer shall be Chief Executive Officer of the benefit fund. Yet all policies are signed by the Grand Chief Conductor. I think that under existing circumstances the Grand Chief Conductor should not be required to sign these policies, but that they should be signed by Grand Secretary and Treasurer only. All of our work should be reduced to the utmost simplicity, that none may have occasion to misunderstand or fail to comprehend. The opposition to our Brotherhood in certain quarters renders it absolutely necessary that our line for eligibility to membership be drawn closely as possible to our favor. All unwritten work possible should be restored to written work. We are on the very best of terms with all of the labor protective organizations of the country. The majority of our successes for the past year was brought about through Eugene V. Debe, the Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen, and editor of the *Firemen's Magazine*, that fearless champion of the rights of organized labor under any and all circumstances. He has ever been ready to assist us in every way in his power, and his advice has proven invaluable to us, and to-day we haven't a better friend in the world, and are proud of his friendship.

and only wish we had more friends true as he is, and has been to our cause. Our Brotherhood is federated with the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen, and the Switchmen's Mutual Aid Association, and we represent forty-seven thousand men, all working shoulder to shoulder, each for all and all for each. We are now subject to the laws of a Supreme Council, and a supply of the Constitution and By-Laws of this Council will be furnished to all delegates at our Toledo Convention. These laws, as well as the laws of our Brotherhood, must be complied with, and when complied with, hot-headed strikes cannot occur, and we will never fail to obtain justice. Eighteen months since very little respect was shown for us, but affairs and sentiments have changed wonderfully, for now we mention as friends to organization and the cause of labor, such men as Col. Bennett H. Young, ex-President of the L. N. A. & C. Ry., the K. & I. Bridge Co., and Louisville Southern Railway; Eugene Zimmerman, President of the Dayton, Fort Wayne & Chicago Railway, and C. H. Chappell, General Manager of the Chicago & Alton Railroad, all of whom have openly expressed themselves favorably in the premises, and within the past sixty days. Our Brotherhood is being built upon the proper kind of a foundation, and is a pronounced success already. Of course its future strides depend upon the assiduity of its members, and in the end the Brotherhood of Railway Conductors will be just exactly what we have made it, nothing more. Remember this, and can its mark be placed too high for us? We have had thirteen issues in the past sixteen months, and in the settlement of all we were successful. Can any other organization produce such a record? And in the past ten months our membership has increased nearly 100 per cent. Should we not feel proud of this? Within the past six months I have had the pleasure of meeting with T. V. Powderly, Grand Master Workman of the Knights of Labor, and Samuel Gompers, President of the American Federation of Labor, and both of these gentlemen expressed the warmest of feelings for the success of our Brotherhood. A continued pressure of business has prevented my being at headquarters for more than a year, and I cannot give you the information I should like to concerning the general affairs of our Brotherhood, but our Grand Secretary and Treasurer, and Assistant Grand Chief, will no doubt prove equal to the occasion, and thoroughly enlighten us. Besides writing for the *Gazette*, adjusting grievances, and attending to the correspondence of your Grand Chief, I have during the year organized fifteen divisions, attended four meetings of the Supreme Council, and eight union meetings, and did my best on each occasion to promote the interests of our Brotherhood. Our growth during the past four months has been seriously retarded by members of our Brotherhood forming alliances with individuals not members of any organization, and with others though identified with organizations, could obtain no support or backing from the same. It is wrong, hurtful, and not necessary to do this, and I hope that in future our members will steer clear of all local or system federation. It is absolutely necessary that each and every member of our Brotherhood should take and read our official organ, and thus keep posted. Knowledge is power, and we should endeavor to improve ourselves with every opportunity we can make. In conclusion, I assure you that nothing of a "gag law" will ever be used or tolerated by me, but each delegate shall have a fair and impartial show and hearing; and all must attend regularly and punctually, and manifest an active interest at each of our sittings, and if any shall fail to do this I will positively report them to their divisions for dereliction of duty. We are now assembled for work, and I want one and all to be brotherly in your acts and intercourse with each other. Be consistent and courteous in debate, and let absolute fairness govern every move and act. And again assuring you that with the proper effort on our part, the Brotherhood of Railway Conductors can be made the leading conductors' fraternity of this country, I am, for P., S. and I., fraternally yours, always,

G. W. HOWARD, G. C. C.

As an evidence of the spirit of the Broth-

erhood, that it has come to stay and to do efficient work, Assistant Grand Chief W. J. Martin, makes the following announcement:

We have purchased the *Railway Service Gazette* and I would ask you all to do all in your power to advance the interests of that paper both in the way of communications and an increased circulation. Remember in working for your official organ you are working for yourselves, as it is our property now, and it's success is our gain. Direct all correspondence to 139 Huron street, Toledo, O., and don't forget the place.

In closing this notice of the second annual Convention of the International Brotherhood of Railway Conductors, the *Locomotive Firemen's Magazine*, that has watched the splendid growth of the Order with ever increasing pride and satisfaction, now, as from the first, wishes it God speed in every good work.

The addresses of Geo. W. Howard, G. C. C. of the International Brotherhood of Railway Conductors; D. J. Carr, G. S. & T., and J. W. Martin, A. G. C. C., for the ensuing year, will be at 139 Huron Street, Toledo, O.

THE GRAND CHIEF.

Col. Geo. W. Howard, Grand Chief Conductor of the International Brotherhood, is emphatically the leader and presiding genius of the Order. Perhaps no chief officer of any sort of an association, ever held, in a greater degree, the confidence and esteem of the rank and file of membership. Under his administration the Brotherhood has grown more rapidly than any other railway association in the world. His devotion to the true interests of railway employees, stands out so conspicuously in his whole life, that none can question it. Under his administration the career of the Brotherhood has been one of brilliant success. Energy, firmness, justice, moderation and prudence are the striking elements of Col. Howard's character. Under his leadership, every request of the Brotherhood for better pay and better treatment of railway employees, has been promptly granted.

Col. Howard is a remarkable man. He has served in all positions in railway employ, from sectionman to that of general manager. When the Brotherhood was first organized, he resigned a five thousand dollar office, as the General Manager of a California road, to become the chief officer of the Brotherhood, without pay, and to work as hard as ever man worked in this world. He is the Vice President of the Supreme Council of Federated Railway Employees, and lately, when the eyes of the whole people of this country were turned upon Terre Haute, Ind., those who knew him best, had full faith that the judgment of this man of iron nerve, could be relied upon. The Supreme Council represents about 50,000 railway employees, and it is to-day the dominating power of the whole railway service. Its power will steadily increase while it is impressed by the justice, moderation and prudence of such men as Geo. W. Howard.

Col. Howard was a gallant soldier during the late war, and his record is unsurpassed. He is a member of the Grand Army of the Republic and will, this week, meet many of his old comrades, while the army of the Cumberland is in the city.—*Toledo Blade*.

D. J. CARR, G. S. AND T.

The genial and able Chief Secretary and Treasurer is a Pennsylvanian by birth, and started his successful career as a railroader with the Baltimore & Ohio, in 1872. He went west and settled in St. Louis, and from there went to San Francisco. He was elected Grand Secretary and Treasurer of the Order at the first annual meeting held in Los Angeles in 1888, and it is to his zeal and careful attention to business that is due, in a great measure, the success of the Order. He will undoubtedly be re-elected to the office that he has filled with honor to himself and benefit to the Association. Mrs. Carr accompanies him and says she likes Toledo immensely.—*Toledo Blade*.

HOWARD ON STRIKES.

The International Brotherhood of Railway Conductors is said to be highly esteemed by railway officials everywhere. It is essentially a protective organization, and the strike is the great weapon of defense. Chief Howard, when asked by a reporter whether the Brotherhood can be called a striking organization, said: "Yes, sir; decidedly so. But the strike is only the last extremity, and is used only when conductors are subjected to rank injustice, and when there is no possible alternative. Mere grievances will never cause a conductor's strike."—*Toledo Commercial*.

W. J. MARTIN, A. G. C. C.

There is a great deal of curiosity among our people generally to meet and shake hands with W. J. Martin of Temple, Tex. He is the level headed fellow who recently secured an almost world-wide reputation for the way he handled a difficulty on the Santa Fe road. It was a place where great tact and shrewdness were required, and Mr. Martin was equal to the emergency. He managed the affairs so well that all hands were well pleased with the result. The employes, however, are dancing with delight for it works a difference in their favor of millions of dollars annually. The conductors share in this rise and now everybody wants to see Martin and have him explain how he did it so that they can try it on somewhere themselves.—*Toledo News*.

COMPLIMENTARY.

At the annual convention of the Switchmen's Mutual Aid Association, held in the city of Buffalo, in September, the following resolution was unanimously adopted:

WHEREAS, The Brotherhood of Locomotive Firemen, in convention assembled, have carefully reviewed the work done by the Supreme Council of the Federated Orders of Railway Employes during the past sixteen months, unanimously endorsing the same and have now officially recognized, accepted and ratified the constitution of National Federation, therefore be it

Resolved, That the Switchmen's Mutual Aid Association, through its Delegates in convention, take this method of publicly expressing to the Brotherhood of Firemen our due appreciation of the justice, wisdom and fraternity which has ever characterized the history of their Brotherhood. In again clasping hands with the Firemen, we do so with full hearts, realizing and acknowledging the obligation which has been put upon us by this their last act of glorious fraternity. The Switchmen have had some bitter experiences, but never one drop of bitterness has been added to our cup by the Brotherhood of Locomotive Firemen. They have watched our struggle with the interest of brothers, aiding us here and there by friendly counsel and advice, and have not hesitated to take up the fight in our behalf. That we have rendered our full share of sacrifice and labor to the general movement, onward and upward, is true; and nobly has the Brotherhood recognized and acknowledged our contributions to the general cause and our worthiness to stand by their side. May the grand march of mutual justice continue until the railway labor organizations meet in fraternal affection on common ground, and the errors of the past be dissipated by the rays of the rising sun of National Federation.

(Signed)

L. J. WALTERS,

E. J. REILEY,

R. B. BLACKALL.

Committee on Resolutions.

To say that the Brotherhood of Locomotive Firemen reciprocates the generous sentiments expressed in the foregoing resolution, scarcely does the subject justice.

That the B. of L. F. has been from the first the ardent friend of the S. M. A. A. is a matter of record, and this *Magazine*, with such ability as it could command, has voiced

the sentiments of the Order of which it is the official organ.

We have recognized the fact that the S. M. A. A. has been from the date of its organization an earnest, courageous and indefatigable co-worker in the cause of justice to railroad employes.

With prescient penetration it saw the wisdom of federation and gave to the movement its unreserved approval and battled for its success. No doubts obscured its vision and no hesitancy marked its deliberations, and such dauntless devotion to a cause which sought the welfare of men in the railroad train service has been productive of the most satisfactory results.

That such an order should send generous words of recognition to the B. of L. F. is something more and better than an ordinary compliment. It touches principles and policy which enthrone new ideas of protection in harmony not only with the welfare of workers, but of corporations—principles and policy which are destined to prevail, if railroad employes are to maintain their rights and secure justice when those rights are in peril.

The resolution breathes the essential spirit of fraternity between the four great orders now represented in the federated body, a body that makes no unrighteous demands, that avows no anarchical ultimatums, but is ambitious only to secure right and justice by means all honorable men approve.

We reproduce the resolution in the *Magazine* not only for the purpose of permitting us to say how much we appreciate its generous words, but that the membership of our Order may know the high esteem which the S. M. A. A. entertains for the B. of L. F. and to express the conviction that the bonds of fellowship will continue to strengthen as the years come and go.

MEMBERS will take notice that the "Personal" column which has hitherto been a feature of the *Magazine*, was abolished by the late convention, and it was also ordered that no communication pertaining to balls, picnics or other entertainments or any other matters of purely local interest be hereafter published, and this will account for the absence of a considerable quantity of literature we have received of the kind above indicated. The purpose is to make the *Magazine*, as it should be, a publication of character, standing and influence, and to eliminate from its columns anything and everything calculated to detract from its merits or lessen its usefulness.

THE cigar makers believe in having a surplus. According to the last financial report for 1889, the union had on hand December 31st, \$285,136, and expended during the year \$246,262.

THE S. M. A. A.

The Fifth Annual Convention of the Switchmen's Mutual Aid Association, at Buffalo, N. Y.—The Opening Meeting at Music Hall.

ADDRESSES BY PROMINENT CITIZENS—ANNUAL ADDRESS OF GRAND MASTER FRANK SWEENEY.

The Fifth Annual Convention of the Switchmen's Mutual Aid Association was held in the city of Buffalo, N. Y., commencing September 15th.

The Association had on the 1st of September 121 lodges, and its jurisdiction extends throughout the United States and Canada, and is steadily growing in membership and influence.

The Buffalo Convention was largely attended, and the public exercises at the opening meeting, held in Music Hall, were impressive.

M. J. Moriarity, Esq., called the meeting to order, and made a brief address of welcome, in which he described the purposes of the order, and then introduced

MAYOR BISHOP.

The Mayor was greeted with prolonged cheers, and in response said:

It is a distinguished privilege to welcome to this city the representatives of the Switchmen's Mutual Aid Association of North America. The railroad men of this country occupy an exceedingly important place in it. This is so whether we regard the nature and extent of the business in which they are engaged or the character of the men who are in the business. From the highest to the lowest, every man in the railroad business owes important obligations not only to his employers, but to the public as well. The railroad system of this country is a wonderful network of complicated machinery, and unless every part of it is watched and managed with fidelity and skilled men, the injury which may result is serious and often appalling.

Moreover, the increasing demands of the people and the progress of inventions and science, require each year more fidelity, more experience and more skill on the part of the railroad men. I am glad to be able to say that the men themselves have nobly responded to the ever increasing demands made upon them. This fact is shown by the small number of railroad calamities resulting from the acts and omissions of incompetent employees. This fact is also shown by the sobriety, the industry, and the manly conduct which conspicuously and generally characterize the railroad men of this country. This fact is also shown by the extent and the character of organizations among railroad men. The employees of railroad companies have become organized into numberless mutual aid associations like your own. All these have in view the same general objects—the steady employment at good wages of their members, the improvement of members by education, and the inculcation of temperance, frugality and good morals; the assistance of all who are in need of help, and the care and maintenance of the families of disabled and deceased members. These, gentlemen, are some of the objects of your association. They are certainly worthy objects, and you may justly be proud to belong to such an organization. The city of Buffalo through me extends to you a most sincere and hearty welcome. Your meeting here will, I hope, be satisfactory to you and the men you represent. I am certain you will find here many who will regard it as a privilege to do you favors, and I feel confident in predicting that your stay will be both pleasant and profitable.

At the close of the Mayor's remarks, the Chairman introduced

HON. WM. F. SHEEHAN,

who was enthusiastically greeted by the audience. He spoke as follows:

As a citizen of this State I join in greeting the delegates of the Switchmen's Mutual Aid Association of North America, and trust your organization may live and prosper as long as workmen have wrongs to redress or rights to maintain.

You have combined not only for self-protection and membership beneficiary, but also for the laudable object of elevating and maintaining the standard of American labor. It is your duty to organize for protection and advancement, and you should have the power, within just and reasonable laws, to assert your rights. Defiance of law and the destruction of human life and property should not, and does not, meet with approval at the hands of intelligent, honorable laboring men, and no man who has the interest of labor at heart will perpetrate or countenance such outrages. You have a right to combine that wages may be increased. You have a right to combine that hours of labor may not be made unbearable. You have a right to combine that members of labor organizations may not be discriminated against. You have the right to combine that legislators may be compelled to enact laws that will protect you in your rights. No people can be happy or prosperous where labor is degraded. To the intelligence, integrity, and ambition of our skilled and common laborers is the marvelous prosperity of our own country due. From their ranks have sprung the greatest and most useful of her public servants. It has been our proud boast that, under our magnificent form of government, the avenues of advancement are open to all alike; that the road to honor is as open for the poor man's son as for the rich man's heir. With honesty, intelligence and industry, the bright star of fame is no farther removed from the reach of the mechanic and the laborer than from the dwellers in palatial homes. Upon the brightest pages of our country's history is to be found the work of men who sprang from humble parentage like yours and mine.

In our age, all public movements are the result of aggregated power. The citizen is weak, compared to the aggregated strength of a mighty corporation or a political aggregation. Men having common interests combine in business, politically and socially, for their advancement.

Laborers have a right—nay, more, it is their duty, for the public good demands it, to combine that labor may not be degraded; that in the greedy struggle for gain the rights of the laborer, on whom so much depends, be not ignored, and that he may have his share in the comforts and enjoyments secured by advancing intelligence and civilization.

In every State in this Union a law should be enacted that will give to employees, or their representatives, a right of action for injuries or death (as the case may be) occasioned to them by the want of proper care and diligence upon the part of the employer, except when the negligence or carelessness of the employee contributes to the injury. It is wrong in principle, and contrary to advanced human thought, to say that a passenger on a railroad train who is injured through the negligence or want of skill of an engineer or conductor, can recover all damages sustained by him, but that the brakeman, or fireman, or switchman who is injured at the same time and place, and under the same circumstances, and who is free from contributory negligence, cannot recover because he is a co-employee of the person who causes the injury.

The courts have been compelled to adopt the rule of the common law on this question, in the absence of statutory law to the contrary. This ancient common law rule was first enforced at a time when employees in a common enterprise were thrown in close contact with each other, long before the development of the great enterprises of this age, and when railroads and mechanical science as they exist to-day were unheard of.

I say this rule is too narrow for the present age; it has not kept pace with the growth of science and the development of great enterprises. It is utterly absurd to impute to a brakeman on a train knowl-

edge of the capacity or fitness of a train dispatcher, and to imply that on entering service he is chargeable with knowledge of such fitness or qualifications, when the probabilities are that the train dispatcher is not even known to him personally or by reputation. The exigencies of the present age require the expansion of this rule. The employer has the opportunity and the ability to judge of the qualifications of men engaged in the various departments of his service, while the employé has not, and a statute should be enacted speedily which should change the present law in this respect, and which would at least give an employé injured in one department of the business of a public corporation a right of action against the employer, by reason of the unfitness, unskillfulness, incompetency or negligence of the employés in other departments of the same service.

Differences between public corporations like railroad and steamboat companies and their employés concern the general public, and the State by appropriate legislation should proceed at once to enact laws to prevent these differences, if possible, or to work a speedy settlement of them when they arise.

Your organization has wisely adopted as one of its cardinal principles the theory and practice of arbitration, and in this you should be sustained by all honorable men, and in all well-directed efforts to elevate and dignify labor you are entitled to, and will receive, general public support.

I trust your deliberations and proceedings may be harmonious, and that your conclusions may prove not only beneficial to your organization, but highly advantageous to the cause of labor generally.

To your local organizations and to their executive officers I return my thanks for giving me the opportunity to be present at your opening exercises, and trust the visiting representatives may carry to their respective homes pleasant recollections of our city and its citizens.

Following Mr. Sheehan, the chairman presented to the audience

GRAND MASTER FRANK SWEENEY,

who was received by the audience in a way that must have been very satisfactory to the courageous Grand Master. When the applause had subsided Bro. Sweeney delivered his annual address as follows:

We are assembled here on this occasion to transact the business of the fifth annual convention of the Switchmen's Mutual Aid Association and likewise to celebrate the fifth anniversary of its birth. It is an event of unusual importance to our order. We have reached a stage in the development of the organization where those who are entrusted with the management of its affairs, and legislation in its interest, feel upon themselves the responsibility, in a large measure, for the happiness and welfare of many thousands of individuals and homes, humble though they be, but none the less in importance to the commonwealth or less dear to their members. I am conscious that this gathering appreciates to some degree the import of the occasion, and am glad that they have added the dignity and encouragement of their presence to this assembly.

Our existence as an organization needs scarcely any explanation in these days of universal and close organization. It is the outcome of wisdom garnered in the book of experience and born of the desire to promote the welfare of honest, hard working men. Whatever tends to advance their condition is well worthy of the best efforts of the noblest and ablest of men, for on their prosperity more than on that of those who live in plenty depends the well-being of the nation. They have their place in the machinery of the world, and though each one may be but a cog on a little wheel in this vast machine, yet if that cog is not kept clean and well supplied with oil the whole machine may become useless and its stoppage may spread misery far and wide. Our efforts to bind together consciously those whom nature and the laws of social development have subjected to the same process, sufferings or pleasures have hitherto been crowned with success to such a degree that even the most sanguine hopes have been left behind. To

apologize for the existence of organization in the present days is not only superfluous but a gratuitous insult to the intelligence of all observers of passing events.

There are none who require the benefits of organization more than the switchmen. The switchmen are recognized as the fountain heads of the railroad service. On them rests the responsibility of speedily executing the work in the switch yards of the railroads in order that the traffic of the country may be carried on with that despatch which modern civilization requires and modern means of conveyance render possible. Beneath the burning ray of the summer sun or amid the storms of winter these men pursue a calling that is attended with constant danger to life and limb, making their every day a feat of heroism and courage unequalled in any other avocation, while their employers are safely sheltered from the elements in their offices or homes and rarely subject to the perils of the railroaders' life. It is used to be believed that the sailor must be brave and a certain halo of romance has been thrown about his calling by tradition. But sailing has been made safer by science until to-day it is by no means among the most dangerous pursuits, while the advance of science has created new means of conveyance and thereby conjured up new dangers for those who have the responsibility of carrying the commerce of the world. In consideration for our hazardous occupation and the amount of work we are expected to perform we ask of our employers nothing but justice and equity do not countenance. It is not unreasonable to ask a fair day's pay for a fair day's work, or to demand a little rest from exhaustive labors to enable us to get acquainted with our families. Yet there are railroad officials on record refusing faithful and trustworthy employes who have grown gray in the service of the company, even a hearing if complaints are made that should call for an investigation.

It is the prime aim and object of the Switchmen's Mutual Aid Association to alleviate the distress of those only too numerous unfortunates who have become incapacitated from work at their trade by one of those accidents which are so common among our craft. The Association gives them a snug little sum of money that will enable them to engage in other pursuits and help them over the immediate evils of their misfortune. Five years of constant application have been devoted to this work. How far this mission of mercy has been fulfilled the records of the Association will bear witness. That it has carried out this prime object and relieved untold distress can be proven by the thousands upon thousands of dollars paid out of our treasury for death and total disability claims to widows and orphans of our unfortunate brothers as well as for assistance to the brothers themselves.

Our Association is yet in its infancy in this locality. Let me say to you who may not yet belong to the organization that wherever we have planted our banner of Benevolence, Hope and Protection, wonderful changes have been wrought. We discipline intemperate men. We enable the men to do more work with less friction among themselves and with their employers than ever before.

As to strikes, I desire to be explicit in order that our position may be fully understood. It is erroneous to suppose that labor organizations are in favor of strikes, or foment trouble. The very reverse is true. The better organized a trade is the less trouble do the employers experience with their employes. For the benefit of those among you who do not owe allegiance to the Switchmen's Mutual Aid Association, as well as the members themselves, it may be permitted to discuss this question at some length.

In the first place no strike can be ordered by our lodge in our organization without first obtaining the sanction of the highest officer of the Association. If a grievance exists on any railroad our laws require that a committee must endeavor to have a conference with the officials of the road and use every honorable effort to bring about an amicable adjustment of the question. Failing in this effort we must call in the Grand Master of the Association to whom the grievance must be submitted and who will endeavor once more to induce the officials to

come to an understanding on a peaceable basis. If this effort also fails, then is the time to bring up the question of striking. The local lodge will not have the backing of the Association unless the Grand Master sanctions the strike, and the latter is supposed to be impartial enough, and so far above local prejudices that he will not give his sanction to a strike unless the grievance is of sufficient gravity to warrant such a radical measure. It is my experience that wherever the officials will meet and treat with the men there has never been any necessity for a resort to extreme measures; and whenever radical measures are taken you may be sure that it is because the respective railroad officials refuse to give the complaints of the men proper consideration. I say advisedly that it is a refusal to even consider the grievance which in most cases leads to trouble, not a refusal to grant whatever may be asked. The men are not without common sense. It is easy to negotiate with their representatives, but a refusal to treat with them, amounting to a denial of their right to present a complaint or desire, savors too much of oriental despotism to be meekly borne by Americans, though they be but mechanics and laborers. I never yet knew of a workman who wanted to strike unless he was driven to it by absolute necessity.

There have been some strikes which do not answer this description. They may be attributed to errors of judgment in the selection of men to manage the common affairs of the craft. Strikes have taken place because the laboring men have been so unfortunate as to have an executive head to their local organizations who was indiscreet, injudicious or impatient in the management of matters affecting the condition of members of the order. As a general rule it may be set down that strikes of this sort are inaugurated by men in no wise connected with our organization or with organized labor in any form, but who by their example and appeals to the sympathy of their fellow-workers succeed in drawing them into their own troubles. These men do not understand the principles of organized labor, and, above all, are not acquainted with the laws established by our Association for the express purpose of preventing strikes as far as practicable and compatible with self respect. Men outside of labor organizations are lacking in that training which nothing but affiliation with labor unions can give: they do not look upon matters in that broader view which the consciousness of fellowship with our brothers gives to us; they are wrapt up in their own little troubles and do not consider consequences to others, nor, for that matter, any too carefully the consequences to themselves. They have no regular leaders. Everything is done on the spur of the moment. Members of our association should not fall into these errors but oppose their trainings as union men to the passion of others, and, if they cannot hold them in line, should refuse to be governed by their example or advice.

I have said that I will not offer any apology for the existence of the Switchmen's Mutual Aid Association. With trusts and gigantic corporations all around us and continually growing who dare say that labor should not combine? How rare are the cases where labor organizations have entered on a conflict with capital and have not enjoyed the sympathy of the public? But I would like to call the attention of railroad officials to the fact that they make a mistake in opposing labor organizations, because they derive as much benefit from them as do the laboring men themselves, provided the organizations are judiciously managed. It is easier to deal with a railroad president than with all the stockholders. Do not the managers see, while all the world is running toward combination and simplicity of management, that it is easier for them to deal with an executive head of a body of men than with all the men? It saves time and trouble, affords a better opportunity to equalize wages and avoid jealousy, removes causes of dissatisfaction and secures better service from the employees. Many railroad managers fully understand this and assist rather than oppose labor organizations. Those who still oppose them display thereby a lamentable lack of foresight. They insist on "running their own business," as the phrase goes. The most far-sighted business man, if he sees nothing but business, is the most short sighted of men. There are forces and con-

siderations above business, which, if not taken into account, will render all his calculations nugatory. The time is fast approaching when they will learn that they are as much interested in the success of labor organizations as are the laboring men themselves. Notwithstanding the strong opposition that has been made to the advancement of organized labor and the despotic attitude of some men high in official position, labor organizations are to-day stronger and more effective and better disciplined than at any previous time. Labor is better united, the organizations more compact, a closer understanding exists between individual men and organizations than ever before, and the onward march of organized labor is irresistible. Workingmen are becoming better educated in understanding their position. It is characteristic of the American workmen to learn fast and he has made remarkable progress in the last few years in arriving at a realization of his position.

I cannot but regret the folly of the attitude of those egotistical railroad officials who think they are stronger than the economic forces which are bringing about these results, or see in passing events the works of men instead of the results of laws as immutable as the great laws of physical nature. These men are smaller than pigmies and surrounded by their small interests to such an extent that they do not see the shadow of coming events beyond their narrow business circles. The development of these social forces will take no notice of them but proceed to the working out of their objects over the heads of the astonished would-be dictators. These men refuse to meet the representatives of labor organization and virtually, sometimes even in so many words, deny the right of men to organize. Have not we the same right to organize as they, and is not necessity stronger on our side than on theirs? They could live without organization. We would be degraded below a stage compatible with human dignity were it not for our organizations. The officers of labor organizations represent their constituents as properly as the officials of a company represent the stockholders. As a rule representatives of labor are able and willing to exercise proper judgment and consideration in any controversy when acting as mediators between the company and its employees, and they will consider the interests of the corporation with perfect fairness. Their mission in such cases is for peace and harmony and they are entitled to the sympathy of the public. If railroads would recognize the labor organizations more than they do, and complain to the heads in case local and subordinate officers exceed their authority and act injudiciously, there would be less trouble. Some of our best railroads have been ruined by the neglect of this consideration. If a local and subordinate officer of the Association creates trouble let the manager notify the chief executive of the organization, and in most cases the trouble will be investigated and the mischief makers suppressed.

Railroad officials often are afraid of humiliating themselves by recognizing labor organizations. They believe their methods are absolutely correct or that no one has any right to interfere with them. It is the same error to which I have already invited your attention. They ignore the working of superior forces. The laboring men under the whip of necessity have learned to understand these forces, at least to a certain extent. Hence they form themselves into organizations national in extent.

This brings me to the subject of Federation.

The Switchmen's Mutual Aid Association is now affiliated with three other organizations of railway employees constituting a body of national scope under the name of United Orders of Railway Employees. The importance of this lies in the fact that this body meets to deliberate upon matters affecting any one organization embraced in it. The terms on which the various organizations have come together are such as to secure to each organization full and perfect control of its own affairs, yet binds them all closely enough to give to each the entire strength of the others. Each organization preserves full autonomy, but is joined in an offensive and defensive alliance with allies upon equal terms and losing none of its distinctive features as a trades-union. It is a practical combination of the trades-union principle

with that of the community of interests of all the fraternity.

Attacks have been made upon this federation both by capitalists and by men belonging to other labor organizations. It was claimed that such a body could not be judiciously managed and would result in disaster to the federated organizations. It was again the purely "business" principle of minding one's own business and ignoring the tendency of the social forces in the direction of combination.

This body has been in existence since June 6, 1889, and up to this time it has considered some subjects of vast importance. In every instance it has pursued a course of equity and justice and did what was thought best for the interests of organized labor.

I wish to be set down as a trades-unionist. I believe in the perfect organization of each trade by itself. But beyond that I see that it is necessary for all working people to combine, not in one promiscuous body but by federating upon a basis of independence and equality, first all allied trades and ultimately, if it may be permitted to look so far into the future, all labor organizations embracing all trades. This federation of the great railway brotherhoods and associations is perfectly in line with that idea and has up to the present time never overstepped the boundaries which the above principle and its constitution prescribe. From this body emanates good counsel to be scattered among the members of the various organizations. Circulars containing valuable instruction and information have been issued to the subordinate lodges, not urging men to do anything wrong or rash, but on the contrary counseling and reasoning with them in the line of conservative action. The object of the Supreme Council of the federation is to prevent strikes, not to precipitate them, that we may command the respect and confidence of all lovers of justice and fair play, elevate the standard of the condition of the working people, in our line especially, and teach them their duty to society and to themselves. All grievances, before a strike can be entered on, must be referred to this Supreme Council for consideration and action and that body will exert all possible honorable means to bring about a peaceable settlement of the difficulty before any radical measures are taken.

As an illustration of the workings of this Supreme Council and the influence and wisdom and calmness that govern its decisions, let me call your attention to the recent meeting at Terre Haute, Ind. There was a strike on the New York Central Railroad. Reports had been sent all over the country that the entire Vanderbilt system would be drawn into the trouble. The anxiety was increased when some trouble of our own caused the Grand Master of the Switchmen's Mutual Aid Association to depart to the scene of the trouble. Public apprehension, excited by reports sent out by persons who were ignorant of the form and purpose of our federation, grew almost to a panic when the grand officers of the federated railway organizations went to New York in response to an urgent invitation from the leaders of the strikers. Most people expected a general strike and at many places business was practically suspended. Amidst all this excitement and under the influence of the pressure of universal sympathy with the men who were fighting their right to organize, the Supreme Council met. The members were calm and deliberated slowly and carefully. The result is known. All fears were set at rest and the public saw that the railroad employes were not anxious to foment trouble, but on the contrary endeavored, as they always will, to preserve the peace not only in abstaining from infractions of the law but by avoiding any interference with the industry and commerce of the country.

To my mind it is only a question of time when all railway employes will be federated in one great body. It is idle for individuals to oppose this consummation. They may delay the formal act of federation, but the sentiment is growing in spite of all, fanned and fostered by the irresistible march of events.

In the mean time let us all do our part to advance the common interest of laboring people and of our common country. Let us work when our efforts will

be most telling. Let us complete the organization of our trade so that it may truly and perfectly represent and embrace it in its entirety. Let us practice and extend the principle of brotherly love which our organization is founded and which is at the bottom of every good action. As the welfare of the whole is made up of the welfare of its parts, so the well being of our country depends upon that of its people, the common people in particular. We can serve our country no better than by endeavoring to elevate the standard of the working people. Let us begin at home and give our best efforts to the building up of the Switchmen's Mutual Aid Association.

Following the Grand Master's address a number of letters and telegrams were read from a number of gentlemen prominent in the organization of railroad employes.

The business of the Convention was of more than ordinary importance, and the sessions were distinguished for harmony.

The Convention adjourned September 23 and the next convention will be held in Philadelphia. The election of officers resulted as follows: Grand Master, Frank Sweeney, Chicago; Vice Grand Master, John Downey, Chicago; Grand Organizer and Instructor, M. W. Barrett, Kansas City; Editor and Manager of the *Journal*, John A. Hall, Chicago; Board of Directors, W. R. Davidson, Joliet, Ill.; John E. Wilson, La crosse, Wis.; George A. Low, Chicago.

The editor of the *Magazine* takes this occasion to acknowledge a cordial invitation from Brothers Sweeney, G. M., and Grand Secretary Simsrott, to attend the reception given September 15th, and but for the San Francisco Convention he would have taken great pleasure in making one of an audience to greet the delegates representing a brotherhood whose intelligence and courage has won the admiration of railroad employes. The staff of officers at the head of the S. M. A. A. is ample guarantee that the Order is to realize in full measure every expectation of its best friends.

WILLIAM T. FIELD.

Brother Wm. T. Field is a Brotherhood Fireman, a member of Custer Lodge No. 191, Livingston, Montana, an old time member of the Order, who is a candidate for Congress in the Livingston district, nominated by the Independent Labor party of that state. The nomination is a splendid compliment to Brother Field. It is a recognition of ability and sturdy devotion to the cause of labor, and it is to be hoped that every workman in his district will vote and work for his election.

If Brother Field succeeds, as we hope he will, the Brotherhood of Locomotive Firemen will have a representative on the floor of Congress, the first in its history, and in Brother Field every other labor organization will as certainly have a representative in Congress. We hope to have the great satisfaction of recording Brother Field's election.

THE SAN FRANCISCO CONVENTION.

The Second Biennial and the Fifteenth Convention of the Brotherhood of Locomotive Firemen.—One of the Most Important and Harmonious Conventions that Embellishes the History of the Order.

THE OPENING EXERCISES, MONDAY, SEPTEMBER 8TH, ALL THAT COULD BE DESIRED, AND EVERY EXPECTATION MORE THAN SATISFIED.

It was thought at one time that the choice of San Francisco as the place to hold the Second Biennial Convention of the Brotherhood of Locomotive Firemen was a mistake, relating entirely to longitude, geography and topography. It involved the necessity of a trip across the continent for a large majority of the delegates; in some instances three or four thousand miles of travel by rail, climbing to mountain elevations above the clouds and then descending to the valleys below.

But locomotive firemen are at home on the rail, and it matters little to them whether the route lies through cañons or chasms; cuts and fills and curves are all the same to them; they make little account of bridges and tunnels; always serene, and having confidence in the machines and the sturdy men who handle them, they inspire confidence in others and make the coach a temple for hilarity and good fellowship, and the memories of it a joy forever.

As a consequence, all were glad that San Francisco had been selected. The trip was invigorating to mind and body. The scenery, the grandest in the civilized world, has left a thousand pictures of beauty in the minds of those who saw the mountains and the valleys, the verdant slopes and wide spreading plains, and at last, the Golden Gate and the ocean beyond,

Dark, heaving, boundless, endless and sublime. The image of eternity—the throne of the invisible.

It is not surprising, therefore, that the delegates were pleased and that the wives of many of them who made the voyage were still more delighted.

Of the four hundred and thirty lodges of the Order entitled to representation, three hundred and sixty were represented by delegates *in propria persona*, all things considered, a large representation.

The opening exercises were held Monday afternoon September 8th, in the Bijou Theater, a splendid structure, which was filled—packed—with as fine an audience as ever smiled upon an organization of workingmen, or applauded sentiments in harmony with their rights and the welfare of society.

The arrangements for the meeting had been committed to a committee, and nothing had been omitted calculated to insure success, and while each man earned and received high commendation, too much praise cannot be bestowed upon Brother T. J.

Roberts, who was chairman of the committee, for the tact and judgment displayed and the ceaseless vigilance which distinguished his work throughout the time the convention was in session.

Brother J. H. Neven, of Perseverance Lodge, No. 98, presided at the meeting and gracefully introduced the speakers.

Prof. Yanke's orchestra rendered delightful music throughout the entire programme.

The exercises were opened with a brief prayer by the Rev. W. W. Case, after which the chairman introduced His Honor, Mayor E. B. Pond, who delivered a cordial address of welcome which was enthusiastically received by the audience.

His Excellency, Governor R. W. Waterman, next welcomed the delegates on behalf of the state. He said that the people of California were honored by their presence and paid a tribute to the high qualities required to follow that calling. Governor Waterman's address was received with marked enthusiasm and applause.

The chairman then introduced F. P. Sargent, Grand Master of the Brotherhood, who was received with cheers that said: "Well done, good and faithful servant."

Bro. Sargent spoke as follows:

MR. CHAIRMAN, LADIES AND GENTLEMEN:

Gathered in this assembly of distinguished men and beautiful women are the representatives of the Brotherhood of Locomotive Firemen, who have journeyed from the rock-bound coast of Maine, where the orb of light first starts on its daily journey, casting its rays alike upon the just and the unjust, the rich and the poor, the man of leisure and the man of toil; from the North, where the sturdy sons of toil wield the axe to fell the forest trees, furnishing the material to construct shelter for the use of man; from the balmy South, where nightingales and orioles mingle their notes with the songs of the cotton pickers and cane gatherers; from the West, where, by energy and thrift, the plains have been populated and the desert caused to bloom with the choicest of nature's productions; the seemingly impassable mountains, penetrated by the ingenuity and perseverance of man, to the Golden Gate, the Mecca of the argonaut, to be received with open arms by the inhabitants of one of the most enterprising, hospitable cities of America—the metropolis of San Francisco. I know I speak the sentiments of the Brotherhood here assembled when I say we are glad, thrice glad, to be the guests of such people as the citizens of the City of the Golden Gate. The welcome of His Excellency, the Governor, has won its way to every heart, and made us almost wish we were his subjects, residents in his domain. [Applause.] His Honor, the Mayor, who has greeted us so warmly upon our entrance into the city, fully conveys to us the true fellowship and kindly feeling of the people with whom we are to sojourn for a few days while performing service in the interests of our constituency, the Brotherhood of Locomotive Firemen, and I am confident that the organization could have selected no better place for the second biennial session of the Grand Body than in the Golden State and within the portals of the Golden Gate.

MAKEUP OF THE ORGANIZATION.

The Brotherhood of Locomotive Firemen is an organization of labor. [Applause.] Its membership is made up of men who earn their bread by the sweat of their brow; honest toilers in God's universe, proud of the vocation they follow; and gentlemen of the city and State, this body you welcome to-day represents this class of men. They have been selected from the rank and file, not for their beauty

(although I believe they will bear inspection and pass with the majority of mankind), [laughter and applause] but for their intelligence and their interest in the redemption of the toilers of the land, in whom every honest man should take an interest. In this day and generation there is no subject that comes more prominently before the people than that of organization. It is an era of organization. Societies are being formed among all classes and nationalities of mankind, but those that receive the most attention, the closest scrutiny, are the labor organizations. Such is the Brotherhood of Locomotive Firemen, and to-day we come before you and the people of California and lay our aims and purposes before you, knowing that the work in which the organization is engaged is one that commands itself to all right minded men. [Applause.]

First organized in 1873, as a benevolent association, to provide means for the support of those of its membership who, through sickness or accident, were in need of aid, and in case of death support for widow and child, mother or sister.

In the year 1885 the Brotherhood became a labor organization, and adopted a protective policy on what is commonly known as a striking platform. Up to that time we had done much good in the way of charity, but it was found the time had arrived when the Locomotive Firemen should protect their rights as workmen; maintain good wages and command fair treatment at the hands of their employers. The Brotherhood adopted laws and regulations providing for the time when the firemen on any system of railroad considered that they were not receiving a fair compensation for their daily toil, that through a committee of their own selection they could go before their officials and make a request for an advance. That if necessary they could call to their aid the executive officers of the organization for counsel and assistance. It also very wisely provided that when all other means failed, and when corporations refused to listen to just grievances and allow a fair compensation for a fair day's work, that the members should have the privilege of withdrawing in a body, or in other words, strike—a weapon without which no organization of labor can successfully perform its functions.

CHANGE OF POLICY.

What has led the Brotherhood of Locomotive Firemen to change its policy and become a protective organization? What causes labor to organize? The total disregard of corporations of the rights of workmen. [Applause.] To be allowed the privilege of being a locomotive fireman in the employ of some railroad corporation was regarded as all the rights a fireman had: that he had no right to set a price upon his labor; that no matter how long and faithfully he might serve a corporation, he had no right to promotion, and if the company saw fit to dismiss him he was not allowed to ask the reason why, and if he did ask, no satisfaction was given him. A master mechanic or a round-house foreman swelled up with his own conceit treated locomotive firemen not as men, but as slaves, and when a fireman dared approach the general manager, where, as a general rule, we now find justice dealt out, he was referred back to this arrogant subordinate and off went his head for having had the moral courage to assert his rights as a free American citizen. This is what caused the Brotherhood to broaden its field of labor and gather up and dispose of some of the abominations that were practiced upon its members. Had the railroad corporations been disposed to pay fair wages [applause] and accord to every man his rights; had master mechanics, superintendents and that all-important round-house foreman [applause] always been just and fair in their treatment of firemen, never discharging a man unless he deserved it; allowing no selfish motive to control them in their decisions, but always keeping in mind the best interests of the men as well as their own, we would be plodding along to-day as a mutual benefit admiration society, lauded and applauded because we did not strike. It has been through our policy of protection that we have maintained our institution.

STRIKES NOT ADVOCATED.

We do not advocate strikes. In our entire history

as an organization we have always endeavored to avoid them. [Applause.] We believe that when locomotive firemen have a just grievance they have a right to go to their employers and make known their complaint and seek redress by a personal appeal through a committee of firemen. We do not believe in making unjust demands, nor do we fail to remember that corporations have certain rights which we as employes are bound to respect; but we aim to bring about by mutual understanding, by arbitration, by a communion between official and employé, a satisfactory settlement of all our grievances and, if possible, to avoid a strike, yet we wish to know that we have striking machinery and when it well oiled. [Prolonged applause.]

Five years have elapsed since the Brotherhood began to look after the wages of its members and protect them when unjustly assailed, reinstate them when discharged without sufficient cause, and draw attention to subordinate officers who take advantage of the little authority vested in them to make an honest man's life almost unbearable.

Look over the country and see the results of organization for protection on the part of the firemen. How many roads have within that time advanced wages from 10 to 15 per cent.? Nearly all the large corporations and many of the smaller ones that have escaped the grasp of some one company which was but one railroad and that one under their control. Look at the large number of written agreements the firemen have to-day with different corporations made with the presidents and general managers; count up those who, through the influence of the Brotherhood, have been reinstated after being dismissed by some important (?) personage, and informed that they could never work for the company again while he was master mechanic, and you will find that the Brotherhood has a record we need not be ashamed of, but of which we can boast, for in all that time we have only used our weapon of warfare once, and on each occasion when supporting our nearest neighbor, the engineer. [Applause.]

Now some railway officials with whom these settlements have been made, will say that they were not dealing with the Brotherhood, that they do not recognize the Brotherhood, but treat with their employes. Most certainly, Mr. Railway Official, we admit that, but if there was no organization of firemen, if there was no Brotherhood, locomotive firemen would knock at your door in vain for admittance, and the pay of firemen would be regulated to suit your views and the men would not be consulted; therefore, I affirm that the Brotherhood is entitled to the credit of bringing about the present condition of things among the firemen. Is every instance where a committee of locomotive firemen, representing the Brotherhood, have been met with a spirit of fairness by the official, they have never failed in effecting a settlement. Sometimes it has been our painful duty to be called to use that little ability we possessed and the authority vested in us, to convince the officer of the justice of the claim of the men, and we believe a little has been accomplished, for it is on record, signed by the president and general manager, as the case might be, but it has always been our aim to ask nothing unfair, to be ready to meet the corporation in a friendly spirit, and, if possible, to obtain what we believe to be just for the men we represent. Yet when we meet a man who is devoid of reason, who will not give his employes what is acknowledged to be fair, then in my official capacity and with all the authority at my command we will wield the weapon of organized labor has provided for its membership—strike, and strike hard. [Great applause and cheers.] If that is wrong, then I have no faith in the ultimate triumph of labor. With the weapon at hand sheathed but not drawn, except when every other measure has failed; with men as counselors and leaders who are rational in their understanding of the rights of labor; with men true to obligation, faithful in the discharge of every duty, sober in their conduct, coming up to the full stature of true manhood, the laboring classes will ultimately gain that recognition at the hands of corporations and employers that will give them good wages, short hours, happy homes and opportunities to lay aside their earnings so that when old age comes they can rest

from their labors and enjoy the blessings of a well spent life of toil.

ADVANCING THE WORKING CLASSES.

Organized labor is to-day doing much to advance the condition of the working classes. But the work has just commenced; [cheers] the brightest minds the country affords are given to the discussion of the labor question; men in all stations of life are interesting themselves in the movement, all of which will ultimately result in a better condition of affairs.

We have often heard predictions made that the organizations of labor would be destroyed. War has been waged against them; men powerful in authority and rich in this world's goods have endeavored to crush them out, and while, perhaps, in a single locality, they may have been able to retard the growth of the organization for a time, it has always risen more powerful than it was before. How about the men who have been the most pronounced foes of organized labor? Gowan has disappeared from the face of the earth by his own hand; Corbin has departed [great applause] to a foreign country to meditate upon his past acts; Stone has left the railroad service, [applause] likewise Morton and others of that stamp, and the organizations they have attempted to crush are gaining in influence and membership every day, and will so continue as long as those in authority honestly carry out the laws that have been adopted for their guidance.

The Brotherhood of Locomotive Firemen as an organization is striving to be a pioneer in every movement that will benefit the countless toilers; neither selfish in its makeup nor aristocratic in its views, it recognizes every honest effort on the part of organized labor. It matters not what occupation a man may follow, whether he be a switchman in the yard, or an engineer on the locomotive, a brakeman on the car, or the conductor in the coach, machinist, or what; if he is an honest man and faithful at his post, he is our brother, and we regard him as such, and have a care for his welfare. Thank God, there is no aristocracy of labor in the makeup of the Brotherhood of Locomotive Firemen. [Applause.] We can take into our lodge rooms the engineer and conductor, switchman and brakeman, and all classes of railway men. A man should never be estimated by the clothes he wears, or the salary he draws. Some men have fine clothes and draw large salaries, yet have not the first principles of manhood, while the poor beggar in the street may have a spotless character, although the child of misfortune and poverty; yet, how often the first is sought after and the latter shunned.

A man with a good moral character, no matter what his circumstances in life may be, should never be excluded from the society of honest men. [Applause.] This is the belief of the Brotherhood, and we aim to practice this virtue as an organization by affiliating with all sister organizations in the labor cause.

During the last two years federation has been effected between the Brotherhood of Conductors, the Brotherhood of Railway Trainmen, the Switchmen's Mutual Aid Association and the Brotherhood of Locomotive Firemen, whereby the several organizations have been brought into close alliance with each other, so much so that when trouble comes to the firemen they will find the members of these organizations their friends and supporters. In the laws governing this alliance we have provided means for the settlement of grievances by joint action, if necessary, when any one organization fails to get justice for its members, going so far as to strike after every honest method of arbitration has failed, and when our cause is just. [Loud applause.]

PROTECTION THE OBJECT SOUGHT.

The purpose of these several organizations is protection, and for that object a closer affiliation we have federated. All we ask at the hands of our employers is a fair day's pay for a fair day's work, our rights as men when we earn them by faithful service, and courteous treatment at the hands of our superior officers. We require a faithful obedience on the part of our members of all rules. We expect that proper discipline shall always be enforced upon all the railways, and we have no desire to retain in service one moment an incompetent man. [Applause.] We wish

sobriety to be the ruling passion of every railway man, and when this state of things exists no railroad official need fear federation or organization. But when men in authority practice injustice upon our membership, then through a proper committee the organization will seek redress; if it fails, federation will step in and expose the cause of those who are unjustly dealt with. I have no forebodings of evil, rather I see a bright future for all workmen. With honest men at the head of organizations and such practical officials in charge of the railways as the gentlemen to whom we, as representatives to this second biennial session are under so many obligations, and one of whom California is proud, one whom every railroad man esteems, Mr. A. N. Towne, [applause] with St. John, Miller, Sloan, Mellen, Haraban, Hallstead, Hewitt, Chappell, Ingalls and others, who regard men in their employ as entitled to a hearing when they call upon them, all differences will be adjusted in an amicable way, peace and harmony will prevail; but if the corporations conceive, bring to light and raise up Corbins, Stones, Gowans, and men of like character, who regard an honest workman as a slave to do their bidding, with no rights but to accept what they offer or quit, then organizations will assert their authority and the strength of federation will be manifested. [Applause.]

I am pleased to be in a position to report at this time that the Brotherhood of Locomotive Firemen is at peace with all the world; we cherish no ill will towards any one; our friends we appreciate and hope by a faithful adherence to those ennobling principles which form the motto, viz: Protection, Charity, Sobriety and Industry, to retain their friendship and grow in their esteem. For our enemies we have the kindest feeling as an organization, and we hope the day will come when the good spirit will so work upon their benighted understandings that they will realize that the Brotherhood is organized for a noble and unselfish purpose—that of elevating mankind.

WORDS OF ADVICE.

My brothers, you who have been selected from so many as delegates to the meeting of the Grand Body, you have a responsible duty to perform. The past record of the organization, with its successes and failures, is before you, and if you can profit thereby, the future, in a large measure, is yours. Let no selfish motive control you in your action, or any personal regard govern you in your deliberation, but the highest sense of duty to the organization and the brothers you represent. Your department while in the city will be closely watched; let no member of this Grand Body forget the dignity of his position, and let us leave behind us such a reputation when we bid farewell to our kind friends at the Golden Gate that they will long for our return. Our brothers of the Brotherhoods of Conductors, Engineers, Trainmen, Switchmen and all organized workmen of whatever body, we appreciate the kind expressions of welcome we have received from you. In the past year we have been thrown in personal contact with Brothers Howard, Wilkinson, Sweeney, [applause] and others of the grand officers who direct the affairs of the several Brotherhoods, and they are all men of integrity and are faithfully serving you and your interests, and while we may not all be in accord as to policy, we are friends, and as the executive of the Brotherhood of Locomotive Firemen, and in behalf of the organization, I bid them God speed in the good work allotted to them. I wish every fireman to encourage every conductor, engineer, brakeman, switchman, and in fact every unorganized workman to become affiliated with the organization that will best promote his interests. What we want is a more thorough organization, and by all taking an interest in each other's welfare, all will be likewise benefited. Above all things, let us live peaceably together, thus making life pleasant for all.

To His Excellency, the Governor, and His Honor, the Mayor, we return our hearty thanks for the cordial greeting we received on our arrival in California. [Applause.] We will endeavor to retain the good will of these distinguished gentlemen by a proper observance of the laws, and not in any manner lay ourselves liable to be called upon to answer before the Bar, but on the other hand, practice the motto of so-

briefly while in the confines of their domain. If by chance, after the close of our session, and after time has elapsed, one of these handsome fellows should return. Your Honor, and ask of you one of the fair ladies of your court, do not hesitate to grant his request, for our experience in past conventions has proven that many come, few are chosen and happiness ensues.

To the other distinguished gentlemen we will say, that the good counsel you have given us will be acted upon and will bear fruit; it has fallen upon good ground in the hearts of honest workmen.

To our friends, the officials of the Southern Pacific Company, especially Mr. Towne, [applause] we all feel grateful for the many courtesies they have extended to us, and we will not forget them in all the days that are to come, and I hope that there may always exist pleasant relations between the Southern Pacific Company and all organizations of railway employees.

In conclusion, we thank our friends, the ladies who are with us, and it will be the aim of every delegate, Grand Officers included, to make enjoyable the visit of those from abroad as well as cultivate the acquaintance of those who breathe constantly the balmy air of the placid Pacific. [Applause and cheers.]

From the first to the last Bro. Sargent commanded the unbroken attention of the vast audience and was frequently interrupted by prolonged applause. We do not hesitate to say that it was, in many regards, the best address ever delivered, evincing profound thought and a full comprehension of the subjects treated; besides, the manner of delivery was faultless, and added indefinitely to the satisfaction of the audience.

After the applause called forth by Bro. Sargent's superb address had subsided, the chairman introduced

MR. M. A. DORN,

who, in behalf of the Native Sons of the Golden West, delivered a stirring address, which commanded the closest attention of the audience and was frequently interrupted by applause. The speaker paid a high tribute to organized labor, and won hosts of friends among the delegates.

The chairman next presented

HON. TOM FITCH.

This gentleman, justly renowned for oratory, eloquence, learning and devotion to the friends of labor, was received in a way which, however accustomed he may be to cheers, could not have failed to impress him with the fact that he was honored by his audience.

His magnificent address was as follows:

MR. CHAIRMAN AND MEMBERS OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN: This gathering illustrates the character of our government and the beneficial changes which have been wrought during the last 100 years. Anywhere upon the continent of Europe such a convention of workers as this would, in the last century, have been forcibly dispersed, or its members imprisoned, and even in free England, if they had been permitted to assemble at all, it would have been under police surveillance.

But you gather for mutual consultation and improvement, respected by the community, considered by the press, with one Governor—and possibly two—attendant upon your meeting, and quite conscious—as is your right and duty—that not one among you all need doff his hat to any man living, except through the courtesy of equals.

When I was honored with an invitation to address

you I was puzzled to determine what topic to select for discourse. Statistics with respect to your organization, numbers and work will come more properly from your officers, and I know so little about the details of your trade that I should be certain to make blunders if I attempted to discuss your duties and achievements. Generally I know that to you is committed the duty which in the Orient is imposed upon the faithful Parsees—that of keeping the altar forever glowing. Generally, I know that in the performance of your tasks you are called upon to counter sweltering heat and bitter cold, fierce tempests and driving sleet, and that when on duty you are required to be as alert, as tireless, as industrious, as powerful as the fabled gnomes whose swart, fire-lit features illuminate our fairy literature.

Generally, I know that when you strike—as lightning—you have never found occasion to do upon this continent, and as I hope you may seldom have occasion to do anywhere—people are then compelled to stay at home and freight accumulates in the warehouses until you resume your labors.

Knowing these general facts, I yet do not know enough specifically about your organization or its objects to offer to you either valuable advice or interesting, or even intelligent comment concerning

DAMAGES FOR INJURIES.

But there is one point where our lines touch, and where, in my profession, I may be able to present some suggestions that may prove of value to you, and that is with respect to the rights, or rather absence of rights, under the law of this state, of a locomotive fireman—or other worker—to recover from his employer for injuries which he may sustain through the negligence, carelessness, or unskillfulness of a fellow workman. [Great applause.] I do not, in my opinion, serve you better to day than by omitting the usual rhetoric and eulogy supposed to be suitable for such occasions as this, and by endeavoring to point out a method within your power of adopting, of securing such reforms in the present law as will make you less helpless if you are maimed through no fault of your own, and your wives and little ones less dependent if—by calamity beyond your control—death should come to you while in performance of duty. [Applause.]

Why is it that jurisprudence is about the only science which fails to keep pace with the brilliant and advancing procession of progress in all other ways? In theology, total depravity and infant damnation have been laid aside, along with the legends of Jonah's sojourn in the whale's interior, and the new philosophies—the result of modern thought and ancient cult combined—have stricken the shackles from the onward feet of the seekers after truth.

In medicine the lancet, the blister, and the blood-letting are no longer the ruling trinity; the fever-stricken patient no longer cries in vain for water, and anaesthetics have almost banished pain from among the ills of life. But when we approach the laws, the entire membership of the legal profession from the most venerable judge to the latest pinfeathered chicken of the schools, cries out: "Do not disturb the venerable dust of innumerable ages!"

I am not especially given to iconoclasm, but I can see no greater reason for preserving the error of bygone ages in law than for insisting upon a literal six days' creation in theology, or for adhering to black mass and brimstone in medicine. [Applause.]

The common law doctrine which relieves the employer from responsibility for injuries which the employé may sustain through the negligence of a fellow-workman has been upheld, and strengthened and enlarged and construed by the courts of England and America in the interest of employers, until it has grown into a monstrous and apparently impregnable fortress, from behind which wealth can defy the claims of the worker.

THE CALIFORNIA CODE.

To the shame of California it may be said that this is the only State in the Union besides Dakota which has by legislation established and fortified the cruel doctrine of the common law. Section 179 of the California Civil Code reads as follows:

"An employer is not bound to indemnify his employé for losses suffered by the latter in consequence

of the ordinary risks of the business in which he is employed, nor in consequence of the negligence of another person employed by the same employer in the same general business, unless he has neglected to use ordinary care in the selection of the culpable employé."

This provision of the California Code, and the common law doctrine upon which it is based, is against the interest of every locomotive fireman, every engineer, every brakeman and conductor and train band in California. [Applause.] It is against the interest of every miner, and carpenter, and mason, and painter. It is against the interest of every toiler in factory and furnace. It is against the interest of every laborer whose life may be taken or whose limbs may be mangled through the carelessness or unskillfulness of a fellow-workman. This section of the California Code ought, in justice to the workers, to be repealed [applause] and the common law doctrine upon which it is based should be swept by legislation from the jurisprudence of this State, as it has already been destroyed or modified in several States.

Georgia was the first State in the Union to inaugurate legislation on this subject. As early as 1855 her Legislature enacted the following law: "Railroad companies are common carriers and liable as such. As such companies necessarily have many employés who cannot possibly control those who should exercise care and diligence in the running of trains, such companies shall be liable to such employés as to passengers for injuries arising from the want of such care and diligence.

"If the person injured is himself an employé of the company, and the damage was caused by another employé, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery."

Iowa enacted a similar statute in 1867, but limited it "to employes engaged in the business of operating railroads, and not to all persons employed by the corporation without regard to their employment." Kansas passed an act in 1874 made to apply only to railroad corporations, but its phraseology is such that the courts of that State have greatly limited its scope. Massachusetts, in 1867, enacted an elaborate law, but the amount that may be recovered there is limited to \$1,000 for any injury, or \$5,000 for death. Minnesota in the same year passed an act applicable only to railroad corporations, and excepting all railroads in process of construction.

Wyoming, Rhode Island and Montana have statutes applicable to railroad corporations alone. In forty States and Territories of this Union the common law rule of non responsibility to the employé prevails, and it is a matter of astonishment to me that the labor organizations of the country have not long since directed their attention and efforts to changing the law, for they certainly have the power to do so if they see fit to exercise it.

LAWYERS IN LABOR ORGANIZATIONS.

Perhaps the Knights of Labor were not altogether wise in excluding lawyers from their membership, for lawyers are certainly laborers, and occasionally they have ideas which might prove of service to other laborers. The reason of the common law rule is clearly stated by Chief Justice Shaw of Massachusetts in the case of Farwell vs. Boston & Worcester Railroad Company, reported in fourth Metcalf. He says: "He who engages in the employment of another for the performance of specified duties and services for compensation, takes upon himself the natural and ordinary risks incident to the performance of such duties, and in legal presumption the compensation is adjusted accordingly.

"And we are not aware of any principle which should except the perils arising from the carelessness and negligence of those who are in the same employment. These are perils the servant is as likely to know and against which he can as effectually guard as the master. They are perils incident to the service, and which can as easily be foreseen and provided for in the rate of compensation as any other."

If I could presume to question the reasoning of so distinguished a jurist as Chief Justice Shaw, I should say that the weakness of his argument is in the

assumption that a peril arising from the negligence or unskillfulness of a fellow-employé is a peril "which the employé is as likely to know and against which he can as effectually guard as the employer." In many instances, indeed in most instances, this is not the case.

AN ILLUSTRATION.

Permit me to illustrate: The General Superintendent of a railroad knows, or, at least he ought to know, whether the Division Superintendents possess sufficient intelligence, experience and knowledge of men to enable them to select competent workmen, and the Division Superintendent, or his assistant, knows, or ought to know, whether the switch-tender whom he selects is clear-headed, sober, wakeful, attentive and competent. The fireman, whose life may be sacrificed or whose body may be maimed by a misplaced switch, knows nothing whatever of the antecedents, qualifications or habits of the switch tender. Often he does not know even his name or person. He was not consulted in his selection, and he will not be consulted concerning his retention or discharge. The switch-tender may have received his appointment because he is influential at a primary election, because he is a cousin or a brother-in-law of the appointing power, [applause and cheers], or of somebody who has a "pull" with the appointing power, or because he has a pretty sister, [laughter] or because he was upon a jury that brought in a verdict in favor of the railroad company. [Great applause.]

I do not undertake to say that any employer makes a practice of selecting his employés for any other reason than because of their qualifications. On the contrary it may be assumed that as a matter of self interest those who employ switch tenders use all the means of information within their reach, and exercise their very best judgments in making selections. Nevertheless, the selections are made upon their information, which may be false or colored, and upon their judgment, which may be erroneous, and it is not made with the approval of the locomotive fireman, who has no information upon the subject, and who does not exercise and cannot exercise any judgment in the premises.

And when a switch is misplaced, and a locomotive overturned and a fireman lies crushed under the wreck, what mockery of logic and of justice is it which says to him: "You can recover nothing if you live, and your family will be entitled to nothing if you die, because the drunkenness or the stupidity of the switch-tender whom you did not know and never saw was a peril which you were as likely to know and against which you could have guarded as effectually as your employer." [Applause.]

Suppose a waiter in a hotel sent to the fifth story with an order, and injured through the carelessness of the man in charge of the elevator; suppose a machinist at the lathe or the anvil, crippled through the carelessness of the engineer in the basement; suppose a mason or painter or carpenter thrown to the ground by a loaded wagon carelessly driven against the scaffolding; suppose a miner hurled to the bottom of the shaft, or strangled or drowned in drift or tunnel through the neglect of the engineer in the hoisting-house. In none of these instances could the injured man or his heirs recover from the common employer, and in none of them is there, in fact, whatever there may be in law, any common employment of the man injured and the man whose carelessness caused the injury. [Applause.]

RISKS BY RAILWAY EMPLOYÉS.

There is doubtless a special and extraordinary risk incurred by railroad employés, and therefore greater necessity for protective legislation in their behalf, but the principle underlying the reform I advocate will extend with equal logic and equal force to all other trades and avocations, and the true rule should be that an employé may recover from his employer in any case where he might recover if he were not an employé. If an elevator in a dry goods house falls through the fault of the engineer, why should not the elevator boy recover damages as well as the passengers in the elevator? If it falls through the unskillfulness of the elevator boy, why should not the injured clerk recover as well as the injured customer?

The legal presumption that the risks of the business are estimated for in the compensation paid the employé is a pleasant legal fiction. Do the miners on the Comstock receive more wages because of the risks of fire and flood and premature explosions and falling cages? Does the hod-carrier obtain a larger compensation because of the risk that the teamster may drive his team against the ladder? Does the bookkeeper collect higher wages because of the risk of being blown up by an unskillful gas tender? Is the actor's salary any larger because of the risk of being maimed through the carelessness of the stage carpenter? [Applause].

INJUSTICE OF COMMON LAW.

The rule that the servant cannot recover from the master for injuries inflicted through the negligence of a fellow-servant is as old as the English common law, and it is quite old enough to die, for it has survived all the conditions which gave it birth.

It originated in a system of society where the terms "master and servant" were almost equivalent to the words "master and slave," where the employer and the employed had in theory both rights and duties, but where in practice the servant usually had all of the duties and the master all of the rights. It is a rule that was established before railroads were built, before the use of steam or electricity was known, before great manufacturing establishments existed.

The employé in those times was usually a member of the household of his employer, sleeping under the same roof, eating at the lower part of the same board, working in the same shop. Each employé was under the eyes of all the other employés and all were under the eyes of the employer. Under such circumstances there might be some justice in the rule, while, under the changed circumstances existing to-day, there is no justice in it whatever.

At an early day that rule was limited to cases where both the negligent and the injured employé were engaged in a common employment, and had the phrase "common employment" been construed by the courts with fairness to the servant, the injustice of the rule might not be so obvious, but the tendency of courts has been to enlarge their constructions in the interest of employers and narrow them in the interest of employés. A few of the many hundred cases reported in the books may be quoted to illustrate this tendency:

In the case of Slater vs. Jerrett, reported in Eighty-fifth New York Court of Appeals Reports, a telegraph operator at Salamanca, on the Erie Railroad, omitted to give to the engineer of an east-bound train orders received from the train dispatcher as to the place where the east and west-bound trains should meet.

A collision ensued, and Slater, who was a locomotive fireman on the west-bound train, was killed. What possible knowledge could Slater have had of the qualifications of the telegraph operator? and in what sense—other than a legal one—could the telegraph operator and the locomotive fireman be said to be engaged in a common enterprise?

NOTED CASES CITED.

In the case of Sammon against the New York & Harlem Railroad Company, reported in Sixty-second New York Court of Appeals Reports, a careless switch-tender permitted the switch to become displaced so that two cars of the train were thrown off. One of these struck some empty cars on a side track and propelled them across Fifty-second street, where they struck and killed Thomas Sammon, who was employed to attend a chain across that street so as to prevent people from driving or going across. The court consulted the administrator of Thomas Sammon on the ground that the man who attended the chain to keep vehicles from crossing the track was engaged in a common enterprise with the switch-tender. [Laughter and applause].

In a Pennsylvania case a painter was employed by the railroad company to paint the outside of its station house, and while he was engaged in this work a careless brakeman suffered a car to escape and run down an unused track in front of the station, where it struck the painter's ladder and threw him to the ground. His only consolation for a broken leg was to be told by the court that when he was spreading paint upon the front of the railroad station building

he was engaged in a common enterprise with the man whose duty it was to brake the cars, and that therefore he could not recover from the common employer.

There are numerous instances of laborers employed in gravel pits and transported on gravel cars to and from the scene of their labors, who have been mangled through the negligence of an engineer or conductor, and who could recover nothing from the company because the grader was a fellow-servant with the engineer. [Laughter and applause.]

There was a case where the miner who was charged with the care of giant-powder to be used in blasting in a railroad tunnel handled it in such a careless way that it exploded and injured some laborers who were sawing cordwood for the use of locomotives, but according to the law as expounded by Chief Justice Shaw, this was "one of the perils incident to the business of wood-sawing," and no recovery was allowed.

In the collision which occurred in Oakland, twenty years ago, through the neglect of a switch-tender every injured passenger was entitled to recover damages from the railroad company, but the engineers and firemen and conductors and brakemen and train hands could not recover because they were fellow-workmen with the switch-tender.

In the case of Yeomans against the Contra Costa Steam Navigation Company, reported in 44th California, the plaintiff was a barkeeper on the steamer running between San Francisco and Petaluma, and as he was about to enter the cars at Petaluma intending to make the usual daily trip to San Francisco the boiler of the locomotive in charge of the defendant's engineer exploded, and caused Yeomans personal injury. It was contended by counsel learned in the law that the barkeeper on the steamboat was engaged in a common enterprise with the engineer on the locomotive, and doubtless the plaintiff would have lost his case had it not been for the fact that he was not a barkeeper who was hired by the company, but, on the contrary, he rented the bar of the company and paid it \$200 a month for rent and daily passage on its train to the boat.

ANCIENT MAXIMS IN LAW.

There is an ancient maxim of the law-writers that "when the reason of the rule changes then the rule should change," and the rule which might have been a just one in a community where there were seldom more than a few dozen men employed by one man, and where the use of steam, of electricity, of explosives and of powerful and intricate machinery was unknown, has no reason for its existence in a community where thousands and sometimes tens of thousands of men are employed by one corporation, and where the error of a telegraph operator a hundred miles away may bring death or injury to a faithful and blameless fireman or conductor or engineer. [Applause.]

A change in the law that shall place the railroad employé upon an equality of right with the railroad passenger, and the miner in the drift upon an equality with a stranger, is a change that will add only the cost of accident insurance for its employés to the expense account of railroad and mining and manufacturing companies. It is a change that will secure greater safety to the travelling public, for it will induce a more scrutinizing selection of sober, careful and reliable men for positions where care and sobriety are needed. It is a change that might alleviate the sufferings of many a gallant worker stricken down in the performance of duty, and lighten the gloom of poverty which otherwise might rest upon widowed and orphaned households.

The means of effecting such a change are exceedingly simple. Substitute for Section 1970 of the Civil Code of California, and for the common law rule elsewhere, the following:

"Every person or corporation organized or doing business in this State shall be liable for all damages sustained by any employé of such person or corporation, by reason of the negligence, carelessness or unskillfulness of any other employé thereof, without contributory negligence on the part of the person injured, when sustained within this State, and no contract, rule or regulation between such person or corporation and any employé shall impair or diminish such liability."

RELIEF AT THE BALLOT-BOX.

I submit to your judgments that such a measure as I have suggested will prove of practical advantage to your membership and to the membership of all trades where there is necessary risk of life and limb to the worker. The time is propitious to secure such legislation.

Elections are approaching in many States. If a committee from your Order, cooperating with committees from other labor organizations, shall demand of legislative candidates public pledges of support to such a law, there is little question but such pledges will be given. At least it will be quite your privilege to allow such candidates as refuse pledges to obtain their election—if they obtain it at all—without the help of your votes. You have in your ballots an invincible weapon. Do not surrender that weapon to boss or caucus, but use it for the defense of your homes. [Loud applause.]

The relations between capitalists and laborers are happily growing toward just and peaceful solution, and it is in broader and stronger unionism of each trade, rather than in general federation of all trades, that labor will find its greatest strength.

The Brotherhood of Locomotive Firemen, as well as the Brotherhood of Locomotive Engineers, has shown itself to be a powerful, conservative, intelligent organization, and its strength lies in the intelligence and moderation of its members. They recognize that it would not be possible for a committee of plumbers or house carpenters to know what changes in compensation or in methods of work would be just as between a railroad corporation and a locomotive fireman any more than it would be possible for a locomotive fireman to arbitrate intelligently between striking shoemakers and their employers.

Labor finds its strength and its promise of advance in the fact that among the most intelligent, thoughtful and experienced members of any trade in this country may be found workmen who are quite as capable of comprehending the commercial and economic conditions and relations of that trade as are their employers. Napoleon is credited with saying that every soldier of the grand army carried a marshal's baton in his knapsack. [Applause.]

I doubt not that within this audience are men as capable of comprehending and adjusting the intricate traffic relations of railways as any congressional committee. I doubt not that there are many members of your Order who could step from in front of the furnace door and take the place of Division or General Superintendent with profit to the public and the stockholders. Hence it is in cooperation rather than in federation that the fortress of labor will be found, and labor is coming to its own over all the world. Human selfishness may delay the coming economic adjustment, but it cannot prevent them. There are obstacles at both ends of the puzzle, but they will be swept aside. There are sordid and unsagacious capitalists who seek to lessen the wages and so degrade the lives of the workers, and there are idle and unthrifty men who brawl for an unearned share of the results of industry and clamor for bread or blood, meaning always somebody else's bread and somebody else's blood—and to my mind the scoundrel who wrecks a railroad in Wall street, and the other scoundrel who wrecks a train upon the prairie, ought together to study the mystery of electrocution. [Great applause and cheers.]

But intelligent labor comprehends that it is as much interested as is capital in the preservation of order, for labor pays the cost of disorder. The millions of property destroyed some years since in Pittsburgh by maddened and insurgent labor were paid for by the municipality. The municipality collects in its taxes from the real estate owners, and the real estate owners collect it in turn from their tenants, and every time that the rent of a cottage or a room in a tenement house is paid by a wage-worker in Pittsburgh there is paid a part of the cost of the Pittsburgh riots.

WHY STRIKES HAVE FAILED.

From Socrates to Henry George [applause] students of social science have been busy with plans for amelioration of the relations of labor and capital. Strikes

have failed because labor is a commodity that will not keep, and the work which might have been done and was not done on Monday is of no value whatever on Tuesday morning. Various plans have been suggested to exempt man from the decree, "In the sweat of thy face shalt thou earn thy bread," but no changes of governments or of parties have ever yet evolved a successful plan by which two pounds of flour can be made from one pound of wheat.

Individual economy and industry will, in this country sooner than in any other, bring independence to the laborer, for the margin between earning and eating is larger here than elsewhere, and in my judgment the best plan of labor organization will be for each trade to determine for itself what conditions will be just to its members, just to employers and just to consumers, and then governing itself by enlightened self-interest within lines bounded by justice and moderation, insist through lawful methods upon its rights. [Applause.]

Society surges with the throes of a new life for the worker, and upon the horizon of hope a pencil line of light will soon begin to glow. Away and away beyond the Eastern horizon, across stormy seas, across forests and plains, beyond the ruins of empires, and eastward still until the globe is girdled to the shores of the western sea, everywhere the night of selfishness and greed and despotism has for ages been resting in close weight upon the nations. In the far North, under the midnight suns of Russia, manhood dares not utter the truth which the Spirit of God whispers into its ears, and women shriek and sob under the scourge. Upon the continent of Europe drill and discipline, discipline and drill, and the labor of preparation for death—dealing to humanity, withdraw from productive labor and change into pauper ruffians the flower of its manhood. Africa is still in the jungle of ignorance and superstition, and in Asia the living trampled under the feet of caste, and faint with the exactions of both native and alien rule, look forward with hope only to the deliverance of death. [Applause.]

IN FREE AMERICA.

Only here, under the flag of forty-four stars and under the banner of the Canadian Dominion, does the toiler begin to ask why he must gather his rags closer lest he jostle the silken garment that his fingers have fashioned? Why he must offend his hunger with the odor of banquets which he prepared but may not taste? Why he must walk weary and shelterless in the shadow of palaces which he built but may not enter? The worker has begun to question; he will soon begin to act. He will not long supplicate for his rights, but he will take them. Not in wrath, not in injustice, but in orderly and lawful and manly ways he will take them. He hears the cry of peoples weary of centuries of error, centuries of wrong, centuries of toil and tears and martyrdom, and he knows that the free laborers of a free land will heed and answer the cry, for labor is here the sovereign: it is the Prophet, Priest and King; it is the creator and conservator of all wealth, all government and all civilization. [Applause.]

THE PERORATION.

Labor rends the earth and hoists the somber ore and seethes it in baths of fire, and hammers and rolls and tempers it into glittering blade and ponderous rail. Labor gathers the fleeces and whiteneth them in steaming vats, and with humming spindle and shifting shuttle transforms them into a thousand articles of use and beauty. Labor bids the green-plumed forest monarch fall low upon the earth, and seizes his huge form and sends it screaming under the gang saw, until the forest is changed into material for homes. Labor smites at the adamantine doors of the earth's treasure chambers and bids them roll back upon their hinges and reveal their shining secrets.

With hand on throttle-valve and face red with the furnace glow, Labor feeds and guides the black cavalry of commerce as with steam-flecked flanks they thunder up the mountain side or scream across the plain. On the foam-crested seas, in golden harvest fields, amid the din of factories and the roar of forges, everywhere, it is the dews of toil alone that nurture a nation from poverty to affluence.

And shall not the toilers come to their own? Shall not crowns and castles be abased before them? and

oppression and injustice and greed lose their power? Who shall doubt it? When amid the howling storm the mariner, sailing over tropic seas, waits for relief from his weary watch, he turns his eyes toward the Southern Cross burning luridly above the tempest-tossed ocean, and as the midnight approaches the Southern Cross begins to bend, the whirling worlds change their places, with starry finger-points the Almighty marks the passage of time upon the dial of the universe, and though no bell may beat the glad tidings, the lookout knows that the midnight is well nigh past, and relief and rest are close at hand.

Let labor everywhere take heart of hope, for the cross is bending, the midnight is passing and "joy cometh with the morning." [Prolonged applause and three cheers.]

Most earnestly do we invite the patrons of the *Magazine* to give Mr. Fitch's address a careful perusal. No workingman should permit it to pass without careful study. It thrills like a bugle blast. It elevates and sublimates; men will read and expand. It will enable men to find

"The great world's altar stairs
That slope through darkness up to God."

Up to higher planes of thought and ambition. Read it.

It is unnecessary to say that at the close of the address, Mr. Fitch was informed, in a way about which there could be no mistake, that he had touched the great heart of his audience, and that it had beat responsive to every word he had uttered, and as a climax of enthusiasm the speaker was tendered three cheers, given with as much thunder as the audience could command.

Following Mr. Fitch the chairman introduced Brother

D. J. BROWN,

a member of the Brotherhood of Locomotive Engineers.

Brother Brown is a veteran engineer, not only master of the machine, the throttle and the air-brake, but master of good English. His words are the signs of ideas, practical ideas. Brother Brown is a thinker, an earnest, practical thinker. He is not a vagarist. He is not full of whims and shams. He reflects upon current topics which relate to organized labor, to work and wages, to the life that now is, to home, to the advancement of workmen in all that pertains to right, justice and fair play, in the world's broad field of battle. His address is brim-full of good ideas. They could scarcely be improved, and as the delegates listened and applauded they realized that they were listening to a man who was in profound sympathy with them, and they applauded his periods to the echo.

Bro. Brown spoke as follows:

MR. CHAIRMAN AND MEMBERS OF THE LOCOMOTIVE FIREMEN'S BROTHERHOOD: On an occasion like this you have a right to expect that any one who attempts to address you shall have something to offer that will interest, instruct or amuse you. I disclaim the ability to do either. I am here simply as a locomotive engineer, by the kind invitation of your committee, and at the request of the members of Leland Stanford Division, No. 283, Brotherhood of Locomotive Engineers. They desired me to be present at this meeting and to convey to you their best

wishes and in their behalf to greet you—to welcome you to this city.

When Bill Nye was here a short time ago some one asked him if he would lecture. He said, "No, not exactly. I shall simply appear, and then I will retire, and there will be music." Now, I hope that about all which is expected of me by your committee, and I humbly apologize to this audience for presuming to do even that much. A man who follows the occupation of locomotive engineer must think a good deal; must be always watching—always listening, but he needs to do but little talking. The faculties that are least used are least developed. It is reasonable to expect that one who has been over thirty years at the throttle should be entirely disqualified for public speaking.

It is my opinion that there should have been a Brotherhood of Locomotive Firemen, but, instead, there should have been an organization known as the Locomotive Engineers and Firemen's "Mutual Union." Twenty-five years ago this month, at the Rochester Convention (the second annual convention of our Brotherhood), plans were proposed to bring about such an arrangement. I was a delegate to that convention and favored the plan, but it had few supporters at that time, being considered impracticable by the majority. Perhaps it might have proved so, but I never could understand why two classes of men so closely allied in their work and interests could not be associated under one charter.

We labored with this question year after year until the firemen, tired of waiting for our decision, organized an association of their own, which, I am glad to know, has been a satisfactory and successful one in its workings.

FEDERATION NEEDED.

What we want now, what we should have had long ago, is a close union, not only between your organization and ours, but between all trainmen. [Applause.] A grand Union or Federation. I hope that in the near future such an arrangement will be brought about, and that in all important matters we will act as one body. Why not?

It is a good thing to have power, and then it is a wise thing to use that power with moderation and discretion. I know there is some opposition to this scheme of federation in our brotherhood, principally, I think, in our grand office, and among those who do not reason for themselves, but who think as our Grand Chief Engineer wishes them to.

Our order is, and has been for years, dominated by one man. He is an autocrat in the organization over which he presides. A large portion of our membership blindly follow him, believing that his wisdom is supernatural. So far his influence has prevailed in shaping all important legislation, but federation I believe is a tidal wave whose flow he cannot check, even with the assistance of Mr. Chaney M. Depew. I do not mean to speak unkindly of our Grand Chief. He did well enough in the infancy of the organization, [laughter and applause] but he belongs to the past. [Applause.] The organization has outgrown him. He is behind the spirit of the times. A mariner on the deck of his vessel safely riding the storm and turning a deaf ear to the appeals of his fellow men, who are on a less secure craft or are struggling in the water, is not a pleasant figure to contemplate. But my friends, I say it with regret, that the Brotherhood of Locomotive Engineers has occupied some such unenviable position among the organizations of workmen and I charge that it is more the fault of the captain than of the crew. We want a leader whose charity goes a little farther than his own threshold: one who has the disposition to aid others besides those who pay him his yearly salary. [Great applause.] The tendency of the times is toward federation, co-operation. [Applause.] The rich combine and wield immense power. We must meet combination by combination, or be crushed in detail like scattered battalions on the field of battle. Much as we deplore the necessity to do so, we can not ignore the fact that the necessity exists.

DEPEW CRITICIZED.

In a recent address to the engineers, Mr. Depew says that he has never had a difficulty with his employees that he could not, on presentation of the facts, settle in five minutes.

Well, in the light of recent events and developments, considering the fact that a large proportion of the employes of the New York Central Railroad work for less wages than on most roads in America, and the further shameful fact that many of them are obliged to pay sweat money for the privilege of earning even the miserable pittance that they get, I say, in the light of these facts, men working under such conditions and can be so readily settled with, must be under pretty good restraint and subjection. But the fact is, settlements made with Mr. Depew have not always been satisfactory ones to all concerned, but have been accepted by force of circumstances.

DEPEW'S ASPIRATIONS.

Mr. Depew is believed to be a hopeful aspirant for the Presidential office. [Laughter.] Well, many men have aspired to that high office who did not reach it. Stephen A. Douglas once wanted to be President, and at the conclusion of a speech which was generally accepted to be a bid for the nomination, old Tom Benton said to him: "You never can be President. Mr. Douglas, you never can be President; your coat tails hang too near the ground." Applause.]

Now, Mr. Depew's coat tails may be no hindrance to his aspirations, but something else will that is more potent. The workmen of America will not forget that he absented himself from his post to escape the responsibility and odium of an attack on organized labor made and carried out by one of his assistants. They will hold him responsible for this attack, and not the creature Webb. The workmen of America will not fail to see through the thin disguise of this aristocrat—this pampered pet of the Vanderbilt.

On this road (the Southern Pacific) our complaints have always been listened to and adjustments promptly made. We have had that monarch of men to deal with, Leland Stanford. He has dealt justly and generously with all his employes. But we have him with us no more. Good railroad presidents retire and die, and others succeed them who are sometimes not so good. It seems that more good ones die than bad ones.

Death now and then does us a good turn in the removal of such arch tyrants as Franklin B. Gowan and J. M. Hoxie, but his favors are too long delayed. They were allowed to remain with us too long. Their inhumanity to man made thousands mourn. Great applause.]

THE BURLINGTON STRIKE.

The strike on the Chicago, Burlington & Quincy road cost the Brotherhood of Engineers \$1,506,500. We had at the time of the strike about 27,000 members. Over 1,000 of them were in the strike. I allow 1,000 more as delinquents, and figure on a basis of 28,000 members, which multiplied by the amount I paid myself in assessments, gives a result of over a million and a half. You were in the struggle with us, and yet our combined efforts were of no avail. We were beaten by a giant corporation, having at its head an unscrupulous chief officer. We were beaten between two classes of trainmen were not with us. One class, I say it to their shame, were against us. The lesson of that strike is plain, yet some of our members are slow to profit by it. There is a feeling of caste among a portion of our members. They have an exalted idea of our Brotherhood, and they feel that contact with other societies of workmen would lower the prestige of our order. This idea is encouraged by utterances from our Grand Office through the *Journal* and otherwise. The element that is affected with this feeling of prejudice is passing away, and our ranks are fast filling up with young men from your Brotherhood. This process will gradually but surely bring the two organizations into closer touch, closer sympathy, until the two Brotherhoods will be practically one union in all except name. [Applause.] Strikes are calamities from which in our day and civilization there seems to be no avoidance. It is the weapon which we use in an extremity to inflict loss on those who refuse to grant us fair treatment and fair wages. In the past the weapon has proved a boomerang many a time—a weapon somewhat resembling in its action the old Harper's Ferry musket with which we were

armed early in the war, which were very destructive to those at the muzzle, but at the same time very uncomfortable for those at the breech. But imperfect as the weapon is, we cannot afford to abandon it. It knocked a ten-million-dollar hole in the balance sheet of the Chicago, Burlington & Quincy road, if we did suffer a little at the breech.

STAND BY ONE ANOTHER.

I have no new light to offer; I can only advise that we follow the lines already marked out: that we stand by one another; that we perfect our organizations and combine them. The federation of the several associations of men in train service is the best plan that has ever been devised for establishing an agency to settle our differences with the railroad companies. I heartily approve of the plan, and hope that the engineers will soon stand in line with the other four classes of trainmen who are already in the compact. I am glad to be with you to-day, glad to be with the representatives of those who have been my associates for the greater part of my life. I am glad of the opportunity to testify publicly to the manliness and faithfulness of those who have been my helpers these many years. Of all those who have been with me, not one has ever treated me otherwise than with kindness and respect. If I have been fairly successful in my business it is because of the excellent help I have had more than anything else. I am willing to divide the credit of that success equally between my own efforts and the efforts of those who have assisted me. Without intending to take undue credit to myself, I may be allowed to say in my own behalf that I have never had a man on an engine with me that I have not tried to improve, to instruct, to lift up, to build up. As a rule I have not selected my firemen, rather preferring to have them come to me in the regular order. I found early in my career that the average man would make a very good fireman, if he was properly handled. On one occasion I varied from the rule and asked for a certain fireman. I had been employed a short time on the road, and had been running extras. I was about to be sent out on a regular run, and the master mechanic said, after designating my engine, "I don't know who I will give you for a fireman." I said: "Why not the boy who has been with me for a few trips, and who is extra here?" He replied: "Oh, he is no account; none of the engineers will have him. I am about to discharge him." I said: "Well, let me try him." He agreed, and I tried him. I tried him for two years. I found him to be a noble fellow. He had not been understood. His good qualities had not been uncovered. He wanted a little pruning, a little developing. He had trouble with the master mechanics several times while with me, and I had to plead hard for him twice to keep him from being discharged, but I succeeded in bringing about a better feeling between him and his employer, and at the end of two years, on my recommendation, he was promoted. He has been running a locomotive now for twenty years, and I do not believe there is a better locomotive runner in the breadth of the continent than Eugene Martin, of St. Joseph, Missouri. [Great applause.] My experience with this man was a valuable lesson to me.

SUCCESSFUL MAN-BUILDING.

It was one of my first attempts at man-building. I discovered that there were men of a plastic nature, who by little encouragement and proper handling could be started on an upward chute, leading on to success; or, by the opposite treatment, might be started on a downward tread ending in failure. Now, my friends, let my lesson be your lesson. If you will heed it and profit by it, my few minutes' talk with you will not have been in vain. Many of you are already in charge of locomotives. All of you will be in due course of time, if you live. Bear in mind that firemen do not come all ready made, like a new suit of clothes. They must be trained, must be built up, and you must be the builder; not your foreman or master mechanic. Do not be too exacting; bear and forbear. If your fireman has some good foundation qualities, you can build on them and make a man of him, and in so doing you will not only have the satisfaction of helping a fellow-man but you will help yourself by securing his

heartly coöperation in your work. Do not forget that your fireman is your apprentice, and that you are in duty bound to instruct him to the best of your ability. Try to improve every man who is placed with you, if he is only with you a few days. Let him forward a peg. Pursue this course and you will never regret it. The consciousness of having done your duty by those so closely associated with you will be an ever present satisfaction, and your good work will come back to bless you in after years.

AN ENGINEER'S LIFE OF PERIL.

My railroad life is drawing to a close. I am about to leave off just as you are beginning. My pathway has been a long one, extending from Omaha and Rock Island on the North to Atlanta on the South, and from the West Virginia line to the Pacific Coast and the Rio Grande. Inside those bounds I have run a locomotive in ten states and territories. All over that country and far beyond those limits are scattered my old associates in train service. A few years ago I found myself in Mexico—in the old town of El Paso Del Norte. I spent several hours in that queer old town in the midst of a civilization strange to me. I had looked through the old church, said to be 200 years old, and was strolling through the crooked streets, thinking, here I am in a strange country all alone, unknowing and unknown, when, to my great surprise, I heard a familiar hail from across the street, of "Helloa, Brownie!" I turned about and saw an old train man who worked with me in Missouri. I said, "Why, Jim, what are you doing here?" He replied, "Oh, running on the Mexican Central from here to Chihuahua."

And so I come across them everywhere. I remember this particular meeting, because it was so unexpected and because of what followed. He asked me to take a drink with him, or, in common parlance, he said, "Let's take something." Well, when I had recovered from my surprise at the man making such a strange proposition to me, [laughter] I decided to accept, just for the novelty of taking a drink on Mexican soil. So I followed him into a little store where they kept saddles and bridles, and spurs and sombrero hats and liquors and cigars. These articles seem to be the foundation stock of all Mexican stores. My friend laid down a handful of coin and the man put it all in the drawer, and set us out some embalming fluid. [Great laughter.] They call it mescal down there. I took a generous drink of it and immediately concluded that I had made a mistake. I bid my friend a hurried good bye, and hastened across the Rio Grande, for I wanted to die in my native land. But I recovered, as you see. My stomach, after assimilating the food of railroad eating houses for thirty years, stood the supreme test of Mexican whisky. I often think that a railroad man's stomach must be organized on the same principle as the Order of Railway Conductors; they won't strike under any circumstances, [great laughter] no matter how you use them or how much you impose on them.

AN EVENTFUL LIFE.

I ran my first locomotive out of Lexington, Ky., in 1858. She was a "Hincleky," with solid cast iron driving wheels. I ran on that road from April to November. In the latter month I was discharged under peculiar circumstances. Times were a little out of joint just then, and the lines were being drawn for the great struggle which took place a little later. One day I received a letter from a committee of several citizens charging me with being a black Republican, a sympathizer with John Brown, the traitor of Harper's Ferry, and a spy. I was also charged with illegal voting and conspiring to run away slaves. The committee generously granted me three days in which to leave the city, never to return, failing in which I was to be prosecuted. You see they drew the indictment pretty strong. They did not charge me with horse stealing. If they had waited two years, until the time we were chasing old "Pap" Price and Hardee in Missouri, they might have added that to the list of crimes, for I never walked when I could find a "critter." Believing that this letter did not represent the feelings of any considerable number of the people of Lexington toward me, I resolved to stay and test the matter, seeing my determination to do so, they requested the

Superintendent to discharge me. He refused. They then waited on the Directors and accomplished their purpose. Being deprived of a means of livelihood, *put hors du combat*, as you might say, I evacuated the city of Lexington and journeyed westward, landing in Muscatine, Ia., in midwinter. Political refugees from the South were already quite numerous in the north and commanded sympathy. What was condemnation in Kentucky was commendation in Iowa. Kind friends interested themselves in my behalf, and I was given employment on the Mississippi & Missouri Railroad by that king of railroad men, Abel Kimball.

Time makes all things even. In a little over ten years from the time of my departure from Kentucky I met these several citizens of Lexington in General Buckner's rifle pits on the snow clad heights of Fort Donelson, the Second Iowa against the Second Kentucky—I among the victors, they among the vanquished; I among the captors, they among the captured. In my first contest with the citizens of Lexington I was but one against many. When we were at Fort Donelson there was fifty thousand of me. I had federated in the meantime, you see. I had joined a powerful combination, whose leader dictated terms and "proposed to move on people's works." But I do not intend to talk war talk to you.

I only refer to this episode in my railroad career because it was the first and only time I was ever discharged from railroad service, and I hope and believe that Lexington is the only community in which I was ever regarded as unworthy of citizenship. At the expiration of my term of service in the army I entered the service of the government as an engineer on military railroads, running an engine on the Nashville & Chattanooga, Nashville & Decatur, Nashville & Northwestern, Memphis & Charleston, East Tennessee, Virginia & Georgia and Western & Atlantic. I was with Sherman in the Atlanta campaign, and brought one of the last trains out of Atlanta at the time of the evacuation. As my engine labored up around the base of Kenesaw mountain that night I looked back frequently to see if the red lights were following. I saw a bright light in the direction of Atlanta. I knew then that the grand march was about to begin. As the sun sends up a beam of light above the horizon before bursting forth in all his glory, so the light that I saw in the southern sky was the herald of the rising of Sherman's sun, the herald of the commencement of that grand movement that made his name immortal. It was the herald of the beginning of the end—the dawn of peace.

I was with Thomas in the campaign against Hood, hauling the Pioneer Corps with engine 190 to Huntsville and Decatur, and barely escaped capture near Huntsville. I hauled the Pioneer Corps in the last grand movement into East Tennessee, when Thomas' army started towards Richmond near the close of the war. At the close of the war I went to the Huntsville & Nashville road, where I ran mostly from Bowling Green to Nashville, and to Paris on the Memphis branch. I then came to Missouri, where I found employment on the Missouri Valley road from St. Joseph to Leavenworth and Kansas City; then to the Central Pacific, which is to be my last camping ground.

TRIBUTE TO THE FIREMEN.

In all these years, during weeks and months of peril in time of war, in many a trying hour in time of peace, through the long, dark watches of the night, across sandy deserts and through dark snows, in the midst of storms and dreadful wrecks at all times and under all circumstances and conditions, there has been within the sweep of my arm, constant as my shadow, a kind friend, a faithful companion, a willing helper—one who has never failed me under any circumstances—my fireman; and I gladly embrace this opportunity, in the presence of their representatives, to make this acknowledgment of my great obligation to those who have served me so long and so well; and to you, my friends, again I say for myself, and in behalf of the members of Division No. 23, Brotherhood of Locomotive Engineers—aye, in behalf of the engineers of this coast, I bid you welcome to this city and wish

you a satisfactory meeting and a safe return to your homes.

We confess that we dismiss Bro. Brown's address reluctantly. It breathes such a manly spirit, it concludes with such generous words, that we feel confident that it is destined to exert an influence of lasting benefit to all orders of railway employes. It helps on federation. It voices fellowship and fraternity. It magnifies union. It is a grand speech, worthy of the great order of Locomotive Engineers.

The chairman next introduced

JOHN J. HANNAHAN,

Vice Grand Master of the Order, who received a genuine ovation, evincing the high regard in which he was held by the delegates. Bro. Hannahan addressed the convention briefly and felicitously, and retired amidst hearty applause.

Next followed

JOSHUA A. LEACH,

who was introduced as Past Grand Master, First Grand Master, and Father of the Order. The ovation that greeted Bro. Leach must have been convincing proof that the boys loved and honored the man who had laid the foundation of the Brotherhood, and had contributed so much towards the commanding prominence it now occupied.

Bro. Leach briefly reviewed the history of the Order, and at the close of his remarks was cheered and applauded with all the enthusiasm the vast audience could command.

With these addresses the opening meeting of the Convention adjourned, and if all were not pleased, those who felt otherwise than delighted, gave no sign of their discontent.

Nothing more in consonance with what might be called a royal good time ever occurred in the history of the Brotherhood of Locomotive Firemen since the day of its organization.

THE SERMON OF REV. DR. W. W. CASE.

In this connection, though a week intervened, we give the great sermon preached to the boys by the Rev. Dr. Case, of the Central Methodist-Episcopal Church, on Sunday, September 14th. It was a compliment of no ordinary significance for the delegates to the Convention to be invited to listen to a sermon by the Rev. Dr. Case. To say the invitation was appreciated, is stating the case mildly; they regarded it as an honor. Locomotive firemen are not irreligious. They believe in the great fundamental doctrines of the Christian religion, and thousands of them are men of faith and good works. Thousands of them have been reared by pious parents, and believe after life's fitful fever is passed, there is a brighter and better world awaiting them. As a result, when the boys filed in-

to the Central M. E. Church, it was no idle assemblage of curiosity hunters, but men accustomed to worship God.

The sermon was worthy of the occasion. The boys listened to a master mind, to a man familiar not only with his theme but with the great outside world, with man, and his words were "like apples of gold in pictures of silver."

The church was handsomely decorated. The music was superb. The tones of the organ were subduing and elevating, the atmosphere was religious, and the men, gathered from every state and from the Queen's dominions, realized that in Christ's religion there was brotherhood and fellowship, signs and grips and passwords which all could give, and a Grand Master to whom all could go with a grievance and obtain justice.

AT THE CHURCH.

Dr. Case selected as his text, I. Cor., 9:21: "So run that ye may obtain." He said:

I have the honor this morning to address the representatives of a large Brotherhood of Past Men. Fast, not in any offensive sense, but literally. Your gait is not a walk, nor a trot, nor a lope, but you are said to "run." Let me, then, in the language of the text, exhort you to so run that you may "obtain."

First—So run that you may obtain the throttle of an engine. Your honored Grand Master, in his address two years ago, before the delegates to your last biennial gathering, said: "The goal for which the firemen struggle is the throttle of the engine. For this he toils night and day. The prize is not won at a bound; years of patient toil are required. It may be said that 90 per cent. of all locomotive engineers have come from the ranks of firemen, and this fact brings into proud prominence the importance of the Brotherhood to the railroad interests of the country."

So run that you may reach this goal. We are so constituted that we must always be looking forward and upward or we soon drop out of sight in the race for life. A young man desiring to enter the legal profession asked Rufus Choate if there was room for any more lawyers. "Room upstairs," said the illustrious attorney. So it is in all callings and employments. There is always room for the best, the most skilled and trustworthy. There are certain prime qualities that lead to real success in all laudable undertakings. The carpenter, the machinist, the railroad man, the insurance man, the merchant, the lawyer, the clergyman, must all alike, in their degree, depend upon the qualities that win for success.

The first quality is industry. Industry—it is the law of God. If a man will not work, neither shall he eat. Even the monk in his better days consecrated labor by working with his hands. The aristocratic idleness which has intruded into our higher civilization is anti-Christian as well as anti-industrial. No Christian who knows the Gospel can possibly believe that it warrants him in living uselessly by the sweat of another man's brow.

Joseph Cook says: "It is good political action, as well as good morals, to insist that if a man will not work, neither shall he eat." The worker who contributes something to society is entitled to an honorable place in it, while the drone—one who contributes nothing to the public good—be he rich or poor, forfeits all claim to the respect of honest people. It was a part of the heathen theory to exalt all warlike wealth and despise traffic and manual labor.

THE DIGNITY OF LABOR.

The Christian theory is that every man, from the artisan to the Chief Magistrate, has his calling from God, and that no one need be ashamed of his work, if his work is useful and he is a good workman.

"In every rank, or great or small,
'Tis industry supports us all."

Nothing is impossible to industry. One of our own poets sings:

"The heights by great men reached and kept
Were not attained by single flight,
But they while their companions slept
Were toiling upward in the night."

And another has said:

"Labor is life! 'Tis the still water faileth;
Idleness ever despaireth, bewaileth;
Keep the watch wound, or the dark rust assaileth;
Labor is rest from the sorrows that grieve us;
Rest from the petty vexations that greet us;
Rest from the sin promptings that ever entreat us;
Rest from the world sirens that lure us to ill.
Work—and pure slumber shall wait on thy pillow;
Work—thou shalt ride over Care's coming billow;
I do not down wearied 'neath Woe's weeping willow;
Work with a stout heart and a resolute will."

Second—Another prime quality that wins is common sense.

The Duke of Wellington asked, "What is common sense?" and proceeds to answer his own question. "It is," he says, "a good understanding, moderated and modulated by a good heart." Common sense as a term of science in metaphysics expresses those notions and beliefs which are essential to a man regarded as an intellectual and moral being. The existence of such original convictions is assumed when a man is declared to be capable of collecting knowledge from experience. Men have not themselves been collected out of the materials of experience, but, in the common parlance, we spoke of common sense as natural prudence, or acquired skill in the management of common affairs in the inter-course of society.

An able minister of the gospel, in a series of lectures to theological students, bases his whole series of lectures on the principle that success depends on truth and personality. The preacher must have truth and he must have personal character to give it weight and force. With truth he must have common sense.

What is true in the ministry is true in every calling in life. The same idea is sometimes conveyed by the word "gumption"; that is, capacity, ability to accomplish. Sometimes we call it "tact." Tact is the ability to use natural powers, acquisitions and opportunities to the best advantage. Tact is talent. It manipulates moderate abilities so as to outstrip real mental greatness, proving that the race is not to the swift nor the battle to the strong.

Emerson puts in thus:

"Tact clinches the bargain.
Sails out of the bay,
Gets the vote in the Senate,
Spite of Webster and Clay."

We sometimes meet people of uncommon sense. They shoot wide of the mark oftentimes.

UNCOMMON SENSE.

A young clergyman, with fine education and gifts of oratory, was sent to take charge of a congregation in Minnesota, where the principal occupation of the farmer is raising winter wheat. The brilliant young clergyman, just out of college, supposed that all seeds were planted in the spring, and here he made his fatal error. While he was expatiating on the wondrous providence of God, as manifested through nature in the springtime, he suddenly turned to the openmouthed farmers who were drinking in his eloquence, and exclaimed: "Whoever heard of sowing wheat in the fall? A man would be a fool who did not plant it in the spring." That young clergyman had too much uncommon sense.

Strong purpose is another prime quality. Goethe says: "He who is firm in will molds the world to himself." And it is Longfellow who says:

"The star of the unconquered will
He rises in my breast;
Serene and resolute and still,
And calm and self-possessed."

The endowments of Nature we cannot command; but we can cultivate those given us. Men of great talents are inclined to do nothing, for want of vigor. Vigor, energy, resolution, firmness of purpose—these carry the day. Are any disheartened by difficulties?

Do you bend to the storm? If so you will accomplish little. Let men know that what you say you will do; that you are decided in your course; that once resolved you are not to be allured or intimidated, and you will command respect. A willful man should be uncommonly wise.

Another winning quality is integrity. It is fundamental to character. There is no real success without it. A man may have all capabilities, but if he be not trustworthy he is of little account.

A young man in Cleveland began life as collector for a bank. He was modest, persistent, but seemingly nothing beyond a collector. For eight years he plodded along, careful, accurate, but still a collector. Other men in the bank rose to high positions. At last there came a change, however. Another bank with large capital behind it was started. The President of the enterprise called on a business friend, and asked him if he knew a young man of implicit integrity. The collector, who had been working obscurely all these years, was mentioned. The capitalist engaged him and made him his chief officer in the great bank. So it is always. The man who does good and honest work is sure to be recognized in the end.

WAS IT DEWEY OR VANDERBILT?

Another quality necessary to success is sobriety. Temperance, I am informed, is one of the cardinal virtues of your organization. A rum-muddled brain on a locomotive is little better than a blind pilot of a ship. A gentleman of wide experience speaks of a well-known railroad millionaire who has his wine-cellar, his champagne refrigerators, and lives in a palace. But he keeps Pinkerton detectives to report any man in his service who dare have a bottle of wine or other strong drink in his possession; yet time and again he has been seen drinking his wine and champagne in the presence of his employees, whom he had forbidden to touch strong drink. The gentleman said: "Although I am a total abstainer, and a believer in the principles of prohibition, yet I believe in equal privileges and equal right to drink. Even a millionaire has no right to forbid his employees what he uses himself if they get it honestly."

They tried this system in the Sandwich Islands—the system of having one law for the poor and another for the rich. The natives were not allowed to use any kind of intoxicating liquors, while Europeans on the islands were allowed to drink to excess and indulge in wild orgies. The result was that the island became demoralized, and in the end the laws were repealed. It would have been well had the law prohibited every class from wrecking manhood with intoxicating liquors. But all restrictions were removed, and recently, when in the palace at Honolulu, I asked one of the royal personages the cause of the frightful mortality among the royal family. He said it was rum and the excesses growing out of intoxication.

CAPITAL AND LABOR.

Again I would repeat: "So run that you may obtain your right." You are one of the great labor organizations of the world. In the industrial world you hold a place of responsibility and honor. Much depends upon you in the adjustment of the vexing questions which arise between capital and labor.

You are not a mob clamoring for blood. You are not a faction brewing discontent among wage-workers. You are an organization of intelligent, thoughtful men, whose aim is to dignify labor—to secure the interests of laboring men and to promote the best interests of all concerned—both employer and employee. You have the courage of your convictions. To see what is right and not to do it is to show a want of courage. You are no craven cowards. You have organized, not for oppression, but to secure justice and righteousness.

In this Christianity is with you. Those who suppose that Christianity is on the side of the capitalist and the bondholder, as against the laboring classes and the poor, would do well to consider the teaching of Jesus in regard to the comparative merits of the rich and the poor. If they do so they will find that He is continually warning His hearers of the dangers of riches and telling them in the plainest terms that it is impossible to serve God and store up great wealth. Surely He condemns, commanding His dis-

ciples to do good and lend, hoping for nothing again. Those who heard His words felt it impossible to be rich and to follow Him.

Jesus recognized none of the artificial class distinctions which are supposed to be essential to the welfare of society, but shows the true relation of men to each other, telling the disciples, "All ye are brothers." "He that is greatest among you shall be servant of all;" and, again, "Thou shalt love thy neighbor as thyself."

"ONE GOD AND ONE HUMANITY."

The grand two-fold relation of the Christian religion is. One God and One Humanity. One good Father and every man a brother. The Christian conception of human life is sublime; every man is of value to God and has a place in His purpose and a part in His love. It is a grievous wrong that the rich fatten on the poor, that the idle grow strong on the labor and sweat of wageworkers. "May I not do as I like with my own?" is a heathen saying, not a Christian. Against this divine law the kings of the earth have established themselves and have taken counsel to prevent the spread of the belief in the brotherhood of mankind. The people have long walked in the darkness of ignorance, suspicion and fear, but now the great light of federation and unity has dawned and the imperiousness and oppression of monopolies are giving way to the blessings of world-wide love. Former things are passing away. The period of slavery is over. The wageworker holds out the hand of fellowship to all, linking the bonds of brotherhood about the hearts of those who have so long traveled alone.

Public sympathy in this direction is setting in with a strong current. This is peculiarly true of those who have given careful attention to labor organizations.

Mr. Ely, in the *Forum* for March, 1887, page 51, says: "If any man who has carefully studied the nature of labor organizations from life has ever pronounced against them, I have yet to find him."

Political economists probably are not more nearly unanimous in their views on any question of the day than they are in their approval of labor organizations. When representatives of the most prominent colleges and universities met at Saratoga to form the American Economic Association, it probably would not have been possible to find even one opponent of labor organizations among them all. Therefore, it may well be asked, Why is it there is so much confusion in the public mind regarding these labor organizations at a time when there is almost unanimity of opinion among those who have given the subject special thought.

In conclusion, I would say. So run your organization that it may command the confidence of the best people of the land. By so doing you will not only win, but you will increase your power for good, and your work will be of inestimable value to the world.

So run, as immortals, that you may attain unto eternal life. Life is a "run." It is a "run" from the cradle to the grave. The grave is the round house; the machine goes there, but the power that controls the engine does not remain in the round house. The machine grows cold; not so with the hand that controls it. The human machine goes into the grave, but the guiding spirit lives on. I hope that you have no doubts concerning this matter.

"If a man die he shall live again.

The soul, immortal as its sire, shall never die."

It is absurd to imagine that such a wonderful creation as the human body and the human soul and spirit that animate it should have been created for a few brief years. It is for immortality that man is born. Would the architect of the Great Eastern have been so foolish as to have constructed it and launched it for sailing on a pond?

There is nothing so precious as a human life. There is nothing so precious as our passing years. Yet men squander both. They throw these precious gifts away as if they were but dust.

A New York mayor was on a ferryboat with his little daughter. In the crush she was crowded into the river. A brave sailor, who was standing by, leaped into the flood, and at the peril of his life held the little one aloft until a rope was thrown to them,

and they were brought safely aboard the boat. The joy of the father was inexpressible. In speechless gratitude he clasped his child to his heart, then wrote a check for \$10,000 and handed it to the savior of his little one. The child grew up to be a woman, no doubt, and the father paid \$10,000 for perhaps fifty years of human life. This may be a low estimate; but if fifty years are worth \$10,000, who can compute the value of eternal life—of the joy and happiness and the unfolding of the precious soul through all the eternal ages?

CONVENTION NOTES.

In succeeding issues we shall dwell more particularly on the work accomplished by the Convention.

Grand Master Sargent's speech won for him stacks of high commendations from all who were so fortunate as to hear it.

The Convention adjourned to meet in Third Biennial Convention at Cincinnati, Ohio, on the second Monday in September, 1892.

The officials of the Southern Pacific were generous to magnanimity. They wanted the visitors to combine pleasure with business and contributed largely to their enjoyment and satisfaction.

The Native Sons of the Golden West, sturdy sons of a glorious state, endeared themselves to all the visitors by their bounteous hospitalities, which were tendered as freely as the vitalizing air of the Pacific.

We had the pleasure of making the acquaintance of Jesse P. Meehan, Esq., Superintendent Pullman Palace Car Company, San Francisco, to whom we are indebted for numerous courtesies, which we shall be glad to reciprocate when opportunity offers.

On September 8th the Native Sons of the Golden West had a Grand Promenade Concert, with tableaux of the Native Daughters, to which the boys and their wives were invited. It was gotten up on a grand scale indeed; everything is on a grand scale in San Francisco.

The grand ball given by the Native Sons of the Golden West, September 9th, was a brilliant affair. The Mechanics Pavillion was ablaze with light, and the music was of a character that Orpheus, had he heard it, would have immediately gone and hung his lyre upon the willows.

The great pleasure of meeting Mrs. Nellie Bloom, the poetess, whose numerous idyls have embellished the columns of the *Magazine*, was a treat which added to the enjoyment of our visit to the Golden Gate. Cultured and vivacious, with beautiful fancies forever thronging her mind, she writes, when in the mood, poems as sparkling as diamonds, and gives them to the public to gratify a disposition of sweet benevolence, thinking only of how she can make others happy.

The Convention convened September 8th and adjourned at 12:15 at night, September 15th. There was a loss of a day and a half on account of the Celebration of the Native Sons of California. This, with Sunday out, shows that the work of the Convention was done in five days and a half, the quickest work of any Convention of the Order.

We are under special obligations to the officials of the Illinois Central for the use of the baggage car which was attached to the special train. The same favor was conferred by the same company at the time of the Atlanta Convention, and the delegates, fully appreciating such kindness will be happy to reciprocate when the opportunity occurs.

The oration of Hon. Tom Fitch is a splendid production. It is a succession of gold nuggets interspersed with pearls and diamonds. It is electric light from the grandest dynamo on the Pacific coast. The delegates were delighted, beyond measure, and if kind wishes avail anything, the magnificent orator will live a thousand years, if he wants to.

Thanks are due the officials of the Southern Pacific Company for a complimentary excursion tendered the delegates over their road to Monterey, on Tuesday, September 16th. The excursion was one of unalloyed pleasure, and those who enjoyed the ride and viewed the splendid scenery were loud in expressions of thanks for the generosity of the officials.

The thanks of the Convention are extended to the numerous railroads throughout the country whose officials contributed in any measure to the transportation of delegates to and from the Convention; and in a special manner are thanks due and tendered to the officials of the Southern Pacific for numerous evidences of generous recognition and courtesies.

Prior to the departure of the special train, homeward bound, a magnificent gold-headed cane was presented to Mr. A. N. Towne, Esq., General Manager of the Southern Pacific Railroad. The presentation was made at the depot, by Vice Grand Master Hannahan, in a little speech felicitous and appropriate, one of Hannahan's best. The testimonial of regard was accepted by General Manager Towne most happily, and good fellowship prevailed. General Manager Towne is a railroad man of splendid abilities, and having grown up from a brakeman, knows a railroad from bed to bonds, tie, rail and ballast, everything from switch and coupler to an engine; and better still, he knows men, knows his men, treats them as men, knows the men who handle his trains and help him to achieve success.

The committee of arrangements, including the ladies' committee, worked hard and faithfully, and although the task was a severe one they succeeded admirably in carrying out the programme of the Convention, and to no one is more credit due than to Bro. T. J. Roberts, chairman, who, everywhere and at all times, worked with indefatigable energy to meet the requirements of the occasion.

The magnificent address of Bro. D. J. Brown, the veteran engineer, forever installed him in the affections of the delegates to the second Biennial Convention of the Brotherhood of Locomotive Firemen. We challenge the entire literature of the Order of Railway Trainmen for a superior address. It filled the bill, with enough left for a splendid banquet for an annual convention of the B. of L. E.

The Grand Convention Ball, under the auspices of the Brotherhood of Locomotive Firemen, given at Odd Fellows Hall, September 11th, met every expectation. The Hall was thronged with fair women and brave men, and was splendidly decorated. The music was so enrapturing that dancing was relieved of weariness, and had the night been as long as are enjoyed in Lapland, the festive throng would still have danced till broad daylight.

Officers and boards for the next ensuing term of the Brotherhood were elected as follows: Grand Master, F. P. Sargent; Vice Grand Master, J. J. Hannahan; Grand Secretary and Treasurer and Editor and Manager of the *Magazine*, Eugene V. Debs; Board of Grand Trustees, Daniel E. Berry, Wm. F. Hynes and Chas. W. Maier; Grand Executive Board, Harry Walton, Chas. J. Singleton, Thomas P. O'Rourke, John F. O'Reilly and Eugene A. Ball.

The special train provided to take the Eastern delegates to their far-away homes, left San Francisco on Thursday afternoon, September 18th, over the Southern Pacific to Los Angeles, from there to Barstons; the California Southern, from Barstons to Albuquerque *via* the A. & P., and from there *via* the Santa Fe to Chicago. The homeward trip, like that which took the delegates to San Francisco, had nothing to mar its continuous pleasure from start to finish.

The special train that took the great body of the delegates over the mountains and on down the foot hills and over the plains to San Francisco, was in charge of Vice Grand Master Hannahan. He was in his element, bland, courteous, amiable and watchful. The splendid train of Pullmans went over the Rock Island, Union Pacific and Southern Pacific in splendid style, without an unpleasant incident. The train left Chicago Tuesday,

September 2d, and rolled into San Francisco Sunday, the 7th, in the afternoon. All hands were tired but happy. Many of the delegates were accompanied by their wives, and it is needless to say that their presence gave a charm to the journey that nothing else could have supplied.

The thanks of the delegates are returned in full measure to the railway officials, by virtue of whose courtesy the special train was transported from Chicago to San Francisco and return and to all other officials who favored them with transportation over their lines. The favors thus extended were of great value to the delegates and knowing them as we do, we do not hesitate to say that "the boys" will gratefully remember and, when the opportunity occurs, cheerfully reciprocate every kindness shown them.

The sermon of the Rev. Dr. Case, measured by any standard, shows him to be thoroughly equipped for the work of winning men from evil ways to the flowery paths of virtue. He does not forget that he is in the flesh, nor does he intimate any anxiety to dismiss mortality for different surroundings. They will come, but the lesson is to be content with the present and so work that heaven shall begin here. No man can read the sermon without being benefitted. There may be better sermons in print somewhere, but we confess that we do not know where they are.

Our return trip over the Northern Pacific was made all the more agreeable by the unexpected pleasure which was afforded us by Mr. J. E. Phelan, Division Superintendent, who had his private car attached to the train at Dickinson and made us his guests from there to Mandan, one of the divisions of which Mr. Phelan has charge. Mr. Phelan, who, by the way, is still a devoted member of the B. of L. E., has risen by his own exertions from the position of locomotive fireman to that of Division Superintendent, having now charge of the Northern Pacific from Glendine, Montana, to Mandan, North Dakota. Although his advancement has been rapid and he enjoys the confidence of his superiors to the fullest extent, he wears his honors modestly and is without as unassuming as when "in garb of blue" he polished brass and shoveled coal. Such men glorify the possibilities of American citizenship, and their example invites to emulation all the sturdy toilers who have faith in themselves and in their ability to hew out their pathway to success.

DURING the past year the Switchmen's Mutual Aid Society paid out \$76,000 on death and disability claims. Such figures are more eloquent than words.

THE PINKERTONS.

The *Locomotive Engineer* remarks that "in no country but this could private individuals and firms hire a small army of toughs to protect themselves against interference by their employes, the public, or the civil authorities. Even Russia has no such curse as the Pinkertons. John Burns' speech before the Manchester workingmen, in which he declared that such an armed force in England would be torn limb from limb, their force met by force, and their bludgeons met by other bludgeons, has met with the approval of all England. The press generally declare that such a blight upon English civilization would not be tolerated. Whatever else is done about strikes on our railroads, the Pinkerton toughs have got to be dispensed with; they are trouble breeders, use their firearms upon a crowd, whether strikers or not, and the civil authorities of any city or state that tolerate them for one day should be held responsible. The people have a right to resist the sword by the sword, and if no other relief shall come, workingmen have a right to arm themselves and meet the Pinkerton army in a war of extermination." H. Walter Webb, to defeat his employes, employed Pinkerton thugs. He hired murderers, the vilest wretches to be found in the slums of New York and Philadelphia. These outcasts were armed to the teeth and were put on duty to kill. Is it not about time to hold up to universal detestation railroad officials who employ Pinkerton outcasts and outlaws, vagabonds, highwaymen, footpads and reprobates? How much worse are these abandoned wretches than those who employ them?

Chauncey M. Depew is president of the New York Central and Hudson River railroad. When the inhuman wretch, H. Walter Webb, was hiring Pinkertons, did Depew interfere with his superior authority and put a stop to the infamy?

There is not a word of such testimony on record. And yet, Chauncey M. Depew wants to be president of the United States.

Our acknowledgments are due and are hereby expressed to Mr. Angus Sinclair, Secretary of the American Railway Master Mechanics' Association, for a copy of the proceedings of the twenty-third annual convention of the association, which was held at Old Point Comfort in June last. The report is very exhaustive and abounds in matter of special value to those engaged in mechanical and scientific pursuits.

THE Pike's Peak Railroad is nearing completion, and next season, tourists for a small sum of money, will be able to go heavenward 14,000 feet, and enjoy Arctic temperature in July and August.

THE RIGHT OF A MAN TO WORK WHEN HE WANTS TO.

We reproduce the following from the columns of the *National Car and Locomotive Builder*, captioned "The Right of a Man to Work When He Wants To," numbering the paragraphs from 1 to 6 for our convenience:

Editor National Car and Locomotive Builder:

1. Is it not a little discouraging, not to say tiresome, to pick up a paper and see where some of the members of our many labor organizations have grown discontent with some of the officers that are managing our different railroads, and demand a change of the same, "or we will stop the wheels of progress, and allow no man to make an honest living until our just (or unjust) demands are satisfied." From what I can learn, the more intelligent and better thinking class of workmen are becoming thoroughly disgusted with such proceedings, and are heartily anxious for some form of Legislation where in they can feel assured, on returning to their post of duty, they will not be confronted by the committee and told that they must not attempt duty until "our grievance is settled."

2. Would any sane man attempt to start an enterprise or business unless he was certain that he could and would be allowed to say who his manager and his subordinates should be. Still we see the men on the Illinois Central railroad call for the removal of one of the company's best officers, because he wished to place men in positions of trust that he knew to be worthy and competent.

3. Mr. Webb says: "I have men that are not working to the interests of this company," and makes changes suitably to the company's interest. The consequence is, another "tie up." The community at large and all private enterprise is compelled to suspend operations until this "disgruntled" element is satisfied.

4. Railroads have come to be necessary factors in our system of life, and the country is entitled to their uninterrupted service, regardless of the disputes between employers and employes.

5. Cannot government aid be called and license our engineers and conductors so as to make them personally responsible for the delays of traffic, by giving each conductor and engineer a certificate for an examination as to his fitness for holding said position, examination to consist of mechanical ability, train rules, eye sight and bodily ailments, to ascertain if structurally weak—endowing the board of examiners with the power of fixing the salaries of these officers. The railway company would then be protected from any outside organization or interference and would secure a far more desirable class of men than they now have, and also do away with the pernicious habit of "seniority."

6. Then the public would not be compelled to ride behind incompetent or intemperate men and commerce would at least be partially protected.

A Reader.

For one, we are obliged to the writer.

He states propositions that have commanded attention and are being discussed in all parts of the country. They are vital propositions.

We shall not refer to these propositions *seriatim*.

We begin with paragraph 4, and quote a sentence.

"Railroads have come to be necessary factors in our system of life."

That is true.

But, my dear "Reader," before you was thought of, before railroads were thought of, before the railroad president, vice president and general manager were thought of, the workingman had "come to be a necessary fac-

tor in our system of life," and here we ask, by what process of evolution or of legerdemain, of sham and shame, trick or truckling, has the railroad or corporation gained an ascendancy over the man?

How has it come to pass that the railroads "in our system of life" have become a superior factor to the workmen—the railroad employes?

Again referring to paragraph 4, what is the nature of the "disputes between employers and employes?"

We answer, these disputes generally relate to wages of the employes, to hours of work, to the arrogance and degrading manners and methods of some subordinate boss. In such cases the lickspittle, like "Reader," assumes that the "railroads have come to be necessary factors in our system of life," and that the employes are not "factors in our system of life."

"Reader" glorifies the railroads; it is a sort of fetish to him, for, says he, "the country is entitled to their (the railroad) uninterrupted service, regardless of the disputes between employer and employes."

In this we have "Reader's" total disregard of the rights of employes. They may be wronged, cheated, degraded, starved, subjected to poverty and squalor, and the "country" is to look on, seriously neutral, unconcerned, indifferent and unmoved. The railroad, according to "A Reader," is the prime factor in "our system of life," and the employe is not to be counted as a factor "in our system of life." For the employe to dispute the right of the employer to wrong him, to degrade him, to enslave him, is a matter in which the "country" feels no concern, and "A Reader," who evidently reads little and reasons still less, appeals to the law-making power to supply the railroads with appliances by which employes, like dumb driven cattle, shall do their bidding. "A Reader" sounds his battle cry and beats his war drums too late in the day.

It will be noticed that "A Reader" in paragraph 5, appeals to the "government" to come to the rescue of the corporation to "license engineers and conductors, so as to make them personally responsible for the delays of traffic."

We have italicized a word or two to bring into prominence, as Josh Billings would say, the essential "dampfoolism" of "A Reader," and yet this idiotic twaddle in some circles is being treated as sensible talk.

Engineers and conductors can't run trains, and no law of congress or of legislatures, could clothe them with the power to secure regularity of traffic or prevent delays.

Indeed, if the government is to run the railroads, we surmise the licensing business will begin with higher employes than engineers and conductors.

It occurs to us the examination will begin

further up the ladder of power and responsibility.

Should such be the case a good many presidents, vice presidents, general managers, master mechanics, etc., would be likely to step down and out. At any rate, when the government takes a hand in the business, railroad employés and all other workingmen will have a voice and a vote in the matter, and the salaries of the big ones as well as the little ones will be fixed by law, or by the board of examiners.

Such stuff is really beneath contempt, besides, engineers and conductors, are not more necessary to run trains than firemen, brakemen, switchmen, telegraphers and others that could be mentioned.

If one is licensed all would have to be licensed, else the whole business would tumble.

Referring to paragraph 2, we have a question, which "A Reader" doubtless believed was a *poser*. It is a foolish interrogatory, because all men in starting enterprises, running railroads, or anything else, do select their managers and subordinates. They hire whom they please.

Officials, without regard to the amount of capital they have to back them, can't start a train; they are absolutely powerless. They must hire several thousand trainmen, engineers, firemen, conductors, brakemen, switchmen and others. These men are as important factors in our system of railroad life as the bosses. The country so regards them.

The point is, shall they be treated as men, or as beasts? If as the latter, they will protest, and they will demand that the catiff—the subordinate lickspittle be removed. Nor is there a man with any claim to decency who will attempt to shield the vulgar parasite from merited condemnation.

The organizations of railroad employés have a history. It will bear the severest scrutiny. That they have made mistakes, as we have said goes for nothing. Corporations make mistakes.

These organizations have been in the past, and are now eminently conservative.

Their members are long suffering. They do not indulge in threats and bravado. As a rule, their demands are just, and as a rule they have been granted, in part at least, demonstrating that justice was on their side.

Of all the organizations of railroad employés, that can properly be designated as such, not one of them desires governmental oversight.

They are engaged in bringing the employé and employer into harmonious relations and by all honorable means, while endeavoring to legitimately promote their own welfare, are not less considerate of the welfare of others.

We have on our table the *Railway Conductor* for September and October. In glancing through the editorial department of those issues, we note with no little satisfaction that the trend of the editor's thought relating to federation is steadily becoming more encouraging.

Referring to the strike on the New York Central, the editor says:

The contest is one which must be of interest to conductors generally, and the Knights should have and undoubtedly do have the sympathy of the Order on the Central as well as elsewhere. So far as we are informed, no aid has been asked of them and it is not likely that they will take any part in the strike unless forced to do so by the action of the company. They certainly will not take the strikers' places and will undoubtedly aid them unasked, to the extent of declining to take out any trains that are not properly manned by safe men.

In the October issue the editor says: "That federation will decrease, if not entirely prevent strikes, can hardly be contradicted." You are right in that, Mr. Editor. Federation will not only decrease strikes, but will create better conditions for railroad employés. With federation perfected as it will be, and as is being done, we doubt if conductors will be discharged by wholesale at the behest of spotters. If workingmen are driven into exile and into idleness, federation will seek to know the cause. Federation is a good thing, and so far, no half way decent objection has been formulated by its enemies.

MRS. IDA A. HARPER.

We do not write to introduce Mrs. Ida A. Harper to the readers of the *Magazine*, but to say that she is now not only the brilliant editor of the Woman's Department of the *Magazine*, but occupies a position on the editorial staff of the *Indianapolis News*, a paper that employs only first-class talent.

We regard the fact of Mrs. Harper's recognition by such a paper as the *News*, as a compliment of a high order to the *Magazine*, where her work and worth have won for her a national reputation as a writer of splendid equipments.

There are few women in America who wield a more vigorous pen, nor do we hesitate to say that, when occasion requires it, Mrs. Harper displays masculine comprehension of current topics, and brings to her task such cogent arguments and such a mastery of logic, that she need not shrink from combat with men who think they know it all.

We congratulate Mrs. Harper upon having entered a broader field of journalism, where her mental endowments will not be cramped for space, and where her audience will be large and as select as any paper in the State could offer.

On June 30, 1889, the Canadian railway system had a mileage of 13,324, an increase in eight years of 5,378 miles.

AMERICAN FEDERATION OF LABOR.

We are in receipt of the following circular issued from the Headquarters of the American Federation of Labor, 21 Clinton Place, New York City:

To the Trade and Labor Unions of America, Greeting.

FELLOW WORKMEN: In pursuance to the provisions of the Constitution of the American Federation of Labor it affords me pleasure to call upon the hosts of organized labor of America to send their representatives to the 10th annual Convention to be held at Clauson's Hall, 36 Miami Avenue, in the city of Detroit, Mich., December 8th, 1890.

In issuing this call it is but necessary to mention the fact that though the past has been full of success in our movement, it behooves us to gird on our armor, with renewed energy, devotion and self-sacrifice to continue the battle for the material, moral and social improvement, and the hoped-for ends the Trades Union movement of our time and country is destined to achieve.

The recent movement begun to reduce the hours of labor has been crowned with such success, the whole column of organized Labor has advanced with such rapid strides for improved conditions, and the Trade Unions have received such an impetus from surrounding circumstances that the toilers of our country have become more and more convinced of the advisability and necessity of gathering within the fold of our organizations.

On the one hand the corporate and speculative classes have become more arrogant in their efforts to intimidate and crush out the spirit of the toilers by methods hitherto unheard of in labor difficulties; and on the other, the demand of the wage-workers to be larger sharers of the product of their toil has become so loud and impressive that the forthcoming Convention of the American Federation of Labor will, without doubt, be the most important gathering of labor's hosts within the annals of history. We cannot allow any retrogression in the natural development of our movement. The watchword of organized Labor must be upward and onward.

I therefore call upon all National and International Unions, State Federations, Central Labor Unions, Trades Assemblies, Local Unions and Federal Labor Unions, which are affiliated to the American Federation of Labor and entitled to representation, to elect their full quota of delegates they may each respectively be entitled to, to attend the 10th annual Convention of the American Federation of Labor. The convention will be called to order at 10 o'clock in the morning of December 8th, 1890.

Representation in the Convention is upon the following basis: National and International Trade Unions one delegate for 4,000 members or less; two delegates for 8,000; three delegates for 12,000; four delegates for 16,000; five delegates for 20,000; and so on. State Federations, Central Labor Unions, Trades Assemblies, Local Trade Unions and Federal Labor Unions one each, respectively.

The per capita of delegate tax of the organization must be paid up in full and the organizations must have received a certificate of attendance at least thirty days prior to the Convention, or the delegates will not be entitled to seats therein.

Accommodations have been secured at the Griswold Hotel at 100 cents per day.

Traders, all Trade and Labor Unions of the country entitled to representation to send their delegates so that the convention will not result from our joint counsel and deliberations, I am

Fraternally yours,

SAMUEL GOMPERS,

President American Federation of Labor.

Attest: GEORGE EVANS, Secy.

WM. MARYEN, 1st Vice-President.

P. J. NEASE, 2nd Vice-President, L.A. Com.

HENRY KROVETZ, Treasurer.

P. N. B. Long this call to the notice of your Unions. Labor and friendly papers please copy.

The American Federation of Labor has become a potent force in labor affairs. Un-

der the administration of President Gompers, the Order has expanded to continental proportions and its influence is now felt throughout the length and breadth of the land. That the coming Convention may achieve still greater victories for the Order is the ardent wish of the *Magazine*.

THE GENERAL MANAGER DICTATES.

A contemporary remarks that "the directors of the Pennsylvania, west of Pittsburg, have recently adopted a resolution granting additional aid to sick or injured members of the relief fund under the following conditions: When members of the relief fund have drawn benefits therefrom, on account of disability or sickness, for the limit of fifty-two weeks therein prescribed, and are still incapacitated for duty, the general manager, after investigation and report by the superintendent of the relief department, shall make such recommendations as the merits of each case shall warrant for the action of the board, and pending such an investigation and action, such members shall be entitled to receive sick benefits at one-half the rates received during the fifty-two weeks, and, after definite action upon the case, such amounts as the company may authorize to be paid, based upon the member's classification in the relief fund and the length of his faithful service with the company."

The men pay the money, but the general manager and the superintendent determine how much the sick or disabled employee shall receive, and the longer he is sick the less he gets.

OUR BROTHERHOOD.

The Creston, Iowa, *Advertiser* says: Among the strong and growing labor organizations of the United States, the Brotherhood of Locomotive Firemen stand in the front ranks. The members of that organization have recently held their biennial convention at San Francisco and their grand secretary's report showed that, during the years of 1888-89, the members had contributed over \$400,000 to help the strikers on the Burlington road. And now the organization proposes to erect a fine building of their own in the near future, and they have the money to pay for it too. The Firemen's Brotherhood has had a wonderful growth since its organization in 1875, and now they propose to have some property for the use of their many thousands of members.

B. H. GLOVER, the President of the Farmer's Alliance, it is said, fifteen years ago went to Kansas, almost penniless. He now has 1,600 acres of splendid land and has herds of horses, cattle and hogs. He must have struck "pay dirt" early.

EX-MAYOR HEWITT, OF NEW YORK, ON CAPITAL AND LABOR.

Some time since ex-Mayor Hewitt, of New York, read a paper before a convention of iron and steel manufacturers of Europe and America. The New York Times reports him as follows:

"The ability of the United States to supply the iron required for the continued progress of the country and the march of civilization throughout the world," Mr. Hewitt continued, "depends upon the establishment and maintenance of friendly relations between the employers and the employed engaged in the work of production. We are thus brought face to face with the most serious problem of the age. It cannot be denied that the relations between capital and labor are far from satisfactory. The solution, when it comes, must be based upon justice; and it cannot come until public opinion is definitely made up as to the rights and duties of the contending parties. Meanwhile, the severity of the struggle may be greatly mitigated and the final outcome accelerated if certain fundamental principles, which have been established by the experience of mankind, are kept steadily in view and rigorously applied as each new complication shall arise."

Those "fundamental principles" Mr. Hewitt set forth in great detail. Individual liberty was paramount; but in a country where the popular will ruled there should be no resort to private or personal force to rectify wrongs. If the law is not strong enough the legislatures should be made to strengthen it.

"It is the equal right of employers and employes," he said, "to form combinations to advance or reduce wages, or establish or resist legislation. Neither has the right to force the other into submission except through the machinery of the law. Strikes and lockouts are therefore equally indefensible on the ground of justice, and can only be tolerated in the absence of provisions for the submission of grievances to the adjudication of competent tribunals. Boycotts and lockouts are, in effect, declarations of private war to be stamped out by prompt and severe punishment."

Mr. Hewitt then went to the question of arbitration. The unions of employers and employes, he said, prepared both sides for argument. In England the plan of voluntary arbitration had been in vogue since 1859 and had, in the main, worked satisfactorily. Official arbitration, however, created by the law of 1872, had not been found acceptable to either party. The question of wages was fundamental, and by voluntary arbitration nearly all disputes have been settled. All that was necessary was a fair umpire whose decision should be absolutely final. The voluntary arbitration had been so successful elsewhere that Mr. Hewitt believed it would rapidly be adopted as the only system in this country.

"It is manifest," Mr. Hewitt went on, "that this method of settlement involves publicity as to the profits of business. There is undoubtedly great reluctance and some ground of objection to the disclosure of costs and profits, but as a matter of fact, the transfer of business to large corporations has really made this information public property, and in the iron business there is no longer any pretense of concealment either from stockholders or competitors. Surely, then, there remains no valid excuse for denying to the workmen the information necessary to enable them to formulate reasonable demands, and it is to the interest of the owners to give this information inasmuch as the margin of profit on manufacturing operations is now narrowed down to the small limits consistent with a moderate return on the capital employed. There is so much misapprehension on this point in the public mind that I am inclined to say that in the great staples of trade it is exceedingly difficult to get an adequate return for the capital employed."

Mr. Hewitt is regarded as one of the foremost thinkers of the times. He is an employer. He comprehends the rights of American citizens. He boldly concedes the

right of workmen to combine for the purpose of advancing wages and to "establish or resist legislation." Such rights are not peculiar to the employer. It being a right which workmen have to combine to advance wages or to establish or resist legislation, it is manifest that employers have no right to inflict penalties of any kind upon workmen for the exercise of their rights. This they have done in the past and they are doing it now.

In view of such facts what ought to be done?

The answer is ready. There should be a law making it a felony to discharge a workman because he is a member of a labor organization. This penalty has been inflicted upon Knights of Labor by H. Walter Webb, and may at any time be imposed upon members of other labor organizations employed on the New York Central.

Mr. Hewitt says workmen may combine to "establish legislation." There is no doubt about it, and the important work of restraining the devilishness of some employers cannot be too soon entered upon by the wage-workers of the country who are members of organizations.

The *Western Railway*, of which Cy Warman is editor and manager, refers to the B. of L. F. in a recent issue as follows:

The firemen did a good piece of work when they re-elected all the grand officers at their last convention. They are grand officers in every sense of the word. Hannahan is a good, honest and conscientious man. Sargent distinguished himself during the New York Central strike, and as for Debs, just read his *Magazine*. No organization stands better before the public to-day than the Brotherhood of Locomotive Firemen. They have had but few strikes in the past and when they have struck they have had the sympathy of the public in most cases. Labor organizations should not be judged by the number of strikes they have won, but by the number of strikes they have avoided. What organized labor wants is a decrease in the number of labor leaders who never labor and then strikes will decrease.

The following testimonial to Messrs H. R. Eagle & Co., whose advertisement appears elsewhere in these columns, has been handed us and we cheerfully give it to our readers:

Messrs H. R. Eagle & Co., 68 Wabash Ave., Chicago, Ill.

I want to say that I have bought groceries from you for some years and always at a good price and saved money. I should be glad to have other members patronize you, and know that you will please them.

W. H. Freeman.

Ex-Chief of Police and Vice Committee.

Division No. 30, East 1st St.

P. O. Box 17.

Michigan City, Ind.

Sept. 22, 1890.

The Fireman of the Household is the name of a vividly interesting story of American railroad life, which begins in a review of *The Fireman*, an old story number will be found a striking article in which is told of the death of the true hero, why the author is a devotee of liberty, and the author's life in the fire or fire on the Union prisoners, who he is saving through the famous tunnel. *The Fireman* is a clean paper with no parent need fear to trust in the hands of his children.

A CAPITALISTIC VIEW OF THE SITUATION.

Our attention has been called to the following article, which appeared in the *Chicago Sentinel*. It has attracted no little attention, and its careful perusal will awaken, we believe, serious reflections. The article is captioned "Go to war, and thus exterminate the troublesome and discontented lower classes," and is as follows:

The editor of the Dayton, Ohio, *Workman* is responsible for the statement that the following is a copy of a letter from one capitalist to "Sam" one of his friends:

NEW YORK, August 1, 1890.

FRIEND BIRKLEY, Dayton, Ohio: Yours of 25th ult., came to hand in due time, but I confess my inability to fully and satisfactorily answer the questions you propound. Indeed they have been a source of great annoyance to most of us who have great capital invested in various ways. The future political aspect is anything but encouraging. My only hope in the future is the ignorance of the masses, and their susceptibility of being used by us just as we have used them. I will therefore try to answer your questions from that basis. You ask: "Does the present agitation among the lower classes—I mean all laboring classes—indicate a reversal of power from our hands into theirs?" Next, you ask, "Will the agitation likely amount to anything in the long run, or rather in time?" To your first interrogatory, I will answer, that I do not think the lower classes capable of conducting what now seems to be a war upon the upper classes for the following reasons:

They are by no means united, neither in organization nor in objects to be accomplished, much less are they sufficiently informed upon the real condition they are in. To explain. There is, for instance, the great organizations fighting each other. Powderly, Gompers and all the leaders are at war with each other, therefore the various organizations are each at war with all other organizations. Just so long as these leaders fight each other, we will have nothing to fear. Now it is evidently our policy to keep them fighting each other. The result will be, a final breaking up of these organizations. The fact is apparent, that neither the leaders nor the members have the first glimmer of common sense or they would long since united their forces and compelled us to give way step by step, nor need we fear of their ever uniting upon any one great controlling principle. All that they can perceive is an advance in wages, and even if we have to concede a little in that way, it's only a question of time, and that a short time, when improved machinery and growth of population will increase the number seeking work, so that wages naturally will tend downward. These men do not understand yet that they ought to direct their fight and energy at the root of the subject. I am still more positively convinced when I look at the various branches of industry, both productive and distributive, I see a sort of pride among the one branch or other which precludes all possibility of unity. For instance, the clerks in the various branches of distribution imagine themselves as superior, and will not associate with those whom they regard as laborers. We need fear nothing so long as this pride exists among the various branches of wage workers. We, of course, can see no difference, but we must keep this antagonism alive and nourish it. Looking all along the apparent line of battle, I see no reason for fear. They can not now, nor is it at all probable that they will, unite forces, nor strike at the root, which is so deftly covered up, that it requires great study and patient inquiry to learn where their trouble comes from. The only body that may, and it does, cause any trouble is the Knights of Labor. It seems to me, as far as I can learn, they are the only organized body that is educating themselves and are hunting for the root. The very fact that they realize that the wage question is not the root, makes it ominous for the future. But all other organizations are at war with them, and it must be our settled policy to wipe out their organization. We in the east are contributing to a fund to

keep up the fight between the Unions and the Knights of Labor. I am glad to be able to say we are succeeding in this line.

There remains only one other cause for apprehension, and that is when any of the K. of L.—assembly is what they call them I believe—break up they join some other organization and instill into them that devilish persistency of hunting up the root, and thereby increase our enemies. So far they have succeeded, at least in a measure, to stir up the farmer, and others sufficiently to give us trouble. The only remedy I see is to take the right of franchise from them and place the control of government entirely beyond their reach. You know the methods that are now being sought to accomplish this, and if it fails some other similar method will have to be adopted.

We need have no fear of the Republican working classes. We can always have these fellows to vote our way. The fact is, they are so far under our control that they will not listen to any unless it is "simply pure" Republicanism. Our policy in the near future—as soon as Congress adjourns—will be to employ every available Congressman, and also those who are in any way able to speak in public to stump the country, and continue this until we have again turned public sentiment in our favor. This will require much money, but even if it does, it must be done no matter how much. If it comes to the worst we can soon get up a war with England. We have sufficient cause now, and can at any time force a war. The monied men of England, at least a goodly number, are in accord with us on that line, for they also are having a serious fight with the lower classes, and the way out of this whole muddle is war—to kill this discontented and troublesome horde both in England and here. War will give us pretext for what we want, and the poor fools will be only too glad to kill each other off.

Now, I have answered both questions in one, have done so in a more extended form than I first intended, but I realize that it is the only way in which to convey a clear conception of the whole situation.

I need not caution you to destroy this letter as soon as read, for fear it might through some mishap fall into wrong hands. If you wish further information regarding the organization I wrote to you about in my former letter, I will give it with pleasure, but it must always be in cipher, to avoid all possible chance of it becoming known. Yours, etc.,

Sam.

The letter, written by a capitalist, sounds as if it had been written by Austin Corbin, Chauncey M. Depew, or H. Walter Webb in "strict confidence," but whoever is its author, he should be credited with a clear comprehension of the situation.

The hope, and we may say the only hope of the capitalistic class, is to divide, and estrange labor organizations. In this division and consequent wrangling, lies the success of the trust barons, the monopoly moguls, the employer dynasty of the country. They see, with organization and federation on the part of workingmen, a number of things which disturb their repose.

One of the shibboleths of the times is, "There is room on top"—and the men, the capitalistic writer designates as the "lower classes," are seized with the idea that they can get "on top" by organization, and they are climbing to higher elevations. The capitalistic class, their sycophants and lick-spittles, parasites and flunkeys, their spaniels, toad-eaters, time-servers and flatterers, see the hand-writing and are alarmed, and seek to solace themselves with the belief that existing infelicities in labor organizations will eventually break them up and

scatter them, as wolves and dogs scatter sheep.

They say, "it has been so in the past, and will continue to be true in the future."

That they tell the truth of the past, cannot be contradicted. Do they speak as advisedly of the future? We think not. The present rebukes their prophesies. Workmen, and particularly railroad employes, engaged in moving trains, pronounce their predictions vagaries. They are federating—wranglings are silenced. Firemen, conductors, brakemen and switchmen are in line under a federated banner. The telegraphers are seeking admittance; the engineers still stand aloof. How long Mr. P. M. Arthur and Mr. Chauncey M. Depew, can hold back the swelling tide of thought and conviction in that great Brotherhood, we are unable to say. Our conviction is, however, that Mr. Depew, though he receives \$50,000 a year will prove unequal to the task which Vanderbilt demands he shall perform in the interest of his "great properties."

Mr. Depew has won a national reputation as an after dinner speaker. He is said to be witty if not wise. With his stomach crammed with viands such as kings devour, he may captivate his exhilarated comrades, and he may drink in the delusion, that the cheers at the bacchanal feast, means the triumph of corporation Belshazzars, the Vanderbilts, Goulds and Corbins, but as certain as that

"Truth crushed to earth shall rise again."

these oppressors of labor, will eventually find their dwellings with "wild asses or domesticated donkeys," while workmen, true to ennobling aspirations, will march steadily forward in securing and in maintaining their rights.

DEATH OF ED. F. O'SHEA.

We record with feelings of profound sorrow the sad and untimely death of our friend and co-worker, Ed. F. O'Shea, late Grand Secretary and Treasurer of the Brotherhood of Railroad Trainmen, who departed this life in Denver, Col., on October 15th. A man of fine physique and robust health, in the very prime of his young manhood, a more unexpected message never flashed over the wire than that conveying the intelligence of the death of Ed. F. O'Shea.

In the following, which we clip from the *Rocky Mountain News* of October 17th will be found the particulars:

Ed. F. O'Shea, one of the brightest and best railroad men in the country, is dead. He was not only popular but loved by a larger circle of acquaintances than almost any other man of his age.

He was the Contracting Agent of the Southern Pacific, Houston and Texas Central Railways and Moran Steamship lines, and fifteen days ago left his office apparently in the best of health, as hearty and robust a man as could be found anywhere, but

the demon of typhoid fever attacked him, and day by day his strong constitution gave way to its ravages, until he died Wednesday afternoon at 3 o'clock.

His funeral will be held to-day at 10 A. M. and will be attended by a number of railroad organizations, including the Union Pacific switchmen. He came to Denver last January and began his business career as Western Manager of the Massachusetts Mutual Benefit Association, and only accepted the position he held at the time of his death about a month or two ago.

He was a native of Illinois, and was born in September, 1830. When 17 years old he graduated from the Western Business College of Galesburg and the next year entered the service of the Chicago, Burlington & Quincy Railroad, and as brakeman and yard foreman he remained with that company until 1882, when he entered the service of the Minneapolis & St. Louis at Minneapolis. In 1883 he again returned to Galesburg and was braking on the "Q" when called to the Grand Lodge of Railroad Trainmen.

Up to the time he came to Denver he was Grand Secretary and Treasurer and Editor and Manager of the Railroad Trainmen's Journal. At the present time his brother Henry is in the toils of the same fell disease, and has been unconscious for a number of hours. When Mr. Delaney, Commercial Agent for the same lines with which the deceased was connected, heard of the death of his friend he was completely overcome by the news and now lies ill at home of nervous prostration.

In speaking of him some time ago, the Railroad Trainmen's Journal said:

He is a man who, more than any other individual, has directed the course—indeed, we might say, constructed the foundation—of the Brotherhood of Railroad Brakemen; and to whom the organization, now the Brotherhood of Railroad Trainmen, is very much indebted for its present stability. This is saying a great deal, but is the simple truth; and to say less would not be the act of a reliable historian.

Every word the *News* speaks in commendation of our late Brother O'Shea is true. He was a man among men, and those who survive him are not required to restrain their generous impulses in writing his obituary. He possessed in a full and rounding measure all the qualities that adorn character and dignify manhood.

During his five years service as Grand Secretary and Treasurer of the Brotherhood of Railroad Trainmen, he worked with indefatigable energy to promote the interests of that Order, nor was he indifferent to the welfare of other organizations of workmen, who always found in him a staunch supporter and steadfast friend. Called into official position at a critical period in the history of a young Brotherhood, it at once began its march on the highway to prosperity and success. From that day until of his own accord he retired from active official participation in the Brotherhood's affairs, Ed. O'Shea discharged with unrelaxing fidelity every obligation his office imposed and when he withdrew to private life, he had the proud satisfaction of seeing his cherished Brotherhood among the foremost in influence and power in the land.

Neither monument nor high-wrought eulogistic phrase is necessary to perpetuate his name or enshrine his memory in the grateful affections of his fellow-men.

On the Lake Shore Railway, all new freight cars are to have air brakes.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

Federation and Relief Funds in Australia.

In Australia on the other side of the globe they do many things far different from us, for do they not have their winter in our summer months and their summer in our winter months? Does not their north wind blow warm and their south wind blow cold? And, standing on opposite sides of the globe, they call our up down and our down up. In spite of these differences we are greatly pleased to find that there are points on which we can fully agree with the inhabitants of that far away land, and that these points are federation and relief funds. The railroad men of that country have combined and formed what they call the New South Wales Amalgamated Railway and Tramway Association, which seems to take in nearly every class of railroad men. In their official organ the *Review* they have reproduced the article on Federation from this *Magazine* and are in full sympathy with us on that subject, as appears by the following in regard to so called Relief Funds which we clip from the columns of the *Review*:

"It appears that we are to have a compulsory benefit society introduced by the Commissioners after all. We say introduced, because if the men once thoroughly understand the matter and all its consequences, there will not be the slightest chance of its being carried into effect. On the L. and N. W. Railway an old established Fund was broken up owing to the system of slavery which it imposed on the men, and so fond were the company of the vast and unjust power which the existence of the Fund gave, that it was not until the utmost pressure had been used, not until the Directors had been shamed before the House of Commons, that even liberty to take a vote on the matter could be procured by the members of the Society, who, by departmental fiction were supposed to have the management of it. On the N. E. Railway the company sought with the greatest determination to force a similar society on their employees. But they were met with equal determination, and as a Bill had to be got through the House of Commons before it could be brought into operation, the men felt so keenly on the matter that they made their voices heard effectually even in that august assemblage, with the result that the company's philanthropic endeavor was first scotched and then killed. These men had seen too much of the iniquities of these Funds on other lines, and would have none of them. Then we had the South London Gas Stokers' strike. These men struck because the Company wanted to give them a share of their profits. At least, so the Directors said, but the men saw the cloven hoof through the sham philanthropy and would have none of it; and at the cost of great suffering and privation to themselves, cost the company £25,000 and beat them in the end. In New Zealand the first night between the Cornish Locomotives and the men was on this compulsory insurance scheme, and the men won the day. In those and only just lately, the same night has been got against the men have made won. The President of the Amalgamated Association in the news even in favor of the scheme, but the tide was so strong that it carried the compulsory scheme, and him as well as he, but it is a thing we are strictly sorry for, as Mr. T. D. B. is a true Unionist, an excellent tradesman, and an extremely capable man. Being a member of the Amalgamated Society, he had a severe struggle over it, and ultimately, by the aid of sympathy and advice from the men who have been in a state of mind for some time. The Sydney Tramway and the London Company, among the same thing at the very time. It is a pity that it always is under a

great show of solicitous philanthropy, the motive is always much the same. It is Unionism that is threatened, and Unions must meet and fight these things wherever they show, for the fight is one for their very existence. We shall deal with this matter more fully in a future issue. There is a mass of irrefutable evidence, all dead against the imposition of any such scheme, and we shall be able to show such a case against it, that we are persuaded that the men will meet it with sternest opposition, and that the people's representatives will never pass a measure which could not but have the effect of putting a dog chain around the neck of free men."

The foregoing re-echoes the sentiments from time to time expressed in these columns in condemnation of all schemes of "paternal care" fostered by big companies, for which the men have to pay and the virtue of which they are enslaved.

Relating to a Train Order.

MR. EDITOR:—A controversy has arisen here in regard to the meaning, or, more directly speaking, the executing of a certain order. And as all engines expect to run an engine some time, they should have a clear understanding of all orders. So, boys, and let us know your opinion upon the order that puzzles so many on the Cairo division of the Big Four.

First—An explanation as to the running of trains. Even numbers of trains run north; odd numbers south; north-bound trains have right of track over south-bound trains of same class. The train dispatcher will not run a train as an extra; that is, an engine carry white signals, unless there is absolutely no way of getting out of it—out of which arises the controversy.

Second—Train 18 leaves Mt. Carmel at 11 o'clock P. M., and is a through freight to Danville, a terminal station, but a great many of their loads go out of Paris, a station between Mt. Carmel and Danville. So many of them, at least, that it is unnecessary for a second or third section of train 18 to go all the way to Danville, but proceed back to Mt. Carmel from Paris, letting the first section of train 18 take all of their Danville loads.

Third—Train 18 arrives at Paris at 7 o'clock A. M. Since we have only a small number of trains on the road, and all trains out of Paris, according to schedule time, are due out of Paris more than 12 hours after which time a train loses its rights, the question arises with the train dispatcher, how can he get an engine that came upon the second section of train 18 back to Mt. Carmel without running it as an extra, that is, without its carrying white flags?

Fourth—A local freight is due at Paris at 9 o'clock A. M., and is known as train 13; so the train dispatcher gives the train men that came upon the second section of train 18 an order to run as first section of train 13 ahead of time.

Fifth—Now for the dispute: Suppose the train men got an order at 7 o'clock A. M. to run as first section of train 13 ahead of time from Paris to Mt. Carmel, can they, or can they not, leave Paris at 9 o'clock A. M., the time of the departure of train 13 from Paris; or in other words, does the order mean to leave Paris ahead of time?

Come, boys, which do you say, before 9 o'clock, 9 o'clock, or after 9 o'clock? Yours

MT. CARMEL, ILL., Oct. 21, 1890.

CAIRO, ILL., October 4, 1890.

MR. EDITOR:—I noticed a letter in the *Review* from Brother C. M. Moon in regard to insurance, and desire to say that I am with Brother Moon in this respect and can't see why we should not have as he says, "an arrangement" where we can have all our insurance in our own order, as insured in the Travelers, and it costs more a year, which I would much rather pay, than the F. There are nine out of ten of our brother firemen here insured in either the Travelers, or the Standard and all of them, I think, would rather pay the B. L. F. Hoping to hear from some other brother on this subject, I am fraternally

NATURAL GAS.

There is nothing which make men so sick as to read
Resolutions of organized gush;
They amount to no more for a poor fellow in need
Than a spoonful of wind flavored mush;
Give them something substantial to help them along,
And their courage will quickly increase;
Tis the best way to chorus a stave of a song
To the tune of "five dollars apiece."

Oh, I've noticed some airy tongued blatherskite chaps
Resolving, debating and such;
They were first to slink off when we passed round
the caps,
Not a cent could be got from their clutch;
They are dress-parade soldiers for holiday fun,
With their stripes and their sashes so fine;
But, with foemen ahead, they'd the first be to run
For their lives to the rear of the line.

Resolutions agra! They amount to no more
Than a smell when one's hungry for beef;
They are squibs as compared with artillery's roar,
And afford no substantial relief.
I have noticed that those who are loudest to shout
They would give their last cent for success,
Are the first to desert the brave fellows when out,
In their moments of direst distress.

Fellows talk about giving up houses and lots
To enable their brothers to win;
How the guns of their mouths fire continuous shots,
Till the echoes rethunder their din!
When the time comes to pay their assessments we've
known
All their niggardly hearts to stagnate,
The poor fellows encouraged must go it alone,
Or exist on their blatherskite prate.

May we never again have occasion to hear
Irresponsible parties proclaim,
With their mouths all agape from the chin to the ear,
What they'd give to be sure of the game;
Such blank cartridge explodes in a volume of smoke,
It amounts to no more than the noise;
Put some coin in the guns for bombarding the yoke
That is crushing the backs of the boys.

Shandy Maguire.

The Car Inspectors' Protective Association.

COLUMBIA, O., October 10, 1890.

Editor Locomotive Firemen's Magazine:

I have been silent for some time, but not unobservant of passing events, and now, as I have some leisure on my hands, will ask you for so much space in your *Magazine*, as will enable me to state a few propositions.

To begin, I will say I have enjoyed the privilege of visiting a number of cities recently, my mission being to organize Lodges of the Car Inspectors' Protective Association, and have the pleasure of stating that I have organized Lodges in Cairo, East St. Louis, Chicago and Louisville, Ky., and have applications from all parts of the country for the organization of Lodges of the Order, and will start this month on an extended tour to all of the large cities, for the purpose of organizing Lodges.

Organization is the watchword everywhere, and I ask all car inspectors to interest themselves in the welfare of our association. The importance of the work the car inspector is required to perform about a railroad, should be better understood by the public at large. It is well known by all railroad men, that the service is incomplete without the services of the car inspectors. Many things of vital importance to the safety of a train are overlooked by careless eyes, but the car inspector discovers them, and is in a large measure held responsible for the safety of trains and passengers. This being true, the car inspector is quite too often forgotten by the traveling public, and by railroad officials also. If the public knew, as railroad officials know, of the importance of the duties which car inspectors perform, there would be many expressions of gratitude, where now silence reigns, for it is a fact that but for the vigil-

ance of the car inspector, disasters on the rail would be more frequent. I do not hesitate to say that the work of the car inspector is as important as that of an engineer and other employes connected with the train service.

The car inspector, so, to speak, should be selected from "seasoned timber," that is to say he should be a man of steady habits, with practiced eye, ear and hand, and whose fidelity to duty is unquestioned, otherwise perils which might be guarded against, pass unnoticed, involving disaster and death, wreck and ruin. Under such circumstances, need it be said, that a car inspector should possess every important excellence of character, which are desired in the men at the head of the train?

As I write, the question comes to my mind, do the citizens of this country realize the fact when they walk into the fine coaches of our railroads, for a business or a pleasure trip, that their lives, to a certain extent, depend upon the faithfulness of the car inspector? Railroad wrecks, as I have said, so disastrous to life and property, are often prevented by the faithfulness of the car inspector; yet you seldom, if ever, hear any praise bestowed upon these faithful railroad employes.

Our Order is engaged in earnest work, and I believe that in a short time it will rank well abreast of the foremost associations of railroad employes of this country. Let me say to the inspectors of the country, that our principles are well founded, and that our cause will succeed, and as the aims and object of our Order become better understood, and as the knowledge of our purposes is circulated, the more rapidly and stronger will the Order become. It now seems certain, that nothing can prevent the most gratifying growth of our Association, and our triumphant success is assured, if every inspector will do his whole duty for the next three months, and it will be a proud day for the Order when the Grand Convention meets. Then the banner of Protection will be waving over every railway center, large and small, in the land.

I remain yours in C. I. P. A.

George Scott.

Car Inspector,
133 North High st.

[We earnestly invite the attention of Brotherhood Firemen to the foregoing communication of Mr. Geo. Scott, Past President of the Car Inspectors' Protective Association. As is stated in the communication Car Inspectors constitute a body of men whose services have hitherto been shamefully overlooked, their importance has not received proper recognition from railroad officials, nor from the traveling public. But in these hurly burly times, this is not surprising—the motto being, "every man for himself and the devil take the hindmost," or, changing the phraseology, if men would be recognized they must assert themselves and organize. It is the only way out of the woods, the labyrinthian pathways designed to confuse workmen.]

We are glad to know that the Car Inspectors are organizing. It is the one thing needed and will tend to solve many vexatious problems that have hitherto oppressed them, and we call upon our Brother Firemen, throughout the entire jurisdiction of the Order, to take an earnest and lively interest in the success of the Car Inspectors' Association. In many ways our Lodges can help them along in many ways encourage them. They are in a position to extend friendly offices and a helping hand.

It is one of the glories of our Order, that

it is in sympathy with workingmen who are trying to better their condition by organization and especially is this true of workingmen engaged in the train service of railroads.

This *Magazine* does not hesitate in such matters. It has not been silent when it could encourage fellow-workmen to organize and federate for their own good and in this, let it be said, it has voiced the sentiments of the Order of which it is the official organ.

We would level up pay and level down aristocracy. We would everlastingly eliminate aristocratic ideas from labor—the arrogance of the boss and the mean, debasing sycophancy of the employé.

If, as St. Paul would say, we “glory” in anything it is in the sovereignty of citizenship—the independent, self-respecting man who demands fair wages for honest work. These good things can be secured by organization and federation and we bespeak for the Car Inspectors every possible kindness and courtesy that the members of our Order can extend. ED. MAGAZINE.]

Railroad Affairs in England.

POINT EDWARD, ONT.

MR. EDITOR:—Having recently returned from a visit to England and assuming that your readers may be interested in railroad affairs in that far away country I have concluded to pen for your columns a resume of some of my observations.

On the 26th of June we left Montreal for Liverpool on the S. S. *Parisian* of the Allen Line; we had a fine passage although it was very foggy for three days—however, we arrived at Liverpool safe and sound. Through the kindness of Grand Master Sargent, I was furnished with a letter of introduction to Mr. Sumter, the General Secretary of the Associated Society of Locomotive Engineers and Firemen, whose headquarters is at Leeds. Not having the privilege of seeing him I wrote enclosing the letter and we had quite a correspondence in regard to his Society and our Brotherhood. I also had a good many talks with engineers and firemen on the different roads. They are not so well organized there as we are, but I must say that they seem to get along together very well by both belonging to one society. They will in time become very strong. They have only been organized eight years and last year upwards of 600 members joined. They seem very hopeful and are, I believe, working shoulder to shoulder trying to do a good work. They have some fine locomotives there and they run very fast, some of the roads making an average of fifty-five miles an hour including stops. They take up their water going along and have the very best of coal, which is greatly to their advantage. Although not nearly as well paid as here, they have a very great advantage over the most of us, as on all the large roads there are four tracks kept up in the very best of order, so there is no danger of your coming round a curve and some other fellow wanting to pass you on a single line. While in London I went to Westminster Abbey and stood at the tomb of George Stephenson, who is buried there, and I thought if he could raise up and see the thousands of locomotives that are in England alone and the improvements that have been made how surprised he would be. At South Kensington Museum I saw the first locomotive ever built; it is named “Puffing Billy,” and I can hardly explain what it looks like.

In England they claim that Trevethick is the father of the locomotive, and that the first engine was built in 1803. I think the system of running trains in England is as near perfection as can be, but the small freight cars, or wagons as they call them, would make our brothers laugh, for they are very small, and

a refrigerator would make six of them—however, they do effective service.

The drivers and stokers are very genial here and seem to be very happy. There are no cabs on the engines and on most of them the drivers are on the left side, so it is not promotion to get on the right side. They have all to stand up, there being no seat so they are not quite as comfortable as here.

Ed. Engr.

“ELEVEN-SPOT.”

Dedicated to the Memory of Martin Eskridge, Joseph Burke and R. G. Williamson.

“Eleven-Spot” was on parade
As Mart the Engineer
Pulled wide her throttle for the grade.
And echoing far and near
The belching of the fire and steam
That issued from her stack
And the whistle’s wild, commanding scream
Seemed saying, “Clear the track!”

Thus on she sped that fatal night
With Mart and Joe and Bob,
With something like a mad delight
In every mighty throb.
Through swaying hollows, o’er the crest
Of many a hill she sped—
Let stronger hearts repeat the rest:
To me they seem not dead!

The caller’s voice no more shall fall
Upon the Fireman’s ear.
Nor lusty shout nor midnight call
Shall rouse the Engineer:
They with the Brakeman ne’er shall grace
The posts they filled so well:
For ruin only marks the place
Where that brave trio fell.

Nor washout nor the misplaced switch
Nor loose nor broken rail
Nor rotten trestle o’er the ditch
Can ever make them quail.
For them no more the unguarded bridge
Can burn to do them harm:
They’ve passed life’s last uneven ridge
Where dangers can alarm.

And gently to that silent rest
Their charred remains were borne:
And bowed to God’s divine behest.
With bleeding hearts and torn.
We sing the requiem by the tomb
And sigh our last farewell;
But He has chased away the gloom
Who doeth all things well.

The rest to which they all have gone
Shall be a blest repose.
Unbroken till that glorious dawn
Its splendors shall disclose.
And, waking from that slumber, they
On spirits’ wings shall rise
To that bright realm of perfect day—
Our home beyond the skies.

Geo. W. Ho

STANBERRY, Mo., Sept. 25, 1890.

SCHREIBER, ONT., October 6, 1890

MR. EDITOR:—I wish you to publish this notice in the columns of your *Magazine*. As I have not seen anything from Red Rock Lodge, No. 387, I thought I would let you know that we are alive and prospering. We have as nice a Lodge and members as there are on the Canadian Pacific Railway. We have new mogul engines here and the boys like them pretty well now, since they have received the raise of wages, which they are well satisfied with. Promotion has been slow here lately owing to business being so dull with us for the past two or three years. Our Worthy Master, W. Norris, has gone East. It

likely that he will spend his honeymoon there before he returns. We wish our Worthy Vice Master, Phil McAllen and wife, a life of joy and prosperity. He was married to Miss Smith, of Owen Sound, and they are now at home at Fort William. May their home be as bright and as joyous as ever gladdened the eyes of angels. Bro. Bilbe, the light of our Lodge room, sits on the right side of one of our new moguls; he does valiant service at Jack Fish pit, and Bro. McCloud sees that he gets all the steam he needs. Bro. Hedge, who handles the quill, fires the Nancy Hogan on passenger; he says she is a daisy since she has come out of the shop. Bro. Gwynne, our Receiver, keeps the 429 hot on freight and Bro. Fixter, who collects the bills fires the 451. We have quite a few ballast trains running this summer. We have two engines pulling ballast out of Graig Pit. Our *Magazine* Agent, H. West, fires the 430 out of there; Bro. A. West fires the 422 and Bro. Davies fires the steam shovel for Mr. G. Fullerton, a B. of L. E. man, one of the jolliest engineers we have on these divisions. We don't wish to see a change of name, but we have a good opinion of federation.

Yours fraternally,

H. West.

THE UNIONIST.

We are in receipt of *The Unionist*, published at Memphis, Tenn., and edited by Henry P. Hanson, Esq. *The Unionist's* motto is, "Devoted to the interests of the United Trades and United Farmers." The copy on our table, No. 2 of Vol. 1, October 11th, gives evidence of ability of a high order, and for such a paper there is always room. Indeed, such candidates for public favor very speedily hew out a place for themselves, and with every issue widen the area of their usefulness and influence. Referring to the strike on the New York Central and to H. Walter Webb's *ukase* against Knights of Labor, *The Unionist* says:

We mistake the spirit of the age and of the workmen if they quietly submit to this demand of a railroad magnate that they shall cast aside all honor, all independence, all love of home and family, and the rights and privileges of a free American citizen and become the voluntary slaves of a corporation, which continues to exist and grow rich solely through the labor of their hands and brains. Take away the workman and this rich and gigantic railroad system would soon crumble and decay; it would take but a very few days to bring bankruptcy and ruin upon that which is now rich and flourishing, and a whole regiment of H. Walter Webbs could not stem the tide of the disastrous current. Perhaps the managers of the New York Central have not thought of this phase of the situation. They doubtless believe that success is due solely to the superabundance of gray matter which they fondly imagine reposes in their aristocratic craniums; that nothing but their sagacious and all-wise management causes the road to pay handsome dividends on about four or five times the invested capital. But the workmen are becoming educated. Each year brings them nearer to a realization of the fact that the farmer and the workman form the true foundation of all nations and all governments—the farmer as the producer of all the raw materials requisite to the existence of mankind, and the mechanic as the builder of the city, the steamboat, the railroad, and the manufacturer of the raw materials into everything used by rich and poor.

We welcome *The Unionist* with fraternal good will to the ranks of labor journalistic workers and wish it every anticipated success.

In New York City, it is fashionable to rent clocks, and kill time.

Grand Union Meetings.

Garrett, Ind.—On Sunday, November 16th, there will be a grand union meeting at Garrett, Ind., under the auspices of the B. of L. E., B. of L. F., B. of R. T. and O. R. C. Afternoon and evening sessions will be held. The grand officers of the several orders have been invited to address the meeting. All members are cordially invited.

Chicago, Ill.—On Sunday, December 7th, a grand union meeting will be held at Chicago, Ill., under the auspices of Triumphant Lodge, No. 47, B. of L. F. A large attendance is expected. Members are cordially invited to be present.

Death of Sidney Vaughan.

We announce with extreme regret the death of Brother Sidney Vaughan, of the Grand Executive Board, at Gloster, Miss., on October 7th, whence he had gone from his former home at Toronto, Ont., in the hope of recuperating his failing health. Brother Vaughan was connected with the brotherhood during the past ten years and was always an active, painstaking member, ambitious of promoting the interests of his fellow-members. He was an honest and conscientious man, a zealous worker in the field of organized labor and a true and steadfast friend. *The Magazine* mourns his death as a great loss to the Order and tenders its profound sympathy to the stricken family.

Acknowledgments.

MILDALE, KY., October 6th, 1890.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—I have received from the May Flower Lodge, No. 415, B. of L. F., a draft for fifteen hundred dollars (\$1,500,) the insurance due me by the death of my dear, devoted brother, George R. Barker, who was snatched away like a flash on July 27th, in a railroad accident at Sulphur, Ky. I wish to offer my sincere thanks and gratitude to the brethren who so kindly assisted us in our time of trouble. Their great kindness went far to lighten the heavy affliction. May heaven's blessing fall upon the members of your noble Order is the wish of one in sorrow.

Nettie Barker.

EVANSVILLE, IND., October 1, 1890.

To the Members of C. J. Hepburn Lodge No. 160, B. of L. F.:

DEAR FRIENDS:—This is to certify that on the 12th of September, 1890, I received through the representatives of the B. of L. F. the sum of fifteen hundred dollars (\$1,500) on the insurance policy held by my late husband. I wish also to extend my heartfelt thanks to the members of the Brotherhood for their kindness and sympathy at the time of my husband's death, and hope that God will protect and prosper your noble Order. Yours respectfully,

Mrs. Ed. Tohill.

THE following table shows the average speed of fast trains in different European countries:

Country.	Speed per hour in miles	
	Including Stops.	Without Stops.
Great Britain	41.7	44.6
France	32.8	36.2
Holland	32.5	35.0
Belgium	31.8	33.5
North Germany	31.8	34.3
South Germany	31.2	33.0
Austria-Hungary	30.0	32.0
Italy	29.5	31.8
Russia	29.0	31.7

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

NOVEMBER, 1890.

Assessment Notice for November.

OFFICE OF GRAND LODGE B. OF L. F. F.
TERRE HAUTE, IND., November 1, 1890.
ASSESSMENT No. 15, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 299. Charles Nicholson, of Golden Gate Lodge, No. 91, was killed by Railroad Accident, June 11, 1890.

CLAIM No. 300. William Clark, of Land Mark Lodge, No. 128, was Murdered, June 22, 1890.

CLAIM No. 301. Charles W. Heaton, of Pine Ridge Lodge, No. 17, died of Pericarditis, July 21, 1890.

CLAIM No. 302. Franklin E. Dennis, of Kit Carson Lodge, No. 257, was killed in a Collision, July 26, 1890.

CLAIM No. 303. Charles A. Basford, of California Lodge, No. 250, died of Typhoid Fever, July 29, 1890.

CLAIM No. 304. George Cheesborough, of Charity Lodge, No. 5, was killed in a Railroad Accident, August 6, 1890.

CLAIM No. 305. Walter J. Kirby, of Beacon Lodge, No. 111, died of Typhoid Fever, August 10, 1890.

CLAIM No. 306. Albert C. Martin, of Fidelity Lodge, No. 185, died of Bright's Disease, August 17, 1890.

CLAIM No. 307. William B. Haws, of Stone Mountain Lodge, No. 332, died of Hemorrhage of the Bowels and Continued Fever, August 18, 1890.

CLAIM No. 308. Frank H. Hart, of Denver Lodge, No. 273, was killed by Railroad Accident, August 20, 1890.

CLAIM No. 309. Christian F. Fogel, of Denver Lodge, No. 273, was killed by Railroad Accident, August 20, 1890.

CLAIM No. 310. William C. Davidson, of Vigo Lodge, No. 16, died from the effects of a Pistol Shot Wound, August 22, 1890.

CLAIM No. 311. Enoch W. Macklin, of Pride of the West Lodge, No. 6, died of Perforation of the Bowels, August 28, 1890.

CLAIM No. 312. Edward Hill, of Taylor Lodge, No. 175, was killed by Engine turning over, August 30, 1890.

CLAIM No. 313. Joseph H. Brown, of Long Doubler Lodge, No. 334, died of Heart Failure, August 31, 1890.

CLAIM No. 314. Charles F. Cook, of Garfield Lodge, No. 263, was killed by being struck by an overhead Bridge, August 31, 1890.

CLAIM No. 315. Austin Richardson, of Snow Flake Lodge, No. 298, died of Typhoid Pneumonia, September 2, 1890.

CLAIM No. 316. Elbert M. Babb, of Nauvoo Lodge, No. 391, died from injuries received by being struck by Locomotive, September 4, 1890.

CLAIM No. 317. Willard E. Wemple, of Eclipse Lodge, No. 107, died of Typhoid Fever, September 6, 1890.

CLAIM No. 318. Winfield S. Applegate, of Welcome Lodge, No. 72, died of Dysentery, September 8, 1890.

CLAIM No. 319. J. W. Warren, of Vigo Lodge, No. 16, was declared Totally Disabled from Amputation of Left Arm, September 8, 1890.

CLAIM No. 320. Christian Rost, of Columbia Lodge, No. 252, died of Typhoid Fever, September 14, 1890.

CLAIM No. 321. George Andrews, of Challenge Lodge, No. 66, died of Typhoid Fever, September 15, 1890.

CLAIM No. 322. James P. Shields, of Youghioghny Lodge, No. 302, was killed in a Collision, September 21, 1890.

CLAIM No. 323. William Payne, of Mount Look-out Lodge, No. 289, was killed in a Collision, September 27, 1890.

CLAIM No. 324. Silas Elder, of Thanksgiving Lodge, No. 406, was killed by a Railroad Accident, September 27, 1890.

CLAIM No. 325. Frank Wood, of Folwell Lodge, No. 326, died from injuries received in a Railroad Accident, September 29, 1890.

CLAIM No. 326. Martin J. Conniff, of Falls City Lodge, No. 103, was killed by Falling from an Engine, September 30, 1890.

CLAIM No. 327. John Hirsch, of Buckeye Lodge, No. 239, died of Typhoid Fever, October 2, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each member whose name appears on the rolls November 1, 1890, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than November 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

4. GREAT EASTERN Portland, Maine.

Meets in B. of L. E. Hall, 53 Temple St., 1st and 3d Sunday.

Jas. E. Cook, St. John st. Master
C. D. Getchell, 249 York st. Secretary
A. E. Dennison, 23 Merrill st. Collector
F. A. Huff, 47 Hanover st. Receiver
F. H. Pember, 93 India St. Magazine Agent

5. CHARITY; St. Thomas, Ontario.

Meets in Engineer's Hall every Tuesday at 7:30 P. M.

C. W. Dyer, Box 1273 Master
James W. Finney, Box 1273 Secretary
M. McCarthy, Box 1273 Collector
Wm. Crouse, Box 1273 Receiver
G. Corbett, Box 1273 Magazine Agent

6. PRIDE OF THE WEST; DeSoto, Mo.

Meets in K. P. Hall, 2d and Boyd Sts., every Monday at 2 P. M.

F. W. Gratiot, Box 296 Master
Alexander Williams, L Box 212 Secretary
Harry Hart Collector
Fred. Showman Receiver
D. J. Roach, L Box 18 Magazine Agent

7. POTOMAC; Washington, D. C.

Meets 2d and 4th Sundays in McCaulley's Hall, between 2d and 3d Sts., Pennsylvania avenue, southeast.

R. M. Smith, 129 Carroll St., S. E. Master
H. B. Claggett, 625 6th st. S. W. Secretary
W. H. Bailey, 417 G St., S. E. Collector
J. B. May, 12 D st. S. E. Receiver
Wm. Baldwin, 1707 Maryland ave., Baltimore, Md. Magazine Agent

8. RED RIVER; Denison, Texas.

Meets in Brakemen's Hall, Main St., alternate Saturdays at 2 P. M. and alternate Saturdays at 7 P. M. next.

Jerry Scott, 200 E. Munson st. Master
M. L. Hann, 326 Hull st. Secretary

MAGAZINE PRIZES FOR 1890.

We have decided to offer the Magazine Agents Two **SPLENDID PRIZES** as follows: To the Agent obtaining the Largest number of **PAID SUBSCRIPTIONS** on the books of the Grand Lodge December 1st, 1890,

ONE NEW PIANO.

To the Agent obtaining the Second Largest Number of **PAID SUBSCRIPTIONS** on the books of the Grand Lodge, December 1st, 1890,

ONE HANDSOME GOLD WATCH.

The **LOCOMOTIVE FIREMEN'S MAGAZINE** is known to be the best publication of its kind on the continent.

Magazine Agents need not hesitate to recommend the Magazine to Railroad Men—and to all others who are interested in labor problems. NOW IS THE TIME TO SUBSCRIBE.

Alexander's Ready Reference

**New 1890 EDITION For
Engineers and Firemen.**

Broke Down. What I Should Do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 31 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK-ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the manner of handling are given. A diagram of SLIDE VALVE MOVEMENT, 16½ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given, in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING. A careful study of the principal items of the old editions has qualified very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their letters to me say in substance. "I would not have been promoted without it," or, "It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Price \$1.50 per copy.

GRAND SPECIAL SALE

—OF THE—

RAILWAY MEN'S FAVORITE WATCH!

We are making a strenuous effort to introduce our Goods among railway men throughout the United States, and in order to attain our object we are well aware that it is necessary to offer you the best goods, at prices so low that you cannot afford to buy elsewhere. BEST IN THE WORLD

The Deuber-Hampden Watch!

Cheapest House in America

The John C. Dueber movement, made by the Hampden Watch Co., is suitable to the railway service in every respect. It is solid nickel, handsomely damasked, full ruby jeweled (4 pairs in gold settings) chronometer balance, patent pinion and escapement, Breguet hair spring, patent regulator, and accurately adjusted to heat, cold and position. This movement is specially guaranteed by the manufacturers to be the best time-keeper in the world. It will not make any noticeable variation of time, and is, consequently, almost indispensable to railroad men.

We quote the John C. Dueber movement in Sil-

14 K Gold-Filled Case, Hunting, Louis XIV. style (see cut), handsomely engraved, and warranted to wear 20 years, with the John C. Dueber movement. \$29 00

Any watch described above will be shipped by express, C. O. D., subject to a thorough examination, on receipt of \$1.00 as a guarantee of good faith, which amount will be credited on the bill.

All goods guaranteed exactly as represented.

References: Your local Bankers, Managers of Express Companies doing business in Chicago, and Prairie State National Bank of Chicago.

Our 160 page illustrated catalogue will be sent to any address on receipt of 25 cents in postage stamp. This amount will be credited on your first order.

Our Watch and Jewelry Repairing Department is the best equipped in America. Fine and complicated work promptly done at wholesale prices.

Established 1874.

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

BAKER CITY, ORK., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe it far superior to any other Dinner Pail now in use, and will take great pleasure in recommending it to all railroad men.

Yours truly,
DR. T. N. SNOW,
Surgeon.

Size of No. 2 Pail is 9¼ inches long by 5¼ inches wide by 9¼ inches high, when locked up.

TO INTRODUCE THESE PAIS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth Pail order received we will refund the money and send the Pail free of expense. Try one.

CHICAGO, ILLINOIS.

THE FIREMAN OF THE HERCULES

This is the title of a striking story of Railway Life, which begins in No. 40 of

THE HOLIDAY.

It abounds with stirring incidents, graphically told, and is the most realistic picture of the life of the employes on American railways ever published.

THE HOLIDAY is a bright, clean, pure weekly paper, fully illustrated, which will be gladly welcomed into the home of every railway employe in the country.

Most liberal terms are offered to all such persons.

In Nos. 40 and 41 of THE HOLIDAY is an interesting article, copiously illustrated, entitled,

THE TRUE HISTORY OF LIBBY PRISON.

In this article is made public for the first time the true reason why the Confederate sentinel did not challenge or fire upon the 109 Union prisoners whom he saw escape through the famous tunnel on the night of February 9th, 1864.

The two numbers of THE HOLIDAY containing these articles, and much other attractive matter, will be sent to any address on receipt of five cents.

THE HOLIDAY,

10 Beekman St., New York.

A BIG FLOOD.

The only thing that will wet a man who wears a "Fish Brand Slicker" is a flood; but even then he must be under water. This statement may seem strong, but a coat that will stand a two days' storm without leaking, and will not rip or tear, is sure to fill the bill. The additional advantage is that it costs less and wears longer than any other waterproof coat. Have you one? If not, why do you wait until it rains? Sold everywhere. Buy it now. It is a great mistake to wait until it rains to buy a waterproof coat. The time to buy is when the dealer has a clean, fresh stock. Be sure the coat is stamped with the "Fish Brand" Trade Mark, and you will get the best waterproof coat ever made. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

SIDE BY SIDE.

TWO HEROES, speeding toward their homes where Wife and Little Ones await them, MEET THEIR DEATH while at the POST OF DUTY.

On Friday evening, October 3, 1890, a freight train, rushing down a heavy grade at full speed to the entrance of a tunnel, plunged into a land slide which had completely blocked the entrance, burying the engine and piling up the cars in a heap of ruins. To add to the horror the wreck took fire. The Engineer and his Fireman were covered in the debris. The Fireman, GEORGE KNUCKLES, was caught by the arm, and was not released until about daylight the next morning, while ENGINEER MCCOY was literally buried beneath the pile of wreckage. With his head terribly crushed and his body almost cooked by steam and water, he finally succeeded, after more than an hour, in crawling out more dead than alive.

Both men were insured in the **RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION**, and the history of their case is interesting.

ENGINEER JAMES B. MCCOY, Of Atlanta, Georgia,

was insured in the Railway Officials' and Conductors' Accident Association for \$1,000 at death and \$5 weekly indemnity. He was in a wreck on August 12th, being badly scalded and bruised. On August 18th, the Association sent him, while laid up, his first week's indemnity, and on October the 3d, the morning of his death, had sent him the balance of his indemnity for seven weeks. His first run after his recovery was that in which he was killed, on October 3d. He lingered in awful suffering until three o'clock Saturday morning, when his brave soul went out from his poor, maimed body. At nine o'clock that morning the Association in Indianapolis learned of his death, by telegraph. Before ten o'clock they telegraphed to his widow **\$250 Funeral Benefit**, and it reached her four hours and a half before the remains of her husband were brought home. Saturday afternoon's mail carried the balance of his death indemnity, which was paid over to Mrs. McCoy, and her receipt in full obtained on October 8th, **just five days after his death**. The following acknowledgment was received October 10th:

ATLANTA, GA., October 8th, 1890.

W. K. BELLIS, Secretary Railway Officials' and Conductors' Accident Association, Indianapolis, Ind.:

DEAR SIR—

I have this day received from J. D. Collins, your

agent, the sum of \$1,000, being the full amount due me on policy held by my late husband, J. B. McCoy, who was killed at Little Tunnel, E. T. V. & G. R. R., October 4th, by running into a land-slide. I wish to extend my heart-felt thanks to the noble Accident Association. The \$250 funeral benefit was paid to me in six hours after my husband's death occurred. The full amount of \$1,000 was settled in five days after date of death. I remain, truly yours,

MRS. MELISSIE MCCOY.

FIREMAN GEORGE KNUCKLES, Of Atlanta, Georgia,

had his arm badly crushed and burned, but the Association did not learn of his being in the wreck until Monday evening, October 6th. He was insured for \$2,000 death and \$10 weekly benefit. On Tuesday the Association sent him his first weekly indemnity. On Thursday they were notified that his arm had been amputated on the night of October 6th, at the hospital in Dalton. The same day, October 9th, they telegraphed to him the sum of \$250, and sent by mail the balance, \$750, due him as **Half Benefit for loss of one limb**. On Saturday morning, the 11th, they were notified that he had died from his injuries on the night of Tuesday, October 7th, and the same day (October 11th) sent to their agent in Atlanta the remaining \$1,000, having settled the full claim of \$2,000 in five days from the first information received of his injury, and within **four days of his death**.

CELEBRATED

Pocahontas Semi-Bituminous Coal

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1888. Since that time the outputs have increased over 1,200 per cent., amounting in 1897 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

EUGENE V. DEBS, . . . *Editor and Manager.*

RETROSPECTIVE AND PROSPECTIVE.

Before another number of the *Magazine* makes its appearance, 1890 will have joined the centuries gone.

We are not in a mood to write of 1890 in pathetic phrase; we have no tears to shed over 1890. Were we otherwise inclined, we fail to see any practical good that would accrue to our readers.

Suppose it were possible that we could transform the eyes of our readers into fountains of tears? Suppose we could set all the Lodges of our great Brotherhood to sobbing? What then? Well, much can be said to the credit of tears; for oft in their redeeming flow the stains that sin hath made have been washed away—

“The ruin'd maid—the shrine profaned—
Oaths broken—and the threshold stained
With blood of guests!—there written all,
Black as the damning drops that fall
From the denouncing Angel's pen,
Ere Mercy weeps them out again!”

But, however valuable tears may be on

certain occasions, we have none to shed over 1890. In fact, as we write, 1890, though approaching his end, is as hail and hearty as when, at midnight—night's high noon, booted, crowned and spurred, he took charge of mundane affairs, became general manager of the solar system of planetary tracks and trains, and, asking no questions, has, with a total disregard of Sundays and holidays, kept things moving at a speed utterly incomprehensible.

From first to last, 1890 has devoted himself strictly to business. Having only 365 days, 6 hours and 13 minutes at his command, and being required to take the earth around the sun in that time, we readily excuse his silent austerity and general unsympathetic characteristics.

We, too, mean business. The year 1890 has afforded us the opportunity to publish twelve numbers of the LOCOMOTIVE FIREMEN'S MAGAZINE. This (December) number is the last one for the year. With the opportunities thus afforded, we have gathered the usual harvest of experience, and the twelve numbers for 1891 will show a number of substantial improvements.

As a force and a factor in advancing the interests of the BROTHERHOOD OF LOCOMOTIVE FIREMEN, we are clearly of the opinion the *Magazine* has met, in a large measure, every reasonable demand. It would be strange, indeed, if upon this point no contrariety of opinion could be discovered; but, in the light of all the facts, the conclusion is inevitable that the *Magazine* has been true to its mission, because it has been true to the Brotherhood of which it is

the official organ, and the Brotherhood finds itself, at the close of the year, far advanced as compared with December, 1889.

In saying this, we must not be charged with egotism. We claim for the *MAGAZINE* only its rightful share in whatever satisfaction the Brotherhood experiences in contemplating its advanced position—and we confess that the satisfaction, if not boundless, is abounding.

During the year, one question of vital consequence to the Brotherhood has been up for debate and settlement. We refer to federation—and surely, in casting a backward glance over the battlefield, results warrant florid felicitations. Federation is out of the woods and in the open field. It now constitutes a grand army. It is no far-fetched fancy to say that the federated orders are now passing in review, that drums are beating and that banners are waving—knee to knee and shoulder to shoulder, heads erect, and with courageous mien, their stature and their step proclaim them men without fear and without reproach; workingmen whose badges honor them and who honor their badges; men who, though not the enemies of capitalists, are the friends of labor, and who, in any conflict with the oppressors of labor, will stand together, and, when all else fails, will strike as one man for their rights.

In all of the pageants that challenged the admiration of men during 1890, not one possessed the significance, the redeeming and emancipating glory of the processions of organized labor, announcing to the world that Labor's Emancipation Day draweth nigh!

Turning from a theme that thrills the soul with exultant faith and hope, we are scarcely less jubilant when we behold our own great Brotherhood striding on to pre-eminence. Twenty thousand men in line, loyal to law and order; devoted to the principles and policy of their organization; in profound sympathy with all labor organizations; ready to level up wages and level down aristocracy; animated by friendship and fellowship for all toilers; believing in federation as the climax of organized effort; independent, fearless and self-reliant;—by all the gods at once, we like the picture, and for the

privilege of contemplating it which 1890 has granted, will with special pleasure weave a garland of amaranths and lay it lovingly on his bier when he hands in his checks.

If the retrospect is so full of satisfaction what may be said prospectively? May we not judge the future by the past?

If in the past our Brotherhood has won victories, each triumph has had its battle, and it will be as true in the future. We doubt if the real labor battle has yet been fought. At best, the conflicts have been mere skirmishes. To observant eyes and to ears attuned, the sights and sounds presage a contest of overwhelming majesty. Capitalists are taking account of their resources. There may be those who can be lulled to repose by the siren song of peace. There is to be a national federation of corporations. It will be as compact as adamant. The work has been begun. Not a day of 1890 passed, that hundreds of workingmen did not realize the ostracising power of the corporation. Circumstances may postpone for a time the impending crisis, but the battle is inevitable. Labor is preparing for its coming. It judges the future by the past and is organizing. The significance of labor organizations is understood by corporations. The preparations mean strikes as a last resort, and strike means war, and war means battles, victories or defeats. The hope may be entertained that this preparation shall prolong peace.

We dismiss such thoughts for the expression of thankfulness that the present affords all opportunities to be charitable and forgiving. As we write, all christendom is preparing for the Christmas holidays. In the whirling tides of festivities, dull care will be dismissed. Music will lend its enchantments, and man's better nature, asserting its divine right to rule for a while, will give the world a week's release from the mad chase after the "Almighty Dollar."

It will be a season for gifts, reunions and messages glowing with friendship, in which the spirit of the Master will bear sway.

In our fancy, the Christmas bells are chiming, happy homes are ablaze with light and joy. God pity the poor, the homes darkened by poverty. And as we send our Christmas greetings to our 100,000 readers,

to our friends in all the Lodges throughout the continental jurisdiction of our Brotherhood—we say, as you have ability, give to the poor, and in the records which 1890 shall bear away of our deeds of love and devotion, not one will shine with more resplendent beauty than that which tells of our remembrance of those who are the victims of poverty and misfortune.

HON. CHAUNCEY M. DEPEW AS A LABOR ORATOR.

On October 13th the Brotherhood of Locomotive Engineers began their Twenty-seventh Annual Convention in the city of Pittsburgh, Pa.

The programme for the public meeting was elaborate and attractive, the most captivating feature being the address of Mr. Chauncey M. Depew, President of the New York Central and Hudson River Railroad.

The incident is of a character that will set the labor world to thinking on both sides of the Atlantic.

Manifestly, opinions will differ widely as to the ulterior object Mr. Depew has in view by accepting invitations to appear on labor platforms as the "orator of the day." He belongs to no labor organization. He wears no labor badge. He probably never performed a day's manual labor in his life. He is not the associate of laboring men. He never, for an hour, experienced their trials and privations. He knows nothing of their anxieties. Chauncey M. Depew is a lawyer by profession, and to that profession owes his present position as President of the New York Central and Hudson River Railroad.

It may be well to remark in this connection that the real workmen on the Vanderbilt railroads (we refer to those in the train service of the roads) receive from \$1.50 to \$4.00 a day, an average, say, of \$2.50 a day, while Mr. Depew receives \$138.86 a day. In the matter of pay he towers above them as Pike's Peak towers above the hills of the prairie dog.

Mr. Depew lives in a palatial home—in all regards princely. It is furnished luxuriously. In art, the works of masters of the past and the present challenge the admira-

tion of beholders. No potentate is served with richer fare or rarer wines.

The associates, the boon companions of Mr. Depew, this new labor leader and orator, are railroad kings, trust millionaires, monopolist moguls, the bullion barons—what are called in New York the "upper crust." Just how much consideration these high-headed, social giraffes have for workmen has been written with an "iron pen and lead in the rocks forever." If the army of workmen has moved an inch during the current century towards the goal of better pay and better conditions it has been done without the aid of Chauncey M. Depew and the millionaires who pay him \$50,000 a year out of the earnings of men who receive from \$1.00 to \$4.00 a day.

The question arises, Why is it, at this juncture, Mr. Depew plays the role of labor orator? Has Mr. Depew, with his \$50,000 a year, become a labor reformer, a "walking delegate," whose mission it is to magnify and dignify the mission of railroad workmen? Such questions are up for debate and workmen will discuss them.

The inquiry is already going the rounds of the lodges: Is Mr. Chauncey M. Depew the avant courier of the millennial era, when "old men shall dream dreams and young men shall see visions?" Is the good time really at hand when the "wolf," H. Walter Webb, shall lie down with a Knight of Labor "kid," and Lee, the "young lion," and Powderly, the "fatling," and be happy as clams at high tide? And is it to be believed that the "lions," Vanderbilts, Gould, Corbin, Huntington, *et al.*, are to be seen eating "straw like the ox?"

Is the appearance of Chauncey M. Depew on the labor rostrum, as a labor reformer, to be accepted as a sign and wonder in the earth that railroad employes shall learn strikes no more? Are firemen to beat their picks "into pruning hooks" and their scoops "into plough shares" and go to Europe and hobnob with dukes and lords and other titled aristocrats? Are the engineers to everlastingly throttle injustice and then tell the rest of mankind to "mind their own business?" Are the switchmen to close up the switches and bring the world to a full stop, or open them, and shout "let her go,

Gallagher?" Are the brakemen, in storm or shine, to wear the same angelic smile regardless of ice and snow, and continue to go to their death protesting that railroad corporations shed oceans of tears over their graves while pleading the "co-employé" dodge to shirk responsibility? Are conductors to continue to punch with care tickets to cross roads or kingdom come, and at the end of the "run" find themselves as spotted as a leopard and compelled to wear the spots for the gratification of the sublimated officials, who, like Mr. Depew are labor reformers in a sense that would give an average cast iron dog the chills?

Most assuredly this *Magazine* bears no grudge, no ill-will towards Mr. Chauncey M. Depew. It does not envy him his \$138.86 a day, his \$50,000 a year. His palatial home, its sumptuous surroundings, its costly furniture and superb works of art awaken no jealousies—neither robes of purple and fine linen, nor rich viands that tempt the palate of fastidious epicure or gourmand creates the slightest ripple in the affairs of the *Magazine*. It is simply interested in Mr. Depew as a labor reformer, a labor orator, a man who suddenly comes like a comet to astonish the world by its luminosity, and to set men to thinking about its mission, what are its constituent element, and whether its head or its tail is the more dangerous.

As a matter of course, and as a matter of fact, this *Magazine* has a theory in regard to Mr. Depew's appearance upon the rostrum as a labor reformer.

This theory, in cold type and in all seriousness, is that Mr. Depew has found a place where he can stand, by the grace of Mr. P. M. Arthur, and fight the federation of railroad employés.

Our theory finds all the support demanded in facts as unyielding as adamant, and in the logic of facts which defies successful contradiction.

We state the facts:

1st. The federation of organizations of railroad employés, engaged in the train service of the country, presupposes ability to exact of railroad corporations even-handed justice, when such equity, impartiality and fair play is denied.

2d. Federation recognizes the fact that

each class of employés engaged in the train service of railroads is alike indispensable to that service, and therefore, that between them mutual interests exist that no power can revoke.

3d. Hence, the federation of the organizations named is not only legal, but natural, inherent, existing in the very fitness of things, and must take place the day the mind-forces of such employés triumph over ignorance, envy and bigotry.

Upon these propositions we have from the first challenged debate, and here and now, if Mr. Chauncey M. Depew desires an audience of ONE HUNDRED THOUSAND readers to controvert the facts as we have stated them, the pages of this *Magazine* are at his service.

He has started out as a labor reformer, and his mission is to defeat federation if he can. One of the duties of this *Magazine* is to demonstrate that federation is the broadway, the highway out of the injustice, the vexations and degradations which, from the first, have been the lot of railroad employés.

So far, and we challenge the record, and we include Mr. Depew's Pittsburg speech, not one lucid argument has ever been formulated, spoken or printed, that controverted any logical proposition favoring federation. Why? Simply because there is not in the very nature of things, from bottom facts to crowning facts, a place where an argument, worthy of the name, can find a footing.

It was, doubtless, supposed that Mr. Chauncey M. Depew could formulate such an argument if there was a man in the United States equal to the task. He is a renowned lawyer. He is skilled in technicalities, in sophistries, in the jugglery, the legerdmain of pleadings. He understands the process of watering stocks and in collecting dividends on moonshine investments, and the foes of federation, doubtless, believed that the President of a great railroad system, that pays him \$50,000 a year, could on a labor platform, annihilate federation. Every preparation that wealth and power could devise was made, so that when the Depew bomb exploded, federation, if found at all, would appear in fragments, where the "whangdoodle mourneth." The wires were

placed at the disposal of Mr. Depew by Jay Gould, who owns them, and as the mighty words of the \$50,000-a-year-labor-reformer were uttered they were flashed over the continent. But federation survives. Like the Hebrew children, it comes forth from Mr. Depew's fiery furnace without the "smell of fire upon its garments."

Mr. Depew should have remembered the maxim, that a "false description does not vitiate a document," and that his false description of federation, instead of vitiating it, will serve to give it strength and durability, and to eventually secure its triumph.

In this article our purpose is not to analyze Mr. Depew's address. In so far as it was complimentary to the Brotherhood of Locomotive Engineers it has our unqualified approval. It is a great order, made up chiefly of graduates from the great Brotherhood of Locomotive Firemen, whose *Alma mater* still holds a prominent place in their regards.

We know that the Brotherhood of Engineers, since its organization, has moved steadily forward in its prosperous career, battling against injustice to secure better conditions, better wages and less hours of labor, and that in all these years of struggle Mr. Depew's voice was never raised to aid them to overcome any wrong that impeded their progress, but when the victory was won this new-fledged labor reformer strides to the front to make it appear that in all the weary years of combat he has been profoundly solicitous for their welfare. And now, when Mr. P. M. Arthur arrays himself against federation, Mr. Depew, with all his equipment of law and learning, comes to Mr. Arthur's rescue and gives such influence as he can command to embarrass the federation movement.

In the course of his remarks, Mr. Depew said :

We have learned from experience several important lessons. It has been demonstrated that socialism, either with individuals or by the State, is incompatible with our liberty, and cannot survive under our institutions. Over five hundred societies have been formed to put in practice socialistic theories. They have been headed by earnest, self-sacrificing and devoted people, and wrecked by disciples who could get along with nobody in this world and would never be received into the next, and who fondly imagined they could create a better world of their own.

In the quotation we have made, the purpose of Mr. Depew is as clear as daylight. Mr. Depew is aware that in the United States there is a deep-seated hostility to what is called "socialism." He knows that in the public mind it is associated with Anarchism, and every other unpopular *ism*, and he means to be understood that federation is but another name for socialism, with all the crimes and abominations cranks, in the frenzy of their hallucinations, have charged upon it.

We would do Mr. Depew, the \$50,000-a-year-labor-agitator, no wrong. He is the president and attorney of a great railroad system that recently struck down Knights of Labor because they were Knights of Labor, and this was done without protest from Mr. Depew, and penniless men were made houseless and homeless because they had exercised the right to join a labor organization, and yet, this man Depew, this *dumb* man when infamous wrongs were being perpetrated where he had supreme power, strides upon a labor platform to flatter a Brotherhood which, were its members to strike, as its laws permit them to do, would be as speedily *Corbinized* and *Russianized* as were the Knights of Labor.

For the nonce we dismiss Mr. Depew's utterances at Pittsburg. We cannot indulge the belief that he contemplates becoming a member of the Brotherhood of Locomotive Engineers, and yet, it may be possible for him to entertain the opinion that if he should be elected G. C. E. of the B. of L. E. while President of the N. Y. C. & H. R. R. R. he could work more effectively to break up and break down federation.

It will occur to many readers that Mr. Depew should turn his attention to the purification of corporations with which, directly and indirectly, he is associated. As for workmen, they have long since resolved to "quit themselves like men." They have clear conceptions of the power of federation and of the power of the corporation. They know that "money talks" and that a man at \$50,000 a year, in his pocket, in the nature of things, ought to be true to the corporation that fattens him.

Just now, federation is the theme of railroad employes engaged in the train service

of the country. They have tuned their throats and their harps to the music of federation. They

"Hold it truth, with him who sings,
To one clear harp in divers tones,
That men may rise on stepping-stones
Of their dead selves to higher things."

THE WAGES SYSTEM.

In the *Forum* for July appears a paper on "The Wages System," from the pen of Rev. Dr. Lyman Abbott, recently installed as Rev. Henry Ward Beecher's successor in the pastorate of Plymouth church. It may interest the readers of the *Magazine* to know that Mr. Abbott at first studied law, which he abandoned for theology, and is now recognized, not only as a preacher of liberal views, but as a writer upon topics which the church, it is thought, in certain exclusively hide-bound circles, was not organized to discuss.

Mr. Abbott doubts that "we are approaching an industrial revolution," but is positive that such a revolution "is promised or threatened," and his belief rests upon the evidences he has of "discontent with existing social order," which he says is "deep, widespread and extraordinary."

It should be remembered that Mr. Abbott is simply a theological D. D.; that he is paid ten thousand dollars a year to discuss "no theology and new theology," to knock down old creeds and old dogmas, and introduce others more in consonance with the enlightenments and liberalities of the age. To remain in Plymouth church he has got to be something like Henry Ward Beecher. The old worn ruts and trails won't do in Plymouth church, the members of that world-renowned society will not tolerate the nanby-pambyisms of Talmage. They believe in heaven and its palaces, white robes, golden harps and crowns, but while "here below," wrestling with stocks and bonds, silver and gold, commerce and manufactures, debts and credits, taxation and revenues, law and legislation, the man who preaches for them must be a man of affairs, and like a bank president or a general manager of a railroad, must earn his money. He must be a thinker, and his thoughts must have a wide range, touching the economics of this life as well

as topics which relate to another life, about which even the Rev. Dr. Lyman Abbott at best, can know little. As a result, we apprehend, the Plymouth divine takes up "The Wages System," and concludes a "revolution is promised or threatened."

We desire to say to the Rev. gentleman the revolution is here. It has come. The town meetings have been held, or, more properly, the "Union meetings" have been held. Others are announced. Several chests of tea have been thrown overboard, not only in Boston Harbor, but in other places. The John Hancocks, the John Adamses, the Patrick Henrys and thousands of other revolutionists have announced themselves, and to emphasize matters, organizations are federating and a continental Supreme Council has been established. The Rev. Mr. Abbott sees more clearly than he is willing to admit that what he calls a "promised or threatened" revolution has begun. Of the "discontent" to which the writer refers, he says:

It characterizes in different degrees nearly all classes, all faiths, and all commercial and industrial communities. Anarchic movements, strikes, labor unions, socialistic conventions are by no means the only indications of the industrial discontent and unrest. These are serious in their proportions, and in some instances almost revolutionary in their results. The great railroad strike in the Northwest a year ago disorganized the traffic of a large section of the country and threatened the domestic commerce of the entire nation. The coal miners' strike in the East advanced the price of coal and for a time closed many factories. The dock laborers' strike in London paralyzed the commerce of Great Britain while it lasted, and the analogous strike in Liverpool resulted in the withdrawal from the ocean of several of the regular passenger steamers. A large proportion of these strikes—larger than the public generally imagine—are in whole or in part successful. One of the recent reports of the Labor Commission of the State of New York shows that a considerable majority of the strikes in that State resulted in a victory partial or complete for the strikers.

A revolution destroys the *statu quo*. Things are no longer as they were. A new set of mind forces is called into operation. The old disappears, the new takes its place. Somebody gains, somebody loses. Mr. Abbott shows that workingmen have all the force required to change things, and he might have said that this force is, like electricity, "in the very infancy of its development." Mr. Abbott has learned that the

"discontent" of which he speaks is not "confined to the lower classes of laborers." On the contrary "every skilled trade has its union," and Mr. Abbott is still more profoundly impressed that workingmen mean business when he discovers "these unions are united in a Federation of Labor."

That Mr. Abbott has studied the subject of which he writes, with no little care is shown by his reference to the fact that the "press" the "great daily newspapers, reflect the general demand for reform, and this they are doing with a voice which the deaf can hardly fail to hear." Nor is this all. "Bellamy's vision" has a third of a million readers, and a "magazine devoted to nationalism leaps at once into apparent success," and besides these forces and factors of revolution, "labor journals, organs of special movements, have an aggregate circulation far from insignificant." Moreover, the pulpit occasionally comes to the rescue and, says Mr. Abbott, "the preacher who announces as his subject some phase of industrialism is sure of a full house." "These signs" of revolution are not confined to the United States, but are seen in England and Germany, and "are writ so large that the dull sight can hardly fail to see them; these voices of prophecy are so loud that only the deliberately deaf can fail to hear."

Mr. Abbott intimates that he is a "student" of "the Wages System," and he believes "the student can better elucidate the general principles whose application can alone bring order out of chaos" than "a man of affairs, a merchant, a manufacturer or a railroad manager," and having brought his student optic to bear upon the subject, Mr. Abbott says: "It can hardly be doubted by any careful and candid student of human affairs that this discontent has a common cause, and seeks, though blindly and unintelligently, a common result," and that common result, Mr. Abbott declares, is not "to get higher wages and shorter hours," but "revolution." Following up this strikingly astute declaration the writer proceeds to supply his readers with a few old chestnuts, as follows:

In the *first stage* of the world's development, *capital owned labor*. This was slavery. The laborer was a part of the world's capital; the rich owned the poor. That was succeeded by feudalism. In this

system the rich owned the land; the workingmen were attached to and formed a part of it. They were a kind of living real estate. The capitalist owed them protection; they owed him fealty, obedience, allegiance, and a large share of the product of their industry.

A revolution has been going forward for many centuries, according to Mr. Abbott, but he does not admit the fact. He says a "revolution is promised or threatened." Still, he says, the "first stage" gave way to "industrial individualism," and then to "the Wage System." According to the writer, the revolution which he says is "promised or threatened," and the coming of which he evidently deplores, has done away already with the "stage" when "capital owned labor." "Industrial individualism" has given way to the wage system. "Slavery" and "feudalism" have been abolished by the march of revolution. But now comes the trouble, in Mr. Abbott's estimation. "The capitalists own substantially all the tools and implements of industry." The few "tool owners" control the situation and the millions of tool users must come to the "tool owners" for employment. And this condition of things, the writer asserts, "that while the world stands there must always be these two great classes of tool owners and workers; that it always has been and always will be to the end of time."

It might just here be profitable to recapitulate briefly. According to Rev. Dr. Lyman Abbott, pastor of Plymouth church, there is a "promised or threatened revolution." According to the gentleman's own testimony the revolution has been going forward from the "first stage of the world's development," when "capital owned labor." Capital no longer owns labor, slavery is abolished, and individualism has given way to organized and federated labor, until labor is to-day freer and more independent and better educated than ever before in the world's history. If that is not revolution, what is it? Mr. Abbott says that "striking operatives do not wish merely to get higher wages and shorter hours, but that they 'demand, whether they know it or not, revolution,' that 'only revolution will 'satisfy' them. This is jargon. It is devoid of reason. It is not common sense. It demonstrates that Mr. Abbott is not a student of

"The Wages System" or of wage earners. His writing is not in consonance with Christ's teachings. It ignores fundamental ideas of moral development, the ultimate enthronement of justice in human affairs. It flatters the Carnegies, the Vanderbilts, and Goulds, the trust kings and monopolists, the autocratic employers with the idea that they own all the tools, all the machinery, all the land, all the opportunities, and that the workers, while God permits the sun to shine and the rain to fall are to be the subject race, are to live by the permission of the "tool owners."

As a matter of course the Rev. Mr. Abbott could not, even seemingly, say a good word for the tool users, the "workers," without paying a glowing tribute to capitalists in the aggregate, and in doing this, as is usually the case, the Rev. gentleman draws largely upon his fancy for his facts. He says:

Many of our capitalists are men of noblest purposes. They are not tyrannical, despotic, greedy. They have given their lives, their hands, their heads to their country. They have been themselves America's hardest workingmen. They have tossed uneasily on hair mattresses many a night while their workingmen slept unbroken sleep on beds of straw. They have pushed away the untasted delicacy at the breakfast table while their workingmen ate with hearty appetite a less luxurious meal. They have fought bankruptcy for the sake of the men dependent on them, and with nervous susceptibility which muscle can never comprehend, have suffered vicariously in apprehension all the pangs of poverty of those whom they were, in vain perhaps, endeavoring to supply with work and so with bread. When they have succeeded the community has always had the greater share in the success. They have founded our hospitals, built our churches, established our libraries, erected our schools and colleges. Even when they have not been benevolent they have been beneficent. Whether they would or no, their activity and energy have been a benefaction to the community. The railroad magnate lives in a finer house, drives a finer horse, wears a finer broadcloth, and eats a tenderer steak than the wage-earner who works for him; but when he has lavished all he can upon himself he has expended but the smallest part of the wealth his brain has conjured up. The rest goes into railroads which open wild country, convert the wilderness into farms, and the hunting ground of yesterday into the gardens of to-day. The steel rail he lays is an enchanter's wand, and where it enters a community of homes and a long line of villages spring up as if by magic, and a ceaseless chime of church and schoolhouse bells ring in the advent of a blessed civilization.

It is such high wrought panegyric that sickens the average reader and makes even

those who are the victims of it chuckle when they look each other in the face. Even Chauncey M. Depew is lugged in as one who looks with disfavor on tool owners, and whose heart agonies require medical treatment whenever he thinks of how a tool user fares.

Notwithstanding Rev. Dr. Lyman Abbott's opinion that a revolution has not yet arrived but is "promised or threatened," notwithstanding his opinion that wage workers do not want "higher wages and less hours," notwithstanding his opinion that tool users seek "blindly and unintelligently" to better their condition, notwithstanding his opinion that "tool owners and workers constitute two great classes that have hitherto existed and always will exist," we say notwithstanding such opinions, the Rev. Mr. Abbott in some measure makes amends for such mental aberrations by putting on record the following:

Every man has a right to the product of his own industry; under the wages system the greater part of the products of industry go into the hands of the few tool owners. The wealth of this country has increased during the past quarter-century from fourteen billion to forty four billion. A careful statistician estimates that the wages of 5,200,000 unskilled laborers were in 1884 less than \$200 a year, while the average wages of workmen engaged in manufactures, including skilled laborers, was but \$346 a year. That system cannot be right which gives the profits of industry to the few and compels the many to live always praying, Give us this day our daily bread.

Four gifts God has given to all His children to possess in freedom—air, water, sunlight, land. The wages system, concentrating the land in hands of a few tool owners, crowds the many in tenement where sunlight is darkened, water is poisoned, and air is pestilential. "The mean mortality," says Elise Reclus, "among the well-to-do, is at the utmost one in sixty. Now, the population of Europe being a third of a thousand million, the rate of mortality among the fortunate should not exceed five million. It is three times five million." That system cannot be right which denies to God's children God's free gifts, and so summons death to their doors thrice as often as else he would come. Modern machinery Mr. Atkinson tells us, enables seven men to feed a thousand. This ought to leave some leisure for self development to the hand workers. What time had the car drivers who stood on their feet fourteen to sixteen hours a day? Or the bakers who, until recently, worked twelve to eighteen? What time have the iron workers of Pennsylvania who toil twelve hours in the day, 365 days in the year? That system cannot be right which, though God's beneficent forces stand ready to do the world's drudgery, leaves so many men mere drudges. Uncounted mothers who have a right to be home stayers, are denied that

right by the wages system, and are driven to the factory with the husbands whose incomes cannot support homes; unnumbered children under this system stand with weary eyes and pale faces beside their fathers, or in their places, in the great army of factory operatives.

Such utterances as the foregoing inspire the users of tools to continue a revolution, the result of oppressions continuing through all the centuries since "capital owned labor." Nor is it to cease. It will take no backward step. It is under way. There is a mighty mustering of the mind forces of workingmen. The "tool owners" will be required to part with some of their tools, and the "tool owners" will be "tossed" still more "uneasily on hair mattresses" than ever before. The Rev. Mr. Abbott names "four" gifts God has given to His children; "air, water, sunlight and land," but as "God is no respecter of persons," we incline to the opinion He desires that all men shall have food, clothing and shelter to keep their souls in their bodies. At any rate workingmen demand such things, and have determined that the "tool owners" shall no longer rob them of what God ordained should be their due. Defrauded tool users may be denounced as dynamiters in Russia, anarchists in France, socialists in Germany, and revolutionists in the United States, but here such things are of little consequence and will not deter workingmen from organizing and federating to secure their rightful share of the wealth they create.

BUDDHISM teaches that sublimely perfected beings, like Chauncey M. Depew, are brought into existence at long intervals, to live lives of unutterable greatness, and soon after their last after dinner speech is made, become gods. After this, they have all the leisure required to address the engineers who run the planets on their ever curving tracks, or do anything else agreeable to gods.

THE French Government made last year, 12,500,000 fire-arms. France is peacefully inclined, but she is getting ready to maintain the Republic with bullets as well as ballots.

MESSRS. JAY GOULD AND GEORGE JAY GOULD.

The New York *World*, in a recent issue, has an article captioned "Men of Millions," in which, strange to say, the Messrs. Vanderbilts are not mentioned, nor the Astors. This omission is doubtless explained by the fact that the *World's* article refers only to men who are speculators, who are "bulls and bears," who understand "longs and shorts," "puts and calls"—who are experts as lamb shearers, and who enjoy the music of the bleating animals when deprived of their fleeces.

The article in question devotes more space to Messrs. Jay Gould and his son, George, than to others who have made their "pile," and though some of them have won national notoriety, the two Goulds, father and son, are assigned the most conspicuous places in the narrative. This is doubtless proper, as the elder Gould is probably worth more money than all the others who are named combined.

All railroad men, no matter what may be their calling, are interested in knowing as much as possible about Mr. Jay Gould, whose annual income is now placed at \$10,000,000—\$27,397 a day—\$1,141 an hour—\$19.00 a minute, and 31 cents every second.

There may be some prince or potentate somewhere who enjoys a larger income than Mr. J. Gould, but we are unable to name him, though it is possible that the income of Mr. Vanderbilt or Mr. Astor represents as much cash every year as drops into the till of Mr. Gould. The *World*, in referring to Mr. Gould, says:

Foremost of all American speculators is Jay Gould. During the past three or four years Mr. Gould has not been so potent a factor in speculation as previously. There was a time when he actually ruled the market. If he were to exert his power he could do so again. He has latterly been credited with a renewal of operations in the stocks on something like the old scale. He has not traded in the market promiscuously, but has restricted his dealings to the securities of the corporations which he controls. Mr. Gould's great advantage over other operators in his speculations has always been in the fact of his having a hand in so many corporations. He has thus been enabled to obtain inside information upon which he could base his dealings with almost absolute certainty of success. Added to this was his great wealth, which he could use to buy up the whole stock of a company if necessary to bring the

bears to terms; or, on the other hand, he could use his money to sell a stock short on a vast scale, and in that way break the price.

Mr. Gould abandoned speculation on account of his health. He was greatly troubled with neuralgia and indigestion, and the doctors said that rest was necessary for his recovery. Mr. Gould's present appearance is greatly improved from three years ago.

When Mr. Gould is speculating he watches the stock tape very closely. The noise of the ticker is music to his ears, and the tape which it turns off, covered with cabalistic marks, is a running narrative to him. His favorite attitude at the ticker is to sit on the arm of the chair with one leg crossed over the other and to twirl a piece of paper, the ends of which are held between the thumb and forefinger of each hand. He seldom makes any comments on the course of prices, but he keeps up an incessant thinking, and acts as he thinks.

When he was active in the market he sometimes employed as many as two hundred brokers, and he never let his right-hand man know what his left-hand man was doing. Private telegraph wires connected his own office with twenty-five brokerage offices in the street. It was like a game of chess. He watched the board and made his moves with consummate skill. There were times when Mr. Gould lost in his speculations, but there were more times when he profited, as his enormous fortune attests.

Mr. Gould will probably never try to dominate the market again. He does not care to risk his health in the mad whirl. He may now and then buy or sell a railroad and make \$5,000,000 or \$10,000,000 in a lump, but that will be mild excitement compared to his former experience. Mr. Gould leads a very simple life. He indulges in no luxuries beyond his Fifth-avenue mansion and his country place at Irvington-on-the-Hudson. Few men eat plainer food. He has his breakfast and dinner at home, but his luncheon, consisting merely of a plate of soup, and some fruit, is generally taken at the Western Union building, where he has his private office.

He never drinks wines unless occasionally to taste some sweet vintage, and then only because he has guests or is a guest. He does not use tobacco and does not like the fumes of the weed. There never is any smoking in his offices. He goes to bed as a rule at 10 o'clock and is up by 5:30 or 6 in the summer and by 7 in the winter. He comes down town with the crowd in the Elevated train and goes back the same way. He rarely uses a carriage.

Mr. Gould is a great deal more sociable than he used to be. This is accounted for by the fact that he has not so many business matters to occupy him as formerly. He runs over to the Windsor Hotel, the principal rendezvous of the stock speculators, for a chat of an hour or so every afternoon before his dinner. He is also seen there, as a rule, on Sunday afternoons. He often goes into the reading room to look over the newspapers that are kept on file there. He is a great reader of newspapers. The stories they contain about him afford him unlimited amusement, for the majority of them are wholly the work of imagination, and are ludicrously preposterous when the facts regarding Mr. Gould's habits and doings are known.

It will be observed that Mr. Gould is severely abstemious, and that his habits are devoid of ostentation. He rides on the elevated roads, and eschews wines and cigars, in fact, luxuries of every description. He doubtless finds his chief enjoyment in watching the "stock tapes," and occasionally, when in the mood, buys or sells a railroad and "makes \$5,000,000 or \$10,000,000 in a lump," in which case, he doubtless has such game as "bulls and bears," a sport which he doubtless finds full of pleasant excitement.

Of his oldest son, Mr. George J. Gould, the *World* says:

George J. Gould, the eldest son of Jay Gould, will in time be one of the richest men in America, or for that matter, in the world. It is generally understood that Mr. Gould will follow the example of Commodore Vanderbilt and leave the bulk of his fortune to his eldest son. George Gould already has the active management of his father's affairs, and is therefore a figure of importance in the financial world. He is not yet thirty years old, but he directs concerns which are capitalized for several hundred millions of dollars. He is not dependent on his father altogether for an income, for he is five times a millionaire in his own name. Most of this money he accumulated himself. Of course, if he had started out in the world as a poor man's son, without opportunities, the chances are that he would not now be a millionaire. Nevertheless, every one who knows him will say that he would have made his way.

He is an exceedingly agreeable and obliging young man. He has always been a lover of sports and athletic exercises. He is an unusually good boxer and can handle the foils with skill. There are few better shots in the country. His hobby with the gun is shooting clay pigeons, and a second after one is sprung from the trap it is invariably smashed into smithereens. He is likewise a faithful disciple of Izaak Walton and has the knack of alluring trout to the fly to perfection. With all the rest he is an enthusiastic yachtsman.

As a speculator he partakes of his father's skill. He is constantly in the market and the best part of his fortune has been rolled up by his operations. He is about as plain in his ways of living as Jay Gould. He does not use tobacco or liquor. He is thoroughly domestic in his habits, and may be found every evening at his home in West Forty-seventh street with his beautiful wife and three young children. He is very attentive to business. By 9:30 in the morning he is at his office in the Western Union building and he works incessantly until 3:30. There are times when he has worked as late as 11 and 12 o'clock at night. There is a telegraph instrument on his table. He picked up the knack of operating it and sends and receives a large part of the telegraph business of the office.

We should incline to the opinion that

Mr. George J. Gould is a model young man, and that the old gentleman will make no mistake by making him the "richest man in the world" will be conceded.

After this, the *New York World* may deem it prudent to follow up its "Men of Millions" by an article with illustrations on Men, Women and Children who work a month for less than Mr. Jay Gould receives every minute of the year; who work all day for less than his income for a second—in fact, it might be well, for the sake of sharp contrast, to have the "Men of Millions" and the "Men of Misery" in the same issue. It might be said, and doubtless would be said, that "the *World* is attacking capital," but millions of level-headed men would contemplate the picture and inquire, "Is this what you call Christian civilization? Is this the outcome of all the struggles for liberty and independence?" We do not doubt that a great many people would say that our boasted civilization, in so far as it permits the few to pile up fortunes at the expense of the many, requires radical improvements—a general overhauling.

There need be no special ill feeling towards Mr. Jay Gould. He represents a class—but more particularly does he represent conditions and methods. He finds a great and enlightened people willing to pay him dividends on *water*, and he accepts the money. He finds a government creating national banks which control the money of the nation, and which use these privileges and money to help speculators and freebooters to rob the masses, and he takes his share. As long as the people are willing to play donkey and camel and bear such burdens as are placed upon their backs, there will be men to load them down.

When the time will come for kicking, the Lord only knows, but there are men who believe it is not far distant, and when it comes a great many big engines will go to the shops for repairs.

OLD King "Calico," of the Sandwich Islands, lives in a million dollar palace, built of coral. His ancestors were fond of baked missionary, but old Calico prefers beef.

LABOR STATISTICS.

We are under obligations to Chas. F. Peck, Esq., Commissioner of Labor for the State of New York, for a copy of his Seventh Annual Report, a volume of 822 pages, which we think will be regarded, in some of its features, as the most important report that has been made by the Labor Commissioners of the country.

Mr. Commissioner Peck devotes large space to strikes in the State of New York; and, since his statements must be accepted as the most reliable that can be obtained, they ought to have, and doubtless will have, a wide and healthy influence in correcting mistaken ideas as to the results of strikes.

We confess to being under special obligations to Commissioner Peck for his figures and conclusions relating to strikes. This *Magazine* is on record as entertaining the conviction that strikes are *not* an unmixed evil; and it may be questioned, all things considered, if a strike, in any proper sense, is an evil at all—because when resorted to for the purpose of securing fair play and fair pay, the rights involved are of such consequence as to obscure the sacrifices made to secure them.

Mr. Commissioner Peck says: "Free labor claims a fair share of the comforts and conveniences which it is a chief agent in producing, and will not be closed out of its rights by interested theories as to the impolicy of embarrassing capital, or by the trader's alleged right of buying in the cheapest market."

"The strike is a war measure," says Mr. Peck, "and has often achieved a result when appeals to liberality and good feeling have been utterly useless; while the employer—who, in times past, would have peremptorily dismissed as impossible an application for advance of wages, reduction of hours, or easier shop rules,—has found the machine run more smoothly, and his profits quite as good, often better, under a system more in harmony with the workingman's newly recognized rights and the modern theory of the employer's duties."

The workingmen of New York have, in their Commissioner of the Bureau of Labor Statistics, a friend, who, unlike Edward Atkinson, permits figures to tell the truth.

Manifestly, the New York Commissioner has not sold out to capitalists. If Mr. Jay Gould should want to buy a Labor Commissioner, as he sometimes wants to buy a Legislature or a Judge, we doubt if he would find Mr. Peck in the market for sale. The New York Commissioner states in his report that "all movements for redress of grievances are in the nature of a quarrel." Just "as war is the last argument of rulers, or an oppressed people, so the strike is the last argument of workers." The strike is a "war measure," and Mr. Peck supplies the figures showing the results of strikes in the State of New York for five years, 1885-'89. He says: "The total number of strikes in these years was 9,384. Of this number, 5,866 were successful, and 3,468 were unsuccessful, and 50 pending at the close of the investigation. These strikes involved 338,926 strikers. These people struck for an increase of wages, or they struck either for a reduction or against an increase of working time. In a great majority of the strikes, the strikers won victories, substantial victories—an increase of wages and a reduction of working hours. Of the 338,926 strikers during the years named, 213,523 succeeded in obtaining their demands, and 125,403 had to accept defeat." Says Mr. Peck: "An extra quarter or half dollar per day is not much to the employer, who can fall back on his customers or on society at large, but it is of value to the wage-earner; while the reduction of labor hours means relief to labor engaged and a chance for labor unemployed."

Mr. Commissioner Peck's report shows that 67,084 of the strikers advanced wages, as follows:

One year	\$5,382,337
Five years	18,623,060
Cost of strikes to employes for 5 years	8,009,511
Net gain in five years	\$10,613,549

Mr. Peck says this gain was made to 67,084 workers. There were 213,523 workers benefitted by the strikes during the five years named (1885 to '89); hence, it is fair to assume that

The gain to all who made gains amount- ed to	\$62,255,563
And deducting the costs of the strikes . . .	8,009,511

Net gain to strikers who were successful . \$54,246,052

As to the causes that underliestrikes, and

who is responsible for them, Mr. Peck observes as follows:

The strike is the worker's protest in action against a grievance, or the last resort for obtaining an improvement in condition. The average wage-worker does not want to strike; he would prefer to keep steadily along the beaten path and go with his class. He has nothing to gain by departure from established rules. If there be any infraction of supposed rights or change from an established order of things he wants reasons and is prompt to stand forth in defense of himself and his class. Employers know this, and if prudent, are careful not to make frivolous changes or to stir up a spirit of opposition. Unless, perhaps, with ulterior purpose open to unfavorable criticism, and so not made known at the outset.

There may be, perhaps are, employers who have never had a serious difficulty with employes. This would imply a good class of workmen and no small amount of tact in the employer. On the other hand a misunderstanding with employes, if judiciously used, may be a stroke of business policy. There are some persons, perhaps rather low in the moral scale, who may think it worth while to bring about a difference with purpose and design. Even in certain states of the market, there is more than a suspicion that strikes are contrived for the benefit of the employer. It is easily conceivable that a manufacturer may not desire to increase his stock of unsalable goods; but he may not care to boldly close his factory. At such a crisis any demand by a section of the employes that might lead to a strike and consequent suspension of manufacture would be a gain to the employer. It would save a further accumulation of stock with loss of interest; it would stop the payment of wages; it might even pave the way to a reduction of rates on a rehiring of such operatives as might desire reinstatement. In a commercial sense, a strike is almost always preferable to a lockout, and resumption may be either partial or entire, at the option of the employer.

Strikes are rarely if ever regarded with a tolerant eye by an employer. The worker thinks them a measure of relief. The employers have not yet learned to tolerate them as a means to an end, but continue to insist that they should be repressed by law.

Thus a strike is not always a voluntary act on the part of the strikers. It may be forced on them by design. It may even be a "shut down" by the employer, who forces the game in such a way that the cessation of work is made to appear the employes' act.

Every word of the foregoing extract from Mr. Peck's report is true. Workingmen are not fond of strikes. They prefer suffering to the extent of endurance. They strike only when they must continue to suffer wrongs and injustice and by their silence and supineness invite fresh broods of atrocities. On such occasions the cost of strikes in dollars has little to do with the determination of workingmen, who feel

keenly the galling chains of oppression, and if they have not lost their self respect they will rebel. If their independence, self respect and courage have fled, if they have become debased until no act of injustice can awaken them to action, then to all intents and purposes they are *slaves*—not chattels, perhaps, to be bought and sold like mules, but slaves in the sense that they are subjugated and obey their superiors like trained spaniels.

When an American workingman won't strike for his rights, as a last resort, he sinks to depths of degradation and becomes despicable to an extent that defies exaggeration.

But such degenerate times are not yet upon us. The Bureaus of Labor Statistics are doing a good work when, like Mr. Peck, they furnish reliable data relating to strikes.

We might become sentimental, and write of a time—before the sun grows cold as a Greenland iceberg—when human nature will lose its hog and dog propensities, and take on the characteristics of angels; or we might emulate the old prophet Elijah, when he thought he was the only prophet of the Lord God left in Israel; he concluded to croak and lament, and was doubtless astonished when informed that he was not the only prophet left, but that there were seven thousand of them on hand ready to strike against Baal.

There are many times seven thousand workingmen who will never bow their knees to either the god Mammon or to the god Gammon. The Nebuchadnezzars of the corporations may set up their golden images, and beat their tom-toms, hewgags, horse-fiddles, and the like, and command workingmen to worship—many of them will obey, and shout, "Long live King Corbin, Gould, Vanderbilt, Depew and Carnegie!" but there will be millions of other workingmen who will strike—strike for their manhood, strike for home, for wives and children! strike, though fiery furnaces were as numerous as the stars and a thousand times hotter than hell! They will introduce again the age of martyrdom. They will, with equal courage, laugh at rack, thumb-screw and faggot. They will organize and federate—and the coming strike,

with labor federated, will be as when the waves engulf fleets and the tempests prostrate forests and cities.

We are for peace, when it secures even-handed justice; when that is denied, we advocate the strike.

THE GREAT COD OF THE YANKEES.

Kate Field visited the Isles of Shoals, off the New Hampshire coast, and tells charmingly what she saw and enjoyed, including fishing. She went fishing with a "skipper," and during the voyage interviewed the "Old Salt" on the fish question, with the following result:

Said I to the skipper, "What do you consider the best fish for broiling?"

Skipper.—Boiling? Why, cod, to be sure.

I.—And what is best for baking?

Skipper.—You couldn't have no better fish nor cod for baking.

I.—How is it with broiling?

Skipper.—I never tasted no better fish for broiling than cod.

I.—What is your opinion about frying?

"Frying," repeated the skipper, scratching his head: "why, what would you fry but cod?"

I.—What fish is best for general purposes?

Skipper.—General purposes? Cod can't be beat for general purposes, I tell you!

Possibly the foregoing accounts for the New England codfish aristocracy.

THE Hartford, Conn., *Courant*, in referring to the brakeman's unhappy lot, says: "Let the railroad men go on demanding better protection for brakemen, and let all other civilized people join with them in the demand. If animals had to endure what brakemen have to endure the cruelty societies would have the railroad business in court. But because the animal happens to be a man the killing and maiming go on and seem to be taken for granted." Such is the opinion of one of the most prominent newspapers of New England. How does it speak for railroad corporations? Echo answers—"How?"

WE notice that Mr. Chauncey M. Depew, the \$50,000 a year labor agitator, in his Pittsburg speech, before the locomotive engineers, never so much as mentioned the employment of Pinkerton thugs, by H. Walter Webb, to shoot down workingmen. Strange that he should have overlooked such an important matter to engineers.

WE ARE GOING TO FLY LIKE BIRDS.

A Washington correspondent of the St. Louis *Globe-Democrat* writes to that paper an interesting account of the progress made in "aerial navigation," and of the revolution of ideas from a scientific point of view which has taken place within a comparatively short time, regarding the problem of navigating the air.

This revolution relates entirely to means, and not to the fact of aerial navigation. The balloon idea is about exploded. The demand now is for a car with wings and a steering apparatus that will make one hundred miles an hour. Just when the airship will take the place of the vestibule train is not certain, but the conclusion seems to be that within the next ten years the occupation of ticket agents and passenger agents will be things of the past, and that railroading will relate to freight, chiefly.

Those who believe that the railroad has fulfilled its destiny, and who take stock in the flying ideas of the times, are devoting a large share of their time to scientific discoveries. The flying machine must be strong, and at the same time, light. Iron and steel are too heavy, and at this supreme juncture a metal hitherto scarce and costly is becoming cheap and abundant. We refer to aluminum. Says the writer:

One naturally considers a metal as necessarily a heavy thing; but aluminum is as light as chalk. A spoon of it—and much of such tableware is now manufactured from this material—feels like a feather compared with its likeness in silver. Furthermore, the tensile strength of aluminum is so great that huge tanks for containing liquid fuel can be made of it. The flying machine of the immediate future, which may fairly be regarded as a thing almost on the point of successful accomplishment, will be composed largely of aluminum, alloyed with a small percentage of some other metal for the sake of hardening. Five per cent. of silver is often used for that purpose. As at present contemplated, the air coach will be run by steam obtained from liquid fuel or the burning of the gas that is compressed and loaded before starting into cylindrical reservoirs of thin-drawn steel tubing. A gas, consisting as it does, of molecules separated from each other and flying every which way, is readily compressed, so that a single reservoir may be made to hold 100 times its cubical contents of such a material. Thus the air-ship can take on board a great quantity of fuel in exceedingly small shape. By transforming this fuel through combustion into steam the engine will be operated, the fans will be made to revolve at a

tremendous rate of speed, and the airship, rising like a bird from the ground, will be directed by the steersman to any point of the compass that may be desired.

In discussing aerial navigation we naturally inquire what will be its effect upon railroads and railroad employees? That the present is the age of science we do not question, but to what extent new methods will supersede those now in vogue, is a question which attracts attention. From New York to Chicago in six hours and return, is the prospective time table. The idea is that the air ship of the immediate future need not sail very high, say 100 to 200 feet above *terra firma*, and it is suggested that passenger cars must be equipped with life boats in case the ship should drop into deep water, and each car is to be provided with parachutes for passengers who want to drop off at way stations. It is conceded that the landing of an air ship will be attended with more or less danger, and parachutes will be handy when the engineer can't put on the brakes and stop her. With fair winds the ship is to fly at the rate of 100 or 200 miles an hour, but with head winds the speed might be reduced to sixty miles an hour. These air ships are to have engines, and necessarily engineers and firemen, and it is said that engines are now on the market which weigh only twenty-seven pounds and occupy a space of only ten inches square. To fire such a machine with gas would be comparatively light work, and as it would be automatic, a fireman would have a comparatively easy time.

Nice calculations relating to cost have been made, and results are satisfactory. Much depends upon the cost of aluminum, which is now only \$2,000 a ton. Says the *Globe-Democrat* correspondent:

Although aluminum costs \$2,000 a ton, it will be fore very long be reduced to one-half that figure, as those who know assert. At that price an air ship could be built for \$150,000. Allow \$100 a day for fuel, \$100 a day for interest on the investment, \$50 a day for the crew, \$50 a day for incidentals, and you have considerably less than \$1,000 expense for each voyage of 500 miles, which would carry you from New York to San Francisco or across the ocean. Supposing that the rate of speed did not exceed that of the regular trans-continental railway trains, a passenger's expense for the trip would not be over \$25, leaving meals out of the question—and they need not be more costly up in the air. To cross the continent by rail costs

nearly four times as much. It has been suggested that for short distance passenger traffic an air vehicle might be propelled over routes of 100 miles or less by electricity, sliding along double lines of wires at a height of fifty feet above the ground and driven by an electric motor similar to that employed in the overhead street car system. Such an arrangement would best suit the requirements of a territory thickly populated.

The foregoing indicates what's in the air relating to aerial navigation. Science has rendered a favorable verdict and the ship, in due time, will be forthcoming.

"THIS is the great point," says a contemporary. "Division means disaster. Division is the device of the enemy. Union means victory for the cause of labor. Let all who do at heart desire, above all things else, to improve the lot of the poor, discountenance personal bickering, disregard capitalist denunciation, and determine to shrink from no sacrifice and spare themselves no effort to secure for honorable toil that recognition and reward which are its due." The term "union," in the eyes of labor, is not half as sacred as it deserves to be. Victory comes only through union. Not only the union of men in organizations, but the union of organizations in federation. The men who oppose federation are the enemies of labor. It may not always be designed, it may be the result of ignorance, incapacity to grasp conditions and solve problems, but the result is the same, and as a general proposition, it is deliberate treason to labor.

CARDINAL GIBBONS states facts worthy of St. Peter, when he says that "when corporations combine it is quite natural that mechanics and laborers should follow their example. It would be as unjust to deny workmen to the right to band together because of the abuses incident to such combinations as to withhold the same right from capitalists because they sometimes unwarrantably seek to crush or absorb weaker rivals." It is pleasant for workmen to have the church on their side, but the fact remains, that regardless of the church, workmen are going to combine to protect their interests and their rights.

A WRITER who looks upon Newport through fashionable French glasses, remarks, philosophically, "Fashion is autocratic. The world is her footstool, and humanity bows cringingly to her yoke. Of what use, then, to kick against the pricks? Be as reckless as your inclinations, provided you keep within the margin of fashionable vice. Do your sinning in style; that is all." Just how to get into this fashionable sinning and swimming world, is told as follows:

By perseverance. "The secret of Mrs. X's success is industry," said a clever man recently. "With her, society is a business."

There, Mr. and Mrs. Squillion, you have the recipe in a nut-shell.

First necessary, lots of money.

Second necessary, a dogged determination to blaze your way through brake and briar, and snubbing galore.

Third necessary, a fair amount of presentableness and a certain amount of tact.

At the head of the Newport sublimated beings, who do their "sinning in style," is Mr. Cornelius Vanderbilt, of whom Mr. Chauncey M. Depew is President and H. Walter Webb third Vice President. Cornelius, is the High Priest in the temple, Chauncey is Master of Ceremonies, and H. Walter has charge of the Pinkerton guards, and has charge of the slaughter house and the morgue, where relatives are permitted to come to find dead Knights of Labor before they are thrown out to the dogs.

THE estimate is that since the year one of the Christian era, the land required to bury the dead, giving each body space, two by six feet, would require 3,340,000 square miles. By including pre-historic times and times since when history is something better than fable, it will be found that the earth has been several times dug over to plant the dead.

BELGIUM wants to have a workingman's congress. In Belgium workmen have no representation in the parliament of that country, and they are becoming so restive that the standing army is always on hand to quiet them with bullets.

THE worst labor leader in the world is he who does all the thinking for his crowd.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

THE FIRST LOCOMOTIVE,

Built in 1803-4, Could Run Five Miles an Hour and Haul Ten Tons.

TROEDYRHIW, NR. MERTHYR TYDFIL, }
SOUTH WALES, Oct. 27, 1890. }

MR. EDITOR:—Thinking that some of the readers of our valuable *Magazine* might be interested in hearing something of the first locomotive that was ever built to run on an iron rail, I am sending you for publication a tracing of the "Trevithick high pressure Tram Engine." The tracing I made from a drawing that I copied from an old print, dated 1854, and the only one I know of in existence.

Last year it had a place at the Paris exposition and was lent to me by T. H. Bailey, Esq., manager of the Plymouth Works, Merthyr Tydfil.

The engine, as is stated underneath the picture, was built partly in Cornwall and partly in Wales in the years 1803 and 1804, and was used for the purpose of hauling the iron from the Penydarren Works at Merthyr to the navigation house, nine miles distant.

The rail plates on which this engine ran were of cast angle iron about 3 feet in length, with holes in each end for spikes, and resting on stone blocks, the rails being laid so as to form a flange on the inside.

The road is still in existence, though not in use, but there are still two or three miles of rails that have never been taken up and remain just as they were nearly 100 years ago, for the road was built and operated by horses before the engine was constructed.

There are still to be seen the iron water tanks at different places along the road that were placed there for the engine. They are about 4 feet square and 2 feet deep and were formerly elevated on stone pillars, but are now thrown to the ground and nearly buried by vegetation.

In this connection I introduce an extract translated from Davydd Morganwy's Welsh

Trevithick's high-pressure Tram Engine, so designated in the original plan dated 1803, was constructed partly in Cornwall and partly at Penydarren Works, by Richard Trevithick, Esq., Engineer for Samuel Homfray, Esq., proprietor of the Penydarren Iron Works. Merthyr Tydfil, who while discussing the principles of Locomotive Steam Engine power with Richard Crawshaw, Esq., of the Cyfartha Iron Works, made a bet of 1,000 guineas that he would convey by steam power a load of iron from his works to the Navigation House (nine miles distant) along the basin tramroad, which he effected by means of this engine and won his wager, although the heavy grades, sharp curves and frangible nature of the cast-iron trackway operated against the return of this ingenious though rudely constructed machine with the empty trains, hence its discontinuance. As may be perceived, the exhausted steam discharged into the stack, and the wheels combined; thus to "Trevithick" is the credit due for the application of those two principles to locomotive engines.

history of Glamorgan, which gives an account of the first tramroad on record, as also of the first locomotive that was made to move along an iron way:

In the year 1802 a tramroad was constructed from Pen-y-darren Works, Merthyr Tydfil, to the Basin. The latter is a place about a mile below Quakers Yard. An act of parliament was granted to allow of its construction. The length of the road was 9 miles. Upon this tramway moved the first locomotive that was ever placed upon an iron way.

Richard Trevithick, an ingenious Cornish mechanic, was the constructor of the engine. It was called "Trevithick High Pressure Tram Engine." Trevithick had previously designed a similar one, but of less size, in Cornwall for Messrs. Vivian & Co. The date of construction of this, his first locomotive, was the year 1802. He obtained a patent for it. This one though, moved along the ground without any rail to guide its movements.

Mr. Homfray, the owner of Pen-y-darren Works, sent for Trevithick to construct for him an engine similar to the one he had constructed and to move along the tramway.

Trevithick was requested to make the engine capable of drawing a load of ten tons at a speed of 5 miles an hour.

Mr. R. Crawshaw, of Cyfartha, doubted that the engine could successfully take its load and accomplish it in a given time. Mr. Homfray made him a bet of £1,000, which he accepted. February 12, 1804, was the eventful day of trial. The engine was put in readiness with a load behind. When Trevithick gave the driver command to start the engine movement began.

There were 70 persons composing the load, besides the 10 tons of iron. The stack of the engine was of brick. When Plymouth Works was reached the stack came in contact with a bridge and it fell and the engine came to a standstill. But Trevithick was equal to the emergency, he very soon set matters right so that the engine could proceed towards its destination, viz.: the Basin. The engine accomplished the work within the appointed time and Mr. Crawshaw lost the bet.

The Welsh history is slightly in error in regard to the stack of the engine falling by coming in contact with a bridge. The stack was originally made of brick and so constructed that it could be taken down altogether, on account of a tunnel it had to pass through when it reached Plymouth Works.

The foregoing will prove to many who no doubt are in error as I have been, that George Stephenson, though a great man, was not the first one who built a locomotive engine. Yours fraternally,

JAMES ARGYLE,
Blue Mountain Lodge, No. 348.

COLUMBUS, OHIO, October 28, 1890.

MR. EDITOR:—I would be pleased to have some of the contributors to the Mechanical Department answer the following questions, viz.:

First. What is the difference between *straight* and *automatic* air?

Second. How does the air signal work which is now in use?

Third. What is *foaming* and *priming*?

I have read much on these questions but have as yet failed to have them satisfactorily answered.

Pan Handle.

THE *Journal* of the Franklin Institute of the State of Pennsylvania, for the Mechanic Arts, for October, is an exceedingly interesting number.

The Institute, as the record shows, is doing a great work in the promotion of mechanic arts. The history of trades schools is of great interest, and that they ought to be established in every center of population is admitted by all men who can lay any claim to comprehension of the educational needs of the times. In the United States, education, as the pupil advances from the lower to the higher grades, serves to inoculate the mind with an ambition for the professions rather than trades. Cities are full of lawyers without clients, doctors without patients, clergymen without pulpits, educators without schools, and the colleges are grinding out such helpless mortals by the hundreds every year. Besides these unfortunates, the army of small politicians hunting for offices grows indefinitely. While this demoralizing work is going forward men are required to hunt for men who are thoroughly skilled in any of the trades, and when a thorough knowledge is required, men, all too often, have to be imported from abroad, where technical education is regarded quite as valuable, indeed, more valuable than a knowledge of Greek or Latin.

The Franklin Institute is engaged in correcting popular errors relating to education, and among the articles in the October number well calculated to interest ambitious firemen is a contribution by Chief Engineer Isherwood, U. S. N., on "The processes of steam in its development of power by means of a steam engine." When the time comes, and we think it is near at hand, that locomotive firemen take an interest in such papers, promotion for them is assured, and as engineers they will be the best the country ever had.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of November, 1890, and are now free to be used by anyone, viz.:

Car Axle, G. W. Miltimore.
Car Brake, Warwick & Duggan.
Car Coupling, W. B. Snedaker.
Car Replacer, J. G. Burkhardt.
Car Wheel, G. Elmslie.
Locomotive, J. S. French.
Switch, H. H. Potter.
Snow Plow, C. L. Wood.
Steam Brake, N. Nilson.
Railway Switch, J. B. Alexander.
Safety Platform for railway cars, R. Strode.
Car Spring, E. T. Bussell.
Dumping Car, Elliott, Harrington & Davenport.
Rail Fastening, A. M. House.
Self-closing Switch, Hubbell & Gregory.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

Table of Train Speeds.

(Original.)

This table gives the train speed and miles per hour, corresponding to various strokes of piston and diameter of driving wheels, for a constant piston speed of 1,000 feet per minute.

TABLE OF TRAIN SPEEDS IN MILES PER HOUR.

Piston Stroke.	Feet.	Inches.	REVOLUTIONS PER MINUTE.	DRIVING WHEEL DIAMETER, INCHES.							
				0.10695	0.12488	0.14298	0.16667	0.1785	0.19633	0.21417	
				36	42	48	54	60	66	72	
				9.42	10.99	12.57	14.14	15.71	17.28	18.85	
1	12	500		53.48	62.44	71.49	84.33	89.25	98.16	107.00	
1	14	428.5		45.83	53.51	61.27	71.42	76.49	84.13	91.6	
1	16	375		40.11	46.83	53.62	62.50	66.94	73.62	80.22	
1	18	333.3		35.65	41.63	47.66	55.55	59.50	65.44	71.32	
1	20	300		32.09	37.46	42.89	50.00	53.55	58.90	64.25	
1	22	272.7		29.14	34.05	38.99	42.45	48.68	53.54	58.28	
2	24	250		26.74	31.22	35.75	42.16	44.63	49.18	53.55	
2	26	230.7		24.67	28.81	32.99	38.45	41.18	45.29	49.34	
2	28	214.3		22.92	26.76	30.61	35.72	38.25	42.07	45.84	
3	30	200		21.39	24.98	28.60	33.33	35.70	39.27	42.83	

The small figures under driving wheel diameter in inches are driving wheel circumference in feet.

For other number of revolutions per minute than those given in the table multiply by the small figures over the driving wheel diameter in inches. Thus, for 400 times of a 42 inch driver the speed will be $400 \times 0.12488 = 49.95$ miles per hour.

Robert Grimshaw.

MR. EDITOR: I hope "Vulcan" will pardon me for intimating that he does not seem to catch the point of Roper's explanation of this injector matter. Questions regarding difference in pressure and relative area of openings have but a secondary interest; the main point to be considered is this: Is the law relating to the condensation of steam while in motion, as sanctioned by Roper, correct? If so, the rest becomes easy. Now, I have looked in vain for some refutation of this law. All the evidence I can find on the subject tends to confirm it, indeed the injector itself is one of the strongest proofs of the law's correctness. The law is also entirely consistent with the law of the conservation of energy. I find, practically the same idea expressed by the eminent English engineer, John Bourne, in a work written nearly thirty years ago, when the injector was practically in its infancy. In explaining the action of Gifford's injector, Mr. Bourne says: "This instrument which feeds boilers by a jet of steam discharged into the feed pipe, acts on the principle that the particles of water, which obtain a high velocity when they flow out as steam, retain this velocity when reduced by condensation to the form of water." Continuing, Mr. Bourne expresses an idea which we now see in practice in the exhaust injector, he says: "In their present form they occasion much waste, as the steam by which they are actuated is drawn from the boiler, whereas it ought to be the steam or a portion of it which escapes to the condenser or the atmosphere."

Now, by means of the crude illustration annexed I will try to demonstrate the principle I am contending for. We will suppose the area *a*, *b*, *d* to be filled with steam of 100lb pressure. At *c* is a check valve. The cross-sectional area of *a* equals 1,000 square inches; and the cross-sectional area of *b* equals one square inch. Now, it is perfectly plain that while the extreme pressure exerted upon the entire cross-sectional area of *a* equals 100,000 pounds, that upon *b* can only equal 100 pounds, it is also plain that under these conditions there can be no communication between *a* and *d* through *c*, as the pressure is equalized at all points. But, if by any means the column of steam in *a* can be reduced in bulk 1,000 times without impairing its velocity, it will then be able to pass through *b* and exert a pressure equal to 100,000 pounds on *c*, thus easily opening communication between *a* and *d*; conversely, if the column of steam in *b* can be reduced in bulk 1,000 times, without affecting

its velocity, it will exert a pressure of 100 pounds on $\frac{1}{100}$ of its cross-sectional area at *c*, and if we can fill the area *b* with this reduced steam it will exert a pressure of 100,000 pounds on *c*, thus opening communication between *a* and *d*. Now, the foregoing is the principle, as plain as I am able to state it. The contention is that these conditions are fulfilled in the case of the injector by the extremely rapid condensation which takes place at the nozzle. The extreme resulting pressure is, of course, theoretical, but it will readily be seen that there is a wide margin for overcoming weight of the column of water, friction on pipes and pressure at check, and yet cause no surprise at results obtained in actual practice. I don't think "Vulcan" can find fault with these conclusions. The only thing he can do is to prove the law from which the conclusions are drawn in error, and if he does prove the law in error, it will be no longer possible for him to admit that condensation has some effect on the working of an injector. I am sure "Vulcan" will accord me the courtesy of believing that I have not blindly accepted the dictum of Koper or any other man on this subject, but have tried to reason for myself from known effects to explainable causes. To conclude, I was recently told by a thoroughly reliable and well posted engineer that he had seen an exhaust injector forcing water into a boiler against 80 pounds steam pressure, where the working pressure at the injector, as indicated by gauge, only equalled ten pounds. I intended to say a few words about indicator diagrams in this article, but find that I have already used all the space I feel entitled to, so I will defer the matter. "E. S." is entitled to credit for his frank acknowledgment of error on the eccentric question. I felt sure he would see the question in its proper light, upon investigation. "E. S." is also very apt in exposing some of the Wilson fallacies.

Vacuum.

Review of Mechanical Department.

MR. EDITOR:—Advance sheets of the November *Magazine* are at hand, and the first article we find is by Mr. Grimshaw, giving the best proportions of slide-valves for stationary practice, which is an item of information and value to builders of engines, but as our locomotives have the variable cut-off, and as we are hardly ever given a chance to express any choice about the arrangement of the valve motion, but have to fire and run them as we find them, the article is not so valuable for us as enginemen, but can be stored away for reference for some future time if needed.

TOPICS BEFORE WHICH COMMITTEES WERE APPOINTED AT THE LAST CONVENTION OF THE MASTER MECHANICS' ASSOCIATION. There are certainly four of especial interest to firemen and engineers, namely the 6th, 7th, 8th and 9th topics, relating to car couplers, examinations, running engines by different crews or keeping one crew in charge of an engine, and on the best type of engine for fast freight and heavy passenger service.

CAR RESPONSIBILITY THROWN ON THEM IN MAKING COUPLINGS. (while the danger falls on the

brakeman), a safe automatic coupler, which would not be easily put out of order and broken and which could be readily coupled to other cars not fitted with such couplers, would be hailed as a great relief, for it is not a pleasant sensation to the average man to bring two heavy masses together, and to know that even with the utmost care on his part, a slight defect of construction, a partial wear of the parts, or an incautious movement on the part of the brakeman will cause the power he has imparted to the mass to maim or crush out the life of his fellow-workman. As a general rule it is also required that the coupling be made without much loss of time and this haste is no doubt the cause of many of the coupling accidents, for it will cause the men to give such signals as to cause a greater speed than is needed to bring the cars together, and the result is seen in hundreds of armless sleeves, mutilated hands and bodies, and widows and orphans bereft of their support. The vertical style coupler recommended by the Master Car Builders' Association seems very liable to disarrangement and is hard to couple when run in a train with ordinary link couplings; this trouble of course would cease to exist if all lines were uniformly equipped, but the question is, when will this be?

EXAMINATIONS. This committee is to report to what extent it is practiced and the best plan of conducting examinations of firemen and engineers in their duties relating to the use of fuel, care of the locomotive, and ability to deal with the disorder or disability of machinery. One of the main objects to be served by this department (as I take it), is to get our members to study on subjects connected with their calling and have them ready to stand the ordeal of an examination in their duties when their turn comes. Only time can tell how near the object sought has been attained, but it is no doubt true that the discussions in this department have helped us to a better knowledge of our machines than we ever had before, and will enable us to give a more intelligent account of them.

RUNNING EN-
GINES WITH
DIFFERENT
CREWS.

The committee on topic 8 is to investigate the comparative advantages of operating locomotives with different crews on the "first in and first out" plan, and that of confining men to certain engines, the latter not running a greater number of miles than can be rendered by their regular crew. If this matter were to be decided by the wishes of the men, a large majority would be found in favor of each crew having their own engine, for it is very seldom that two crews are found who work the same engine and are in full accord in regard to it. One engineer thinks a certain thing would be an improvement, while the other thinks that of no great account and wants something else which the other does not fancy at all. Pretty soon one fireman thinks that the other is imposing on him by letting the most of the cleaning fall to his share, or the other thinks that No. 1 does not keep the tools in as good order or in as handy a place as he should. Perhaps one crew uses too much of the supplies and the other not enough, or one runs too fast for the rules and the other too slow for the reputation of the engine, and so it goes on from bad to worse until opposite crews will hardly speak to one other. If a crew have a steady engine they seem to feel more at home on her, know just what she needs in the way of firing or petting to get along, what speed she can make without extra efforts, how the machinery runs and how the pumps or injectors will feed the boiler. If certain improvements can be made no other crew need be consulted, and if tools are not in shape no other crew can be blamed. This is from the men's side of the case; now it seems that the other side of the case is almost as strong in the same direction. The men placed on and running other engines every day, lose that sense of ownership they feel in a steady engine, and will not do as much to keep her up or as clean as one for whose condition they only could be held responsible, and this no doubt will account for the stated fact that engines on a steady go, with no rest, wear out faster in the same mileage than they do when in charge of regular crews and have their resting spells with the crew.

Another committee is to investigate the types of locomotives best suited for heavy passenger and fast freight train service and the relative economy and safety of eight-wheel, ten-wheel and mogul locomotives for that service.

In heavy train service two points are essential: that the cylinders be large enough to supply the power needed, and that the adhesion of the drivers be great enough to utilize this power to pull the train. For-

merly "Moguls" were built with more weight on the drivers than any eight or ten-wheel engine carried, but the tendency of late has been to make locomotives heavier, until now we have eight and ten-wheel engines with as much weight on the drivers and also as large cylinders as any "Mogul" ever had. Things being thus equalized, it is to be presumed that there is no difference in the amount of power and adhesion which may be obtained and the only question that remains is safety, and that can hardly be reasoned out. Carefully made and kept records are the only thing which will probably settle this point; still, it is open for debate.

Our friend "Vacuum" has sent in an article on the velocity of steam, which contains a rule where-

by the velocity of steam under any head or pressure can be calculated, but either the rule is not correct or my application is at fault, for the results do not seem to be in proportion to the pressure. When discussing steam with Dr. Wilson, I looked through a number of books to find some rule on the velocity which steam would have under given pressures, but in none of them was there an allusion made to the probable velocity of steam allowed to escape from the boiler. I have before me now three Natural Philosophies, several books on steam and several on the locomotive, besides a Cyclopaedia, and in not one of them can anything be found even so much as intimating that steam would have any velocity. Coming now to the article of "Vacuum" and apparently endorsed by him, we find that the writer treats steam just as if subject to the same laws as water. (Friend "Vacuum," are you not thus taking back some of your statements on the injector question and admitting that steam may be subject to the same laws as other fluids?) Mr. Atkins, the writer, after stating his line of reasoning, which makes steam subject to the same laws that govern the pressure of water, gives the rule: "Multiply the height of a water column that would produce the given pressure, by the ratio of the density of steam to that of water, at such pressure (above the atmosphere), extract the square root of the product and multiply by eight; this will give the required velocity in feet per second." As one cubic inch of water weighs .03617 of a pound, it will take nearly 28 inches of water in height to put a weight of 1 pound on the square inch on which it rests, or, expressed in decimals, it requires 2.304 feet of water to produce 1 pound of pressure. Thus, if we want 20 pounds of pressure the water would have to be a little over 46 feet; for 130 pounds nearly 300 feet, and for 140 pounds nearly 323 feet high. As the density of steam at the three pressures

under consideration are 726, 190 and 179 respectively, we would have to have columns of steam 33,394, 57,000, and 61,370 feet high to weigh as much as the given columns of water. The nearest square roots to these figures are 183, 239 and 248, and these multiplied by 8, as per rule, would give 1,464, 1,912, and 1,984 feet per second, as the velocity of steam escaping under the pressure of 20, 130 and 140 pounds. These figures, although they form a good foundation for the belief that steam is able, not only to keep up to, but to hasten the movements of a very fast piston (for the speed is from 18 to 23 miles per minute), are disappointing to the mind and do not convince me of their truth, because the difference as found between the velocity at 20 pounds and at 140 pounds, which is 7 times as much pressure, is only a little over one-third, when, according to the rule of proportion, it should be seven times as much. Let us hope that the deponent will say further and explain.

Vulcan.

Engineering Ignorance.

At no previous time in the world's history has the advance in engineering knowledge and achievement been so rapid as during the last twenty years. During this time we have seen the development of the compound engine, of electric lighting and locomotion, of tunneling by compressed air, of modern ships of war, armament and guns, the completion of the Brooklyn and the Forth bridges, the perfection of railway travel, the substitution of steel for iron in construction, the erection of fourteen-story office buildings, and many other triumphs of the powers of man over the resistances of nature, which will suggest themselves to every reader. On the theoretical side, also, there have been great advances. Numerous technical schools are yearly turning out graduates well instructed in the fundamental principles of mechanics and engineering, and of engineering books and periodical literature there is an overwhelming supply.

It has been said that Lord Bacon was versed in all the existing knowledge of his time, not so much on account of his vast brain power as on account of the fact that so little was then known which had the right to be called knowledge; but since his time knowledge has grown so fast that no one man has ever been able to comprehend more than a small fraction of it. So in that comparatively limited branch of knowledge known as engineering science, while Smeaton, Watt, Fairbairn, and others of the earlier engineers, might have been expert in all the existing engineering science of their time, it has recently grown so vast that engineers have to classify themselves as civil, mechanical, electrical, sanitary and the like, and these branches are now so divided and differentiated that each engineer in practice must devote himself to a limited specialty if he wishes to achieve success in his profession.

In the acquirement of learning, one of the first and most important steps is to discover how vastly ignorant we are. In engineering the world is now taking that step. In the evolution of engineering practice from "the rule of thumb" and empirical methods of former years, into the more scientific and exact methods of the present, we are gradually finding out how lamentable is our deficiency in really exact and scientific knowledge, and how great is our ignorance not only of theoretical refinements, but of actual facts and data connected with our every-day experience. In quite recent years we were content with certain engineering rules and formulæ, if they were laid down by high authority, such as Weissbach, Rankine, Fairbairn, Hogkinson, or Bourne, and if a

statement were found in the engineering pocket-books like Haswell's or Molesworth's it was accepted without question. Now, however, we are beginning to doubt the accuracy of all the older authorities, and our confidence is extremely limited in the newer ones. These ideas were forcibly brought to our attention in hearing the recent discussions in the meeting of the American Boiler Manufacturers' Association. Simple questions, such as "What ratio of heating to grate surface should be adopted for different fuels?" "Is an iron chimney or a brick one the better?" "How high should a chimney be for different fuels?" and the like, were answered merely by opinions, which differed most remarkably, and not one of these opinions was based on any exact data or experiment. This is no reflection on the intelligence of the boiler makers present, but is simply an example of existing ignorance, which is not that of a few individuals but of the whole world, and it is due to a lack of facts of record from which any opinion could be formed.

Concerning iron and steel, the metals most used by engineers, how little is really known. Why should cast-iron vary all the way from 12,000 to 45,000 pounds tensile strength per square inch, and what tensile strength can be predicted of any given mixture of irons in castings of different shapes? In wrought iron and steel constructions, how shall we determine the best factor of safety—which Holley truthfully called the "factor of ignorance"? Who knows whether high carbon or low carbon steel is best adapted to resist repeated strains without crystallization? Is there really such a thing as crystallization of iron or steel? If so, what proof is there of it? If not, why are such large factors of safety necessary? In the steam engine, is a steam jacket of any value, causing an economy of 20 per cent. of fuel, as has been claimed for many years, or of no value, as appeared to be the case in recent tests of the Pawtucket engine? What is the amount of cylinder condensations with different types of engine, and with different points of cut-off? What is the most economical ratio of expansion for different classes of engines? If large engines have developed a horse-power with 13 pounds of steam per hour, why is it necessary to use from two to four times that amount in small engines? In recent tests in England on the engines of four steam vessels, according to the *Engineer*, utterly contradictory and confusing results were obtained, so that we are yet in ignorance as to the conditions on which depend maximum economy of the marine engine. The Board of Trade in England has found the cause of breakage of the starboard engine of the "City of Paris," locating it in the wearing down of outside shaft bearing, near the screw. Why did not the similar bearing on the port side also wear down, or the two exactly similar bearings in the sister ship, the "City of New York"?

In the use of bituminous coal, who knows how to obtain the maximum economy from different qualities? Why should the Western coals, such as those of Ohio and Illinois, invariably give so much poorer results than Cumberland or Pittsburgh coal—results which are not accounted for by chemical analysis? Why, with all the march of invention, do the Western cities still suffer a cloud of smoke to rest over them as a pall?

We have stated that the engineering world is now waking up to discover the extent of its own ignorance. It is well, for the discovery of ignorance is the end of conceit, and conceit of knowledge is the great barrier to acquiring further knowledge. It is rapidly becoming no disgrace to an engineer to say, "I don't know," and to the engineering profession at large to say, "We don't know, but we are going to try to learn."

The next step is to take ways and means of removing our own ignorance, and of contributing to the advancement of the world's real knowledge. To do the first, careful observation and experiment, with the scientific method of thought, is essential. To do the second, prompt publication of carefully observed data is advisable, but there is already too much publication of crude observations, and hastily formed opinions based on incomplete data. It were better if the publication of opinions and generalizations could be deferred until at least a year after making the observations. This would greatly curtail the

mass of badly digested engineering literature with which we are now inflicted.

In fact, the increasing bulk of engineering publications is becoming a burden rather than a benefit. Each of the technical societies publishes a yearly volume, which tends to grow larger every year, and the number of such societies is steadily increasing. The scientific colleges publish monthly or quarterly magazines, and the technical and trade journals, and the book makers, are doing their share to swell the bulk of matter which engineers are expected to read. The quantity of such printed matter now being issued is so vast, that no engineer can find time to read more than a small fraction of it. But out of all this vast mass, how little is there which really is a contribution to knowledge. Even in the transactions of our technical societies, which are supposed to be under the censorship of a publication committee, and edited by a secretary, how few papers appear which have any permanent value.

The great reason why the engineering profession is still so ignorant of facts and data in its own science, is that these facts and data are not easily obtained in any shape which renders them valuable for comparison and permanent record. An isolated fact, such as that a certain steam engine requires 20 pounds of steam per hour to develop one horse-power, is of no value for scientific purposes, unless it is known precisely under what conditions that result was obtained, including type, dimensions, speed, cut-off, clearance, back pressure, jacketing, quality of steam, etc., and even if these are all known, the result contributes but little to our knowledge, unless it can be determined how the result of 20 pounds will be varied by a change in each one of the numerous conditions. To obtain such a record, and to make any generalization from it, requires an exceedingly tedious and expensive investigation by a trained expert. A few years ago, an experimental compound engine costing some thousand of pounds sterling, was presented to Owens College in Manchester, and experiments for nearly a year, undertaken by Prof. Osborne Reynolds, with an ample corps of assistants, have given thus far very few figures of permanent value in increasing our knowledge of compound engines, and the laws of their action. They, in fact, have thus far only served to reveal how dense is our ignorance yet concerning these laws.

The immediate need of the profession in this matter is not more schools, more books, more society papers; but more experiment and observation. On account of the great expense involved in making accurate experiments, it is rarely that they can be made by individuals. The government is doing some work in this direction in its ordnance department, with the aid of the Watertown testing machine, the laboratories of some of the colleges, and some of the railroad companies are doing a little, but the latter make purchases only on those matters that are of immediate practical importance financially in the business of railroading, while the colleges are generally hampered by lack of funds with which to carry on any important investigations. It is to be hoped that some capitalist who wishes to find a good way to make use of his money for the benefit of mankind, will, instead of founding a law college or library or art gallery, think of founding a laboratory of engineering research. Such a laboratory, well endowed, and in the hands of competent management, would be of vast service in solving many of the doubts which now trouble engineers, give us facts and figures from which we can deduce structures and machines with greater regard both to economy and to safety, and tend in a large degree to remedy a large part of our present engineering ignorance.—W. K. Stevens, in *American Mechanist*.

The use of the telegraph instrument has become so much of an every-day thing, and such a convenience that men seem to forget what a wonderful thing it is, says the *New York Tribune*. A newspaperman telephoned to the cable office, the other day, and asked if a London special dispatch had come in there yet. The operator replied that it had not, and said: "Wait a minute and I'll ask London if the copy has come there." In a few minutes, not more than ten or fifteen, he called over the telephone: "London hasn't received the copy yet."

Building in 1889.

The money actually expended annually in the erection of new buildings in the United States can scarcely be realized by those who give no attention to the business. The following table, compiled by the *Weekly Record*, is an interesting schedule of what was done in 1889:

CITIES.	No.	Cost.
Baltimore	1,955	\$3,600,000
Boston	4,131	32,400,000
Brooklyn	84,500	25,679,405
Charleston	225	281,575
Chicago	4,864	25,065,500
Cincinnati	2,161	4,143,214
Cleveland	4,007	4,401,854
Dever	2,741	10,807,377
Duluth	240	2,480,800
Indianapolis	1,840	4,500,000
Jersey City	944	2,930,857
Louisville	962	1,746,383
Milwaukee	1,424	4,610,000
Minneapolis	4,355	8,787,281
Newark	1,541	15,000,000
New Haven	628	2,066,700
New Orleans	1,044	1,465,165
New York	6,722	75,912,816
Omaha	2,398	4,663,725
Philadelphia	11,952	26,000,000
Pittsburg	3,241	18,000,000
St. Joseph	1,181	1,413,667
St. Louis	3,544	9,765,760
St. Paul	3,736	7,920,400
Toledo	390	1,500,000
Washington	4,078	6,165,715
Wilmington	522	8,000,000

Number estimated; cost actual.
† Estimated.

This gives a total for twenty-seven cities of 75,842 buildings, costing \$82,155,557, being an increase over the preceding year of 9,721 buildings and \$12,749,628 cost.

These figures give an approximate idea of the rate at which the country is growing, and perhaps no more conclusive evidence can be found of our industrial progress and national stability than in the above statistics.

Locomotives for the St. Clair Tunnel.

The Baldwin Locomotive Works, Philadelphia, have the contract for building four decapod tank locomotives for service in the new railway tunnel under the St. Clair River between Port Huron, Mich., and Sarnia, Canada. These engines are to have cylinders 24 by 28 inches, five pairs of driving wheels 36 inches in diameter outside of tires, and will work in working order, including 150 gallons of water in the tank, about 180,000 pounds. They will have boilers 74 inches in diameter, carrying 160 pounds steam pressure. The fire box is 11 feet long by 3 feet wide. There will be about 280 tubes, 24 inches in diameter and 13 feet 6 inches long. The cab is placed centrally over the boiler, with foot plate and coal box at the rear of the boiler. The wheel base is 16 feet 3 inches. As the track through the tunnel is straight, the engines are not required to pass curves on the main line, and are only required to enter or leave sidings. Additional play will be given the tires of the extreme driving wheels. The second and fourth pairs of driving wheels will be flanged with the usual play, and the distance between their centers is 3 feet 2 inches. The tires are to be secured by Mansell retaining rings, and each engine will be fitted with two sandboxes and two headlights, a Cooke steam bell ringer, and the Westinghouse automatic brake, with equalized driver brake fixtures acting on all the wheels. The fuel will be anthracite coal or coke. The load which these engines are intended to haul is about 700 tons, and the grades are 10.6 per mile. They are to be delivered in January.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

TO OUR CONTRIBUTORS.

At the Convention of the B. of L. F., during the consideration of matters pertaining to the *Magazine*, several decisions were made in which the correspondents of the Woman's Department are interested. One was that hereafter no contributions will be used unless accompanied by the correct name of the writer. This will be published or not, the writer can state her wish in her letter and it will be regarded, but we cannot take the risk of publishing anonymous communications. The reason for this should be apparent to every one; in case of a disputed point or any other trouble regarding the letter, the editor must have his authority and not be left personally to bear the responsibility. We would urge our correspondents, as we have done on previous occasions, to sign their own names to their contributions. A letter is much more entertaining if we know who wrote it, and the writer is apt to take more pains and give us a better letter if it is to be published over her own signature, and she also receives the personal benefit of whatever honor her work deserves. If, however, our contributors prefer to use a *nom de plume*, they are, of course, at liberty to do so, but their communications must contain their real name for the use of the editor. We have disregarded this rule for this month, as it is probably not generally known, but hereafter it will be strictly observed.

Another resolution adopted by the Convention was to the effect that no notices of a social nature, that is detailed descriptions of balls, weddings, etc., could be used. The reasons for this are easily understood. They cannot possibly get into the *Magazine* before two months after the event has occurred; such matters are of no special interest except to a small circle of friends in the immediate vicinity; space in the *Magazine* is limited and valuable and it must be utilized in such a manner as to give profit and pleasure to the greatest number. Personal mention, of a pleasant kind, is always ac-

ceptable, but elaborate description must be omitted.

While upon this subject we will once more request our correspondents to be particular about heading their letters with the name of the place where they are written. Frequently the post mark is so indistinct we cannot make it out. We trust our contributors will be as obliging in the future as they have been in the past in following suggestions. We all have one common object, that of bringing our Department up to the best possible standard and having it rank in excellence with the other Departments of the *Magazine*, all of which are of the highest character. A large number of interesting communications have been received this month. Please notice the change of address at the head of this column.

In another column will be found a letter from a neighbor of Mr. and Mrs. "Kicker," which sheds additional light upon their domestic relations. Our correspondent wrote some time ago and stated that after the storm of indignation had subsided, which was aroused by Kicker's letter, she would add her testimony. She seems to have written in as calm and moderate a manner as the subject would permit. The numerous energetic criticisms which we have received show beyond a doubt that there are very few men of "Kicker's" kind in the Order, and yet all of us number at least one such man among our acquaintances. There is but one rule for husbands to observe, that of absolute justice in the treatment of their wives. It is too late in the day to raise any question of equality. There should be but one law in married life, that of the Golden Rule, and it should be observed alike by husband and wife.

When we asked for opinions on the best method of managing a husband, we were overwhelmed with replies. When we suggested that our correspondents should give us their ideas upon the management of wives, deep, dense and absolute silence descended like a wet blanket. We had expected at least to hear from Shandy Maguire, who seems to understand fully both the theory and practice in regard to this question. Here was an excellent chance for the husbands to get even with the ladies who have been discussing them so freely and fearlessly for several months. Is it that they consider "discretion the better part of valor," or do they think they might let the women have the last word as well one time as another? Here, also, was an opportunity for wives to tell how they should prefer to be managed, or whether they are willing to be managed at all. We will leave the discussion open for another month.

A very pleasant account is sent to the Woman's Department of the wedding of Miss Anna McDermott, of Liberal, Kan., to Mr. Frank Walker, of Horton, member of No. 376. The newly married couple will reside at the latter place.

"Belle" writes very pleasantly from Waycross, Ga., of her brother's Lodge and the railroad boys.

A friend has kind words to say of No. 427 at Columbia, S. C.

STEVENS' POINT, Oct. 1, 1890.

Editor Woman's Department:

So many of the writers to the Department have wished to know how Mr. "Kicker's" wife enjoys life with such a man, that I consider it my duty to inform them what I know about them. As I am an acquaintance of theirs I am able to tell a good deal of their daily life. In the first place, I am sure he is sorry he wrote that letter, since it called such a torrent of wrath and ridicule upon his head. But few know him to be the author of it, besides my husband and myself. We have often heard him express such ideas, and we think we are the neighbors referred to in his letter, when he wrote of the man who let his wife have her own way, for he once said the same words to my husband. If he sees this letter he will be more provoked than ever at me, for he will suspect me to be the author. When I have visited at his house he has many times sneered at women for their gossiping and ignorance and general inferiority. In his estimation man is above gossip, and has more brains *any time* than the smartest or best educated woman that ever lived. For his wife's sake I had listened in silence, but once when he had been so bitter and sneering in his remarks about women, I ventured to ask him why he thought man superior to woman. He answered that the chief reason was that Adam was created before Eve. When I asked if he did not think that the beasts, fowls, fishes and reptiles were superior to man because they were created first, he flushed and changed the subject, and never referred to it again in my presence. Perhaps he thought he was wasting time in arguing with an "ignorant woman."

He is anything but agreeable to his family, but when out with the boys, away from home, he is counted as a pretty good fellow. He knows he would be knocked down if he attempted to bully one of them, but he thinks a man can do as he likes to his wife or his children. When his footstep is heard, the children leave their play and take refuge in a dark corner or under the table, out of sight. A look of fear and worry crosses his wife's face. A stamp on the doorstep, a wrench of the doorknob, and in walks her lord and master, with a look of "I caught you this time" on his face, and in tones of thunder he says: "Why ain't dinner ready? Get me something to eat, quick!" She tries to explain that the baby is sick, and that she has been up all night, but her excuse only causes more growling and "kicking." Such was a home-coming I once witnessed. All this time she had a wintry smile, for she believes in that curious idea that a wife must always meet her husband with a smile. Strange that wives must ever have it preached to them, to smile *always*, no matter how they feel or what trouble they may have. Perhaps if men had always acted on the same principle, marriage would not have proved the failure it has in so many cases. Mr. "Kicker" does not like fancy work, so their home is bare and lacking the little things that go so far to make home beautiful and happy. He buys no playthings for the children. What they have, have been made by their mother. In after years they will not look back to their childhood days with the pleasure so many grown people have—no tender memories of home

and parents when they were little ones at home—only the memory of a pale and tired mother, and a tyrannical father who spoke only to find fault.

Mr. "Kicker" does not give his wife spending money. He is too selfish, but his avowed reason is that women are easily cheated and extravagant besides. He does not think himself extravagant when he buys cigars or tobacco or beer, or treats the boys or takes his best girl to the theater at the other end of the road. The shoe is on the other foot then. And he thinks when a man earns his money that he has a right to spend it as he likes. I wonder why a man with such ideas ever marries and takes upon himself the support of a wife and family. He must begrudge every cent he spends for their benefit. And some men seem to think that they have done their duty when they feed and clothe their wives. Something more is needed to make life happy. Add to the daily bread, acts of love and words of kindness and praise. Without them the most loving and tender woman will become in time hardened and morose in spite of prayer or principle. Beware for the sake of your own happiness and honor how mean you are of loving acts. 'Tis not to be wondered at that women sometimes go astray when we reflect upon the fact that they have so little love and consideration shown them by their husbands.

Many avenues are now open for women to earn their own food and clothes, but we have not progressed so far that we fail to appreciate the love of a good and honest man. But we do not prize something that looks like a man and acts like a fiend. It is hardly necessary for Mr. "Kicker" to take pains to keep the *Magazine* out of his wife's reach, for the poor woman never has a moment to spare for reading. She would prize a day's rest above all other pleasure, it seems to me. Her life is indeed a hard one. From early morning until late at night, it is a ceaseless round of cares and duties. She knows but little of the outside world. Thank heaven there are not many men now of Mr. "Kicker's" stamp. They are fast going out of style. Every year woman is proving her worth more to the opposite sex and they are learning to appreciate her at her full value. The day is past when men think their wives a little better than their dog and not quite so good as their horse. Let us be joyful because those times are gone, never to return again.

Nancy Lee

EFFINGHAM, ILL., October 17, 1890.

Editor Woman's Department:

I have been a constant reader of the *Magazine* for one year, and the more I read it the better I like it. When I receive the *Magazine* I lay all other news aside, for it is my favorite, and as I have never seen a single letter from Vandallia Lodge, No. 403, yet I will write a few words myself in its favor. The Lodge here is in a flourishing condition, a host of brave and gallant young men, that are willing and ready to go forth and extend a helping hand to a brother in need or a friend in trouble. I am neither the wife nor sister of a fireman, but the daughter of an engineer and the sweetheart of a fireman. If I don't marry a fireman it won't be my fault, but I am pretty certain I have got one solid if he don't change his mind.

I wonder what has become of "Kicker," who appeared in the April number? I suppose he is dead by this time, for he was too smart a man to live long. I must bid my old *Magazine* adieu. Wishing the B. of L. F. good success, I remain,

Anna

PERT, IND., Oct. 16, 1890.

Editor Woman's Department:

I have been a constant and interested reader of your valuable *Magazine* for some time, and as I have never seen a word from Peru Lodge, No. 157, I will say from all accounts everything is progressing nicely, and the boys are as noble and true-hearted a set as can be found anywhere. I have heard some young ladies say they would never marry a railroad man. I married one, and he is a good and kind husband; I do not regret the step. God bless the boys of the B. of L. F.

With pride, I sign myself,

A Fireman's Wife.

MILLVILLE, CAL., September 20, 1890.

Editor Woman's Department:

"Honor and shame from no condition rise,
Act well your part there all the honor lies."

These are the lines that should be stamped on the memories of all the brave youths and fair maidens of the present and future generations of the earth.

Our sphere of life may be limited or great, still we act and these actions produce an influence, which will be either honor or shame.

Our tasks are various. Some are laboring in the school room, some in agriculture, some in the mechanical line, some in law, some in literary pursuits, some in the pulpit, and many others too numerous to mention; and in all these various pursuits we act, either mentally or physically, and we undoubtedly wish all our undertakings to be successful.

We are sowing seed that will spring up in the harvest of blessings or the harvest of sorrow and remorse. The sod covers the casket that contains the mortal body; still the character walks among the nations of the earth.

The bones of Abraham are mingled with the dust of other patriarchs, still he lives among the Jews. Washington's ashes are blended with their mother dust in the cemetery at Mt. Vernon, yet he lives in the hearts of his countrymen.

The remains of Columbus, that long rested in the Cathedral at Havana, have changed to dust, yet he is remembered by all Americans and leading nations of Europe, having the undying fame of discovering the new world.

Let our lives be free from stain; so that after departing from this earthly abode, we may leave "foot prints on the sands of time." To be honored and respected, we must occupy an honorable position in society. How can we obtain that honor? How avoid the shame that failure brings? We respond, by perseverance.

Where there is a will there is a way. As long as life exists, reformation is never hopeless and sincere endeavors will be assisted. If you have courage and strength, you can soon remove all dangers and difficulties, for they will vanish as a fog is dispelled by the bright rays of the morning sun.

We are emphatically the architects of our own fortunes, whether it be worldly goods or the means and qualifications of obtaining it. Our teachers lay the foundations on which we are to build. Now must we sit with folded hands, and wait for our temples to be reared by unseen hands? If so we are cherishing a hope that will be blasted in the course of time; and then must we sit still pining regretfully? No indeed, we must sever the chain of sloth that has so firmly entwined itself around our arms and herald the cry, "Now is the time to begin!"

Mothers, you have a part to perform on this stage of life, and the most important: that of training the youths and maidens, who are to occupy the positions that you hold. How important, then to teach and practice truth, firmness and temperance. Make their lives pure by keeping yours uncontaminated, for it is only the pure fountain that sends forth the pellucid stream.

Many great men have attributed their success and salvation to the influence of discreet and pious mothers. Thus lead them gently on, and your sons and daughters will bless and honor your memory. Youths and maidens, it is on you that the future of our country depends; each one of you has a part to perform on this stage of life. Let us entreat you to act that well, for there all the honor lies.

Effeminate young men have been the cause of the downfall of many a country. Love of pleasure, fondness for dress, and wanton idleness will be the ruin of our country. When young men feel above work, give themselves up to idleness, become votaries of Bacchus, shun the society of the pure and noble, then you may exclaim, *lost, lost, lost!*

Some of you are now interrogating yourselves thus: "What can I do? I am illiterate, I am poor and have not the means to attain an object, were I to begin." But that filthy lucre—gold, is not all we need to accomplish our aim. Rouse and hear of a few of the great ones who have preceded you.

Henry Clay, one of the greatest of orators, was only a poor mill boy, and the sobriquet conferred upon him is, "Mill boy of the Slashes." Franklin, the sage to whom two worlds lay claim, and who enjoyed an elevated rank in human nature, was only an apprentice. Roger Sherman was a shoemaker, Elihu Burritt was at first an ignorant blacksmith. Hugh Miller, the noted geologist, was a stonecutter, and John Bunyan was a tinker and wrote one of the greatest of books, "The Pilgrim's Progress." And there are many others who have done wonderful feats and accomplished great things for which they are remembered.

We can be educated, but to accomplish this, do you think that all you can do is to wish? If so you are mistaken; you must have the will to find the way. This requires work, and work you must. It is this that has made our vast wilderness rejoice under the agriculturist's touch; it has made our fields wave with golden grain and green with the graceful cereals and grasses. Idleness dwarfs the mind and destroys prosperity; it is the road to adversity. Again, young men, you must be sober. Drunkenness is the bane of all good. It is the fountain from which the broad ocean of iniquity is supplied. It destroys all bright prospects, and fills the future with Egyptian darkness.

Honesty is another virtue that all should possess. Gambling is another vice that should be scorned, but, alas! it is enticing many who might rise to posts of honor; and only by a little coaxing and a few drinks the young man is lured on to the pits of destruction and degradation and all for the sake of a little pleasure and fun.

There is no fouler place than the gambler's saloon; that you must shun or be forever lost. We rejoice to see that some of the youths and maidens of our land are rising to the pinnacle of the temple of fame, while we shudder to behold many drinking the bitter dregs of the cup of destruction, and pursuing the downward road to eternity, by wickedness and woe. We look to the former with confidence, while we shudder to think of the fate that the others will meet as their reward.

Wishing success to the Editors of the *Magazine*,

I am yours respectfully,

E. E. S.

EAGLE BEND, FORD COUNTY, MINN., Oct. 13, 1890.

Editor Woman's Department:

In the days that are not, it was pleasure before business with me, as a rule; but now the order of things is decidedly changed, and I have to almost drop my favorite pastime, and give my time and thoughts to the more practical duties of life. Another little treasure to foster and take care of has sprung into existence since I last contributed my mite to the *Magazine*—a bright, blue-eyed baby girl. We have named her Marion Olive. The other children love her dearly; the tiny baby never gets to be an old thing with them, as they sometimes do with children; her pretty ways are a constant source of pleasure to them. With kindest of wishes, believe me very truly yours,

Annie B. Miller.

ONE PICTURE OF A HAPPY HOME.

A place exempt from brawl and strife,
A haven from the ills of life,
Where mutual sympathy and love
With steadfast faith are interwove,

Unselfishness holds there full sway,
While loving forethought, day by day,
Governs each action, great or small—
Kind and impartial toward all.

Helping each other's burdens to bear,
Guarding the tongue with jealous care,
Worshipping naught save the Father divine,
Contentedly waiting His own good time.

Mrs. C. S. Miller.

[Our friend is excusable for her absence from our Department. I am sure all our contributors will send a kiss to the new baby.—Ed.]

*For Woman's Department :***A PARTING TRIBUTE.**

To the Grand Officers and delegates to the late convention held in San Francisco, Sept. 1890, by the B. of L. F., and also to the ladies in attendance, all of whom have departed for their respective homes.

We have parted to-day no more to meet.

Perchance for many years,
My heart is filled with sorrow deep—
My eyes suffused with tears;
I've grasped each hand with friendly clasp,
My heart hath treasured every word
Of kindness you have spoke to me,
By which its depths are stirred.

We have parted to-day. Ah! who can tell

If we shall ever meet again?
If we should not I'd kindly ask
Thy friendship to retain;
Tho' many miles may intervene,
Between myself and you,
Forget not in your far off homes,
The one you now have bade "adieu."

The last good bye has now been said—

The last farewell been heard,
And here I say to each and all,
This kindly parting word:
"God bless you all, though far away,
And shield you from all care,
God bless the Order of the B. of L. F.,"
Shall be my fervent prayer.

God bless each fireman brave and true
Who faithfully performs his duty.
Whose hands are hardened with honest toil—
With clothes all black and sooty;
And may the two great Brotherhoods
Federate and have no fears—
Remembering it is from the firemen's ranks
That we get our engineers.

God bless the men who right your wrongs—
Who advocate federation,
Their names are known from east to west—
Throughout the entire nation;
They are Sargent, Hannahan and Debs,
Who by their brave endeavor,
Have won the deep abiding trust
Of those who handle scoop and lever.

Mrs. Nellie Bloom.

LOS ANGELES, CAL., SEPT. 21, 1890.

THE BRIGHT SIDE.

PRAIRIE DU CHIEN, WIS., OCT. 7, 1890.

Editor Woman's Department :

Only a little while ago our bluffs were covered with a royal robe, magnificent in its rare and gorgeous beauty, which October brings each year and for very gladness things over all nature. Now all is being clothed in the sober garb of November, but "Behold all things are beautiful in their season." To-day while looking from my window out upon the old bluffs and the beautiful clouds above them, and watching the box elder leaves dry and brown, as they are taken up into the air and swept along by the wind like a levy of frightened birds I had half a mind to be sad. To be sure it was a melancholy picture, but while yet gazing I was forcibly impressed with the truth of these words: "Half the battle of life consists in keeping up a cheerful spirit." There must be a bright side to this picture, there is a bright side to every picture.

The hills and hazy sky make an admirable background for the level prairie, with its now leafless groves and the cheery homes of the workmen scattered here and there among them. Are all these homes cheery homes? They are if there is a cheerful woman in each. My dear reader, did you ever think what a precious jewel to man is a happy woman? She is the very sparkle and sunshine of life. The smiles of a woman who is happy because she can't help it, cannot be dampened even by the

coldest waves of misfortune. Sorrows she may taste, but they leave no cloud, only a look of deeper tenderness and serenity. A woman's circumstances and surroundings may be unfavorable even to a degree of desperation, but it does not pay to cultivate misery by brooding over it and hugging it, so to speak, to our hearts till it gnaws a hole too deep to repair. The wisest course is to turn away from the ills and trials, and with an upward, earnest and cheerful face energetically address ourselves to the duties of our station, for the sweetest of women are those who possess the magic secret of being contented under any circumstances. "The purity of a hidden spring is known only by the rill that trickles from it," and the purity of a life is known by the rill of influence which trickles from it.

You see, my dear readers, that it matters not whether rich or poor, high or low, so long as the bright little fountain of life bubbles up merrily from your hearts and sends forth a rill sparkling with faith, hope, charity and love. It matters not you live in a log cabin, for so long as you are a cheerful mind, the firelight that leaps upon your humble hearth becomes brighter than the light of Aladdin's fabled lamp. If of cheerful disposition it matters not if you eat brown bread and drink cold water from the well, for it affords you more satisfaction than the millionaire's *pale de foie gras* and iced champagne. Nothing goes wrong with a cheerful woman, no trouble is so serious, no calamity so dark and deep that the sunlight of her smiles will not break through the cloud and light up her surroundings with a softer, mellower light than before the storm.

Was ever the stream of life so dark and unpropitious that the sunshine of a happy face falling across its turbid tide would not awaken an answering gleam? Was man ever packed so full of the blues and grumbles that the long drawn lines about his mouth would not relax and the cloud of settled gloom and desperation would not vanish after half an hour's talk with a cheery little woman? The first thing you know that melancholy looking personage will have a smile on his face, the warmth of which is a caress in itself, and the cause of which he can no more tell you than he can tell you why one smiles involuntarily when he hears the note of the first bluebird of the season among the maple blossoms or when he meets a lot of yellow haired dandelions peeping from a crack in a city paving stone.

In conclusion let me say to each and all of my readers, in the time when evil misfortune has daunted all courage and hope, in the time when the clouds seem most dark and threatening, then is the time to let the sunshine of the spirit escape, and it will break the dismal clouds of sorrow and they will float away even as the fog before the noonday star. No one knows, no one will know until the day of judgment how much the world is indebted to the helpful, hopeful, cheerful, uncomplaining woman.

Nora Bird

[Welcome after your long absence. Come again. — Ed.]

ESCANABA, MICH., September 18, 1890.

Editor Woman's Department :

I have been a constant reader of your Magazine for three years and like it very much. How to manage a husband, I think that if a wife does her best to please him he will not need to be managed. A lady friend came in to-day and I said to her, "Tell me you have been married twenty years." She told me how you manage your husband." She looked at me with a smile and said, "I love him with all my heart, and he don't need to be managed." Now I, myself, think that is the only way to manage a husband.

Suppose we change the subject and have something new. Can't some of our sisters tell us how to manage our boys, so when they have homes of their own they will not have to be managed?

I say God bless our noble husbands! Wives, manage yourselves and do your duty to your family, and there won't be any need of managing your husbands.

An Engineer's Wife.

For Woman's Department:

MATERNAL LOVE.

Of all the friends, we hold most dear,
A mother's friendship is the best,
And while on earth her presence near
We know, we feel that we are blest.

Her kindly eyes once gay with youth
Are now bedimmed with sorrow,
But still they beam, oh, yes they speak
That everlasting love.

Her fond caress, her soothing voice
Dispel, allay our fears, our cares,
And on her breast we sink to rest
With happy, joyful thoughts,

We may wander on to foreign climes,
We may pause by pleasure's open door,
But memory still with sweetest chimes
Recalls us back to mother dear.

Then reader dear, I thus entreat
Respect, obey thy mother fond,
Ne'er cause her grief, but kindly treat,
And reward is thine here and beyond.

Kitty.

ST. LOUIS CITY, IOWA, October 15, 1890.

DES MOINES, I.A., October 12, 1890.

Editor Woman's Department:

How many of the *Magazine* readers have ever visited Iowa's capital city, of which we "Hawkeyes" feel so proud? And our State House? Well, the way in which we show visitors over that elegant edifice, and point out the beauties of the surrounding country from its stately dome would fill an outsider with something akin to awe, and then when we are on the last step and our dear old aunt says, "Now, B. B., what do you suppose is the sense of putting all that money in such a building? Why wouldn't the old Court House have done just as well?" we feel like replying that there was certainly "more sense" in it than in working five years at a "crazy quilt" (as we know a certain person did) and then have 304 nieces "scrapping" as to which one shall have it at some time in the future. But no; I held my tongue, for who knows, I may get that quilt, and it's a beauty, with all its old-fashioned work and embroideries. Now we are in the new Y. M. C. A. building, and old and young must admit that \$75,000 is not a cent too much to invest in such a grand building and good cause. Our Public Library will soon be moved here, and we hope the R. R. boys will visit it often. By the way, No. 102 is adding new books to its "shelves." I don't mean that they stay on the "shelves" long. I can count two or three on my table now, and a certain "red head" was hunting at wanting the last two years' volumes of the *Firemen's Magazine* bound for a Christmas present. Wonder if he will have to write to "Santa Claus," as one of his "youngsters" was doing yesterday, only nearly every other line of his was a request for "a long string of cars, big engine—one that will run clear around the room, etc."

The last year has been a good one for Des Moines in the way of new churches and school buildings. It would be hard to find a city of our size (though we are no baby with our 52,000 population) that has finer churches and better schools. Highland Park College, our last new school, has just opened with a good attendance.

Our Electric Street Railway is certainly one of the best, and for five or ten cents one can have such a glorious ride, and who does not enjoy being out, if only to see Autumn in all her style? She is very gorgeous just now. We will start from the hill down past our "Capitol," on we go to Locust street bridge, Des Moines is noted for its bridges, here we are at the Lavery House, one of the finest hotels in the West. (We went in and got a drink of ice water and a toothpick, once.) Here, a few steps away, is the Grand Opera House. We want to see "Said Pasha," but it may be cheaper if we follow them to the Garden City and view them and the Auditorium together. Hasten the time when Des Moines theater goers will not have to pay as much for a seat as they are supposed to do for a new bonnet. Now, a man can go up in the gallery, but a woman, no. But I

believe we were taking a street car ride. Down Fourth street to the Iowa State Register building, (the best paper in the State, too) over to Fifth, and here is the new Government building, a fine one, too. Across the street is an artesian well, and it makes me think of a "pool." I have read of. Everybody is there, the sick and the well. I taste the water, but thanks, I still prefer "Colfax." We resume our ride, out of the business part of town, past cozy little homes, and imposing grand ones. Shut your eyes—now open them. Where are you? Only in the woods—Prospect Park—but you might imagine you were in fairy land, it is all so pretty, and we are landed at a real ferry. I do hope there will always be a ferry there, it does seem so "old timeish." And now we are at the "Zoo," but must not stop long, for one hour at the cage of the "Happy Family" is not long for two little rascals who are along on this trip. And this is only one of many pleasant rides we take.

"Fireman's Mother," we like you. Perhaps it was because we were bringing "our boys" up your way. They are at school now—no, here comes the baby, and cries "Mamma, hear my new piece!" I will send it to the little cousins:

"Good afternoon, folks,
Pray how do you do?
I want to make a speech
This afternoon to you.

"I hope you all are well,
And all happy, too!
Now I've made my speech,
Do you think it will do?"

Dear little man, his "preach" that's what he calls it, is ended, and the next one is "I'm so hungry!" What mother ever listened to that remark and did not start at once for the pantry? So here goes.

Bess Burton.

[Your letter is like a fresh breeze from the prairie. Come again.—Ed.]

ONE WOMAN'S SORROW.

Editor Woman's Department:

"I have a sad story to tell you,
It must be told by the moonlight, alone."

It is not a tale of war, some home left desolate, neither is it the wail of a widow whose drunken husband has been pulled from the gutter for the last time. It is not a financial failure, neither is it sickness. It is not the loss of fame, honor or notoriety; no such trivialities as these. It is no old legend, although the same old story which for so many generations has bent forms, bleached the raven locks and robbed the eye of its light, the voice of its cheerfulness. Ah! God pity those who are crossed in love! Poets have written of it, bards have sung of it, and yet the disappointment is as bitter as it was in "ye olden time." Oh! the frozen hearted public knows as little of the bitter tears, the heartfelt longing, the silent prayers, the vain waiting and despair, as Marie Antoinette knew of hunger when she asked why the clamoring Parisians did not cut cake when they could get no bread. But we must know that the good Lord, who ordained everything, is not casting this sorrow upon us to cloud our lives unless there is a purpose to brighten our future. We will quote Scripture in authority of this pardon, but I do not remember the words, it is to this effect that they who have the good things in this world shall have less in that beyond and *our versa*. Now I explain it thus, that by filling our hearts with the greatest of sorrows we lose our interest in worldly things. Figuratively, the metal is purged of its dross and the gold remains unsullied. The poet Dante is said to have "Learnt in suffering what he taught in song." His Divine Comedy is universally admired as a masterpiece—an example for us.

I think we may now conclude by remembering the dear Christ Jesus who suffered and bled on the tree, and follow His foot prints through trials and sorrows which have bled many human souls. We may well say with Wordsworth,

"'Tis better to have loved and lost
Than never to have loved at all."

Violet Eyes.

For Woman's Department :

REST(?).

Quickly passed the flying minutes, swiftly flew the hours away,
And once more the sun rose brightly on the Holy Sabbath Day;
Bringing calm and peace and gladness, bringing joy and balm and light,
Bringing rest to all the weary, toiling hard both day and night.

Rest for noble lord and peasant, rest for rich and rest for poor,
Rest for busy city merchant from the office and the store,
Rest for tired, tollworn mother, rest for children (if they can),
But there's one there *is no rest for*—'tis the weary railroad man.

Do you think while you are sitting, taking in your day of rest,
There are many railroad workers, who are not one-half so blest?
They have homes, and they have mothers, they have wives and children too,
They can only "love and leave them"—they've their railroad work to do.

Oh! 'tis hard just when they're thinking, they have got some hours of rest,
Comes that noisy call-boy shouting "2:15, for special, west!"
Can you wonder if they falter? if from right they go astray?
When from out of all the seven, they can't have one day to pray?

'Tis *not* right! oh! it is shameful, that such things as these should be.
Will not some one rise and help them, let them have their *Sabbaths* free?
Meantime, Brothers, still be patient, always sure that God knows best;
Strive on for that endless Sabbath, when God gives His children rest.

F. M. P.

WEST TORONTO JUNCTION, ONTARIO, Sept. 22, 1890.

KANSAS CITY, MO., October 16, 1890.

Editor Woman's Department :

I feel very sorry if "May" for one moment thinks that I do not sympathize with her in her troubles. I can imagine no greater trial than an unhappy married life. It is difficult for anyone to decide the right or wrong of another's actions. According to May's own letter her method has been a failure. If her husband is not wholly bad; if he has not become so utterly degraded as to lose all sense of right and wrong; if she thinks that he has one spark of his old love for her, let her try every method within her power to win him back to his first love. Let his home be so happy that he will think no other home like it. Let him have all the pleasures that he can possibly wish, with the difference that everything in his home is encompassed about with an atmosphere of love and affection. Then, if he resists all that, God alone can only help her to bear the terrible trial of being an unloved wife.

A little incident came under my observation a year ago last Xmas. A young married couple, nineteen and twenty-five were their ages, the husband a strong-willed, independent man; the wife yielding and apparently passive. They were boarding at a fashionable boarding house. In her home the young wife had never been accustomed to the use of tobacco in any form, and the husband out of respect to her feelings never smoked in her presence. This Xmas morning she wanted to go to church for the latter part of the service. At the proper moment she asked him if he would keep the baby a little while for her, which he said that he would do. On her way to church she stopped at a drug store and bought two good cigars, then went to church and was back in time for dinner, after which her husband told her that he was going out for a little while. She playfully pushed him down on the lounge and told him

that he could go after smoking one of those, handing him the cigars. He looked at her in amazement, but that was the last he said about his going out. At supper one of the boarders asked him if he had been out. His reply was, "No, my wife wouldn't let me go." In relating the incident to her mother she said, "If George will smoke, I am going to have him smoke at home."
A Fireman's Mother.

MINNEAPOLIS, MINN., October 22, 1890.

Editor Woman's Department :

If a "horrid man" may be so bold as to intrude upon the little circle of bright ladies who contribute to this department permit me to heartily applaud "J. K. F.'s" letter in the October issue relative to the higher education of woman. At the risk of being considered a traitor to my sex I wish to hint that were men more given to obtaining a higher degree of education themselves there would be no need of raising the cry that education in woman detracted from her willingness to wed. The time was when woman was the inferior of the lordly sex. Now she bids fair to be the superior unless the boys do differently. In the last century woman has raised herself to the plane of mental equality with man. While she was doing this, what have we, "the lords of creation," done? Sat down and worried because women were outstripping us? Get up and pinch yourselves, brothers, and see if you are alive! Vulgarly speaking no one has a cable coupled to you. You are free to educate yourselves as highly as the ladies do. As the ladies become more intellectual and acquire higher knowledge what wonder that they dislike to mate with men who are still sitting on a stump at the foot of the ladder and get no higher up because there are no more steps on the stump. Get off the stump and on the ladder, boys and climb. You *must* climb. There is little danger of a balloon coming along and hoisting you to knowledge with no effort on your part. The girls climb why can't you?

What woman worthy of the name wants to tie herself to a man who has no higher ambition than to sit in a corner and eject tobacco juice all over the carpet while he tells what a time he had pulling two miles of cars up the side of a house, "and if she made a slip she was gone." Ah, yes, and if we make a slip, boys, we're gone, in this race for intellectual supremacy. Widen your minds enough to take in something besides a locomotive and split switch and don't "talk shop" at home. The chances are that the little woman doesn't understand what a great thing you have done with your engine to-day even if you tell her, so why bother her with it? Surely we have grief enough on the road without carrying it home and rolling it like a sweet morsel under our tongues. Let the men study and think, develop their own minds and make it worth while for an intelligent woman to marry them and there will be little danger of "higher education in women" resulting in the extinction of the human race.

Respectfully,
W. I. F.

[The latch string is out, call again.—Ed.]

MAUCH CHUNK, October 13, 1890.

Editor Woman's Department :

I am a fireman's sister, and for over a year have been an interested reader of the *Magazine*. In all that time I have never seen an article from any of the ladies of Lehigh Lodge, 251.

As for the boys I will say they are a noble, as well as generous set of men as can be found in our little Switzerland of America.

As for the Woman's Department I must say a word. I love to read the letters it contains every month; they are very interesting. As to managing a husband I can say nothing, for I have none to manage; but I will say this much: I think if every husband and wife do their duty to each other there will be no managing needed.

As this is my first letter to the Department I will close with, God bless all the members of the B. of L. F., especially those of 251.

A Fireman's Sister.

—Grand Street Parade and a Splendid Reception at the Pavilion in the Evening.—Federation Unanimously Indorsed by the Convention.

SPEECHES, INCIDENTS, ETC., ETC., ETC.

The Seventh Annual Convention of the Brotherhood of Railroad Trainmen was held in the city of Los Angeles, Cal., commencing October 20th, 1890.

The Brotherhood numbers 400 Lodges, and 385 delegates were on hand to answer to their names when the roll was called.

The grand parade Monday afternoon more than met expectations, there being upwards of 2,000 men in line. The proceedings of the day were under the auspices of Paradise Lodge, No. 74, B. of R. T., and everything was conducted in a way to elicit ceaseless commendation. Says the Los Angeles *Tribune*: "The procession was headed by a platoon of mounted police and the police rifle battalion of twenty men, commanded by Captain Roberts. Then came a band of music, followed by a score of carriages containing the grand lodge officers and their wives. These were followed by the local Trainmen, as fine a looking body of men as ever marched our streets. The Brotherhood of Locomotive Firemen turned out in force and made a very good showing in the parade. Close in their rear came the delegates, each wearing a tall silk hat and carrying a cane. At First street the visitors were greeted by another division of local trades unions which, headed by Meine Bros. band, fell into line and marched with the rest to the pavilion. Foremost in this division came Los Angeles Typographical Union, No. 174, 100 strong, in command of Major Will Voorhees. Among the other organizations which marched in this division were the Cigar-makers' Union and the tailors of the Knights of Labor. Altogether, it was the greatest demonstration of its kind since the visit of the Grand Lodge of Odd Fellows two years

ago." In the evening, says the *Tribune*, the delegates were tendered a reception at the pavilion, where an immense number of railroad men, their families and friends assembled. The committee had secured excellent music and the occasion was one of rare delight to all present.

The Rev. Dr. Cantine made the opening prayer, after which His Honor, Mayor Hazard, spoke as follows:

LADIES AND GENTLEMEN: I am here in behalf of the city of Los Angeles, to extend a hearty welcome to the representatives of the Brotherhood of Railroad Trainmen. They are always welcome, because we believe them to be the representatives of the people, and of the best class of laboring, producing people. When our forefathers landed on the rock-bound shores of New England, they found a desolate region, inhabited by an uncivilized race. Labor, as well as brains, was then needed. It was not lacking, and soon there had been carved out a nation that commanded the admiration of the world. Schools were founded, and have proven an important factor in our government. There must be a full and complete understanding and consent on the part of those governed, in order to have an intelligent government. The United States has always had one advantage in its march of progress, and that advantage lies in the fact that its representative men and law-makers are taken from the ranks of labor as well as those of capital.

After discoursing briefly on the advantages of labor organizations, and the Order of Trainmen in particular, the Mayor continued:

I am glad to welcome you to Los Angeles, because we are here a mixed people, composed of many classes. Here you will meet many in all the walks of life, and who shall say the conductor or the brakeman is not the better for meeting and conversing with his fellows of other professions? Where is the law that shall say that you who are baggagemen or switchmen to-day must remain so to-morrow?

One thing I prize most highly, and that is our free school system, where your children sit and learn from the same instructor as the children of the millionaire; and to the one endowed with the highest intellect and the best powers of reason, is accorded the right to govern in the future.

Referring to Grand Master Wilkinson's address, a mere outline of which is given, the *Tribune* says:

The Mayor was followed by Grand Master S. E. Wilkinson, who expressed great pleasure at finding himself in what he termed "this land of sunshine and flowers and beautiful women." He said: "Wherever I go I find the (California) noted for his warm friendship and his cordial clasp of hand." Speaking of the Order of which he is the head, the speaker said: "We mean to show you that we are an Order of progress. This is but the seventh convention of an organization which was started a few years ago by a band of eight men, but which has since enrolled over 25,000 members. In that time we have given a million and a half of dollars to the aid of the wives and widows of injured or deceased trainmen of our Order. It is not necessary to tell you that the life of a railroad man is one fraught with danger and responsibility of the gravest nature. To us are entrusted the lives of a multitude of people—your husbands, your wives and your sweethearts—and I say that in consideration of this fact we are entitled to more recognition than has been accorded to us. However, we are steadily gaining, and one assistance is the fact that the brakeman is being educated up to a point where he is fitted for a better position, and even now there is a man within the sound of my voice who will, I hope, within a year assume the duties of General Manager of a railroad in this country.

"It was formerly considered that all that was re-

quired to make a railroad brakeman was a suit of clothes and a big drink of whisky, but to-night I stand before you as a representative of a sober class of men, who believe that the way of putting a stop to the saloon evil is to stop patronizing the saloon. A word of warning to members of the Order and of kindred Orders—the greatest danger in the path of trades-unions is, I believe, not so much capital as the internal dissensions among the members themselves. Brothers, let us so conduct ourselves while in this fair city, that when we come again, if we are ever again so fortunate, we need not be ashamed, nor the people of Los Angeles to welcome us."

The address of Grand Master Wilkinson was received with great applause, and at its conclusion, the *Tribune* says, Judge Maguire, of San Francisco, was introduced and made a brief address, in which he expressed his regret "that the eloquent Lieutenant-Governor of the State could not be present to express the welcome he would feel if here." Continuing, the speaker said: "Labor organizations are always welcome, for they come to deliberate on matters of justice, and can be relied upon to ask nothing but justice. Labor produces the wealth of the world and produces it from the God-given raw materials that come from the hands of Providence to satisfy the wants of labor. By rights labor is entitled to all the wealth produced by it, but it gets only a share, and but for organization, as we all know, that "share" would grow steadily less as civilization progresses and as the wealth of the world increases. But persevere, I say, and remember that

"Goodness is alone eternal;
Evil was not made to last."

Brief addresses were delivered by others and after the benediction by Dr. Cantine the immense assemblage adjourned.

Referring to the history of the Brotherhood the *Tribune* has the following:

The organization was first formed in 1883, at Oneonta, New York, by a handful of brakemen who got together, held a meeting in a caboose and pledged themselves to work together under the name of the Brotherhood of Railroad Brakemen. The organization spread rapidly and other lodges were started throughout the surrounding country. At the end of the first year 150 of these lodges had been formed and the order had a membership of 5,000. This number continued steadily increasing, and the order was in the most flourishing condition, when just a short time before the time of the first national convention, a serious set-back was experienced in the shape of a defalcation by the grand secretary and treasurer, who absconded with all of the ready funds of the order, which was thus left practically bankrupt. It was a terrible blow, but the organization was composed of too good material to die thus easily. The board of trustees held a meeting and the result was that Ed. F. O'Shea, up to that time a clerk in the office of the grand lodge, was placed at the head of affairs. He at once put out a number of organizers and as a result of their labors the order had soon placed itself on a strong social and financial footing.

At the sixth annual convention (the last), held at St. Paul, Minn., a year ago this month, the name of the order was changed to the Brotherhood of Railroad Trainmen, thus admitting to membership conductors, switchmen and baggage-men employed on the different railroads. At that time some changes were also made in the grand lodge, the offices of G. S. and T. and editor of the *Journal*, which had heretofore been in the hands of one man, were made separate and distinct offices.

O'Shea, who had then held his position for five years, voluntarily resigned his office to accept a position with the Southern Pacific at Denver.

W. A. Sheehan, then chief clerk, was elected to the office of G. S. and T., which office he now holds, and L. W. Rogers, a delegate from Denver, was appointed editor and manager of the *Journal*. S. E. Wilkin, son, the present grand master, has held that office for five years, thus showing the high esteem in which he is held by his fellow trainmen.

The order is now in a most prosperous and flourishing condition and numbers over 400 lodges, with an aggregate membership of 22,000 in the United States and Canada. During the past year some excellent work has been done by the three vice grand masters P. H. Morrissey, T. T. Slattery and C. N. Terrell, who have been kept busy in different parts of the country and who have added about 100 newly organized lodges during the past twelve months.

The *Trainmen's Journal*, the official organ of the order, has made good progress under the management of Editor Rogers. The circulation has increased from 15,000 to 22,000 copies, each member of the order now being made a subscriber.

In an editorial notice of the Convention the *Tribune* was highly complimentary, as follows:

The national convention of the Brotherhood of Railroad Trainmen is in session in this city. Welcome to it, and to every member of it! We have the greatest respect for the men who run our railroads—from the humblest to the highest. How wonderfully each performs the service allotted to him—the man with the long-handled hammer, who taps the wheels at the station; the man who walks the track or turns the switch; the brakeman, cheerfully braving a thousand dangers for the security of life or property; the engineer and fireman, so often moral heroes, controlling the snorting steam horse and making the monster do their bidding; the conductor, affable and courteous, with vast responsibilities resting upon him. What a wonderful lot of men they all are! How much society owes to them! Therefore welcome, ye men of railroads, to our beautiful city. May your deliberations here abound in good to yourselves and to the public, and may your hours of rest among us be attended with pleasure.

The *Evening Express* editorially referred to the brakemen as follows:

The necessities of their occupation demand of practical railroad men the qualities of courage, cool judgment and activity to a remarkable degree, and a body of such men is of a superior character. The Brotherhood is benevolent in its character, and its members receive weekly benefits in the event of disability, and the family of each is paid the sum of \$1,000 upon the member's death, these benefits being conferred by means of small monthly dues. It is recognized by railway corporations as one of the most just and conservative of organizations of employees, and it has succeeded in adjusting a great many difficulties between railway corporations and their employees by means of arbitration, and has never yet resorted to the extreme measure of a strike.

Paradise Lodge, No. 74, under whose auspices the convention was held, was organized in 1885 with ten or twelve members and now has a membership of 150.

The convention unanimously approved of federation as it exists under the laws of the Supreme Council of the Federated Orders of Railway Employés.

Among other nice things that happened Mrs. Annie Hendricks Warner presented the Order with a superb banner ten feet long.

The convention adjourned on the night of the 30th to meet in Boston, where the next session of the Grand Lodge is to be held.

THE B. OF L. E.

The Twenty-Seventh Annual Convention of the Brotherhood of Locomotive Engineers.—Held in the City of Pittsburgh, Pa., Commencing October 15, 1890.—Addresses Delivered by a number of Gentlemen, including Grand Chief Arthur and Chauncey M. Depew.

FOUR HUNDRED AND FIFTY-TWO DIVISIONS REPRESENTED.

The Brotherhood of Locomotive Engineers held their twenty-seventh annual convention in the city of Pittsburgh, Pa., commencing October 15, 1890.

Four hundred and fifty-two Lodges were represented. Many of the delegates brought with them their wives, or sisters, mothers or sweethearts, and the crowd was so great that the Pittsburgh hotel accommodations were not equal to the demand.

The open meeting, where the public can put in an appearance, was held in the Grand Opera House and was packed.

Letters and telegrams were read from distinguished individuals expressing regrets that they could not be present.

Mayor Gourley welcomed the engineers to Pittsburgh, and Mr. Elphanstone welcomed them to Allegheny.

When the welcoming was over, the chairman, Mr. Adams, introduced Patrick Fennell (Shandy Maguire) who read the following poem:

DEDICATED BY SHANDY MAGUIRE, THE ENGINEER POET, TO HIS COLLEAGUES.

Old Father Time, the hoary thief,
The heartless wretch keeps driving on;
Unmindful of our joy or grief,
He marks another twelve month gone
Since last we met at Denver, where
We all inhaled pure mountain air,
And saw the glories of the skies
Resplendent in their changing dyes:
Where snow-capped peaks look smiling down
Upon that enterprising town;
Again we meet in numbers here,
To scan the ledger of a year,
Our order's progress to renew;
And pledge our steadfast faith anew
Upon the altar of our love,
With confidence in heaven above.

Our lease of life is short at best,
Our sun is gliding down the west,
And, ere another year goes o'er,
May set on the eternal shore.
We once were boys—'tis long ago—
Our hair could shame the sable crow;
The locks of some now growing old
Were once the shade of purest gold.
Alas! a change has come to stay,
The black and gold have turned to gray;
And some I see—in numbers small—
Have not a single hair at all—
The men I mean, each lady fair
Retains the color of her hair
All through her life. Perennial youth,
Is her reward for love and truth.

The day of doom for many here
May dawn within the coming year;
Forbid it heaven! A widow's prayer
For many more we well can spare;
We do not wish a tearful face
To look upon each vacant place,

We've filled so long, at board and bed,
Lamenting for the darling dead,
This life is sweet, and, mark me well,
Upon the earth we mean to dwell
So long as God shall spare our lives,
And not make widows of our wives;
So now, dear friends, how best to live,
And how we shall in future steer,
So men shall approbation give,
Are questions which have brought us here.

Trans-Rocky Mountain men have come
To meet their brothers here from Maine;
Old Mexico send northward some
Of long experience on the train:
Vancouver in the far Nor'west
Has sent her wisest and her best.
From every sea, from every shore,
Where locomotive whistles roar,
There comes a delegate along
To swell the legislative throng:
To labor for our future weal,
Old sores—if any—here to heal;
Old friends to greet, new friends to make,
To guard against each past mistake,
To keep the vanguard in the fight
For justice, self-respect and right:
For all that men on earth hold dear,
These mighty matters brought us here.

Our good old ship of Brotherhood
Full many a gale has bravely stood;
She shielded every faithful tar,
And never yet has lost a spar.
She floats to-day with canvas spread
From decks to every topmast head:
Still may she float. My fervent prayer,
Is for the breeze to woo her fair,
Upon the future course she'll steer.
If on new charts you shape it here,
Let self be deeply sunk from sight;
Remember but the general good;
Tread bravely on the path of right,
And fear not for our Brotherhood.

Right here my rhyming task should cease,
But visions of delightful skies,
Where all is calm content and peace,
Now dawn before my frenzied eyes;
And in prophetic mood I see
The birth of brighter days to be:
When Capital's parental love,
Inspired by wisdom from above,
Shall staunch the wounds which Labor feels,
And listen to all just appeals,
Which come in manly mien along,
To seek redress from grievous wrong.
When Labor realizes, too,
Destructive tactics will not do
To solve that mighty problem, which
Antagonizes poor and rich.

Cool heads and meditative brains
Must ever hold the driving reins;
And if they do, we'll hail the day,
For which we most sincerely pray:
When firemen and when engineers
Shall look on each as other's peers;
When discord, down to Hades deep,
Shall sink for an eternal sleep;
When selfishness is pulled apart
From every God-created heart;
When reason rules with queenly sway,
And Justice at her side is seen,
And calm contentment whiles away
The hours beneath bright skies serene.

The poem concluded, as soon as the applause had subsided, the chairman introduced Hon. Chauncey M. Depew, late dark horse candidate for President of the United States, the great after-dinner orator, and Vanderbilt's \$50,000 President of the New York Central. Mr. Depew was received by the engineers with "three times three,"

and several tigers. The enthusiasm was simply boundless. The audience went fairly wild.

The idea seemed to have taken possession of the audience that Mr. Depew had been engaged all of his life in righting the wrongs of labor—that he had always denounced the oppressors of labor, that he had done little else but cry out against the debasing policy of corporations in their treatment of workmen, and had often wept over their wrongs. As the audience gazed upon the countenance of Vanderbilt's \$50,000 President, his "seeming brow of justice" won the hearts of all, and the exclamation was ready—

"O, he sits high in all the engineers' hearts."

It was some time before anything like quiet, could be had. Some seemed to never tire of applauding the \$50,000 labor agitator and labor reformer.

When some one thought of how the N. Y. C. had employed Pinkerton thugs, to kill men because they dared to strike on the N. Y. C., of which Mr. Depew is the \$50,000 President, a new shout would be started, which would roll up and over the vast audience and die away in the distance like a thunder peal. Then another would suggest, in a whisper, how H. Walter Webb, who is related to the Vanderbilts, had annihilated the Knights of Labor on the N. Y. C., then from a ripple, no louder than a mosquito's toot, the applause would reach resounding force until the building would shake as if in the grasp of an infant earthquake. But repose came at last and then the man, first, last and all the time the apostle of labor, the corporation attorney, who by promotion had come up from a greaser, tallo-pot and hostler, until he could change water into stocks and bonds and make it earn dividends according to law for the Vanderbilts, stepped forth and spoke as follows:

CHAUNCEY M. DEPEW'S ADDRESS.

LADIES AND GENTLEMEN:—Nothing but a very attractive invitation would have induced me to spend two nights on a sleeping car and then deliver an address. When, for the third time, the call came to me from the Brotherhood of Locomotive Engineers to attend their annual convention and speak, I felt that the continuous friendship which has always existed between us should receive from me an equally cordial and emphatic recognition. I am glad to see that you have with you here your wives and your sweethearts, and that you are not in the condition which I found a party of Cook's tourists last summer in Germany. They all knew me and one of them said: "We have a man in our party who makes us tired; he takes no interest in anything; he is blue and down-hearted all the while. Architecture, old cathedrals, paintings have no interest to him, and at last we sent to know if we could help him and he replied, 'Ladies and gentlemen, my case is full of trouble; it is my wedding tour, and I was so durned poor that I left my wife at home.'" My voluminous friend, Mr. Powderly, says in one of his many utterances, that at the convention of the New England engineers, in New Haven, just before I sailed for Europe, your able chief, Mr. Arthur, and myself rushed into each others arms and kissed each

other in the presence of the audience. I don't know what kind of a kisser Arthur is.

There were a great many Kodak friends in that audience, but that picture wasn't taken. But while that event did not take place, I wish now, as I did then, and do at all times, to express what I believe to be the common sentiment of all the people of this country, their respect of a man who in a great position has done more than any other man in America to lift labor, dignify it and make it respected by everybody. Your organization has been in existence now for twenty-seven years, and during that period it has seen a hundred labor organizations rise, culminate, fill the public eye, and then disappear.

They have been organized to carry out some new theory, or put into practice some new fangled notion while the Brotherhood of Locomotive Engineers has constantly gone on increasing in power and prosperity and in the accumulation of its funds, because it was founded on right principles, and he adhered to them to the end. A man who denies, at our time, the efficacy, and the power, and the right to exist of labor organizations does not know the tendency of the times, and is not in touch with the necessities of the hour, the associations, the principles and the rule of our times. Its recognition is found upon our statute books. It is one of the peculiarities of our times, and of this question, that this thought is in this discussion and in your experience of twenty-seven years you have had many lessons. There is only one line upon which labor organizations in our country can succeed, and the line upon which it must inevitably fail is also clear. These questions have come out clearly in the experience of these years: that Socialism in any form is incompatible with our liberty and cannot live under our constitutions. That the individual is not to be held on a common level, but that the man of nerve and energy may rise to a real place. It is the glory of the American labor; this is the best product of American liberty: that the fireman can become the engineer; that the engineer can become the master mechanic; that the master mechanic can become the superintendent of locomotive power; that the superintendent of locomotive power can become the general manager, and that the general manager can become the president. [Applause.]

There have been five hundred societies. I and upon examination, started in the United States upon Socialistic principles, and every one of them are dead. They are dead because they were based upon wrong principles. They were started by a few earnest, self-sacrificing, able spirits, and with them were joined all the cranks and the lunatics: all the people who could not get anything to do in this world, and who Peter would not let into the next. All the fellows who are going to be cast into hell, as my reverend friend described (active, because they are too warm to be still). They joined it in the hope of getting to the better world, and wrecked it. There is another principle which has come out of experience, and that is that no labor organization can succeed whose only object is to diminish hours and increase the wages. The margin is too narrow. There is constant collision and ultimate failure. One of the principles upon which your organization is based is the brotherhood and hearty sympathy which you find therein to help one another in your troubles. It is one of the principles upon which your Order is founded to help one another in one form and another, and without this distinctive principle it cannot succeed. You have for the foundation of your organization the idea of Brotherhood. The idea of taking care of the maimed and the looking after the families of the men who die; and the education of the orphan, by which, both in theory and practice, they are prepared, not only for their work, but to become supreme in their calling, and which also and more particularly makes them larger minded and more useful citizens. And then, by means of these organizations, you are entrenched in your power and enabled to protect yourselves and enforce your rights. We have no returns in this country of the administration of the funds of labor organizations. But in England they are compelled to report to the public authority. In looking over the reports of 1889 of the ten oldest and most

successful organizations of labor in Great Britain. I find they expended in 1889 \$120,000 in labor troubles and \$1,300,000 in insurance and the assistance of their brothers.

Well, they say you are too conservative. There is a point where conservatism upon proper lines is held in ridicule. A class mate of mine was once called upon to perform the marriage ceremony for one who was much older in the service than himself, and who was about to wed his fifth wife. And when the trembling clergyman waited for the aged dominie to rise, he was asked why he waited, and replied: "I am waiting for you to rise." To this the aged clergyman replied: "On these occasions I have generally snot." [Applause.] He was conservative.

Now in our times labor and capital are supreme. In the progress of development in this country it was soon recognized that no individual could build railroads and telegraph systems, or establish banks. And, therefore, by common consent, our legislatures permitted the organization of these corporations. But at the same time, through railroad commissions and labor bureaus, the state has kept its hand on these organizations to prevent discrimination and to prevent extortion. But in these extreme times everything is running into corporations. But all such organizations which are organized to crush out individuals and divide them into two classes, the employer and the employe, are bound to fail.

Legislation and the laws of trade will permit only legitimate enterprises, and those which are necessary alone will succeed. Now, in the same way, labor has been running to extremes, and ambitious efforts have been made to form gigantic labor organizations in which should be corralled every form of occupation in which the bread winner and the wage earner could engage. The scheme is too large. It presents troubles which are impossible to solve and which we are not able to grasp. There is a demand that labor should be just as intelligent as capital when it comes to present its demands. When it calls upon the railroad president it demands that it must know just as much about its business as he does. Otherwise, all that it can do is to threaten brute force, and in nine cases out of ten it fails. And fails as it should. I have had hundreds of committees call upon me. I never refused to hear a committee in my life. I can safely say that no committee of the employes of the New York Central road ever left my office without being satisfied.

But now I will give you three instances of my experience. Fifteen men at one locality on our line came to me to present their grievances. They belonged to an assembly of one of those organizations to which belonged every sort of labor representatives—carpenters, shoemakers, masons, glassblowers, dancing masters. They were all in. It was like a Scotch Hacketts. After they are through every man makes his will.

The master workman of that assembly was a shoemaker, who had had a quarrel with a passenger conductor who ran a local train, about his fare. He said to himself: "I will get even with this fellow and with this corporation who employs him." and he ordered these fifteen men out. That was two years ago, and they don't know to-day what they went out for. They never have to this moment presented to me a complaint of any kind, but they had all the attendant miseries, and I have heard from their wives the terrible trials which they have suffered.

Now, the second instance to which I will refer was when at one time my private secretary informed me that there was a gentleman who desired to see me. I invited him into my private office, and as soon as he began to speak it struck me that he did not know what he was talking about. It was about labor and capital. I at once said to him: "My friend, my time is valuable. I am paid largely for what I do, but I am not paid for overtime." When I asked him what he was there for, I found he didn't know. He didn't know what were the hours, what were the wages, or what the work of the men he came to help. I found that he had never spent an hour on the railroad in any department in his life. Now, I say that such representatives of labor sent to confer with capital bring labor into contempt.

Labor upon its own ground can always state its case clearly. Take an instance: A committee of the

locomotive engineers came to my office and were announced to me in my private office, and I at once requested them to be shown in. They came in, and in five minutes they had stated their case, and stated it so clearly that there was no escape from it. They thoroughly understood what they wanted. In five minutes I knew what they wanted, the questions in controversy were satisfactorily settled, and I bade them good-by.

Suppose they had sent in a shoemaker. Now, I will give you one other instance, and that is the last. Last fall a committee came—and I think now is the time to tell this: I never have told you it—last fall a committee came to my office and presented certain complaints and certain demands. On examination, most of them, I thought, ought to be granted, and they were. Then this committee said to me: "We want a concession on the same line to the locomotive engineers." I said: "They are gentlemen who can speak for themselves." "Well," they said, to sum it up, "we propose to break up the Brotherhood of Locomotive Engineers and compel them to join us. We have some of them with us now. If you, as president of the Central railroad, will recognize that one concession to the Brotherhood through us, then the Brotherhood will be broken up. If you do not make that concession, we will tie up the Central road." I said to them: "Gentlemen, I regard the Brotherhood of Locomotive Engineers as the best labor organization in the world." [Applause.] "I regard the Brotherhood of Locomotive Engineers as the one organization which makes labor honorable all over the world. I regard the Brotherhood of Locomotive Engineers as a safeguard against insane demands and intemperate violence." [Applause.] "I will communicate with them and with no one else, and you can do your worst." [Applause.] The Brotherhood had made no demands. I sent for them, or their officers that night. I gave them a concession larger than these men said they would accept, and that strike did not come off.

Well, on that question, we are all, gentlemen, in a certain sense, employes of the public; all of us. We owe a duty to the public, and we find it out whenever any trouble arises. If, in a strike, when it comes, the company is in the wrong, and millions of people cannot get to their homes, cannot travel, and thousands and millions of dollars of business is held in suspense, the wage earners cannot go to the factories, public opinion settles the matter, and if it is against the railroad, it will have to yield; if it is against the employes who are in it, they have to yield. Now, I have always made it a rule—and an old timer railroad man said to me: "You are a fool, and you will only make trouble by it,"—I have always made it a rule to see every employe of the Central road when he requested me to do so, whether he came as an individual or as a committee, and I have thought that it created such a friendship, good will and mutual understanding of the ability to reach the source of power, that a strike on the New York Central was absolutely impossible. I went to Europe on my annual holiday, and on one Sunday night, sitting in my room, in the solemnity and stillness of that Bavarian mountain air, filled with a wonderful appreciation of the lesson of "good will among men," taught by the sublime presentation of "Passion Day," which I had listened to all that beautiful day, and I was startled at midnight by the news that thousands of men on the New York Central had left their posts, and the road was tied up. I could not sleep a wink. I drove over the Bavarian mountains to reach some place where intelligence could be had and cables could be sent. I made up my mind that my plan was not a failure, and during that night I pretty nearly and almost wholly abandoned the task of ever, by any means, creating harmony between the laborer and capital. But when I reached, the day after, the beautiful city of Denny, and the long delayed cables began to pour in to me, the first one reinvigorated me. The first one told me that labor and capital could march arm in arm and harmoniously to the same end, and that cable was, "The engineers stand firm!"

The locomotive engineer has been one that constitutes success in the railway service. Those are the elements which constitute success in any service. The firemen often complain to me that the firemen

may be fifty years in service and never become an engineer, because they say they never die. [Laughter.] But a man may be a fireman for fifty years and not be fit to be a locomotive engineer, while another man may be a fireman for one year and be a locomotive engineer. Some men are too light-headed. They pull out of a switch without the dispatcher's order. In the presence of danger they lose their heads. Some men are too careless and take chances that no man ever ought to take, and they are constantly having collisions with their trains. We cannot intrust the lives of the people to such men, but the true locomotive engineer has, first, and beyond all things else, a level head. [Applause.] And with that level head he has what is equally requisite, quick judgment in the presence of danger. He sees before him, as he is thundering along at the rate of fifty miles an hour, the open switch, the open draw, the obstruction upon the track. No time for argument; no time for thinking. He must decide at once what he will do. Will he reverse and jump, or will he stick to his engine and do his best to save that train? It is to the honor of the Brotherhood of Locomotive Engineers that in ninety-nine cases out of a hundred he sticks to his engine! [Applause.] What does he do? Why, he offers a short prayer and bids a mental good-bye to the wife and little ones at home, and then either rescues his train or goes calmly to his death! In the riots of 1863 a mob had possession of the city of New York. Hundreds of women and children were in the depot at Thirtieth street unable to reach their homes. The question was, how could they be got out? One engineer stepped forward and he said: "I will take that train out." Men mad with drunken frenzy, with rage, stood beside that track threatening to kill any man who would dare to move a wheel, but the calm courage and clear eye of that engineer awed these mad men and he led that train out of the station. After forty years' service on the New York Central road that engineer during the last summer, Henry Milliken, went to join the silent majority, but his name will be cherished and stand forever on the records of the New York Central road and its employees, and on the tablets of your records as a Brotherhood, as one of those unheralded heroes who ornament and adorn our common humanity. [Immense applause.] Libraries have been written upon capital and labor. They are mostly trash. We have so quick development in this country and have so many kinds there is no general rule that applies. But in every case, if there is, on both sides, good sense and a friendly feeling, labor and capital have no occasion to quarrel. If capital, in the desire to get undue profit, grinds labor down so that it threatens the existence of the family, there will be a revolt that will destroy capital. If labor, on the other hand, pounds capital by its demands so that it receives no returns for its loss, then the employment will be gone. But there is a middle line that should be defined. I look forward to the time when, through such organizations as you are at the head of, Mr. Arthur, [Applause] the lines will be drawn, not all over the country with labor on one side and capital on the other, fighting each other, but when they will be drawn in this way, that in the New York Central road, in the Pennsylvania road, and kindred organizations, from the president down, the officials of the road and its employees will feel that its energies, its enthusiasm and loyalty is to make its organization to which it belongs the most perfect in its service, the most popular in the country and the greatest in competing lines; and that with this union of feeling, there shall be a prosperity along its lines which will affect every business, every wage-earner and every bread winner, a prosperity in which the employer, corporation, stockholder and every employee shall equally share. [Applause.] The one thing that I want you gentlemen to do is not permit politics to take away all our engineers. [Laughter.] I find they have got a craze for office on the New York Central. One came to my office and said he wanted to be an officeholder. He had been twenty-five years on the road and thought he had run an engine long enough and ought to be able to run one corner of the government, and wanted a letter to President Harrison. I said I had written President Harrison about one thousand letters, and I had never heard

from him. [Applause.] "Well," he said, "write me one." I wrote one to President Harrison and just stated the facts and then stated my desires, and some how or other, I don't know how, he got in to see the President—and he got the office. It shows that with a letter from the president of the New York Central road—its present president—[laughter] and the cheek of a locomotive engineer [laughter] you can get anything out of the President. [Laughter and applause.]

It is often said railroad officers run for the legislature. Well, what if they do? But when a contest arose in our state as to who should be on the railroad commission, there were a half dozen of the most powerful politicians in the state wanting the place and one railroad engineer, because it was \$7,500 salary and lasts for five years. The fear on the part of the engineer, on the part of many, on the part of most, was, that if the politician would get there, he would advocate labor agitation, and that it would be bad for the corporations. As soon as that problem presented itself to me I made up my mind at once that the safety of the railways against unjust demands was with the locomotive engineer and I would throw all my force in his behalf, and he got it, and he has justified the appointment.

Gentlemen, this is your twenty-seventh annual meeting; more than any other labor organizations in the United States. The eyes of the people of this country are upon you. They have faith in your past, because your record justifies it. They have faith in your future, because they know you.

We do not hesitate to say if "taffy" were sugar, the B. of L. E. got enough of it to sweeten its coffee for a century, or, if it were syrup, Jay Gould might sail his yacht in it.

It occurs to our mind that Depew, being direct from the Passion play, concluded to take the B. of L. E. "up into an exceeding high mountain" and show them all the labor organizations federated under the laws of the Supreme Council, and say to the engineers, "I will everlastingly smash these federated orders, if you will fall down and worship me." It looks as though the engineers did not say to Depew, "Get thee hence," and the cheering would indicate a purpose on the part of a majority of the B. of L. E. to make a sort of a Joss of Chauncey M. At any rate, the speech of Depew made it possible to introduce Mr. Andrew Carnegie, another labor reformer, who works 5,000 men, and manages, it is generally conceded, to pay them on an average \$1.00 a day less than they earn, affording an annual net steal of \$1,500,000, by virtue of which in the course of a few years he has amassed a fortune of \$50,000,000. Such speakers held the audience spell bound, until finally, Grand Chief Arthur was introduced. He was cheered according to programme, but not as was Mr. Depew, the brand new apostle of labor. Mr. Arthur spoke as follows:

MR. CHAIRMAN, LADIES AND GENTLEMEN:

These conventions which we have held each year since the inception of the Brotherhood are to the organization what a chart is to a sailing vessel. We steer by them. This twenty-seventh annual convention will decide our course during the year to come. The considerations, judgments and finally the decisions reached by the delegates during the next ten days will control the thought and action of the organization until a twelve months shall come and go, and again we find ourselves back at the starting point on the never ending circle of time.

The uses of these Conventions are very apparent. A review of the year just ended is made: its weak-

ness and follies, its mistakes and grosser errors are brought to light, and with what wit and wisdom we possess we set about to prevent a repetition of the same, and to legislate more wisely for the welfare of what is dear to the heart of every Brotherhood man—the honor, well-being and advancement of our cause.

We do not feel disposed, nor do we deem it necessary, to enter into the details of the rise and growth of the Brotherhood of Locomotive Engineers. We feel that to the public we are so well known and, we trust, so favorably known, that to go back to the handful of men who assembled twenty-seven years ago in Detroit and organized for mutual benefit would be a needless and tiresome repetition. That those men understood their needs and acted wisely is evidenced by the proficiency and standing of the locomotive engineers to-day, while the motto of the organization, "Sobriety, Truth, Justice and Morality," can be plainly read in the faces of the delegates about us. Our Conventions have ever been times of happy reunion, and have resulted in much good to the organization and the men composing it. We come from every quarter of the United States, Canada and old Mexico, four hundred and twenty men representing four hundred and fifty-two sub-divisions, comprising a membership of 27,000. Though there is a oneness of purpose there is a diversity of thought and opinion, and we hope during the course of our debates to find an equation by which the problem of our difficulties and differences may be solved, to strike a balance between capital and labor as far as we are concerned, between the radical and conservative, that right may obtain and justice be done. We come before the good citizens of Pittsburgh as representatives of a labor organization that, notwithstanding adverse criticisms, has been doing all possible good to the members composing it. We believed that in union there was strength, and that, since capital combined to further its interests labor, too, might find it advantageous. We believed that out of this combination of interests would come an awakening of thought; that interest would be aroused in our fellow-men, and as the rules laid down for the guidance of members were rigidly enforced, a higher mental, moral and even physical plane would be sought and reached by many. What more noble end could we have in view?

To this end we established Divisions, organized an Insurance Association, published a Journal, and instituted public, private and social meetings, hoping that all of these things might shed a ray of light over the rugged walks of life and help the weary traveler onward. A desire in the heart of each one of those men who founded our Society to better his condition was the means of helping hundreds of fellow-men whose interests were identical with his own.

But who can estimate influence? It is like the tiny ripple on the surface of water occasioned by the casting of a stone, a single circle, small at first, but widening and widening until it seems as though the little arc enclosed the entire water surface. So, one by one our circles of influence widened and extended. Railroad companies have received the benefits and the public at large have shared the profits; for at the throttle of engines, drawing behind them trains freighted heavily with human souls or loaded with the labor and ingenuity of man, we have placed men, fearless and trustworthy men, who would scorn to shrink a trust or shrink in the face of duty, though danger stood by its side.

As divided as the duty of running a train appears to be, it after all depends upon one man, and he is the man at the front. His position is one of fearful responsibility. The lives of hundreds and the happiness of many more are at his mercy.

We can recount deeds as truly heroic performed by the man at the throttle, begrimed as he is with dust and soot, the trade-marks of his calling as any recorded in history by brave general or gallant knight. Notwithstanding the perils attending the life of the locomotive engineer, we find many men who are willing to drive, and who really enjoy driving, the iron horse flying quickly across the country from city to town, from prairie to woodland or mountain height. There is a fascination about the work to be found in few other occupations; but it is

a wearing life, and well worthy of consideration is the man who follows it. His lot is cast upon the side of labor and he becomes a factor in the knotty problem of the day.

There are people in the world who overlook entirely the grand and universal law of compensation and the nice adjustment and fair proportions of the same. Throughout nature there is no loss without some gain; the death and destruction of one thing is the very life and existence of another.

Human labor through all its forms, from the sharpening of a stake to the construction of a city or an epic, is one immense illustration of the perfect compensation of the universe—the absolute balance of give and take, the doctrine that everything has its price for what earth gives us. The beggar is taxed for a corner to die in. The priest hath his fee who comes and shrives us. We bargain for the graves we lie in. There is no way around this, no way of evading or turning aside this law. It holds for all right action as well. No right and right shall be done unto you. That which is good, like fire, turns everything to its own nature so that you can not harm it.

We are told that the royal armies sent against Napoleon when he approached cast down their colors and from enemies became friends; so disasters of any kind prove our benefactors and our weakness proves our strength. We who have watched the development of our organization know this to be true. Upholding what we honestly believed to be right and true and just, we have stood firmly at our post; have proudly declined to do what we considered an act of meanness or disloyalty; have ever stood ready to meet opposing forces upon neutral grounds, to discuss the situation, and try by fair means and compromising measures to make the adjustment satisfactory to both sides.

It is by honorable action that we have achieved success as a labor organization, not by might, not by loud and boastful assertions of what, owing to our numbers, we might compel corporations to do. No, that has never been our policy. We ask but fair, just dues, nothing more. The laborer is worthy of his hire, is entitled to hours of rest, is deserving of consideration, has the same needs, feels the same longings and desires, is altogether human and as much a man as he who sits in his office and directs the work of others. If there be those who would array labor against capital I am not one of them nor with them. If there be those who regard the interests of labor and capital as naturally or properly antagonistic I do not agree with them. In these words one of the most profound thinkers and active workers of the age, Horace Greeley, has broadly laid down the leading principle which underlies the great problem of labor. The soundness of the principle is self-evident; it commends itself to the good sense of every reasonable man, still more to the natural judgment of those whom habit of thought or practical experience has familiarized with the rights, interests, duties and needs of the laboring class. The interests of labor and capital are identical, or, to be more accurate, reciprocal. Any argument respecting labor topics which does not distinctly recognize and concede the truth of this proposition must needs be fallacious, and as a matter of fact it is so recognized and conceded by all the eminent authorities on the subject under discussion from Adam Smith down.

All evils arising from the frequent conflicts of these two great levers for time immemorial have been caused for the most part by the wilful or ignorant rejection of elementary truths, which all experience has demonstrated, and concerning which there should be no dispute; that civilized society is founded on accumulated capital and systematic labor; that it cannot dispense with either, and that each is mutually dependent on the other. How false is the general understanding of this subject a moment's reflection will make manifest.

We are too apt to be imposed upon by mere names. There is no impassable dividing lines between capital and labor. There does not exist any moral or physical obstacle to prevent a man from being a capitalist, the requisite industry and skill being assured. So long as man lives by selling his labor instead of applying it to protection on his own ac-

count he belongs to the laboring class—to employ a term which has the most common usage—and to no other, for all are laborers save the young and helpless; but the moment he begins to lay by money for investment or save for the satisfaction of his wants that stretch beyond the present hour he becomes in sort a capitalist, different from other and larger capitalists in degree only. This is in accordance with a general law of improvement, and no amount of false terminology can alter the fact.

Those whose business or pleasure it is to investigate the needs and interests of labor and capital should bear this in mind if they would simplify their difficulties. Especially should capitalists do so in regard to their own immediate advantage; for the man who has a reasonable expectation of bettering his condition and in time of being himself an employer will exert himself to acquire skill in the employment of which he is to subsist. On the other hand, he who expects to waste half his life in severe toil with inadequate remuneration will generally do as little as he possibly can. Such being the case, those persons who have accumulated capital and invested it in mining, manufacturing or other business, will find it to their profit, aside from all moral considerations, to do as well by those in their employ as may be consistent with their own interests, meaning thereby steady work and good wages. In this way both classes may work to their mutual benefit, the one receiving fair remuneration for daily labor, the other fair interest on vested capital. It is with real pleasure that I look back upon the past of our organization, reviewing its work and contemplating its future usefulness. Retrospect is, however, not without a tinge of sadness. As we recall the many who have been singled out by death and transported into the unknown, we marvel at the mysterious workings of Providence and are led to think that He still has work for us to do, else we had not been spared. We were created for a purpose, born to labor; and just here I would like to bring plainly before you a very nice calculation I saw recently as to the total harvest of this life is likely to yield.

Three score and ten produces a total sum of twenty-five thousand five hundred and fifty (25,550) days, to say nothing of some 17 or 18 more that will be payable to you as a bonus on account of leap years. Now, out of this total, one-third must be deducted at a blow for a single item—sleep. Next, on account of illness, of recreation, and of the serious occupations spread over the surface of a life, it will be little enough to deduct another third. Recollect, also, that twenty years will have gone from the earlier end of your life before you can have attained any skill or system, or definite purpose in the distribution of your time. Lastly, for attendance on the animal necessities, eating, drinking, washing, bathing and exercise, deduct the smallest allowance consistent with propriety; and upon summing up all these appropriations, a solid block of about eleven and a half continuous years is all that a long life will furnish for the development of what is most august in man's nature. After that, the night comes when no man can work—brains and arms alike refuse to serve.

It is important then, that each moment be turned to good account. Some one has said: "The stuff of which life is made is Time." Regard it reverently, not flippantly, for the moving finger writes, and having writ moves on; nor all your pety nor wit can have it back to cancel half a line, nor all your tears wipe out a word of it. Let us, then, be diligent. Conscience in our work, whatever it may be, is essential to right thinking and right doing. Keep it alive and active, and fraud cannot creep in nor dishonesty exist.

I think we may congratulate ourselves, not upon our freedom from annoying circumstances in connection with our duties, but upon the altogether commendable way in which these adverse circumstances have been made to result to our credit, if not altogether in our favor. The troubles with which we have had to deal are those that come in the way of every organized effort battling with life, its difficulties, disasters and disappointments. The stand we have already taken has been defensive rather than aggressive. Only a wise and conservative policy could have made our organization what

it is; and it affords me much pleasure at this time to grasp the hand of each delegate and bid him work on for the weal of a cause so worthy. I am not ashamed of the past. So far as I can see or know I have kept the Brotherhood close to my heart, next to my personal honor and dignity, and have given to it the best years of my life. I have endeavored to place it rightfully before the world, and to advance the interest of each member so far as possible. May the organization go on with its good work until the days of which Bellamy writes shall come when we shall be brothers indeed and protection no longer be necessary. This is a time of great moment to us. I hope we all appreciate it, and armed with truth will think and act independently, keeping in mind that each is an important factor in that unit and his opinion is likely to be right and wise and just as that of another. We wish to congratulate our sister workers, those who founded and are conducting a work auxiliary to ours, upon the success and general well-being of their organization. We feel that when we have the sympathy and support of our sisters we must be laboring in the right direction. We all know how unerring are woman's intentions, and that she has taken up our cause is sure indication of its worth. We wish them God-speed in their work, which is sure to bring its own reward.

We wish to give added prominence at this present time, and during the year upon which we are entering, to our Insurance Association, which is one of the benefits offered to those who become Brotherhood men. Of the necessity of insurance I cannot say too much. It is the duty of every man who has a family looking to him for support, not alone to provide for to day or for each day as it comes along, but to look into the future, and to anticipate the needs which will surely be as pressing then as now. In an hour ye think not, the Bible tells us, death will come. You may leave your family in the morning in the best of health, and at night be carried home to them crippled and maimed for life, or with the spark forever extinguished. Then, if there is no money in the bank, your life uninsured, a scanty wardrobe, a depleted larder, and hungry mouths to fill, and cries of want to stop, think for one moment of the position and anguish of the wife and mother.

I heard, not long since, of a case where a life had been insured and then the policy forfeited for non-payment of assessments. The party always intended taking it up again, but kept putting it off until one day he was forced to face the truth—it was too late. His last hours were filled with unspeakable remorse and regret. It costs some self-denial; where there is a large family it is not easy to save out of the wages earned by many; but bear in mind, it is not what you earn but what you save that helps, for one's needs are very apt to increase with each additional income; therefore, it is necessary to keep expenses down. Do it while you are young and your requirements are small; then when they are men and women grown, the interest on your savings will supply the increased demands and the principal stand you in good stead when old age comes on and you have reached and earned a resting time. The knowledge that your family is provided against want, or, what is worse, charity, is the interest on money invested in life insurance. I urge you all who hear me to-day to see that your name be found on our insurance roll. Let your time, money and ability go into the Society of which you are a member, all to come back to you as surely as ever it goes in. During the past fiscal year we have paid to the widows and orphans and disabled members three hundred and twenty-two thousand five hundred dollars (\$322,500), making a grand total of three million one hundred and twenty-two thousand six hundred and sixty-nine dollars and sixty-one cents (\$3,122,669.61). There are range and scopes for the best thought and work of every member of our Order.

Our Journal, published every month, is not only our organ of speech, but contains a literary department in which there is always a good story, besides numerous interesting clippings, a scientific department, and a department which, under the head of "Road," contains all matters of interest pertaining to railroads and railroadng. Then we have space devoted to correspondence, to the technique of an

engine, and the engineer; then comes the part, best of all to a Brotherhood man, called "The Journal." It contains items of importance and of much interest. There is always ample space each month for "shandy," and we wish we had more just like him. We are grateful to him and to others who have contributed so largely towards the success of our *Journal*, and solicit a continuance of the same for the years to come.

We live in an age of activity and bustle. The progress of art and science, literature with her fields of inquiry and fascination, the discovery and application of steam, and the inventions in the mechanical world, have given such a force and impetus to all branches of industry and commercial enterprises that we now seem to be taking our cue more from the ceaseless activity of the bee or the ant than from members of the human family. Turn where we will, this striving, this pressing, this ceaseless activity meet us at every stage and condition of human life. The laborer in the fields, the artisan in his work shop, the miner as he seeks for hidden treasures in the bowels of the earth, the merchant in his counting house, the student at his studies, the philosopher solving new problems and clearing up difficulties, and the statesman guiding the destinies of his country—all are straining their energies and muscles to the utmost, some for honor and renown, some for fame, some to be distinguished in art, literature or science, some for wealth, but most of all for a crust of bread.

All the knowledge and enterprise and experience of the past have been handed down to the present age, so that as one generation comes and goes and divides itself into ranks and classes each individual drifts into his or her own peculiar sphere of action. It may be that this sphere is one of humble station, but how many have risen from the ranks, from the loom, from the bench, from the plough, aye, even from the factory, to occupy positions of the highest eminence and importance. Still, each has his part to take in the great drama of life, and what matters it if that part be low or insignificant, if only it has been well and faithfully performed (aye, there's the rub), and if, when the curtain falls, we are found to have through life looked forward to hear those blessed words, "Well done, good and faithful servant; thou hast finished thy course; thou hast kept the faith." As our order is founded upon harmony and conforms its actions to the rules of equity and good order, so our passions ought to be properly restrained and be ever subservient to the dictates of right reason. As the delicate pleasures of friendship harmonize our minds and exclude rancor, malice and ill-nature, so we ought to live like brethren, bound by the same tie, always cultivating fraternal affection and reconciling ourselves to the practice of those duties which are the basis on which the structure we erect must be supported. By improving our minds in the principles of morality and virtue we enlarge our understanding and more effectually answer the great end of our existence. Such as violate our laws and infringe on good order we mark with a peculiar odium, and if our mild endeavors to reform their lives should not answer the good purposes intended, we expel them from our Divisions as unfit members of society. This is the practice which should universally prevail among Brotherhood men, our outward conduct being directed by our inward principles.

We should be equally careful to avoid censure and reproach. Useful knowledge ought to be the great object of our desire, for the ways of wisdom are beautiful and lead to pleasure.

I have prepared a special message containing such recommendations as in my judgment will tend to promote the best interests of our Order. This will be submitted during the sessions for your consideration and approval.

And now I feel I cannot ask you to listen longer. We are grateful for the cordial welcome which the people of Pittsburgh have extended us, for their presence here to-day, and for their kind attention during these exercises. We also desire to give expression of thanks to the various railroads and express companies for courtesies extended us. To my associates in office I would say that I heartily appreciate their kind and courteous treatment during the past year. I thank them for their sympathy and their willingness

to aid me in every possible way. And to this sturdy and progressive association, which has ever upheld and supported me, I extend the right hand of fellowship, and bid you hold fast with all the zeal at your command to the good principles which have placed you upon your present footing. We cannot all be men of genius, of talent, of high position, and of great usefulness, but what we can do, even the humblest in our midst, is by diligently using our own minds and opportunities, and diligently seeking to extend our influence and opportunities to others, to elevate and enlighten humanity as we find it about us each day. When our names are blotted out and the accustomed place knows us no more, the energy of each act for good or evil will remain. This thought may well lighten the load as we toil up the hill, burdened until we can bear no more. It will nerve our arm with boldness, strengthen our voice and deepen its accents against falsehood; and perhaps as we enter the valley of the Shadow of Death, it will cast a ray of light upon the pathway, when your eyes have become dim and our tottering footsteps have left the light and noise and whirl of the busy world far behind.

Such were the main features of the opening exercises of the twenty-seventh annual convention of the Brotherhood of Locomotive Engineers. The record is worth preserving and so far as it goes will be read with some interest by the members of the B. of L. E., all the more significant, because federation was defeated.

THE AMERICAN FEDERATIONIST.

The *American Federationist*, a "monthly journal for Federated Railway Employes," has made its appearance at Mattoon, Ill., under the editorial and business management of Brothers William H. Johnson, member of Welcome Home Lodge, No. 317, and Charles W. Martin, of Beacon Lodge, No. 111. Brother Martin is an experienced journalist and will bring to his chosen task an equipment of ability and familiarity with the work fruitful of success. Brother Johnson is endowed with those special qualities of adaptation to business, which bespeak for the new enterprise a prosperous career, which the *Magazine* hopes will be secured. The times demand agitation and argument to bring railroad employes into harmony of thought and action, and we hope the *Federationist* will have a large list of subscribers to encourage the brave boys who have entered the field of labor literature.

PRESIDENT FISH, of the Illinois Central, is delighted, because so many of the employes of the road are purchasing stock. Already the employes have invested thousands of dollars in the stock, and when all have an interest in the road, the result will be as one, to say fifty, and when their wages go down, the boys will be able to eat crow, and swear it is as good as chicken.

The people of the United States annually require 3,000,000,000,000 envelopes, or about 50,000 per capita, so says a statistician—or more properly a munchausen.

THE TROUBLE ON THE HOUSTON AND TEXAS CENTRAL R. R.

For some time past, according to advices entitled to credence, there has been more or less unpleasantness existing in certain localities on the Houston and Texas Central R. R., owing to the fact, that switchmen were required to work with negroes. As the matter assumed so much importance as to require the convening of the Supreme Council of the Federated Orders of Railway Employés, we deem it prudent to reproduce from the *Houston Daily Post* of Thursday, Oct. 9, the history of the matter, and this we regard all the more important since the action of the Supreme Council did not sustain the grievance upon which action had been taken by the men.

It appears, that a representative of the *Post* interviewed the officers of the railroad on the 8th of October, who gave their version of the situation as follows:

In November 1887 there was trouble in the yard of the Southern Pacific Railroad at Houston and, on account of it, the switchmen walked out. To aid their brethren, the switchmen in the Houston yard of the Houston and Texas Central Railway began a sympathetic movement and also walked out. They had no issue with the Central and no grievance of their own, but sought by a freight blockade in Houston to coerce the Southern Pacific into compliance with the demands of its switchmen. The Houston and Texas Central Railway company prior to emancipation, owned negro slaves. Its employés had also owned slaves. These negroes had worked in various capacities, as firemen, brakemen, etc. After emancipation they were put on the pay roll of the company. From the day of its creation as a corporation, therefore the Houston and Texas Central Railway company has employed negroes. It was no innovation in this respect. Negro labor was and is the ordinary labor of the country. With the influx of railway men from other States, and the intensification of the competition for employment, these negroes have been gradually crowded out of the service of the company; yet there is still on the rolls the name of a negro who was a slave of the corporation, and who as bond man and free served it faithfully and continuously for over thirty years. Another such died only two months ago. Many malarial sections of the line are tended entirely by negroes. In the yards of the Waco and Corsicana there have always been negroes, but at Houston in 1887 the switchmen were whites, though previously negroes had also switched in the Houston yard. Being thus abandoned in an emergency by men who admitted they had no cause of complaint, and having places in the yard which white men were bulldozed by the brotherhood from accepting, in its extremity the company turned to the labor upon which it had previously depended and by which it had not been harassed. But the negroes, having been formerly rooted out by the whites, would not accept the service of the company except upon a guaranty that they were not to be used solely to tide over a trouble, but would remain as long as they did satisfactorily the services required. It was found expedient by the company to retain white men in control of the yard as masters, and every colored crew was under a white foreman, and negroes were switching in the yard when these foremen were employed. Thus constituted, for three years the yard force satisfactorily handled the business of the company. As has been the case in the South for nearly 300 years, white men directed and black men performed the work to be done. The negroes were accustomed to the white direction; nor had ever white foremen considered themselves degraded by superintending negroes at work; some of the present officials of the road have bossed gangs of negroes. The late Superintendent

Charles Burton, when he was an engineer, owned his fireman. The fall of 1890 came fair and warm and cotton opened thirty days sooner than usual. The roads centering in Houston would have their terminal facilities taxed to the utmost to do the magnificent business that seemed about to come this way to the sea. The yards must not be blockaded; everybody must work with a will. To secure these ends wages were raised to the scale paid in Chicago.

It will be observed that the officers of the road claim that the employment of negroes at Houston, in the yards of the road, were employed on the occasion of an emergency, and notwithstanding the admission, that crews of negroes must have white men to oversee them, (as in old plantation times, a tacit admission of their inferiority—they are placed on an equality with white men in the matter of wages, and in all other matters so far as the railroad is concerned.)

In this connection the *Post* publishes the following:

AN APPEAL.

To the Officers of the Houston and Texas Central Railway, Charles Dillingham, Receiver; G. A. Quinlan, General Superintendent; J. M. Lee, Engineer and Superintendent—Gentlemen: We, the undersigned foremen employed in the Houston and Texas Central yard at Houston, respectfully submit the following, and request your immediate consideration: Much discord and dissatisfaction has arisen amongst us, owing to the employment of negro switchmen in the Houston yard. We feel that this is an injustice to us, both morally and socially. We have ever striven to perform our duty faithfully, and to the best interest of the company. We feel that our record indicates that we have acquitted ourselves with much credit, considering the very inferior support we have had. The negroes, believing they will be sustained in their actions, have become insolent and insulting to such a degree that it is intolerable, and we are placed in such a position that we cannot resent it. (Observation, deep and honest conviction, have taught us that we degenerate in the eyes of all, when we acknowledge them our equals, which we are compelled to do, as the position they occupy is on a par, and must necessarily be recognized as equal to ours, and compels us to directly associate with them to an unbearable extent. We consider it a consideration due us, as faithful employés of the company, that this negro labor be removed, thereby removing from amongst us our only cause for dissatisfaction. We wish you to be fully convinced that we do not propose to create any disturbance. If you cannot remove this objection, and have employment to offer us in any other department, we will gladly accept it; if not, please accept our resignations. We cannot, and will not be objects of derision any longer.

Very respectfully,

R. M. HOOVER.
G. N. INGRAM.
M. J. ALBERTSON.
R. M. CLARKSON.
H. W. STEWART.
J. G. THORNHURST.
E. W. KEEVER.

In response to this "appeal," according to the *Post*, Mr. Quinlan sent for Mr. Crooks, the yardmaster, and "told him the condition upon which the negroes were employed, and directed him to discharge any negro who was guilty of insolence or insubordination, but required him to fill the vacancy with a negro, in accordance with the promise of the company in 1887. Thereupon the white foremen walked out, and left the engines standing idle in the yard."

It will be observed that the yardmaster was instructed to discharge negroes for "insolence and insubordination;" but, strange to say, he was positively directed to hire other negroes in their places, thus giving a sharply defined preference to negroes over white men.

It is not strange, therefore, that the following document was promptly prepared and submitted to the officers of the road:

To the Officers of the Houston and Texas Central Railway.—Addressed: Charles Dillingham, Receiver; G. A. Quinlan, Engineer and General Superintendent; J. M. Lee, Engineer and Superintendent—Gentlemen: We, the undersigned committee, delegated by the Brotherhood of Trainmen, Brotherhood of Railway Conductors, Switchmen's Mutual Aid Association, and Brotherhood of Locomotive Firemen, composing the United Order of Railway Employees, beg leave to submit the following for your adjustment:

Article 1. The mere fact of negroes being employed in train, yard and locomotive departments of this company is causing many of our most worthy members to leave the service, because our positions are very closely allied and we are compelled to associate with them to a very considerable extent. We term it an injustice to subject us to an association which is directly antagonistic to our organization and taste. Therefore, we earnestly request that all negroes employed in train, yard and locomotive departments of the Houston and Texas Central Railway system be removed and white men be employed in their stead.

Article 2. The night yardmaster and yard foremen who sacrificed their positions upon the pinnacle of principle, we know to be sober, industrious and trustworthy, have ever worked diligently for the interest of the company, and would have gladly retained their positions had not their proud natures rebelled against the association that was forced upon them. We ask their reinstatement to their former positions.

Article 3. No employees shall be censured or discharged for the actions they have taken in the matter. Very respectfully,

GEORGE NEVINS, R. E. INGRAM, J. C. WILLIAMS, G. W. WILLIAMS, D. E. BRISCOE, G. D. K. REDMON, C. C. BRISCOE,	}	Committee.
---	---	------------

To the foregoing document Mr. Quinlan replied that "The foremen, in whose behalf these demands were made, had accepted employment knowing that the crews they must control were negroes, and that the negroes would not be discharged." As a result of the action on the part of the road, Mr. S. E. Wilkinson, Grand Master of the Brotherhood of Railway Trainmen, was summoned to Houston and the following correspondence, according to the *Post*, occurred:

Charles Dillingham, Esq., Receiver Houston and Texas Central Railway Company, City:

HOUSTON, TEXAS, October 3.—Dear Sir:—Please say to bearer when you could grant an audience to a committee of your employees, acting in conjunction with me, for the purpose of discussing grievances already presented to you, and which, owing to a failure to amicably adjust, have been placed in my hands. If it be your pleasure, I would prefer to meet you in the afternoon of this day.

S. E. WILKINSON,
Grand Master Brotherhood of Railroad Trainmen.

S. E. Wilkinson, Esq., Grand Master Brotherhood of Railroad Trainmen, Houston:

HOUSTON, TEXAS, October 3.—Dear Sir:—Yours of this date has been received. Mr. G. A. Quinlan, chief engineer and general superintendent, in charge of the transportation department, will meet the committee of employees this afternoon at 3 o'clock at his office in the depot building. Yours truly,

CHARLES DILLINGHAM, Receiver

Chas. Dillingham, Esq., Receiver Houston and Texas Central Railway Company, City:

HOUSTON, October 3.—Dear Sir:—Your answer to my note of to-day requesting an interview in conjunction with a committee of your employees has just been read. Do I understand the purport of your reply to mean that your Mr. G. A. Quinlan, chief engineer and general superintendent, will not entertain me in the matter alluded to in my former note? Yours very respectfully,

S. E. WILKINSON,
Grand Master Brotherhood of Railroad Trainmen.

HOUSTON, October 3.—Dear Sir:—Replying to your inquiry, I beg to say that I do not suppose Mr. Superintendent Quinlan will have any objection to entertaining you at the proposed meeting with a committee of our employees, provided you desire to be present. Yours truly,

C. DILLINGHAM, Receiver.

Chas. Dillingham, Esq., Receiver Houston and Texas Central Railway, City:

HOUSTON, TEXAS, October 3.—Dear Sir:—With a committee of your employees I called on Mr. G. A. Quinlan, chief engineer and general superintendent, and appealed to him to take some action tending toward a settlement of the grievances of your employees of which you are cognizant. I presented propositions and arguments to the gentleman for the purpose of effecting an honorable settlement to the limit of my official jurisdiction, but without results. It only now remains for me to ask you as the executive officer of the Houston and Texas Central Railway Company, if the decision of Mr. Quinlan, before mentioned, meets your approval and is to be considered final. If so, it becomes my duty to refer the matter to the Supreme Council of United Order of Railway Employees. This, sir, is a matter of serious importance, and I am of the opinion that if you will take this matter up personally and treat with us in the same spirit in which we approach you, a satisfactory settlement can be reached. I will thank you for a prompt reply. Yours respectfully,

S. E. WILKINSON,
Grand Master Brotherhood of Railroad Trainmen.

S. E. Wilkinson, Esq., Grand Central Hotel, Houston:

HOUSTON, TEXAS, October 3.—Dear Sir:—I have yours of the 3d instant, signed as "Grand Master B. of R. T. T." In reply I beg to say that any employee of the Houston and Texas Central Railway Company having a grievance of any character will always be heard, and I will see that justice is done, as between him and the company; but whatever action may be had must be on the application of the party aggrieved. You ask if the decision of Mr. Superintendent Quinlan in the matter you and others had before him, is approved by me and is to be considered final. My understanding is that Mr. Quinlan was requested "that all negroes employed in train, yard and locomotive departments of the Houston and Texas Central Railway Company be removed and white men be employed in their stead." The colored men alluded to were not employed from choice, as between them and white men, but were employed about three years ago to take the places of white men who abandoned the service which they accepted, and at a time when white men would not accept the same service. They were in the company's employ at the time the white men, who now complain of their employment, were taken on by this company, which fact was known to them at the time they accepted employment. The colored men have rendered faithful and efficient service and I feel it would be unjust to them, as it would to any other person, to turn them out simply to put others in their places. Entertaining this view, Mr. Superintendent Quin-

lan's decision in the matter is approved and may be considered final. I admit that this "is a matter of serious importance." It involves the rights of labor, upon which I am asked to inflict a blow without even a reasonable excuse, and I cannot believe that such a demand will either be sanctioned by the employes of the Houston and Texas Central Railway company, or by railway men throughout the United States. Yours truly, C. DILLINGHAM, Receiver.

Following this correspondence, the Supreme Council was convened at Houston, Texas, Thursday, October 9th, upon the call of Grand Master Wilkinson, of the B. of R. T.

At the session of the Supreme Council, the B. of R. T. was represented by S. E. Wilkinson, P. H. Morrissey and N. A. Bogert.

The S. M. A. A. was represented by Frank Sweeney, John Downey and M. W. Barrett.

The B. of R. C. was represented by J. W. Martin, Asst. Grand Chief Conductor.

The B. of L. F. was represented by F. P. Sargent and J. J. Hannahan.

The grievances, as presented in the foregoing account, were taken up, dismissed and not sustained.

A committee was appointed consisting of S. E. Wilkinson, Frank Sweeney, J. W. Martin, and Frank P. Sargent, to wait upon the Receiver of the Company. This was done, and it was agreed on the part of Mr. Dillingham, the Receiver, that the men who had resigned should be given places in other departments of the service with their rights, according to seniority. The Committee also informed Mr. Dillingham, the Receiver, that the color line could not be sustained as presented in the grievances of the employes, and this done the Supreme Council adjourned.

At this juncture, we do not desire to discuss the character of the grievances of the men, who were instrumental in convening the Supreme Council. The Council was on the ground; all the facts were at the command of the members of that body. That the decision, all things considered, will be regarded as judicious, we do not doubt.

WE acknowledge our obligations to Bro. D. J. Brown, who delivered the splendid address at San Francisco, for having interested himself in the fortunes of the *Magazine*, and as a result, securing for it FOURTEEN subscribers.

The incident is specially gratifying far beyond its financial significance. It is indicative of appreciation of the *Magazine* by a brainy Engineer, a member of the B. of L. E., to an extent that he desired others should know the value of the publication. We esteem such favors as specially valuable. Thanks, Bro. Brown.

THE Pennsylvania's new railroad shed in Jersey City, will have the largest span in the world, being 256 feet long.

THE WORKINGMEN HAVE A GRIEVANCE.

The following article, with the above caption, is from the pen of our esteemed friend, James H. Cater, editor of *United Labor*, Denver, Col.:

So says the brilliant after-dinner orator. We wonder, in view of the great strike that has for the past two or three weeks been the great news item for the daily and weekly press, whether the well known railway president is consistent, or if he was at the time those words fell from his lips or dropped from that brilliant pen, only dealing in those glittering generalities that the able speaker and writer uses with all the power of a perfect master and the subtle skill of a trained tactician. Looking across the broad Atlantic at the condition of affairs, seeing the untenable position that his arbitrary subordinate assumes, untenable, unmanly, unjust, unpatriotic and un-American, can the distinguished and versatile gentleman feel quite comfortable and at ease as a publicist and philanthropist, when his own words confront him and must inevitably lead him to the conclusion that, as a reformer, he must satisfy the public of his sincerity by calling the vice president down from a position that furnishes abundant proof of the assertion that on the very system of which Mr. Depew is the head the workingmen have a grievance, and a big one too? We feel it our personal duty to call the attention of our readers to the fact that some of these eminent gentlemen who take such noble positions on the labor question, either on the platform or through magazine or newspaper medium, are very often, alas, only theorizing, and when put to the practical test, are found wanting in consistency and truth. When a man puts himself on record as a reformer or friend of the masses, let his actions confirm his words, then the people can believe him and know whom to trust. We are forced to the conclusion that if Mr. Depew was sincere when he made this statement about the workingman having a grievance, he would not be luxuriating in European cities where many of his former employes are in a condition that has aroused the righteous anger of all fair-minded men and cast a shadow of doubt on the heretofore fine reputation that Mr. Depew enjoyed. If he meant all he said he would have come home on the first ocean racer and at least made an attempt to adjust matters and settle the grievance in that way that is characteristic of great and generous minds. Alas, we are afraid the gentlemen is not overburdened with consistency and the jewel does not become him. The connection between Mr. Depew and that would-be aristocrat, the misleader of the Locomotive Engineers, is now fully understood, and the development of a policy marked by the most cowardly treachery on the one side and corrupt subservience on the other, is a spectacle well calculated to arouse the public hatred against those gigantic monopolies who carry things with a high hand, and do not in their organizations through the influence of their associates. The workingmen have a grievance against Mr. Depew that will long be remembered unless he places himself right before the people. His tool, the sycophantic, groveling hypocrite, who professes to be a friend of all honest workingmen, will be regarded by intelligent and honorable men as a huge fraud and the greatest stumbling block to the labor cause ever had.

God knows it will be a bright day when the scale fall from the eyes of those poor, benighted down-easters who look upon the man from Cleveland as a superhuman being. There is much of the fox and more of the wolf in the make-up of Mr. Arthur, but his head and brush will be lopped off some of these fine days. Meanwhile let us turn on the light so that those who are in darkness may see things as they are.

Those who read the article, and none should overlook it, who receive the *Magazine*, will feel profoundly impressed with the idea, that when such men as Chauncey M. Depew can shape the policy of a Labor organization, the time for Gabriel

to blow his horn to summon that organization to decorate its mouth with a padlock, furl its banners, and bend its neck to receive the corporation yoke, is close at hand—*sic transit gloria Pinkerton.*

THE WESTERN RAILWAY'S EDITORIAL TIME PASS.

Having received from Cy. Warman, Esq., a "pass" as set forth in the head lines, we are not a little perplexed in mind and spirit—two in one, one in two, either or both, as you may prefer—what fashion to adopt to convey to the said Warman some idea of the height and depth of our gratitude.

It occurs to our mind that the right thing to do, would be to write a star spangled banner, pyrotechnic, aurora borealis sketch of Cy; to elevate him to a Pike's Peak altitude, where electric light requires no dynamo; where he could listen to the music of the thunder, and the roar of the tempest, and write poems which would make the mountains "skip like rams," and the "little hills like lambs"—and "rejoice" on every side of him. We would make him more picturesque than Castle Rock, and require him to stand sentinel at the entrance to the "Garden of the Gods," or the Royal Gorge, in fact, if we could, we would make him, from a sense of overwhelming gratitude, the *chef-d'œuvre* of all of nature's pictures on the "Scenic Route," through wonderland.

The "Time Pass" is itself a work of exquisite art. The colored engraving, at once takes possession of the soul, sublimates thought and aspiration, and lifts the beholder, by power divine, from the contemplation of nature, up to nature's God.

With the pass before our eyes, as we write, we experience ineffable pleasure. The display of art is in itself a poem. There is poetry in art, just as there are sermons in stones. Were we Cy. Warman we could write a poem on that picture, that would make Shandy Maguire wish our Pegasus were dead.

We'd write of rock
Of earthquake shock,
And wondrous things that far surpass
Old nature's freaks
Of mountain peaks,
All—but Cy Warman's Railway pass.

After saying this much, our readers may want to know what our "Editorial Time Pass" looks like.

It is not easy to describe it. There are only two sides to it. If any one should suggest, "that is too thin," we reply it is as thick as "card board." But to quiet anxiety we shall do our best to afford our readers some small per cent. of our own pleasurable emotions upon receiving the pass, by doing our best to reproduce it as follows:

EDITORIAL TIME PASS.

GORGEOUS SCENERY.

The Royal Gorge.

THE WESTERN RAILWAY.

J. O'Connor, Pres't.
P. J. Flynn, V. Pres't.

A. McFarland, Treas.
Cy Warman, Gen. Mgr.

Pass	Mr. Eugene V. Debs
Between	Terre Haute
And	Denver
On Account	Firemen's Magazine
Until	Dec. 31st, 1890.

CY WARMAN.

That is one side, the front side, really, the beautiful side—the attractive side, and accounts for the rushing tide of our thankfulness. On the other side of the pass, conditions are printed as follows:

CONDITIONS.

The acceptance of this Pass shall be regarded by the management as a mark of intelligence on the part of the acceptor. The person to whom it is issued will be expected to risk Two Dollars at this end of the annum—all other risks of wreck or derailment will be run by the issuer. When in the presence of the General Manager the issuer will assume an air of respect equal to that which flows from the fulness of a patient public to a Colorado politician or a passenger brakeman. When in the office they will use cuspidors to spit in, and will not be allowed to heat the Manager in a boisterous and unreasonable manner. Neither will they be permitted to tinker with the typewriter or punish the poet for any little funny business he may see fit to indulge in. When persons who have not paid for that privilege are found loafing along our lines of logic, prancing over our pastures of pathos, and seeking the sunlit summits of our mountains of mirth, the Conductor will take up this pass. Unless you monkey with the month marks on the margin this pass will expire some day, when you can have it renewed by flying a couple of eagles at the other end of the annum.

THIS PASS IS NOT TRANSFERABLE.

In accepting such a pass, it will be observed that the acceptor, secures *prima facie* evidence of "intelligence," which is worth something outside of Colorado, and if the acceptor risks "Two dollars," he should be regarded as a plucky fellow, in addition. Having been permitted to look upon several general managers at a safe distance, it will not be difficult to assume the "air of respect" indicated, and to mark well the location and distance of the cuspidor. Still, the General Manager will do well to be thoroughly posted in his catechism of good manners, and keep his "typewriter" where upper and lower case, interrogation and exclamation points, p's, and q's, may not get mixed up so as to require repairs.

The only objection we choose to make to the "conditions" relates to "loafing along the lines of logic and prancing over the pastures of pathos, and seeking the sunlit summits of mountains of mirth," which the *Western Railway* king claims to own and control. We are disposed, metaphorically, to kick at this. True, "two dollars" might purchase such delectable felicities as may be found in "pastures of pathos," and on the "sunlit summits of mountains of mirth." We do not doubt that in the "pastures of pathos" we could find where the woodbine twineth, and among the "mountains of

mirth" where the whangdoodle mourneth." In the "pastures of pathos" we surmise the mellifluous and pathetic notes of wolf and coyote might be heard when singing lullabys to their cubs, or when out giving troubadour serenades for the purpose of obtaining mutton or veal for their families. Far up the sides of the "sunlit mountains of mirth" our fancy pictures rich mines of jollity, and lakes of wassail, and raging torrents of hilarity. Once in the "pastures of pathos" we would be tempted to challenge every passing wind for a sighing tournament.

We like pathos. The language of pathos is as tender as a spring chicken, and as pathetic as the song of a dying swan. Firemen, conductors, switchmen and brakemen like pathos, and the men of throttledom are fond of it, and their Grand Chief gives them car loads of it in his addresses on federation. Chauncey M. Depew comes loaded down with it from the Passion play, and dashes it along the track like a street sprinkler. H. Walter Webb "loafs along the lines of logic," while Vanderbilt, Jay Gould, Russell Sage and Huntington climb to the "sunlit summits of mirth," where they laugh and grow fat.

Now all these delights and joys, these ravishments of ecstasy are ours, provided we accept the "pass."

By all the gods of the Greeks, we accept the "pass," and we will keep our gratitude fresh and flourishing to the last, and when landing in our checks will sigh, Warman!

PLAN OF FEDERATION.

In the month of September, 1888, in the city of Atlanta, the Brotherhood of Locomotive Firemen took the initiative in the great work of bringing the various Orders of railway employes, engaged in the train service of railroads, into a federated compact for mutual protection.

In the month of June, 1889, in the city of Chicago, the alliance was perfected, and since that time has been in full operation.

The plan of federation as devised at Chicago by the three great Brotherhoods—Firemen, Trainmen and Switchmen—acting under the laws of a Supreme Council, has had numerous opportunities to test its efficiency. So well did it work that at the expiration of the first year of its existence, the young and stalwart Brotherhood of Railway Conductors sought and obtained admission, and now four Orders of railway employes, having an aggregate membership of more than 50,000, are in line under the federated flag.

During the year 1890, these four Brotherhoods, viz: The B. of L. F., the B. of R. T., the S. M. A. A. and the B. of R. C., have held conventions. In every convention the plan of federation as devised by

the Supreme Council at Chicago in 1889 was *unanimously* indorsed—not a dissenting vote was cast.

Since June, 1889, when the Supreme Council was organized, and federation as it exists, adopted, a hue and cry went forth that the "plan" was unauthorized. The assertion was made, and every conceivable charge that stupidity, ignorance, envy jealousy or bigotry could wring in, was resorted to, to create dissatisfaction and defeat the plan of federation under the Supreme Council. This ungenerous and ungrateful work went steadily forward, playing, in so far as it played at all, directly into the hands of the enemies of organized labor—into the hands of the corporation, and in direct and flagrant antagonism to the federated Order.

Now, what of all this opposition? As we have said, every federated Order has, within the past three months, unanimously indorsed federation as it exists, and their laws relating to grievances, have in every instance been harmonized with the laws of the Supreme Council.

Could the defeat of the opponents of national federation be more overwhelming and crushing? We fail to conceive in what way a more disastrous defeat could have been accomplished.

But this is not all. Under the luminous and vitalizing light of the arguments in favor of protection, which finds its culminating power in federation, the O. R. C., no longer able to withstand the convincing power of reason, split at Rochester, and one faction reasserted its willingness to scab—to lick corporation dirt and crawl on its belly that it might be in a better condition to be kicked—while the other faction which, having knocked out the "strike clause," continues to assert that it has no power to strike, and that its principles have not been changed.

Again: The B. of L. E. finds within its jurisdiction a mighty host of chivalric men who demand federation, because they know it is right, who are men of conviction, and who have the courage of conviction; who do not quail nor get down into their boots in the presence of Chauncey M. Depew, Andrew Carnegie, Cornelius Vanderbilt or H. Walter Webb; men who are neither fossils nor fools, but trained trainmen, whose promotion made them neither dizzy nor crazy; men who love their fellow-man, like D. J. Brown, the engineer, of California, whose splendid words, clarion-toned, have the lifting power of genuine fellowship: such men are pledged to bring the B. of L. E. under the federated flag in due time.

Viewing the situation from our standpoint, we have no grievances to present. The outlook is full of hope, and the banner of federation never floated more proudly in the breeze than now.

CHINA WEDDING.

Of Mr. and Mrs. Frank B. Alley, October 27, 1890.

The readers of the *Magazine* will be pleased to learn that Brother Frank B. Alley, Past Grand Master of the B. of L. F., and Honorary Member of the Grand Lodge of the Order and his excellent wife, celebrated their *china wedding*, Monday evening October 27, at their pretty home No. 1,005 North Meridian St., Indianapolis.

The invitations brought together a company of ladies and gentlemen, about one hundred and fifty in all, and a more happy and joyous assemblage is seldom seen.

The supper, prepared by the *bride and groom* was simply superb, and the numerous presents, about 250 pieces of china, some of which were exquisitely beautiful and rich, bore eloquent testimony of the warm friendship entertained for the host and hostess.

During the evening Col. J. B. Maynard by request read the following exquisite verses composed for the occasion, which constituted a delightful incident in the evening's entertainment:

With joy we meet,
With pleasure greet
Our friends, who, for a score of years,
Have found it true,
'Twixt me and you,
That marriage brings more smiles than tears.

In fancy's play
Shall we survey
The road o'er which our friends have come:
The cuts and fills,
The dells and hills,
They've met to find this pretty home?

Shall we move back
Upon the track
To find where Frank Elmina woo'd,
And told his love,
Like cooing dove,
And won one long beatitude?

Though those bright days,
Through mist and haze,
May distant seem to longing eyes,
By magic power
They gild this hour,
And brighten cherished memories.

See, there they stand,
Hand joined in hand!
Their hearts beat time to wedding tunes—
Far sweeter they
Than roundelay
Trilled by the birds in rosy Junes.

The wedding ring,
Oh, who can sing
In seraph tones its potent sway?
It still is prized
And idolized
As on that happy wedding day.

In Hymen's boat
We see them float:
To sunny climes they bravely steer,
To find a home
In some bright zone
Where love makes summer all the year.

And fav'ring gales
Have filled the sails—
The truth affords us all delight—
In spite of rocks
And tempest shocks
They're in this CHINA port to-night.

And as the years
Of hopes and fears
Like meteors have flashed and fled,
Dear babes have come
To bless the home,
And contentment on their pathway shed.

Ah! who shall know
The joys that flow
From infant lips and infant eyes?
How childhood's smiles
And winsome wiles
Make home an earthly paradise?

We gladly bring
An offering
To deck the home of bride and groom:
And every dish
Contains a wish
That this, their CHINA honeymoon.

May be replete
With bliss as sweet
As trusting hearts have ever known
Since Eden's bowers
Of fruits and flowers
Was our first parents' home, sweet home.

Now our farewells
Are not like knells—
No murky clouds obscure the skies:
Nor is there grief
To find relief
In tremulous words and tear dimm'd eyes.

No sweeter song
To harps belong,
When on their strings the zephyrs play,
Than we will sing
Till time shall bring
Our dear friends' SILVER wedding day.

THE *Union Pacific Employes' Magazine* for October has an article on "Indications of Degradation," in which some phases of our not yet sublimated human nature are handled without gloves. The *Magazine* takes little stock in the "nobility" of that class of workingmen who complain one moment of their "treatment, and the next do that which insures the continuation of that treatment; like the dog that licks the hand that smites him."

The *Magazine* refers to a grand display of workingmen in Denver, September 1st, marching and proclaiming they were united to throw off oppression, and "thirteen days later were seen doing their masters' bidding," and "riveting their dangling chains."

Manifestly, such exhibitions of human nature are not pleasant to contemplate, and demonstrate the importance of organization and education.

It is only recently that labor has had a literature of its own, and all things considered, splendid headway has been made, and we say to our contemporaries, keep up the fight, the labor army, as a whole, is making headway.

Just think of it! The distilleries of Peoria, Ill., have a capacity of 180,000 gallons a day, or 5,634,000 gallons a year. Peoria is the greatest whisky town in the world.

MR. Gladstone has entered the arena in defence of Moses, whom he expects to meet at an early day.

GEORGE W. CHILDS WAVING THE DANGER SIGNAL FOR THE B. of L. E.

The Philadelphia *Public Ledger*, owned and controlled by George W. Childs, in its issue of October 27th, professes to see that the Brotherhood of Locomotive Engineers is in great danger. Mr. Childs, therefore, hurriedly abandons his palatial residence, his millionaire guests, and rushes forth and waves the danger signal, as follows:

On Thursday last that model trade organization, the Brotherhood of Locomotive Engineers, seemed to be on the brink of the fatal misstep of surrendering its strong individuality and of destroying its independence, upon the report of what is called the "Committee on Federation." That committee recommended "federation" with railway employees in general—viz, switchmen, trainmen, firemen and others that have each their own brotherhoods or union. A minority report from the same committee opposed such federation or affiliation, and this minority report was the wise one.

The two reports were sent back to the committee. It will be a piece of good fortune if the Brotherhood shall escape the rock on which the adoption of its "Committee on Federation's" plan would certainly wreck it. There has been no such element of strength in the Locomotive Brotherhood or in any other labor organization as the individuality revealed in its honorable and conservative history and in its steadiness of conduct. This results from the good sense with which its affairs are managed, and from its independence and freedom from complications with other orders, unions or brotherhoods less judiciously governed. The preservation of that individuality and independence is indispensable—vital—to its success and to the continuation of the public respect which it now commands.

If it had been in this federation of railroad men, what traps and risks and embarrassments it would have encountered in the last three months, growing out of the ill advised and even crazy strikes of switchmen's unions and Knights of Labor agitators! The Brotherhood would have been involved in no end of conflicts brought on by contentious men, in which it had no direct interest or concern; in which its good name would have been smirched; and under the load of which it must have gone down with the others.

In its individuality and independence and wise management, the Brotherhood of Locomotive Engineers is the strongest and best respected trade organization in the United States. "Federated" with such wretchedly managed concerns as the Switchmen's and Trainmen's Unions, it would be weak as the weakest of its confederates. It would be perpetually at their mercy. That is inevitable.

The foregoing is from the pen of a man who rolls and revels in luxurious wealth; whose princely entertainments afford an inexhaustible supply of materials for a class of penny-a-liners to work into pyrotechnic descriptions of banquets, guests—fair women and millionaires, domestic and imported; costumes cut high and low in the neck, diamonds and dances, music, statuary, paintings, and many other things that Mr. Childs' colossal fortune permits him to enjoy and to lavish upon those who find sufficient favor in his eyes to receive an invitation to visit his palace.

Now, all of this is permissible under the constitution. There is no law requiring Mr. Childs to live in an unpretentious house when he has the cash to build a palace. There is no law requiring Mr. Childs to associate with locomotive firemen, or with

brakemen, switchmen or conductors. He is not required to invite them to his banquets, to partake of viands fit for the gods, such as the Depews, the Vanderbilts and the Carnegies enjoy every day. For such things we care nothing, except in so far as those who enjoy them are led to assume that, by virtue of them, they are constituted a class who may with impunity say, as does George W. Childs, mean and vicious things of men who, though they work—work for small wages, during long and weary hours; who, though they live in humble homes, often wretched homes, and subsist upon coarse food and wear "hoddenn gray;" who, though they are the victims of oppression, and are robbed for the benefit of soulless corporations; are, in every essential of manhood and citizenship, the peers of George W. Childs.

The fact that George W. Childs selects the Brotherhood of Locomotive Engineers for special laudation is a matter of no concern whatever. We admit that that Brotherhood is numerically great and influential. We know its power and consequence, and do not hesitate to place upon record any and all virtues it may possess. That is not the point. The purpose of George W. Childs, Chauncey M. Depew, and other writers and speakers, is to magnify the importance of the Brotherhood of Locomotive Engineers by dwarfing and stigmatizing other organizations of railroad employees, particularly those organizations that constitute the federated body of railway employees—firemen, trainmen, conductors and switchmen.

George W. Childs warns the engineers to keep out of the Federation. According to the showing of Mr. Childs, a majority of the "Committee on Federation" reported in favor of federation, at the Pittsburgh convention. Here proof was furnished, strong as "holy writ," that federation, in the opinion of a majority, had transcendent merits, and ought to be adopted by the convention. Now George W. Childs, not a locomotive engineer, not a workman of any order, simply a millionaire who owns a newspaper, tells the engineers that federation would "wreck" the Order; but why such wreck should occur, as the result of federation, not one reason, nor anything bearing the semblance of reason, is afforded.

The engineers, in the face of a report of the majority of their committee on federation favoring its adoption, are warned against it by George W. Childs. Why? Is it because the engineers and the federated orders have no mutual interests to protect? no mutual rights to maintain? No? The objection Mr. George W. Childs urges is that in federation the Brotherhood of Engineers would sacrifice its "individuality." would get mixed up in "conflicts" brought

on by "contentious men," members of "wretchedly mismanaged concerns," as the Switchmen's and Trainmen's Unions."

In all of this there is no argument. It is simply an appeal of a millionaire of extremely aristocratic proclivities, for one labor organization to ostracise all other labor organizations, play autocrat and aristocrat, and make itself odious in the eyes of the federated orders of railway employés, which, as the records show, in intellect, comprehension of the needs of labor, courage, devotion to principle, in charitable work, care for the living and for the dead—in all things that dignify and exalt men, are the equals of the engineers.

During the C., B. & Q. strike Mr. George W. Childs, then, as now, the owner and editor of the *Public Ledger*, ceaselessly denounced the engineers. He had the B. of L. E. totally wrecked on that occasion. He was then for Messrs. Perkins, Stone & Co., Pinkertonism, scabism, or anything else to defeat organized labor. Mr. George W. Childs is not a fool. He is a millionaire, with all the instincts of his class. He sees in federation the ultimate triumph of labor. He sees in the defeat of federation the triumph of the corporation. Mr. Childs is for the corporation, which accounts for his efforts to defeat federation in the B. of L. E. Convention.

WE find the following item in an exchange:

The cost of strikes in New York alone in 1886 and 1887 was \$8,507,449. From 1881 to 1886 Mr. Gilman estimates the cost of strikes to be \$100,000,000. Carroll D. Wright puts the figures still higher. Mr. Baker estimates the average annual cost of strikes at \$20,000,000.

Manifestly, strikes are expensive, and it is quite as true that many strikes have been ill advised. No sensible man controverts such propositions. But why not estimate the profits of strikes? Why not tell what they have accomplished for workingmen? Gladstone is of the opinion that strikes have been of positive benefit; and that is true. Strikes have reduced working hours from 14 and 16 hours out of 24, to 8, 9, 10 and 12 hours, or to an average of about 9 hours of the 24. Strikes have advanced wages on an average of 25 cents a day for 10,000,000 of working people since strikes first began for the purpose of righting antiquated wrongs, so that the gains, on the whole, are vastly in favor of strikes. Strikes have accomplished another great good. They have, says Mr. Gladstone, taught men, who have been oppressing labor, that it don't pay and that it is more profitable to be just.

Workingmen organize to secure rights without striking, if that is possible. They prefer arbitration, but strikes will occur when other means fail to remedy wrongs.

SOUVENIR PROGRAMMES.

It ought to be understood that the Brotherhood of Locomotive Firemen is not to be transformed into a band wagon nor a dead wall, for the purpose of aiding sharpers to ply their vocation by the *Souvenir Programme* dodge or any other description of advertising jugglery.

Already, on more than one occasion has the good name of the Brotherhood been smirched by fakir advertisers, who, ascertaining the time when the Brotherhood was to hold a convention, offer some Lodge an amount of money to issue what is impudently termed a "souvenir programme." Having paid the money, and secured the right (?) the programme charlatans proceed to solicit advertisements, making loud professions of circulation of the "programmes," representing the Brotherhood as the backer of the enterprise, and that great gains to those who patronize the "programme" may be calculated upon. Already, a number of cheats and scallwags have played the game, conspicuously at San Francisco, and the good name of the Brotherhood has suffered thereby, for those who have been defrauded pretend to see in the transaction a Brotherhood partnership.

It would be difficult to arrive at a more ungenerous or false conclusion. The Brotherhood has never had a farthing's interest in the outcome of such schemes, nor ever in any way authorized any one to make such representations. The Brotherhood never guaranteed publishers of "programmes" aid of any kind, nor consented to any appeals for patronage based upon its indorsements of any character whatever.

What has been done cannot now be helped, but let it be distinctly understood that in the future no "souvenir programmes" will be issued, directly or indirectly, under the auspices of the Order, for any consideration whatever—and this fact we desire those to know who have patronized the *Magazine* with advertisements from time to time.

THE *National Car and Locomotive Builder* remarks that "publishers of books on railroad subjects say that there is less demand among New England railroad men for literature relating to their business than there is among railroad employés of any other part of the country. In the West and South one seldom meets with a young engineman who is not familiar with the literature of his business, but in New England the reading men are conspicuously scarce. We lately conversed with the traveling engineer of a prominent New England railroad who had never heard of Phelan's Air Brake Practice. The man's ignorance of air brake matters was phenomenal, considering the position he held."

A HOME FOR BROTHERHOOD RAILWAY EMPLOYEES.

There is something exceedingly fascinating about the word "home." Standing by itself, it never arouses a thought that is not in accord with the ideas suggested by "Mother" and "Heaven." If you want "home" to be the sign of some other idea, you must qualify it. Home means rest, contentment—a place where there is love and joy—to the landsman, it is what a snug harbor is to the tempest-tossed sailor. There are thousands of men who have no home. While in health, at work, with plenty of money, home is often forgotten—too often doubtless; but sick or disabled, with neither money nor moneyed friends to invest their cash for his comfort, the homeless man is wretched beyond description.

What can be done for such unfortunate men? Well, much can be done for them at a very limited expense if the Brotherhoods of railway employes so determine.

We have on our table two letters, of recent date, from J. B. Spencer, Secretary and Treasurer of the BROTHERHOOD OF RAILWAY EMPLOYEES HOME, of Chicago, office, 166 Randolph street, incorporated under the General Laws of Illinois, as a charitable institution.

These letters are urgently solicitous that we do what we can to bring this charitable institution to the attention of our Brotherhood. In addition to the letters, we have received a "folder," explaining why the Home was founded, how it is sustained, etc.

The Home was founded, "opened," because many railroad employes receive injuries in the performance of their perilous duties, and in their days of misfortune "are without home or friends outside of their Brotherhood, or they are the victims of "consumption, or some other lingering disease," which disqualifies them for work, or they are "superannuated." In all such cases they need a home, where they may receive proper care. "These men," say the officers of the Brotherhood of Railway Employes Home "are our brothers, and THE HOME was opened that they might have a home with all the word implies, in so far as it lies in our power to give it to them."

The Home is maintained "solely and entirely by voluntary contributions." There are no high-salaried officers, and "any brother in good standing in any one of the several railway organizations, such as the B. of L. E., B. of L. F., O. R. C., B. R. C., B. R. T., S. M. A. A., are eligible to be admitted."

It is essential to the success of this charitable institution that it should become widely known to the Orders for the benefit of whose unfortunate members it has been established, and in addition, that every "Lodge of each organization may select

some good, active member to canvass his Lodge for subscriptions," so that every Brother may have an opportunity to give something.

Mr. L. S. Coffin is President of the Home. a guarantee to railroad men that the institution is all that it professes to be, a Home "with all the word implies."

Says the circular: "Do you know of a Brother who is in need of The Home? Then have your Secretary send to Mr. J. B. Spencer at once for the necessary blanks, which will be returned promptly on request, and send the Brother to us and see what report he will send you of our treatment of him." In the letter to us, Mr. Jay B. Spencer, Secretary and Treasurer, says: "If they" (the Lodges) "are unable to secure free transportation for the Brother, if they will let us know, we will try to secure it for them."

The Home is not a hospital, nor is it connected with any hospital; it is a Home where the sick and disabled may find rest and regain their health and strength.

In answer to the question: How will the Home benefit these Brothers? The reply is: "First, any Brother who is able, will be taught some business; such as book-keeping, telegraphy, stenography, type-writing, etc., or some light trade, such as jeweler, cigar maker, etc., whichever he may choose. and we will endeavor, by close study of his natural ability, aptitude and present education, to aid him to an intelligent choice. and when he has mastered the business or trade thoroughly, he living at THE HOME while doing so, we will endeavor to place him in a good position, where he will be independent and will have promotion to look forward to."

It will occur to the readers of the *Magazine*, we think, that THE HOME is a good institution and deserving of aid in its noble work, and we take no little pleasure in calling the attention of our membership to its charitable objects and aims.

BEN BUTLER now has an income of \$200.000 a year, but he once made chairs at 20 cents a day. Ben is probably worth \$2,000.000, which nets him 10 per cent. If Ben had kept on making chairs at 30 cents a day it would have required him to work something over 20,000 years. In some way Ben has been greatly favored.

A DENVER boy has built a coal-burning locomotive five feet long, and weighing 25 pounds, the smallest in the world, and a jeweler has built an engine with a boiler half an inch high, piston with an eighth-inch stroke and balance wheel a quarter inch in diameter. It weighs four penny-weights.

IT PAYS TO BE HONEST.

The grand old aphorism, "Honesty is the best policy," is destined to live forever. It cannot be revoked; like a fixed star, it is an unerring guide. It is proverbial philosophy, condensed wisdom, eternal truth. It can be easily engraven upon the memory, incorporated into the conscience, made available in everyday life. It is every man's friend. Beautiful in brevity, majestic in leading and lifting power. He who learns it, remembers it, heeds it never goes wrong, always goes right. The man who is governed by it never goes wrong; the man who disregards it never goes right. "Honesty is the best policy." Look at it, ponder it. Contemplation expands it. It becomes colossal. The man who practices honesty has no dark shadows resting upon his life, no corroding memories to gnaw like cancers, and he knows, as the world knows, that "it pays to be honest." What is it to be honest? What is it to be dishonest? To be honest includes all the virtues; to be dishonest, includes all the vices. To be honest is to be "decent, honorable, fair, good, unimpeached; fair in dealing with others, free from trickishness and fraud; acting and having the disposition to act, at all times, according to justice or correct moral principles, upright, just, sincere, chaste, faithful, virtuous." Hence, it is said, "an honest man is the noblest work of God." It is only required to say that dishonesty is the opposite of all this. Manifestly, it pays to be honest. These reflections are suggested by a letter from a man, once honored by his Lodge by conferring upon him the responsible position of "Financier." He obtained the money of his brother firemen, and kept it, refused to make restitution, was expelled and went forth into the world with a crime mark upon him. He has since been a wanderer in the earth. There has been no peace for him. He says he has no one to blame but himself. Manifestly so. Dishonesty is an individual matter. This dishonest fireman, this crooked Financier wants to be reinstated in the Brotherhood. He is penitent. The question is not one of sentiment and sympathy, it is one of honesty. The amount of money taken by this Financier was not large—it was simply all he could get hold of. Locomotive firemen are not rich in cash. Lodge funds come in by small contributions from meager wages. To rob a Lodge of Locomotive Firemen is a crime we find it difficult to characterize, there are in it elements of depravity which do not admit of condonement by penitential expressions. Such a crime touches not only the pockets of hard working men but widows and orphans and desolate homes. But there is one way, and only one way, by which penitence can be accepted as genuine and which would make it available as the ground for considering

reinstatement, and that is a restitution of the money taken. Suppose the sum taken was \$75.00. It might not be possible for the crooked Financier to restore it at once. But, as certain as that rivers flow to the sea, if the man is penitent, if he has any proper conception of obligation, if he is worthy of a moment's consideration, he will evidence his penitence by restitution by *single* dollars or half dollars and to do this, no sacrifice of ease would be considered for one minute, and until that is done there is no penitence, no reformation, and the man is crooked still. Restitution by mites, like digging down a mountain by spadefuls of earth, is the one evidence of a change of heart and purpose. Without it tears and professions are valueless. Until that is done the crooked Financier in no proper sense believes that "Honesty is the best policy" or that it pays to be honest. To reinstate such a man is to reinstate a rogue. Every thing pertaining to the Brotherhood of Locomotive Firemen speaks trumpet tongued for honesty. Without it the Brotherhood would be wrecked past redemption in a day. The principles of the Brotherhood, its precepts and its motto demand honesty, integrity, fidelity to obligation, and by virtue of these principles it has prospered, and adhered to through thick and thin, storm and shine, through evil as well as good report, it will continue to prosper, and he who wrongfully, thievishly takes the money of the Lodges, is the enemy of the Brotherhood, and if in any instance he is worthy of reinstatement in the Brotherhood it can be only when he has made full restitution, paid back the money criminally taken.

"THE movement," says an exchange "among train-dispatchers looking to an advance in their pay is taking shape. While no strike is threatened, they go about the matter in a manner that will doubtless lead to the railroad managers recognizing their claims. As the business of the various roads increases and the trains multiply, the position of train-dispatcher is becoming more important. Another thing which should receive the attention of the dispatchers, says one of their members, is to take steps to prevent inferior and incompetent men taking the position of train-dispatcher. One in a position to know says that 50 per cent. of the collisions in this country are the result of employing incompetent men in train-dispatchers' offices, and at way stations inferior telegraph operators." The pay of train dispatchers is a beggarly sum. No position is more important. It is one in which the travelling public has a deep and abiding interest. The press of the country should never cease agitating the subject; it is a case of life and death.

THE MAGAZINE.

With this, the December number of the *Magazine*, all subscriptions for the year 1890 expire. With January, 1891, a new volume begins, and all subscriptions must be renewed.

What of the *Magazine*? This: As a brotherhood organ, as an advocate of organization and of federation, as a publication in sympathy with all organizations of workmen it has secured a *front seat*, the right to which is admitted and stands *unchallenged*.

In view of such facts our *Magazine* Agents can well afford to present the claims of the *Magazine* to men and women in every community and solicit their subscriptions. They can afford to be aggressive, to canvass industriously. They can say, truthfully, that the next volume will be more valuable to subscribers than any of its predecessors. Improvements will be introduced, and higher literary excellence will be secured. Matter, of an objectionable character, will be permitted to "sleep the sleep that knows no waking." Matters of a purely personal character will not appear—and the *Magazine*, for the first time in its existence will be in a position to devote its space and energies to erect a higher standard of excellence in its various departments.

What is wanted now, on the part of our *Magazine* Agent is their best efforts to enlarge the subscription list of the *Locomotive Firemen's Magazine*.

What is wanted now is, that every one of our 19,000 members shall take hold of this subscription business, and help, by every means in their power, to secure subscribers.

Let the work begin at once and in earnest. We have faith in the fealty of our brothers. If they will work for the *Magazine* as they have the ability to work, our subscription list, for Vol. XV, will not be less than 40,000.

It is reported that "a train that pulled into St. Paul the other night had among its passengers a little girl of seven, Jennie Peasley, who was traveling unattended to Sitka, Alaska, to join her parents. She had been living in Newport, R. I., with relatives. She had attached to her clothing a card giving her name and destination, and asking strangers to take care of her. She talked quite freely and said she was having a good time, and everybody was kind to her. It would be difficult to pay a higher compliment to the men in charge of the train service of the country.

The seed of the seceding conductors did not sprout to any great extent. It is a fact that even railroad corporations like men who dare protect themselves. It is an American idea—not Hungarian nor Italian. A "scab" is a loathsome thing and is daily becoming more detestable.

PICTURES.

Professor DeLeon, of Columbia College, in an address before a stenographers' association, said:

At the time of the establishment of the Republic of America, it would have been a perfectly rational prophecy to have said that the Republic could not last. Madison said that a republic could not be a permanency when any large number of the people were simply cattle. But the Republic has not gone down. Neither did those of Greece and Rome go down at once. To-day one man can produce as much as it took 100 to produce 100 years ago. The same quantity of wealth can be produced in one-fifth of the time. This is through machinery. By steam power the necessary hours of labor have been reduced to one hour as compared with ten. Transportation giving the means of exchange of commodities, has combined with these to increase the productivity of labor one thousand fold. In view of this, wealth ought to be the most plentiful thing in the world. But if statistics are approximately true the average laborer does not earn nearly \$1 a day. Wealth may have increased in the hands of some, but has not in proportion among the others. There is not enough actual wealth in the United States to supply all its inhabitants for one month. Under the present system the non-productive army is enormous. The middle men come in also in equal numbers to the producers. All the stores dealing in the same commodity in the same neighborhood are unnecessary and prejudicial to the general good. From this follows the misery of the many and the immorality of the few. This necessitates all the police and soldiers. The people of our Four Hundred, those of Fifth avenue and Madison avenue, do not trust one another. They smuggle detectives into their ball-rooms to prevent their diamonds being stolen—by whom? By their own guests!

The Professor's subject was Bellamyism. and he spoke for the new party, known as "Nationalists." There is not a wrong of which Prof. DeLeon complains, that could not be exterminated in five years by the fiat of the ballot, if all honest men could be marshaled under the banner of common sense reform—a reform free from vagary, crankism, and utopian follies. For instance, trusts and monopolies could be abolished. The water, upon which the people pay enormous dividends could be squeezed out of stocks and bonds; the hours constituting a day's work could be fixed beyond repeal or appeal. Honest men could be elected to make honest laws, and honest officials could be elected to execute them. Why not be practical? Why not use the means at hand to usher in an era of reform? If workingmen would organize and then federate their organizations—land piracy, trust piracy, monopoly piracy and corporation piracy would cease.

JAY Gould's boy entertains the pretty superstition that by wearing his wife's picture in a locket on a chain that no serious misfortune can befall him, and that whether bull or bear he will always win.

SAYS an exchange: The total number of passengers carried in the United States during 1889 was 472,171,343. One passenger in every 1,523,133 was killed, and one in every 220,024 was injured.

**WM. D. ROBINSON.****WM. D. ROBINSON.**

"The glories of our blood and state
Are shadows, not substantial things;
There is no armor against fate;
Death lays his icy hand on kings:
Sceptre and crown
Must tumble down,
And in the dust be equal made
With the poor crooked scythe and spade."

On Friday, November 7th, 1890, in the town of Washington, Daviess County, Ind., Wm. D. Robinson departed this life, in the 65th year of his age.

The announcement of the death of Wm. D. Robinson, outside of a limited number of personal friends, created no stir in the

little town of Washington, situated on the O. & M. R. R., and yet, when Wm. D. Robinson breathed his last, a really great life went out, and a great soul winged its flight to meet its creator.

Wm. D. Robinson was born May 22d, 1826, and was therefore at the date of his death, 64 years 5 months and 15 days old.

For several years past, Mr. Robinson had been in declining health. His disease, baffled the skill of physicians, and the patient, always hopeful, sought to arrest its progress. His courage never deserted him. He realized that the disease, whatever it was, steadily impaired his physical powers. He

saw the inevitable. The pale horse with its skeleton rider was ever on his track, following him through every lane and avenue of his pilgrimage. Death knew, that in Wm. D. Robinson, he had a shining mark but withheld his shafts that his victim might linger, and in his home and on his bed, might watch his declining sun, see it touch the horizon's verge, provided, at its setting, no clouds obscured the view.

Fortunately, the splendid intellect of Wm. D. Robinson remained unclouded to the last. His sun went down in tranquil beauty. Mellow light bathed the scene in supernal glory. He had lived and wrought a great work for his fellowmen. He had loved the poor. He had championed the oppressed. He had laid the foundations of a great Brotherhood deep and strong and enduring. He had guided its destiny when in its swaddling clothes, had grasped it in his manly arms when its step was faltering and unsteady. He had watched its youth and young manhood with unflinching trust and solicitude. He had seen it grow in strength and influence until it grasped a continent and boasted of a membership of 28,000 locomotive engineers; and turning his gaze on his dying pillow, while his pulse grew faint and few, and the death chills were creeping up to his heart, he saw the fire burning in Lodge No. 1; then following the march of the Order with his eyes fast glazing in death, he saw the blazing light of 452 Lodge fires shining on all the elevations, and in all the valleys of the continent, from Nova Scotia to the golden shores of the Pacific; from the orange clime of the South, to where the Arctic blasts mark the boundaries of civilization.

Who shall tell of the entrancing visions of the dying first Grand Chief of the Brotherhood of Locomotive Engineers?

It does not matter who was in the room when death was doing its work. It does not matter who stood around and beside his dying couch—a dying man is always alone with death. It is a supreme hour. The mind, when left unobscured, in an instant grasps and groups every incident from youth onward to old age.

We surmise, that the dying ex-Chief lived over again the years which were devoted to the great Brotherhood he founded. They were years of toil, years of doubts and fears, years of battles, of defeats and of victories—years which required courage as lofty as was ever displayed on any battlefield from Marathon to Appomattox—and we surmise that these years, as they passed in review, like an electric flash, enabled the dying chief to say, "I have fought a good fight for locomotive engineers, my brothers of the foot-board."

Was Wm. D. Robinson, founder and father of the Brotherhood of Locomotive

Engineers, rich in this world's goods? Oh no. He was a poor man. He did not

"* * * Crook the pregnant hinges of the knee.
Where thrift may follow fawning."

He was one of the noble souls who preferred poverty to perfidy. His soul was as far above deceit and hypocrisy as the stars are above the earth. His tongue was for the utterance of kind words and generous words for men who were struggling to better their condition.

Wm. D. Robinson was honestly poor. He knew what it was to suffer, and the world knows, that however severe the ordeal be preserved the dignity of silence. When he was Grand Chief of the Brotherhood of Engineers, the Order could not pay him a princely salary.

When Wm. D. Robinson was told, by Indianapolis physicians, that his disease was cancer of the stomach and would prove fatal in a brief time, he simply replied, "It behooves me then, to put my house in order." There was no tremor, no trepidation, no mental discomposure. He was not surprised. He accepted the inevitable with knightly courage, and went home to "put his house in order"—went home to await the final summons—went home to die.

While he was "putting his house in order" a few of nature's noblemen, members of the B. of L. E., interested themselves in his welfare. They would ask the great and rich Brotherhood of Locomotive Engineers, founded by Wm. D. Robinson to contribute so much from their plethoric treasury, as would make the last days of their ex-Chief free from all worldly anxiety—that, whatever else might come, destitution, gaunt and haggard should not enter the humble home where the ex-Grand Chief was holding converse with death, trying to breathe.

These splendid men—these bright particular stars of the B. of L. E. performed their duty. Their reward will be the consciousness of having performed an act, than which there can be nothing that sheds a brighter halo around fraternity.

These engineers did not stand up in the convention, and with relentless hate, play hyena, and while Wm. D. Robinson was dying, assail him with the venom of an asp, and in his last hours, when this world was fading from view, and his eyes were catching the first faint glimpse of the world beyond—when the care-worn and battle-scarred brother was passing through the valley and the shadow of death, when his sensitive ears were receiving the last words of affection from earthly friends, and catching the first notes of melody from beyond the dark river, these engineers, who would smooth the passage of the dying ex-Chief from time to eternity, did not stop to inquire if Wm. D. Robinson, in all of his long and eventful life had never made a

mistake. No, no, no, thank God, they were willing to shed benedictions upon the closing days of the ex-Grand Chief, and leave all his errors, many or few, to a just tribunal. Was it so with all? Were there any who would wreck reputation by foul means, while the death-rattle was in the throat of their victim? Were there any who, while blatantly professing to be followers of Christ, would make heaven blush, by sitting in judgment upon a man and brother, who in honest poverty and honest fame, had reached the final station, and was simply waiting to test the redeeming love of the Saviour of the world?

We dismiss such reflections. They give prominence to envy and bigotry at the grave. They arraign human nature and bring to the contemplation of men its basest qualities. They transform men into ghouls. They demonstrate that jealousy, once implanted in the human heart, kills every ennobling quality, and makes its possessor contemptible beyond the power of prudent characterization. If there was *one* in the Pittsburg Convention, and only *one* who there distinguished himself, then we can wish that *one* no greater punishment while living than the memory of his worse than savage cruelty. To stab a dying man with words sharper and more venomous than a serpent's fang is a hallucination that marks depths of soundless depravity, and such is the verdict of all honorable men.

Let it pass. Wm. D. Robinson is beyond the reach of assassins. In this tribute to his memory, to his life work, to his many noble traits of character, we would broaden the wings of charity so that were the dead man's faults a thousand, or one, we would hide them all, that we might the better read all of his multitude of manly and redeeming virtues.

We have said that Wm. D. Robinson laid the foundations of the great Brotherhood of Locomotive Engineers. In doing this, he as certainly laid the foundations of the Brotherhood of Locomotive Firemen. Nor is this all—he taught all railway employes that they, too, could organize; and, as a consequence, the world beholds the Orders of Engineers, Firemen, Conductors, Trainmen and Switchmen marching to conquest under their banners, that float in every breeze that blows over the continent.

Such triumphs belong to the favored few, and they challenge the admiration of all thoughtful men.

Wm. D. Robinson possessed a mind of more than usual grasp. As if by intuition, he saw the strong and the weak points of a proposition. This splendid faculty was many times and often demonstrated in the early history of the brotherhood he so successfully established. A path-finder, he saw the way when others hesitated. He went for-

ward when others advocated retracing their steps, or choosing some other line of march. Obstacles which to others seemed insurmountable, he removed or skillfully avoided, and went forward. Tenacity of purpose was one of his distinguishing characteristics. He did not discard counsel, but having investigated before deciding, he was not to be deflected from his purpose by men who formed hasty conclusions, and were therefore easily persuaded. It was this quality of his mind that enabled him to lead the brotherhood he had founded to ever-increasing success. It gave him self-reliance without egotism, self-control without pride or ostentation. It enabled him to exhibit a self-sacrificing spirit for the good of others, without boasting of his deeds or achievements. Wm. D. Robinson was not spectacular; he sought no glorification. He was a born leader; he hewed out pathways to high elevations; disappointments intensified his courage and increased his resources, and thus he led on his Brotherhood until all the membership caught the inspiration of his matchless energy; and when the Order was advancing, by conquering strides, to power and influence, he quietly laid down the gavel and resumed his place on the foot-board.

If the Brotherhood of Locomotive Engineers is great and powerful, influential and rich, it is because in its youth it was fortunate in having such a man for its leader, for its organizer, for its first Grand Chief, as Wm. D. Robinson, whose declining years were years of ill health; whose physical powers could no longer respond to the demand of keeping the wolf of impecuniosity from his door; no longer respond to the aspirations of an intellect that had made it possible for others to reap where he had sown, and live in luxury by virtue of his unrequited labors.

Wm. D. Robinson, the first Grand Chief of the Brotherhood of Locomotive Engineers, was a student of books as well as of men and machinery. He was familiar with the thoughts of great men—the world's best minds. He loved strong intellectual food, and assimilated it—took it into his mental organism. His public speeches abound with expressions worthy of the brightest men of the age. When he spoke, he said something; nor did he repeat himself on every occasion.

Wm. D. Robinson was splendidly equipped mentally for the position he occupied. He loved English classics, whether of prose or poetry, and often beguiled a weary hour by dallying with the muses. He could listen in rapt delight to the lullaby melodies of an Æolian harp; or stand, awe-impressed, amidst the sounding symphonies of Niagara. What of such mental endowments? This: Wm. D. Robinson had a heart that

could be touched when humanity pleaded for sympathy, and a soul that could respond with Spartan courage when the oppressed demanded a champion of their cause. Gentle as a woman, in peace; but in war he entered the list and fought with lion-hearted courage where the battle was thickest. He lived

"'T'law'd by power and unappall'd by fear"

and when death laid its grasp upon his vital currents and froze them in their flow, he could but yield, but this he did

"Not, like the quarry slave at night,
Scourged to his dungeon, but sustained and soothed
By an unfaltering trust,"

He approached his grave

"Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

We confess to great admiration of Wm. D. Robinson. He was no ordinary man. To speak well of the dead is an old time injunction, but in this case, there is in the duty a sad and mournful pleasure. It is a case in which comparative youth pays willing homage to old age, crowned with white hairs, to a life crowned with deeds destined to live in the hearts of railroad men as long as organization has a friend, as long as noble deeds can find a tongue to voice an eulogy.

We know the silver cord is loosened, and the golden bowl is broken at the fountain, still we do not weep. Tears are not in order. Our friend, the past Grand Chief of the Brotherhood of Locomotive Engineers has endured his last pang. In fancy we behold him at rest. Neither summer's heat nor winter's cold shall disturb his repose. Poverty has wrung from him the last despairing sigh. Friends will cherish his memory and his virtues will live in perennial beauty. As for enemies—well, God pity them, if such there are to be found.

In this hour when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame the memory of a man who gave the best years of his life for their benefit? Is not the answer, we will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

What hallow's ground where heroes sleep?

'Tis not the sculptured piles you heap!

In dews that heavens far distant weep

Their turf may bloom,

Or gent' twine beneath the deep

Their coral tomb.

"What's hallow'd ground? 'Tis what gives birth

To sacred thoughts in souls of worth!

Peace! Independence! Truth go forth,

Earth's compass round,

And your high priesthood shall make earth

All hallow'd ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great Order is to increase in luster as the years flow on. But that does not cancel the debt of gratitude the two great Brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our Order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two Orders, but would invite all the Brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

And now our duty is performed. We have written, with our heart in our hand, of a friend we shall see no more. But we shall cherish his virtues and deeds while memory holds sway, and

"—Death, grim death

Will fold me in his leaden arms, and press
Me close to his cold, clayey breast"

ere we cease to cherish the memory of Wm. D. Robinson, the grand old man who wrought with self-abnegation for his fellow-man.

SAID a proud Englishman to a spirited American lady: "Do you know," remarked the Briton, with his most supercilious drawl, "that it always amuses me when any one speaks of old families in the states, because it is so utterly absurd, you know. Of course in England it is different. For instance, I can trace my family back to William the Conqueror without the slightest trouble." "Indeed," replied the lady with a merry twinkle, "I am surprised at that: I had an idea that you could go back at least as far as Baalam's ass." The Englishman wasn't so far out of the way, after all. The United States is running over with codish aristocrats who pride themselves upon their ancestry, when their funerals were great blessings to the community, and would have been still greater had they died without issue.

KNIGHTS OF LABOR.

The Mighty Labor Organization Meets in General Assembly at Denver, Colorado—It is Given a Splendid Ovation by Workmen and Citizens of all Classes—Five Hundred Delegates in Attendance.

SAVINGS OF GENERAL MASTER WORKMAN T. V. POWDERLY.

On the 11th of November the General Assembly of the great Order of Knights of Labor met in Denver, Col., and the delegates, with the General Officers of the Order, were tendered a splendid reception, which amounted to an ovation, and everything that transpired was well calculated to encourage the Knights in their efforts to advance the interests of workmen.

As a matter of course, the interest in Denver, as elsewhere throughout the country, centered in the utterances of

T. V. POWDERLY,

the General Master Workman of the Order, who is recognized as one of the foremost, if not the foremost labor leader on the continent. A profound thinker and an eloquent speaker, he has for many years devoted his time and talents to securing justice for working men and working women.

The *Rocky Mountain News* publishes a lengthy interview with Mr. Powderly, in which that gentleman gave many interesting items relating to the great work in which the Knights of Labor are engaged. Mr. Powderly also delivered a public address:

MR. CHAIRMAN: I am informed that our time is nearly up, and that the man stands with his hand on the lever to shut out the light and shut me off, and for that, at least, I am truly thankful. Not that I want to leave here, but that it will stop me and prevent me making an extended speech. I would rather have remained in my seat and listened to the others, as they address you. I have heard Beaumont so often that it was nothing new to hear him. Although I enjoy listening to him for I know that what he says comes from an honest heart; and it was a pleasure to listen to Mr. Thomas and the other gentlemen this evening. I want to say, wherever I am, that if the opportunity comes to me while I am in the city of Denver, I shall ask that a special dispensation may be granted to Mr. Thomas, that he become a Knight of Labor, [applause] the other two are I believe, eligible now, so that it will not be necessary in their case.

I want to speak on one declaration and perhaps on two. I ask for special legislation prohibiting the employment of children under 15 years of age. Many people claim that that is wrong until they hear our reasons for asking that children should be kept from the factories until they are 15 years of age, not that they may stand on the street corners learning the language and habits of the street, not that they may spend their time at the saloon doors, peeking in to see men passing to eternity and misery, but that they may not pass by the little red school house on the hill when they are going from town, and in order that they may have that time to spend in the school room. Last year or the year before, one day in March, I stood in a city in the East one day before 6 o'clock in the morning and I saw children passing into the gates on their way to one of the large factories, the doors of which would swing open to allow them to enter. These little ones came as boys and girls; many of them showed their little elbows through their sleeves and little girls had light shawls pinned over their shoulders and with many of them I saw

their little toes peeking through their shoes, and those children went in there at 6:30 o'clock in the morning and remained there until 6:30 in the evening. And as I stood there in the morning the rain was falling, and on the little garments the ice was gathering, and in the evening I stood there in company with a committee and saw the same children come out, the rain was still falling and froze as it fell, and I thought that these children had nothing in the world to look forward to or to hope for. When they came there in the morning the school room door was closed, and when they went to their homes in the evening the school room door was still closed. The school room door was forever excluded from the young brain, and I said to myself if there is one thing above another in knighthood that I desire—if there is one thing next to the American heart—it is the right of these children to have an education and that their forms should not darken the factory until they have that education. [Applause.] Was I wrong then in asking that until 15 years of age they shall not do this? No, my friends, the question may be asked on every platform, and no man who loves his country will say no to that proposition.

EQUAL RIGHTS FOR BOTH SEXES.

That is one declaration of principle; the other is the twentieth declaration in which we ask to secure for both sexes equal pay for equal work—and I finally have grown tired in asking for that. The day has come, and whether it is right for me to say it or not I shall say it—whether the time has come to say it or not I shall say it—and I believe that this declaration should be changed to fewer words; that instead of reading as it does now "to secure for both sexes equal pay for equal work," we shall ask of our general assembly to strike out these words so that it will then read "to secure for both sexes equal rights." They will tell you that this is woman's suffrage—that we are not prepared for it—and I shall be proud if they say that of me. No, my friends, I am not ahead of the times, but those who say it stand behind the times. As for equal pay for equal work, the very weapon that makes it possible to elevate her in her work is denied her. She is swindled of her rights. Must all this be and I stand by and not say one word for her. Look in the face of your wife when you go home and ask her if she is not the equal of any of the young men born in this country and raised to the age of 21 years who take upon their shoulders the responsibility of citizenship? We are striving for her that she may receive equal pay for equal work and I believe we should go a step farther than that.

Now as to the question, why do we strike? We elect men, and others buy them. We work, others reap the profits. We strike, they starve us into submission. What then shall we do, my friends? Shall we have revolutions and overturn the government? No, my friends, we do not believe in that; not in revolution but in evolution; not in doing these things suddenly, but thoroughly and slow. How to vote intelligently and how to elect those to office we understand, but we pay little heed to them after elected, and if we would only strive as earnestly after election as we do to put them there we would have fewer complaints to make, and then we would not every four years or every three years or every one year, we would not have the same complaints we find ourselves making to day. Every American has the right to vote with no eye except the eternal eye of God to look on and see how he voted. The Australian system has been very successful in many of the states and we shall ask for its adoption in others. We ask that Colorado shall fall in line and stand with her proud brothers and sisters and ask of her legislature that will assemble here to pass for the state of Colorado the Australian ballot law; that all her citizens may stand equal on election day.

PINKERTON CATCHES IT.

Mr. Neashan said last night that I was possibly as well known as President Harrison. That may be so, but there is another name that shines out of American history, that is as well known as either, and I thank God that the infamy attached to that name is not attached to mine. I refer to the name of Robert Pinkerton. In the late strike of the New

York Central we find men with no commission from the people, with headquarters in New York and headquarters in Denver and headquarters all over the country, and in the face of the constitution which says that the President may not or shall not call out troops without the advice of the senate and congress. These men, heartless and remorseless, whenever a corporation asks for them, rush out and stand with drawn Winchester leveled. Should Robert Pinkerton have the influence and power to do things which President Harrison could not do? If the day has come when one man can stand out in this country and hire an army, that day has come when other men can do it, [applause] and if it is right for him to violate the law, and hire an army, then the Knights of Labor have the right to hire allies to preserve the law with the help of God. If the government cannot do it then we shall stand a raid against that which has made it possible for one man to become greater than all the people. Is it not a strange thing? I was standing one night not many years ago with the point of a bayonet held by my fellow man leveled against my breast. The man had nothing in the world against me, and the only thing that man had to do was to shoot me down if I took one step forward, which I had a perfect right to do. The day has come when our people should speak out on this question. Men of Colorado, correct that wrong to citizens of the greatest republic on earth and demand for them legislation which will forever bar the name of Robert Pinkerton from figuring in such injuries.

THEY ARE IN HARMONY.

We may not be in harmony in our debates, but when we leave here we will be in harmony in carrying out what was best for the good of the people. If you are in business here and want an order of goods from New York you place the order in an envelope with a 2 cent stamp, and the road that shall refuse to carry that letter with the 2 cent stamp on it shall have his charter forfeited. I ask that the government shall have control of the railroad system and the telegraph, and if it has the right to carry your order to the market in the East, then is it wrong to ask that same government to carry back the goods, or at least supervise its transportation? If it is socialism to ask of them to carry back that order, what in the name of God is it in carrying the order for those goods? Where will we draw the line? We may call it by any name we please, but the rose you know is sweet, though we call it by any other name. Our government has set an example in the postal service of the country.

Your honorable mayor spoke here a few moments ago about the mountains of Colorado, of their rich gold mines, of her vast plains, of the greatness and beauty of your city, and when he had told of these things I sat there thinking to myself—for whom did the good God make these things, these coal mines piled up in the Rocky mountains with a few men to control their output? I believe the good God put this coal there that the people of the nation might be warm, and not to be controlled by the power of a few men.

I thank God that there is an organization that voices these things, and we will work on through thick and through thin, through every sort of storm and censure. A more perfect organization does not exist on the face of the earth. They say we are an incendiary organization, but we are not. The incendiaries are those who buy our legislators; the incendiaries are those who buy our justices and those who buy our papers. We have always instructed the Knights of Labor to stand firm, take insult and to wait—bide our time, and one day it will come to you when you will stand face to face with your visor down to your enemies and up to your friends.

When Mr. Powderly had finished his speech and before he took his seat he asked the audience to wait while he read a paper which deserved signatures. It was a petition to the next General Assembly for the enactment of a law giving to women the right to vote. He said that woman suffrage was what was worse needed than anything

else he knew of, and that Colorado would do herself proud in thus recognizing the equality which exists among the sexes.

Chairman Neasham then thanked the mayor and the other speakers for their kind words and dismissed the multitude to the tune of "Auld Lang Syne," which was sorrowfully rendered by the orchestra.

But the more important utterances of Mr. Powderly are found in his report to the General Assembly, which we reproduce as follows:

To the Officers and Members of the General Assembly.

GREETING:—On the 28th of next month the order of the Knights of Labor will be 21 years old. On that day, 21 years ago, the few pioneers who shaped the foundations of the organization assembled and gave it the name that has since then been a beacon of hope to the poor and lowly, a sheet anchor to the distressed, and a menace to the greed and avarice that seek the overthrow of the rights of man to air, sunshine and the use of the earth.

Many changes have been made in these years, and many of the hopes of the dead heroes of our order have been realized. At first the hand was extended to the mechanics only; it was then extended to the assistant in the workshop and factory; it invaded the depths of the mine, and was soon clasped with that of the laborer, who until then knew nothing about fraternity except what was gleaned from those of his own humble calling. At first the war question stood above all others, then workshop regulation became a theme for discussion, and finally the eternal and undeniable rights of man to everything that his Creator drew from the depths of the earth came up before our order, and now, entering upon our majority as an association of industrialists, we can say that there is nothing upon the earth's surface or beneath the waves of the sea which man has a title-deed from heaven that we do not strive for. We have friends by the million who are not members—our principles deserve their aid. We have enemies—bitter, unrelenting enemies—and right well have we earned their enmity. Wherever there stands an enemy to the principles of this order there may be seen the oppressor of his fellow-man. Our claims have been pushed along lines that were rugged and weary of travel, and many have fallen by the wayside; but wherever the stricken and laden have dropped away the seed that was sown was not lost, and the truths we teach were planted in other fields than we can lay claim to. Our order has been called conservative, but it is so only in its methods, for it stands a radical among radicals. Radical in its aims and purposes, but conservative in the methods of reaching these ends. Radical but not rash.

I could make many suggestions and recommendations, relating directly to the management of the order, but have done so so often in the past that it seems to me that repetition is a mere waste of time and words. I will content myself, and I hope please the General Assembly, by referring this body to my former addresses and reports, which are here and accessible to all.

WHAT IS EXPECTED OF MEMBERS.

A human being having arrived at the age when this order has attained is supposed to be in full possession of his faculties; he is expected to be able to study and discuss social and economic questions without fear or prejudice. Unless he does this, himself he cannot intelligently perform his duty as a citizen. If he accepts the statements of others unquestioned he is below the level of the idiot and imbecile, for these unfortunates are not capable of deciding for themselves and cannot therefore be blamed for doing as they are told or for imitating what they see others do. No important action should be taken by the individual until he has satisfied himself by study and discussion that he is right. He should not act merely because some one in whom he has confidence does so; it should be a matter of conviction with him. What is true of the

individual is also true of an aggregation of individuals, and, as this order represents the industrial individual in concrete, it should be willing to give ear to and carefully consider every side of every economic and social question which may come up for discussion. We never advance in education by closing our ears to what is passing around us, merely because we do not believe in ideas advanced or principles agitated. For years the most important of a series of questions that has agitated the people of all nations is that of tariff or free trade.

FORCING THE ISSUE.

We have not as an order adopted a tariff or anti-tariff clause in our preamble, and I do not advise such a thing now. We should, however, throw open the doors of our assemblies for the discussion of this great problem so that our members may become educated in the basic principles of protection and free trade. While we do not allow the question inside of our sanctuaries, our members are asked every four years in the United States and every five years or oftener in Canada to register their votes in favor of or against protection. We must take either side when the time to vote rolls around, but will not tolerate the discussion of the very question itself where we could get that light which would enable us to vote intelligently. We should be ashamed to admit that we do not understand the issue when it is presented to us, and we should blush when we admit that through our prejudices we cannot allow a calm, deliberate discussion of the question before our members.

For many years our members were divided on the question of governmental control of railroads, and it was kept out of our preamble on that account. When the matter was taken up for discussion it was easily understood, and to-day no Knight of Labor can say that he does not understand that a government of the people should not be subordinate to any of its creatures, and that it has the right to control all corporations within its jurisdiction. My recommendation is that on and after January 1, 1891, it shall be permissible for local assemblies to discuss the question of high tariff and free trade. By putting the question in this shape, "Which will bring the greatest good to the greatest number—high tariff, low tariff or free trade?" we do not commit the order to either school, and yet allow our members to take up for discussion and agitation that vital issue.

Our Canadian brothers have already learned in many places throughout the Dominion to meet each other in friendly debate on this question. If we fear that this question will cause dissension, we must admit that those who cannot agree to discuss great issues for educational purposes without anger or indulging in personalities are not capable of self-government. Many believe that this is a question which belongs to political parties. Nothing is further from the truth. It is an economic question, and there is not a household in the civilized world into which its shadow does not intrude itself. Let us ask our members to discuss this question in a friendly way, and, if education is worth anything, we will not have to depend upon what interested persons tell us in political campaigns.

LEGISLATIVE COMMITTEE.

If the general assembly shall decide to maintain legislative committees, it should also decide what measures such committees shall advocate, how far they may go and with whom they may cooperate. It is the experience of those who have filled such positions in the past that they are besieged on every hand by every association and individual having a claim against the government. It is expected that every sop thrown out to the labor whale should be thankfully received and appreciated. Halfway measures and sectional schemes should not be advocated by our order, and in future whoever represents this order in such a capacity, should be required to work in close communion with the committees of the Farmers' Alliance on the great questions of land, currency and transportation reform. During the last congressional canvass men who merely voted for what was called labor legislation paraded themselves as friends to the workman. If the question of government control of railways is put to these men now they will either dodge it, vote

against it or be suddenly called home to attend the bedside of a sick relative. We have been electing men whose conception of the labor movement is exceedingly limited, and until we openly and boldly declare that we will no longer be satisfied with medicine which but irritates the symptoms we will continue to receive polished bones and no meat when our congresses adjourn. Let us direct that no trifling affairs take up the attention of our legislative committees in the future.

THE PREAMBLE IN FOREIGN LANDS.

During the year your general master workman has had more than one application from foreign lands to allow changes to be made in the preamble. My advice to the applicants was to adopt such declarations as were suitable or applied to the needs of the toilers of these countries, and present them for approval. This was done, and at the same time the parts of the preamble which did not apply to these countries were asked to be stricken out. It is worthy of mention that the changes asked for were but few; the parts of our preamble which did not apply were fewer still. This shows that the condition of the men who labor does not materially differ in countries which exist as monarchies and republics. It also indicates that the day on which the industrial republic is to be inaugurated must not be postponed very long. I recommend that our brothers in foreign lands be permitted to substitute sections in our preamble for those which do not apply to the lands or governments where our order is established.

THE NEW YORK CENTRAL STRIKE.

In the early part of the year information came to me that members of the order employed by the New York Central railroad, and under the jurisdiction of D. A. 246, were growing restive under the treatment received at the hands of the officials of that company. Individual effort in the direction of ameliorating conditions that were not easy of endurance had proven abortive, and when the aid of men of influence was invoked it usually turned out to be the same. Public officials were appealed to here and there to approach the officers of the New York Central and intercede for the workmen that they might receive better treatment in the matter of wages and regulations, but nothing ever came of it. The public press from Buffalo to New York was, with but few honorable exceptions, under the influence of the Vanderbilt system. Whenever an editor desired to travel East or West he applied to the company and was granted a pass for himself and friends. Whenever the interests of the company required it, these papers would always respond and publish whatever was presented to them. With the chosen servants of the people traveling on passes of the company, with the editors of the papers along the road subsidized in the same manner, it became impossible for the workmen to get the public ear or place their grievances before the officials of the company without subjecting themselves to dismissal. When the district was organized, the men determined to make use of it in order to improve their condition, and committees were selected to wait on the officers of the company. At first their visits were tolerated, but they became tiresome to men who would rather dream of a ball at Newport than think over the condition of those who work for wages. The idea of meeting on a level of equality of employees for the purpose of discussing terms of agreement was repugnant to men whose aristocratic tendencies were given birth beneath the shadow of the house of Vanderbilt, and a means to put a stop to these importunities was sought for. The old plan of picking off the spokesman in order to terrify the others, was resorted to, and one after another men were discharged, in the hope that the lesson would be of practical value to the company in terrorizing the rank and file. That men and spokesmen may have made mistakes, is not improbable; in fact, it would be unreasonable to expect that men unaccustomed to discussing affairs with those outside of their own circle would not fall into errors. No allowance was made for differences in education and advantages, and the haughty blood of the nobility scorned to meet with the plebeian on anything approaching an equality. That is the plain way of putting it, no

matter what criticisms may be passed upon the words I use.

The men struck work. Their report as to its reception is here and open for the inspection of the general assembly. It is with my connection with the affair as general master workman that I have to deal. The other general officers were not concerned in it until after the close of the fiscal year; but my connection with it began during the month of February, when I learned of the likelihood of trouble along that line of railroad.

Then follows the correspondence between Mr. Powderly and the several district master workmen, all showing that the general master was alive to what his duty was, and did it.

After a full résumé of the events of the labor world during the past year, the condition of the working masses, and sound advice on the subject of their improvement, he closed as follows:

WANTS HIS ACTS SCRUTINIZED.

To day ends, without a break, eleven years of active service as general master workman. This is the twelfth session of the general assembly that I have presided over. I entered upon the duties of the position with no personal ambition to serve. There was no thought in my mind of retaining the place, for I had other ends in view. During these years I have done many things that others would not do; but, on the whole, I do not recall many acts of the past that I would not repeat. I may not be in accord with the thought of many good members of the order; but, acting from a sincere conviction that I was right, I have no apologies to offer. You are here to judge, not only of the past two years, but of all my official life as general master workman. I ask for the fullest scrutiny of every official act; that you owe to the order as well as to me. If in the interest of a better service to the order, you select another representative to pick up the gavel which I now return to your keeping, I will cheerfully fall back to the ranks and keep step as faithfully there as in the forefront. The interests of the order stand paramount here to-day. There is no individual representative on this floor who should receive one moment's consideration if duty to the order is not exemplified in him. We are soldiers in the army of industry, but our generals are not forced upon us—we select them ourselves. If we make good selections, with the welfare of the order obscuring personal friendship, none can find fault, for we will have done our best.

As we write, the General Assembly is deliberating, and when the session closes, the *Magazine* may have something to say upon such matters as are made public.

SOME one familiar with vital statistics, or who has gone into the guessing business, says the deaths of all nations, kindred tribes and tongues, amount to 35,215,200 every year, and the births to 36,500,000, leaving a net gain of births over deaths of 1,284,500. Such figures suggest some financial questions. Putting it moderate, suppose at every birth the charge of the accoucher is \$5.00—\$174,076,000, and that the average charge of the undertaker is \$20.00—\$730,000,000; in which case the world is out of pocket \$906,076,000 for births and deaths. If to this sum total, we add doctor bills and drug bills, cost of cemetery lots and monumental rocks, the amount runs up into bewildering figures.

THE AMERICAN FEDERATIONIST.

We have on our table No. 1, Vol. I, of *The American Federationist*, published at Mattoon, Ill., by Messrs. W. H. Johnson and C. W. Martin, under the firm name of W. H. Johnson & Co.

We intend no flattery when we say that the *Federationist* is one of the most breezy labor papers that comes to our sanctum. It contains twenty-four columns, and the more you read, the better you are pleased; each column bears testimony of ability, and what is said is well said, and the point aimed at gets hit every time.

The *Federationist* is for federation as established by the Supreme Council. There is no mistake about this. There are no subterfuges. Words are fitly chosen and boldly expressed. It says:

This paper wishes to at once go upon record as favoring a federation of the interests of railway employees without an amalgamation of their Orders. The first we consider perfectly feasible, practical, and think that, when adopted, as it inevitably will be, it will prove of much benefit to all those concerned. The amalgamation of the now separate and distinct Orders, we consider would be productive of much harm, amounting eventually to the practical destruction of all the benefits which have been the cause of the phenomenal success of the organizations now in existence, for it would at once, when accomplished, cause a scramble for supremacy of place and power in the new Order, which would at once work evil.

The present plan of the Supreme Council meets our approval, and, until something better is offered, will have our support. The men composing that body are of sound ideas and good judgment, have the welfare of the federated bodies at heart, and will, we verily believe, always work conscientiously for the best interests of both their individual Orders and the federated bodies as represented by the Supreme Council, in which body we have the utmost confidence, and which we shall support to the best of our ability.

The publishers are of the opinion that there is "room" for the *Federationist*, "and that there is a large amount of work to be done." There is "room on top," and that is just where the young candidate for public favor stands, and that its work will be well done, No. 1 gives the most cheering assurance.

In closing their "Introduction" the publishers say:

The publishers are both members of the Brotherhood of Locomotive Firemen, having served their time with the scoop and pick, and now in laying down those useful implements to mount the tripod and take up the pen, they realize fully the responsibilities resting upon them. We promise our most faithful efforts in furthering the good of all Orders now federated or that may come in hereafter, and hope that we may dwell together in peace, harmony and good will for many years; and when in the dim future we look back upon our relations with the mighty hosts of toilers of this land, we may say we have fought a good fight, have kept the faith, and we enter now upon our reward.

The *Locomotive Firemen's Magazine* salutes the *Federationist* with "three times three;" gives it the right hand of fellowship; tells its readers that \$1.00 invested in it will pay good dividends, and urges them to do so, and withal, bids it God-speed on its mission.

WM. P. DANIELS, THE O. R. C., AND LOCOMOTIVE ENGINEERS.

The two orders of Railway Conductors now in full operation, are the ORDER OF RAILWAY CONDUCTORS and the BROTHERHOOD OF RAILWAY CONDUCTORS. The Grand Chief of the O. R. C. is Mr. E. E. Clark, and for the B. of R. C., G. W. Howard occupies the position of Grand Chief.

We have only kind words for these gentlemen. G. W. Howard, G. C. of the B. of R. C., has been from the first a champion of protection. He saw the many and grievous wrongs to which conductors were subjected, and that the Order of which they were members, by virtue of its laws, could furnish them no relief whatever. He saw that the O. R. C. had at least two Grand Officers who were ceaselessly at work to maintain a position for the Order which humiliated and degraded them. We refer to C. S. Wheaton, Grand Chief, and to Wm. P. Daniels, Grand Secretary and Treasurer of the Order. As for Mr. Wheaton, if Wm. P. Daniels is to be believed, he is one of the most despicable characters that ever held any position in an organization of railway employes on this or any other continent. The intimate associate of Mr. Wheaton was Wm. P. Daniels. Daniels confesses that he knew of Wheaton's treachery, hypocrisy, mendacity and other acts, if possible, still more offensive, which he kept to himself, and gave no sign of any superior integrity. He simply waited for an opportunity to kick a dead lion. Having made such confessions, his vituperative assault upon his associate in office has operated as a boomerang, and in the estimation of honorable men has done Daniels far more damage than fell to the lot of Wheaton.

Wm. P. Daniels is now not only Grand Secretary and Treasurer of the O. R. C., but Manager of the *Railway Conductor*, and we feel assured is the author of two articles in the November issue of that publication, captioned, respectively, "Where it Stands," and "Mr. Howard's Assertions," both of which refer, more or less directly, to federation.

The articles in question, we assume, were written by Wm. P. Daniels.

It will be remembered that the O. R. C., at Rochester, by an overwhelming majority, struck from the laws of the Order what was called the "anti-strike clause." Previous to the action of the Rochester Convention the O. R. C. was known to be opposed to strikes. It submitted to wrongs such as were never piled upon the members of any other organization of railway employes, and Wm. P. Daniels not only did not protest against degrading oppressions, which the members of the Order were subjected to, but advocated and urged the members of the Order to *scab* on all occasions when locomotive

engineers were on a strike and battling for their rights.

But referring to the action of the O. R. C. at Rochester, in eliminating the "anti-strike clause" from the constitution, it was immediately given out that the Order was not on a strike basis and that it had not changed its principles (?)—in a word, that it could not strike, that although the "anti-strike clause" had been abolished, the Order could not be regarded in the light of a striking Order, and as a consequence, nothing had been gained in affording the members of the Order such protection as other Orders of railway employes were constantly affording their members. It should be borne in mind that there has been no convention of the O. R. C. since the meeting at Rochester. If the official declaration made by that body, that the Order was not on a "strike basis," by virtue of the elimination of the "anti-strike clause" and that it had not changed its principles, how can it now be on a "strike basis," seeing that since the Rochester Convention there has been no meeting of the Order having the authority to make any law or regulation upon the subject?

To show the low cunning of the writer of the article captioned, "Where it stands," and the deception still sought to be practiced upon the members of the Order and the public, we copy the following:

The Order is not now upon a strike basis if the words are to be understood as meaning going around with a chip on its shoulder, daring every one to "knock it off," and talking of what we will do if they (railroad officers) don't come to time. It is, however, on a strike basis if these words are understood to mean that its members will no longer submit to injustice and injury under a mistaken belief that they "are tied up" or under teaching that they can't do anything.

After reading the foregoing, the verdict will be that Mr. Wm. P. Daniels is totally without convictions, or, if he has convictions, that he is too cowardly to express them. What he says, is simply word jugglery, and a most clumsy performance at that. Such jargon is eminently worthy of a man who had personal knowledge of scandalous acts on the part of an official with whom he was in intimate official relations, but for the good of the Order, remained as silent as an oyster, and shouted "fire" only after the building was destroyed. Daniels is of the opinion that as matters stand, the "executive of the Order would not only authorize, but would advise a strike, should occasion require it," but "the writer" asserts "that there have been times in the past, when, had he possessed the authority, he would have ordered a strike."

We doubt if there was ever a time in the past when Wm. P. Daniels would have ordered a strike under any circumstances. He has not buttered his bread that way.

We desire to put this man Daniels on

record so that railway employes may know the material of which he is composed. We doubt if a more deadly foe of organized labor breathes. The idea that Wm. P. Daniels favors either strikes or federation is simply preposterous except he were influenced by such arguments as are used by Jay Gould when he wants the use of a Judge or a Legislature.

When the Grand Division of the O. R. C. met in the city of Toronto, May 8, 1888, Wm. P. Daniels presented his annual report, portions of which he sent as advance sheets to the principal railroad officials of the land.

It will be remembered at the time this document was sent out, the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen were engaged in one of the most serious conflicts for right and justice that ever occurred on this continent between a labor organization and a powerful corporation. It was the engineers and firemen against the C., B. & Q. Wm. P. Daniels was cognizant of all the facts, and yet he deliberately put upon record declarations of hostility to the engineers of unparalleled venom and circulated them broadcast; the purpose being not only to defame the engineers but to urge conductors in all cases of a strike to act the part of scabs.

Mr. Daniels, in that report, said:

To place the matter clearly before the conductors of the United States, it may not be out of place to give a few instances of the actions of the members of this "holler than thou" organization. In the first place, it is built up and owes its strength, not to the *intelligence, skill or knowledge* of its members, but wholly and entirely upon the ignorance of railway officials and the public in regard to the qualifications of an engineer.

After this, Mr. Daniels proceeds to cite numerous instances when the engineers have outraged every principle of justice and honorable dealing, and paints the Order as black and repulsive as he was capable of doing. Mr. Daniels proceeds to arraign the engineers for a multitude of mean transgressions and then says:

Behold them now on their knees to the Switchmen and Brakemen's Associations! It is time for conductors to teach railway officers what the engineers themselves already well know, and are anxious to conceal, that nine-tenths of the conductors of the United States are capable and trustworthy engineers. The conductors on the C., B. & Q. have already demonstrated this, and they are ready to do it on other roads, and I sincerely hope that the time is close at hand when they will be not only ready but willing to do so all over the United States.

We use italics that our readers may note just why the advance sheets of Daniels' report were sent to railway officials. It was to tell them that members of the O. R. C., in case of a strike, would take the engineers' places and run their engines, and it was asserted that the report of Daniels had the effect to reinstate many discharged conductors in various sections of the country.

This man Daniels carried his hate of en-

gineers to extremes, so far that he exhorted conductors never to "pass an engineer under any circumstances." "It is bad enough," says Daniels, "to subject yourself to dismissal for violation of rules in passing a conductor, but don't do it for an engineer, who is always ready to down you." Such is the record of Wm. P. Daniels, who now talks glibly about being in favor of federation and strikes, and who avers that "the report that the members of the B. of L. E. and the Order (Order of Railway Conductors) on the C. & N. W. System had formed an alliance is true."

The report of Mr. Daniels to the Toronto Convention was exhaustively discussed; the epithets applied to the members of the B. of L. E. were reiterated and justified by Mr. Daniels; scabbing against engineers was boldly commended, and then the report was adopted.

Is it to be presumed that Mr. Daniels has changed front? Does the leopard change its spots? Hardly; and yet Mr. Daniels seeks to make the readers of the *Railway Conductor* believe he is in favor of federation and of strikes. There may be higher heights and deeper depths of gall and guile than such professions indicate, but we beg leave to doubt it. We presume that Mr. Daniels is as ready now as at the Toronto Convention to say:

I believe Bro. — is one of those who demonstrated the ability of the conductors by taking an engine and running it successfully (on the Q. & A.) honor him for it and congratulate him on the appearance of his name in this list, which will soon be with the intelligent public as it is with me, a roll of honor.

Apparently, Wm. P. Daniels has changed front. He fought the engineers when they were struggling for their rights; advised conductors to scab that the engineers might be crushed, and with them every other order of railroad employes. He sent his vituperative slang to railroad officials, and boasted that it was a benefit to the Order; and now he favors federation with engineers, and professes to have been, from "way back," a champion of strikes.

In spite of Mr. Daniels' influence, the members of the O. R. C. struck down the anti-strike clause in their constitution, and elected a Grand Chief Conductor, Mr. E. E. Clark, who is in favor of federation, and of strikes as a last resort, to protect conductors against the outrages perpetrated by corporations—and if Daniels is, in any sense, a convert to federation; if he no longer advocates scabbing; if he would strike, under any circumstances, it must be because he sees that his bread and butter depends upon a change of base.

A man who could seek to "down" engineers and firemen when engaged in a strike for their rights, when contending against a powerful corporation, by advising conduct-

ors to *scab*, and to gain favor with corporations, send advance sheets to railway officials—base treachery to principle—is not to be believed when he changes front under compulsion and professes fealty to a policy of which he had been an unrelenting foe.

Mr. E. E. Clark, the present Grand Chief of the O. R. C., we believe is sincerely in favor of federation, and of bringing the Order of which he is chief executive into line under the banner of national federation. He will do well, however, to study the character of Daniels, and note particularly his treatment of Wheaton, his predecessor. Between Wheaton and Daniels the indications were that the most amicable relations existed, but all the time Daniels, by his confession, shows he was preparing his schemes to "do up" his associate in office; that he was arranging a dead fall, to be sprung when conditions were favorable to sacrifice his superior, and thereby save himself.

Moreover, who knows the character of the secret circulars Daniels may even now be sending to conductors of the O. R. C., who he says have "formed an alliance with the members of the B. of L. E. on the C. & N. W. system?" Who knows that he has not sent "advance sheets" of reports to the officers of that system, intimating, that in case of trouble, regardless of the "alliance," members of the O. R. C. would take the places of engineers, and thereby increase, what he (Daniels) is pleased to call, the "roll of honor?"

Whatever may be the secret schemes of Wm. P. Daniels to "down" the engineers, we are persuaded that he has lost his *grip* upon the great body of Railway Conductors, members of the O. R. C.

There are thousands of Railway Conductors, members of the O. R. C., who are as honorable men as can be found anywhere, men who are courageous, independent and self-respecting and who despise chicanery in all of its vulgar exhibitions, and who, we doubt not, are keeping their eyes on Mr. Wm. P. Daniels. They were the men who eliminated the "anti strike clause" from the laws of their Order, and condemned in convention the course pursued by Daniels in sending out advance sheets of his report to railway officials, by virtue of which every manly conductor was humiliated and degraded.

We have outlined something of the career of Wm. P. Daniels, showing his inveterate hostility to engineers and to all other organizations of railway employes who are organized for protection. This implacable hostility was carried to the extent of bringing the O. R. C. to the verge of disruption, and in our opinion is as pronounced now as ever before, and is quiet, only because of the fact that federation, in the face of malig-

nant and unreasonable opposition, has demonstrated its feasibility and wisdom and has won a victory on every occasion when a righteous grievance was presented.

It is not our purpose to widen any real or supposed chasm between the B. of R. C. and the O. R. C. The B. of R. C. exists because of the attitude which the O. R. C. occupied in regard to protection, and the fact is too self evident to require argument. Geo. W. Howard, as we have said, saw the difficulty, and proceeded to apply the required remedy, and for his splendid efforts to inaugurate a change of policy is deserving of the highest commendation.

In spite of the implacable hostility of such men as Wm. P. Daniels, the O. R. C., under the leadership of such men as E. E. Clark, Grand Chief, has changed front and is now contending for protection and advocating federation.

That the Supreme Council of the Federated Orders affords the most certain remedy for well defined injustices we do not doubt. Only prejudice stands in the way of a triumph which would make the future one of steady progress for the organizations of railway employes, and we do not permit ourselves to believe that prejudice, jealousy, envy and bigotry can long withstand the conquering march of reason, truth and honest conviction.

QUEEN VICTORIA is the head of the established church of England, and yet, in the great empire over which she rules, there are 139,000,000 of India pagans, Buddhists and Brahmans, and 40,000,000 Mohammedans, the sum total vastly outnumbering the protestants of the empire. It is believed that the railroad is doing more in India to upset paganism than all other forces combined. Buddha and Brahma, Vishnu and Siva, and all the rest of the gods, can't stand the whistle of the locomotive; it beats the Juggernaut, since it can haul the pagans or kill them, as they may choose.

DURING the month of September, a waterspout caught a Southern Pacific train, fifteen miles west of Del Rio. The water, some forty feet wide, struck the forward part of the train. It tore the engine, baggage car and mail car from the coaches and carried them forty-five feet, overturning them. The passengers knew nothing of the approach of the water until the jar occurred. The engineer and fireman escaped drowning by swimming to high ground. The track was torn up for 200 yards and a gully ten feet deep cut through it.

SINCE 1875 the Japs have put away more than \$20,000,000 in the savings banks of the empire.

270 VS. 168.

To the general reader the figures which caption this article will doubtless appear cabalistic, but they are easily explained, and are immensely suggestive. The figures combined make a sum total of 438. If the lesser is subtracted from the greater number it will be found that 270 is greater than 168 by 102. To use a phrase, "stick a pin there."

To proceed: In 1888 the Brotherhood of Locomotive Firemen in convention at Atlanta, Ga., put the Federation ball in motion. For two years this *Magazine* discussed the proposition of federation—the federation of the organizations of railway employes engaged in the train service of the country. We said the plan was feasible, that it was wise, that it would redound to the welfare of the organizations, and prove of lasting benefit to railroad corporations, because it would reduce the number of strikes to the minimum; because strikes would occur only when the grievances of employes were of a character to command universal approval on the part of employes; because federation, in a great majority of cases, would result in arbitration instead of strikes; because if a strike should come defeat or victory would be secured in the shortest practicable period. These positions silenced controversy. They were never attacked; they were, from the start, invulnerable; they were self-evident propositions; they secured conviction in all unprejudiced minds. There were objections, but never an argument. Prejudice, envy, jealousy and bigotry were utilized in every conceivable form, but reason, logic, facts, were not used—on the contrary, were ignored, ruthlessly bludgeoned into exile by those who disliked federation.

Nevertheless, federation moved forward. It was a common sense proposition. It was logical. It was the one thing needed to smooth the way of railway employes. It could help them without injury to the employer; indeed, as we have said, it assumed that the employers would share largely in the contemplated benefits.

At once the Switchmen's Mutual Aid Association came into line, then the Brotherhood of Trainmen (Brakemen) adopted federation. The Supreme Council of the Federated Orders was established, and every claim set up and advocated in favor of federation, without an exception, was established by the record it made. So pronounced was the success of federation, so conspicuous were its conservative achievements, that the young and stalwart Brotherhood of Railway Conductors adopted it and came into line under the federation flag. And during the year 1890, after two years of trial had been given federation as established by the Fed-

erated Orders, under the Supreme Council, it was triumphantly and unanimously indorsed by the four Federated Orders in their several conventions.

The Brotherhood of Locomotive Engineers did not indorse the movement; on the contrary, it opposed it, stood aloof from it. It did not formulate arguments, it did not interpose logic, it did not array facts, it simply objected. All? No, not all, but enough to keep the great Order out of the Supreme Council. We do not care here and now to state the character of the objections; that has been done in the *Magazine*, and can be repeated with notes and comments at any time when such literature is desired. Our purpose now is in a different direction. We propose to explain the caption of this article—"270 vs. 168."

Let it be said just here that the members of the B. of L. E. were not indifferent to the arguments relating to federation. Thousands of them saw distinctly that it was a wise and beneficent movement, and ought to be adopted. Some there were who were immovably opposed to federation, and others, the largest number, were indifferent.

At Richmond, federation had few advocates in the convention, at Denver the number was largely increased, and now comes Pittsburg—total number of delegates voting on federation, 438; the number voting for federation 270, the number voting against federation 168; majority in favor of federation, 102. Two-thirds of 438 is 292. Those voting for federation 270, or within 22 votes of a two-thirds majority.

This explains the caption of this article, "270 vs. 168." It was a splendid victory for federation. It could only have been more resplendent by securing twenty-two more votes. In due time they will come. Come, because federation is right, because it meets the demands in the highest degree of the organizations of railway employes.

We accept the vote in the Pittsburg convention of the B. of L. E., as in the highest degree complimentary to the *Firemen's Magazine*. It demonstrates that its position was right from the first. The vote is equally complimentary to the *Trainmen's Journal* and to the *Switchmen's Journal*. They never ceased presenting the facts. They formulated arguments well calculated to create conviction, and we join with them in the felicitations which the vote "270 vs. 168," in the Pittsburg convention of the B. of L. E., so fully justifies. And with equal, if not greater, warmth we congratulate the 270 delegates whose minds, free from prejudice, enabled them to comprehend the benefits that flow from federation, and whose courage, equal to their convictions, enabled them to cast their votes for a measure which the more it is investigated the more wise and conservative it appears.

SOMETHING NEW AND IMPORTANT IN RAILROADING.

Railroad men are on the *qui vive* in regard to an invention recently patented by Mr. A. R. Cagner, a practical Locomotive Engineer, and at one time Second Grand Engineer of the B. of L. E.

Referring to the subject, the *Chicago Herald*, late in October said:

Chicago is to have an immense manufacturing plant where locomotive and other railway rolling stock will be made. A company for this purpose was incorporated at Springfield by A. R. Cagner and Charles Kennedy, of Chicago; T. M. Leonard, of New York, and A. A. Tower, of Detroit. These are all practical railroad men. General newspaper readers will remember A. R. Cagner as Grand Assistant Engineer of the Brotherhood of Locomotive Engineers who came from California during the last great strike on the Burlington road, succeeded Hoge as the head of the grievance committee, and by his adroitness and coolheadedness hastened the end of the strike. Mr. Cagner is the inventor and patentee of several innovations in railway appliances. One of the inventions is a power transmitter for locomotives and cars by which power can be applied directly to every axle under locomotive, motor or any number of cars. The other is a locomotive embracing the Cagner patents, which is a novelty in locomotive construction.

So much for the inventor, who coming up from a fireman, has been from the first a student of locomotives, of power and its application for the purpose of moving trains. As a matter of course, the Cagner patents and theories have created a sensation, as may be inferred by the following from the *North Western Railroader*. It says:

There are now on exhibition in the Exposition Building in Chicago, three very handsome model cars, built one quarter standard size and equipped with what is known as "The Cagner Patented Power Transmission," for Railway locomotives and cars. Expert engineers and mechanics and many prominent and practical Railway men have studied the principles employed, and covered by these patents and it is claimed that this device will have a powerful influence on locomotive construction in the future. What is claimed as an advantage for the "Cagner Device," as a motive power over the present type of locomotive, is this: By the methods employed in the Cagner patents, which are simple and inexpensive, almost unlimited horse power can be transmitted direct to every axle under the locomotive, motor, or any desired number of cars in the train, thus securing the adhesive traction of every wheel, bearing the load of train while in transit. Hence almost unlimited horse power, either steam or electricity, can be concentrated upon a car, motor, or locomotive; and by the transmission of power, beyond the point where power is so concentrated, independent of the adhesive weight of the motor, or locomotive, the employment of all the power thus created can be fully utilized upon any number of cars in the train; whereas the construction of the present locomotive, transmitting power from piston to driving wheels, by rigid rod connections, and dependent upon the adhesive traction of the drivers upon the rail in order to utilize the piston power for propelling purposes, necessitates the concentration of a sufficient weight to be carried on drivers, in order to employ the full energy of force applied to the pistons. Any surplus power, beyond the traction weight of drivers on rails, when applied, is lost, as in the case of wet, or slippery rails, which cause the wheels to slip necessitating the use of sand, thus producing extravagant wear of tire, and increased train resistance. It was this desire to secure greater traction proportioned to piston power that prompted the Mogul and Consolidated Engine with their great weight on drivers and rigid wheel base.

The inventor claims for his device that "it can be attached to any class or make of present locomotives, and at a very slight expense transmitting the power from back driving axle direct to each axle of tank, thus securing the full traction of the tank of the locomotive without increasing the weight upon the driver by more than 500 lbs." It is also stated that "the standard eight wheel locomotive to-day carries from 40,000 to 65,000 pounds on drivers. The standard engine tank weighs from 40,000 to 50,000 pounds as now constructed. This extra load is carried simply as the base of supplies for fuel and water. The Cagner device aims to make the tank a part of the propelling power of the locomotive proper, permitting the engine to be over cylindered, so to speak, while entirely dispensing with the use of sand, and enabling the engine to be worked at full capacity under all conditions of rail, without increasing the adhesive weight on wheels."

The plans and specifications for a powerful motor or locomotive are now being prepared, and the machine will be a new departure in locomotive construction, and it is given out that a revolution in the construction of locomotives will be the result. In describing this new motor, it is said:

The motor will be a double-ended 70 ft. long, with pilot and headlight at each end, requiring no turning at terminals. The body of car will be similar to a sleeping car from an exterior view—without end platforms or end entrances, the upright sides and ends being continuous, forming the water space for tank, which will hold 12,000 gals. The entire frame and body of car will be constructed of iron and steel. There will be located in one end of the car, and above the floor of the car, a double-tandem compound engine, which is estimated to develop, with 140 lbs boiler pressure, 1,000 horse power. These engines are connected to a 6-ft. driving shieve, the shieve being in center of the car and running parallel with the engines. Power is transmitted from the 6-ft. shieve to a 36 in. shieve under the floor of the car, and from this 36-in. shieve power is transmitted, through the Cagner patent device, to a 36-in. shieve on each axle, so that every wheel of the double 6-wheel truck will become a driving wheel. These 6-wheel trucks will carry a load of 122,000 lbs. The truck wheels will be 34 ins. in diameter. It is hoped that the motor so constructed can be made to attain a tremendously high speed, and at the same time with a slow piston travel. The boilers are located in opposite ends of the car, and will be equipped with self-stoking devices and with smokeless furnaces. The cab, or engineer's room, is in the center of the car, elevated so that a clear view can be secured from all directions, similar to the present caboose cupola, where all the necessary mechanism to manipulate the engine will be under the engineer's immediate control.

Manifestly, the outcome of Mr. Cagner's invention will be watched with increasing solicitude by railroad corporations and employed engaged in the train service of the roads.

CHAUNCEY MEPHISTOPHELES DEFEW, said he was out "two nights on a sleeping car," to get from New York to Pittsburgh. Maybe he was out one night on two sleeping cars.

AN EXCEEDINGLY CONTEMPTIBLE LIE.

Someone maliciously disposed has set the lie afloat that the B. of L. E. owes the B. of L. E. the sum of \$26,000. In the issue of the *Firemen's Magazine* for the month of March, 1889, page 247, we published the following:

LOAN OF \$25,839.60.

In all matters relating to finances of the B. of L. E. there should be no concealments. Frank and full statements are always in order; and so far as the Grand Lodge of our Order is concerned, such statements are always made promptly and fully when required, or when there appears a necessity for them.

In the month of October, 1888, owing to the exigencies of the strike on the C., B. & Q., money was imperatively demanded to enable our Order to respond to the necessities of members engaged in that notable struggle. The membership was everywhere putting forth its energies to meet the demand, but there was at the time designated, a lack of funds. At this juncture the B. of L. E. accepted a loan, amounting to \$25,839.60, from the B. of L. E.

It appears that an impression has gone abroad that the B. of L. E. donated to the B. of L. E. the amount named. Nothing could be further from the truth. Such a donation, had it been tendered, would not have been accepted. The transaction was the result of obligations assumed by the B. of L. E. to pay its members certain stipulated amounts monthly, and as assessments had been suspended until the convention met and took action upon the subject, the exigency arose, that money must be borrowed, or the striking firemen on the C., B. & Q. must suffer. The money was borrowed, not donated, and the amount so obtained, has been paid back in full. In making payment, interest was tendered, but not accepted.

In the foregoing statement the Brotherhood has all the facts. The money was borrowed to bridge over an emergency. It was borrowed to meet pay-rolls promptly and at a time when every consideration of justice to the heroic strikers demanded prompt action. The obligation to the men was met, and now the money due the B. of L. E. has been paid in full.

The B. of L. E. is entitled to our thanks for the timely assistance rendered. It is fully appreciated and the B. of L. E., not less magnanimous, holds itself in readiness to reciprocate the favor at any time, and at all times, when it is in its power.

The foregoing statement tells the whole story, and tells it truthfully. Notwithstanding this, some one has sent the *lie* broadcast over the country that the B. of L. E. owed the B. of L. E. \$26,000, which has not been paid.

In this connection we find the following in a recent number of the *Locomotive Engineer* and credited to the *Railroad Gazette*:

WHO TOLD YOU?

The reports of the Brotherhood of Locomotive Firemen, presented at the recent annual meeting, show that the organization borrowed \$26,000 from the Brotherhood of Locomotive Engineers, to help pay strikers during the Burlington strike. The loan has not been paid, and there seems to be some question whether either side desires to have it paid.

The *Railroad Gazette* manifestly started out to lie, and it filled the bill. It names the amount the B. of L. E. borrowed of the B. of L. E., which is not correct (but comes nearer being the truth than anything else it says), and then adds, "The loan has not been paid, and there seems to be some question whether either side desires to have it paid."

The Grand Secretary and Treasurer in his report to the second Biennial Convention,

held at San Francisco, September 15, 1890, in discussing strike affairs on the C., B. & Q., says:

The fact emphasizes the extreme emergencies of the strike, when it is stated that during the month of October, 1888, the Grand Officers deemed it prudent to accept a loan, amounting to \$25,839.60, from the B. of L. E. This amount enabled the Brotherhood to bridge over a financial chasm which the strike created, but the amount borrowed was paid in full February 9, 1889, to T. S. Ingraham, F. G. E., of the B. of L. E., and his receipt for the same is in the archives of the Grand Lodge office.

The foregoing shows the *Railroad Gazette* to be both malicious and mendacious, and even with all the facts before it, would, doubtless, repeat the lie.

To make matters still worse, we are advised that members of the B. of L. E. have asserted, in a number of instances, that the B. of L. E. still owes the amount borrowed to the B. of L. E. Such men are devoid of shame. They lie for base purposes, and are a disgrace to the Order of which they are members. They are also a disgrace to humanity.

The lie is doubtless iterated and reiterated, in the hope that in some way it will injure the standing of the B. of L. E. In this, the lie will be short-lived, and prove far more damaging to its authors than to its intended victims.

Under the circumstances, we may expect that the B. of L. E. *Journal* will not hesitate to insert a paragraph in its next issue stating that the money in question was paid on the day we have named, and that the B. of L. E. owes the B. of L. E. no money—not so much as a farthing—and in the way of gratitude, we assume that "honors are easy," as the strike on the "Q." was an engineers' strike, and to stand by them and do all things honorable to win the battle cost the B. of L. E. the sum of \$459,769.39.

THE editor of the *Trainmen's Journal* is informed that he has been publishing second-hand poetry as original. There is one consolation connected with such matters, the stolen poetry is apt to be about ten thousand times superior to the insipid, vapid and stupid stuff which flows in a ceaseless stream to the editor, from people who have no more conception of what constitutes poetry than they have what constitutes *aurora borealis*. The poetry thief who steals good goods is, therefore, much more to be commended than the semi-idiotic man or woman, who writes twaddle, wish-wash, froth, and calls it poetry.

THERE was the "wildest kind of cheering" says the B. of L. E. *Journal*, when Chauncey Mephistopheles Depew was introduced. He is president of a railroad company that hires Pinkerton thugs to shoot down workingmen. Was that the reason why he was received with such an outburst of wind?

THE NATIONAL RAILWAY ASSOCIATION.

We have on our table the Constitution and "Rules governing Senate and Council," By-laws and rules of order of the *National Railway Association*, born in Atlanta, Ga., September last.

This new organization has "two degrees," Senate and Council. The Council, we surmise, is the subordinate lodge, the Senate the grand lodge. So far it has Council No. 1 located at Atlanta and the Senate is also located at Atlanta for five years.

Just here we surmise, the question will be asked, what is the purpose of the National Railway Association with two degrees? The answer is easy. It is an association to federate members of the O. R. C. and members of the B. of L. E. It is designed to bring these two orders into a loving embrace, where it will be all kiss and no kick, in which punch and throttle will be Senate and Council of the N. R. A. and can change positions, as on the C. B. & Q., without the aid of Wm. P. Daniel's advance sheets. Section I of article III of the Constitution reads as follows:

Any conductor or engineer in good standing, when vouched for by three members of the Order of Railway Conductors, or Brotherhood of Locomotive Engineers and members of this Association, shall be eligible to membership in the National Railway Association.

There it is in black and white. No R. R. Trainman, no Switchman, no Fireman, no member of the B. of R. C., can get in. Nobody but O. R. C. and B. L. E. men. It is lovely. No butterfly was ever more beautiful. It is gaudy. It should be called the Aristocratic Association of Punch and Throttle.

Article three shows how a fellow gets in. It is the front door article. But the N. R. A. or the P. and T. has a back door, a "get out and be gone" outlet, which is embodied in Section 5 of article V, as follows:

No member of the National Railway Association shall be allowed to take a final withdrawal card from the Order of Railway Conductors or Brotherhood of Locomotive Engineers, unless he shall take a final withdrawal card from the National Railway Association at the same time.

That is the way to get out. If a man is a member of the O. R. C. or the B. of L. E. and at the same time a member of the N. R. A. or the P. and T. and wants to get out, he must get out all round. He can't hang on anywhere. He must vamoose the ranch, absquatulate, become absolutely insuampibus.

Every member of a Council must pay \$1.00 a year to run the Senate, the 2d degree must wag the 1st degree, or in other words while the tail wags the dog, or the head, all the teeth are in the head. The second degree having furnished the first degree with the funds the first degree spends as much as it deems proper, and if there is anything over, it goes into a general fund. Just what the general fund is for is not stated, possibly

to defray social expenses as there are eighteen members already on the "social committee."

The first thing in order is to invite Chauncey Mephistopheles Depew to visit Atlanta and deliver an oration. He might be requested to tell what he knows about Pinkerton thugs, and if he recommends the promotion of one of the cut-throats after he has murdered a workingman? He might be requested to tell if the scheme to wreck a train on the N. Y. C. was *cooked* in the Grand Central Depot, to supply an excuse for H. Walter Webb's persecution of Knights of Labor.

Taken all in all, the new order of Punch and Throttle, or B. B. B. (Brass Buttons and Blouse), is mighty aristocratic—too exclusive to receive special commendation from men who have an idea that the required pride and pomp in railroad enterprises can be supplied by the corporation officers, and that the less there is of it in the men who perform the work, the better it will be for them.

THE B. OF L. E.

The closing scenes of the B. of L. E. Convention included the selection of a city in which to hold the next convention of the Order. Atlanta, Ga., bore off the prize, and the next convention will be held in that city, May, 1892.

The *Pittsburg Leader* of October 28th reports the election of Grand Officers. The result was as follows: First Grand Engineer, T. S. Ingraham; Second Grand Engineer, DeLos Everett; Third Grand Engineer, A. Kennedy, of Winnipeg, Manitoba.

A new office was created—that of Assistant Grand Chief Engineer. The *Leaders* says:

The engineers transacted a very important piece of business at yesterday afternoon's session. They decided to create a new office—that of Assistant Grand Chief. The office is to be a salaried one, and, as the title indicates, it is to provide an assistant to the Grand Chief. There were fifteen candidates for the place, and the election was a spirited one. Finally the prize fell to Mr. A. B. Youngson, of Meadville, Pa. It will be the duty of the new officer to travel extensively among the Divisions of the Order thus relieving the Grand Chief of much hard work. Mr. Youngson is very popular with the delegates, and his election to such an important position in the Brotherhood is an honor worthily bestowed.

Mr. Youngson is spoken of as possessing every requisite for the office of Grand Chief Engineer. He is in the prime of a vigorous manhood, thoroughly posted in railroad affairs, and in line with the progressive spirit of the age.

All things considered, the convention made decided progress in some matters of great importance; and, notwithstanding Chauncey Mephistopheles Depew was one of the orators, a great many engineers are still of the opinion that federation is a good thing.

DEPEW'S NEW NAME.

The Philadelphia *Record* in referring to Chauncey M. Depew's oration at Pittsburg in which he eulogized the engineers at the expense of all other labor organizations, calls him Chauncey *Mephistopheles* Depew. The *Record* evidently discovered at a glance the design of Depew, and hence, "*Mephistopheles*." In this connection we reproduce so much of the *Record's* article as is required to show its animus, as follows:

The invitation to Mr. Chauncey M. Depew to address the Brotherhood of Locomotive Engineers in Pittsburg last week gave him the first favorable opportunity to discuss the late strike upon the railroad of which he is the official head. Mr. Depew is too skillful an orator to drag before the public an event which had been almost forgotten by nearly everybody but the poor railroad employes who lost their situations in an ineffectual effort to defend their organization. But although the New York Central Railroad strike received incidental mention, General Master Workman Powderly and the Knights of Labor were the real subjects of his speech. It was natural that on such an occasion Mr. Depew should compliment the Brotherhood of Locomotive Engineers, of whom he was the guest. In his estimation the Brotherhood is an ideal organization of workmen, in strong contrast with the other organization which he described and did not choose to name as the Knights of Labor. Yet in order to give consistency to his eulogy of the Brotherhood and to his disparagement of the Knights, it was necessary for him to overlook certain stormy events in the earlier history of the former organization. But had it been the deliberate design of Mr. Depew to widen the breach between the Knights of Labor and the Brotherhood of Locomotive Engineers he could not have adopted a more cunning method than to exalt one organization at the expense of the other. The argument of the orator limps considerably in another respect in its application to the recent Central Railroad strike. Before the strike was declared the railroad company had already determined upon its hostile policy toward the Knights of Labor. The men who first made the complaint against the dismissal of members of the organization from the company's service were not "carpenters" and "shoemakers," but old employes of the company who well understood the cause which they represented. In obliquely reviewing the strike Mr. Depew carefully refrained from alluding to the subsequent action of his company in making membership of the Knights of Labor an absolute disqualification for employment in its service. It is evident that the Brotherhood of Locomotive Engineers will continue to enjoy the smiling approval of the New York Central Railroad Company's President so long as they shall not strike for increased wages or diminished hours of labor. In any such case they would be apt to fall under the same proscription that has overtaken the Knights of Labor.

With the *Record's* analysis of Depew's address, it may be well to say something of the *Record's* sobriquet, which is happily applied to the New York Central's President.

Mephistopheles is said to be "one of the seven chief devils in the old demonology, the second of the fallen archangels, and the most powerful of the infernal legions, after Satan." As a matter of course, Mephistopheles Depew has an abundance of low cunning—of hypocrisy and deceit. At Pittsburg he was the spider addressing the flies, the serpent charming the rabbits and coons. He persuaded, or tried to persuade the engineers that they were above all other workmen, gods

in overalls; that they held the throttle of the world, and that he, Mephistopheles, was their guardian angel, and could direct them so that they might with impunity snap their fingers in the face of all other labor organizations. And Mephistopheles Depew received an ovation. The engineers admired his scales and listened to the mellifluous melody of his voice, and were charmed by the unearthly light that flashed from his eyes. Mephistopheles Depew was happy as Satan in Eden, and doubtless reported to Vanderbilt and H. Walter Webb. "*Veni, vidi, vici!*" or, "We've got 'em."

But, did Mephistopheles Depew get 'em? Time will determine.

THE Hon. Thos. G. Shearman, of New York, is quoted as saying, that "seventy persons" whom he named, have fortunes aggregating \$2,700,000,000. Many of these millionaires are credited with having been made such by railroads, as follows:

C. Vanderbilt	\$100,000,000
W. K. Vanderbilt	100,000,000
Jay Gould	100,000,000
Leland Stanford	100,000,000
Charles Crocker	60,000,000
Russell Sage	50,000,000
Moses Taylor	50,000,000
F. L. Ames	40,000,000
C. P. Huntington	35,000,000
D. O. Mills	35,000,000
J. W. Garrett	35,000,000
C. B. Roberts	30,000,000
Ross Winans	30,000,000
Mark Hopkins	30,000,000
S. V. Harkness	30,000,000
F. W. Vanderbilt	20,000,000
Wm. Thaw	20,000,000
Wm. Sharon	20,000,000
Total	\$885,000,000

Here we have eighteen persons credited with \$885,000,000, an average of about \$44,000,000 each, all derived from the profits of railroads.

The estimate is low; these eighteen railroad magnates are doubtless worth a billion. but, taking the figures as they stand, and it would require eighteen workmen, receiving \$1.00 a day to work 54,678 years to obtain \$885,000,000.

The question arises, how do these railroad millionaires manage to secure such vast fortunes?

Latest estimates give the number of railroad employes at 700,000. Reduce wages 25 cents a day below the honest earning rate, and in 16 years the \$885,000,000 is secured. Continue the robbery for 50 years, and in that time \$2,625,000,000 is taken, which would create 2,625 millionaires.

Such figures show conclusively that the game of robbery is played successfully.

READERS of the *Magazine* will note that in this issue there appears a complete index of the contents of the *Magazine* for the entire year.

B. OF R. T. CONVENTION.

The Seventh Annual convention of the Brotherhood of Railroad Trainmen, was, according to all reports one of the most harmonious and in all regards successful the Order has enjoyed.

The citizens of Los Angeles did all in their power to make the leisure hours of officers and delegates pass pleasantly, and succeeded as the following resolution shows:

Resolved, That the Brotherhood of Railroad Trainmen, in convention assembled, extends its sincere thanks to the citizens of Los Angeles, Cal., for the cordial reception and hospitable entertainment of its officers and members.

The many attentions of the Rev. Clergy, were not forgotten by the Brotherhood as the resolution demonstrates; indeed, the convention was not unmindful of courtesies.

In regard to the death of Edward F. O'Shea, the convention put upon record its appreciation of that honored ex-officer of the Order as follows:

Resolved, That in the death of Edward F. O'Shea our organization loses one of its noblest members, and the cause of labor one of its brightest intellects and sturdiest champions.

Resolved, That we extend to his family our heartfelt sympathy in this hour of their sad affliction.

Resolved, That our Grand Lodge office be draped in the customary mourning; and that a copy of these resolutions be sent to surviving members of his family.

Federation was not overlooked as the following unequivocal resolution bears testimony:

Resolved, That we heartily indorse the plan of federation adopted by the Supreme Council, and that we discountenance all forms of system federation.

The Los Angeles *Tribune*, of October 31, from which we take the foregoing, says, the convention enriched the city by an expenditure while in session, of at least \$35,000 and adds:

Among other business transacted at the session was the raising of the salaries of the different Grand Lodge Officers. Grand Master S. E. Wilkinson will now receive \$3000 per annum, Grand Secretary and Treasurer W. A. Shehan \$3000, and have his expenses paid, while Editor Rogers of the Trainmen's *Journal* will receive \$2000 per year, and the several Vice-Grand Masters the same amount.

A few changes were made in the staff of officials, G. W. Newman being elected Third Vice-Grand Master, to succeed C. N. Terrel, whose term had expired. J. Bodman, of Los Angeles, was elected a Trustee, in the place of M. S. Bogart, who had resigned. Mr. Bodman will serve during the unexpired term until January 1, 1891, and then for a full term of three years.

The date of the next convention was not definitely determined, but it will either be held next October or in one year from that time. Boston was selected as the place of meeting, and it will be left to a vote of the subordinate lodges between now and March 1, 1891, whether the session will be held in one or two years.

The *Magazine* adds its hearty congratulations. The B. of R. T. is on the high road to still greater achievements.

It comprehends conditions, and is equal to the most exacting demands. Its *Journal* is in the hands of a man whose abilities are universally acknowledged, and whose de-

fense of the purposes of organized labor is of incalculable benefit.

The Grand Officers of the Order are the right men to put on guard and to see that no interest of the Order suffers from inattention.

The *Magazine* wishes the B. of R. T. uninterrupted prosperity.

CHESTNUTS.

The Philadelphia *Times*, in a recent issue, gets off the following:

When will organized labor learn that the true aim of labor must be to make itself indispensable to employers? No intelligent, progressive and trustworthy mechanic or workman of any kind, on railways or elsewhere, will ever need the aid of an order either to find him employment or keep him employed. There is great need for first-class and faithful workmen in every channel of mechanism; but while the incompetent and indolent are upon equality with the competent and faithful in organizations, artistic mechanics must decline and incompetents must rule. Especially is the individuality of the workmen essential on vast industrial systems such as railways. Safety and promptness depend upon the skill and fidelity of individuals in a thousand different channels, and in no line of labor is thoroughly skilled and faithful labor so valuable as on railroads. Until labor organizations make the development of the best skill and fidelity in workmen their first aim, they will ever blunder and crucify their own followers as was done in the New York Central strike. Let the labor organizations develop the highest measure of skill and fidelity in their membership, and wages will never be a matter of serious dispute.

The foregoing is from a paper that exists in Russianized Pennsylvania, where laboring men, by thousands, are more wretched and degraded than in any other state of the great Republic. In the anthracite coal regions of Pennsylvania, the condition of miners is such as it would be difficult to parallel in any quarter of the globe. Poverty, squalor, slavery, degradation, hunger, dirt and defilements such as defy adequate description, exist. In this land, blasted and cursed by corporations, labor organizations do not exist—and debasement, degeneracy and disgrace hold sway. In view of such facts, officially narrated by a Congressional Committee, why is it that such papers as the Philadelphia *Times* does not use its influence to check the vandal viciousness of such corporations as the Philadelphia and Reading R. R., rather than ask such an idiotic question, as "when will organized labor learn that the true aim of labor must be to make itself indispensable to employers?"

Organized labor has learned that labor is indispensable to the country, and that organized labor is superior to labor that is unorganized.

The *Times* should learn that a vast majority of the "intelligent, progressive, and trustworthy mechanics or workmen of any kind, on railways or elsewhere," are members of organized labor, and that it should be said they are the men who work,

the men who appreciate citizenship, who know their rights and dare demand them and defend them. The *Philadelphia Times*, and sheets of its ilk, are ceaselessly intimating that organized labor is vicious, when in fact, it is doing more to solve the most difficult problems of the times than school, church, Legislature or Congress, and doing more to elevate society than all of them, combined.

The *Times* is guilty of a flagrant perversion of truth, when it charges, without qualification, that in labor organizations, the incompetent and indolent are upon an equality with competent and faithful members, and the intimation that the vicious, or "incompetent" do, or must rule, is not less false.

We appreciate the remark that "in no line of labor is thoroughly skilled and faithful labor so valuable as on railroads," and it is equally true that the organizations of railway employes have done more towards improving the character of such employes, a thousand times over than was ever done by railroad corporations, and yet, there are railroad officials who constantly dismiss competent men and employ incompetent scabs, and at the same time, like the *Philadelphia Times*, seek to howl down labor organizations and, if it is found that somewhere a labor organization has made a mistake, or, has tolerated an incompetent man, the fact suffices for an onslaught upon labor organizations everywhere, and a subsidized press is quick to inoculate the public mind with the venom of undisguised falsehood.

DANIELS VS. WHEATON.

We find the following associated press dispatch in the newspapers:

EX-CHIEF WHEATON ACQUITTED.

ELMIRA, N. Y., November 9.—C. S. Wheaton, ex-Grand Chief of the Order of Railway Conductors, was tried here to-day on charges preferred by the Grand Secretary, Wm. P. Daniels, and acquitted, Daniels failing to substantiate the charges.

We congratulate ex-chief Wheaton. His associate grand officer made an attack upon him of intense savagery. Evidently Daniels believed he had his victim down and could annihilate him. But it seems that the tables are turned, and now where does Daniels stand? and what will Wheaton do? To bring charges and fail to "substantiate" them puts Daniels in the pillory. The man who expressed the conviction that a conductor who scabbled on the "Q" was entitled to a place on the "roll of honor," will very soon fade out of sight—will go glimmering.

SAYS Chauncey Mephistopheles Depew, "Now in our times labor and capital are supreme." He should have said, "I, Mephistopheles, and the Pinkertons are supreme on the N. Y. C."

WM. E. BURNS ELECTED.

Wm. E. Burns, of Chicago, at the recent election, scored a splendid victory in his race for a seat in the Illinois Legislature, outstripping by an immense majority colleagues and competitors. Brother Burns' popularity was phenomenal, but deserved. He is a locomotive engineer and a member of the B. of L. F., and will bring to the duties of a legislator mental equipment and practical knowledge which will give him commanding prominence. The *Magazine* felicitates Brother Burns upon his good fortune. The election was bitterly contested, but as the workingmen of his district stood by him to a finish, Bro. Burns, in spite of boodle and all its vicious influences, was elected in triumph, demonstrating conclusively, that where unison prevails there can be no such thing as defeat for a candidate who represents, as did Bro. Burns, the labor interests of the times.

The election of Bro. Burns in the city of Chicago is not merely a personal victory of which he may well feel proud, but it is a triumph of labor over the intrigues and machinations of corrupt representatives of corporation and monopoly. That Wm. E. Burns will faithfully and conscientiously represent all the interests committed to him those who know him best feel assured beyond all doubt.

An exchange says: "About a year ago by the error of a telegraph operator at Aurora, Ind., two passenger trains collided near that place and fifteen people were killed. The operator fled and has since wandered over the country. On Wednesday he appeared at Brunswick, Ga., and shipped in a Norwegian bark for Hamburg. His name is Harry Hull, and in conversation just before he went aboard the vessel he remarked: "I don't mind going away from home, friends and kindred, if the trip will take away the horrible recollection of one night in my life. I did nothing criminal; it was simply a mistake, and yet I would give anything if I could be punished in some way for what I have done; not that I think I'm guilty of any crime, but the cries of those people will ring in my ears always and make me feel as if I were a criminal." It helps matters a little if the public could know more of such transactions. As for instance, how much salary did that telegrapher receive, and how many hours was he required to manipulate his machine without rest or sleep?

MEPHISTOPHELES DEPEW told the engineers at Pittsburg, of a strike on the N. Y. C. caused by a shoemaker, who ordered out fifteen men, employes of the road. The story created a giggle, and Mephistopheles was as happy as if he had been out three nights, instead of two, on a sleeper between New York and Pittsburg.

KNIGHTS OF LABOR.**Officers Elected at Denver.**

The following are the officers elected at the General Assembly, held at Denver, Colorado:

T. V. Powderly of Scranton, Pennsylvania, general master workman.

John W. Hayes of Philadelphia, Pennsylvania, general secretary-treasurer.

Hugh Cavanaugh of Cincinnati, Ohio, general master foreman.

Executive Board:

John Devlin of Michigan.

A. W. Wright of Ontario, Canada.

J. J. Holland of Florida.

John Davis of Kansas.

The public is specially interested in the fact that T. V. Powderly retains his place as General Master Workman. Mr. Powderly has been the target for more criticism than has fallen to the lot of any other labor leader on the continent. This criticism has all too often been malignantly abusive, and in many quarters has had the effect desired, but the great Order has not abated its confidence in T. V. Powderly, and his re-election at Denver was unanimous. Such an endorsement reflects the highest credit upon the intelligence of the membership of the great Order whose representatives in the General Assembly simply obeyed their will in the matter.

Mr. Powderly is the right man in the right place. He is, intellectually, splendidly equipped for the position. He has all the courage required for war and all the vigilance needed in time of peace. He grasps conditions with the power of a statesman, and comprehends the signs of the times with the prescience of a seer.

The times, the country, labor, all, need him, and we congratulate him and the Knights of Labor, that their time tried chief is still at their head.

In the city of New York a corporation has been formed to conduct the business of setting type by machinery upon a large scale. According to a dispatch "a corporation, the New York Mechanical Composition Company, has been formed by some of the printing firms of the city to take up type setting by machinery on a large scale. The company has a capital of \$75,000. The president is T. L. DeVinne. Edward Taylor, of the Trow Publishing Company, is secretary, and W. C. Rogers, of Rogers & Sherwood, is treasurer. Others interested in the enterprise are Harmer Smith, J. W. Pratt and H. Bessey. Tests have been going on for a year and the company has now ordered fifty McMillan type setting machines. The plan of the company is to have an establishment where the members can have type set by machines and then do the printing in their present places of business. It is believed that composition can be carried on at a cost of 20 cents per 1,000 ems, as against

a present average cost of 40 cents. It is proposed to employ union men on the machines, each of which is expected to set about four thousand ems per hour." By working eight hours a man with a machine will set 32,000 ems, or do the work of about five men.

A little calculation will show how these McMillan type setting machines save labor.

Suppose a printing office employs 100 men setting 8,000 ems each, or 800,000 ems a day, which at 40 cents 'per 1,000 ems would be \$320.

The firm introduces 22 McMillan machines requiring each a printer to operate it, these 22 machines permit 78 printers to find employment elsewhere. Tabulated, the gain to the corporation will stand as follows:

100 printers setting 8,000 ems a day, 800,000 ems at 40 cents per 1,000 ems	\$320 00
22 machines setting 800,000 ems a day at 20 cents per 1,000 ems	160 00

Net gain per day \$160 00

Or for a year of 313 working days, \$50,080. That is what the type setting machine can do to save printers from work. It looks like an abundance of leisure for the craft in the near future.

THE MAN AND THE BOSS.

In writing of the man and the boss, it will be well to bear in mind that the boss is also a man—often a degenerate creature—who,

"Dress'd in a little brief authority,
Plays such fantastic tricks before high heaven
As make the angels weep."

The mean, overbearing, lordly, intolerant boss is, all things considered, about the most contemptible, pitiful and base-minded creature that breathes. Find him where you will, trace his ancestry, and he will be found a base-born, vulgar and narrow-minded representative of human nature—a sycophant, a lick-spittle and a parasite; and because he has these traits largely developed, is one of the reasons, all too frequently, that he is chosen for a boss. Such degenerate and despicable creatures are a standing rebuke of the Darwinian theory of evolution. If their ancestors were monkeys (we beg the monkey's pardon for the suggestion), instead of unfolding and expanding to manly men, they exhibit the peculiarities of creatures less human than orang-outangs. They are animated by an ambition to become odious; and, destitute of every ennobling trait of head or heart, they pursue a course of repulsive arrogance towards men who, by virtue of their employment, are so unfortunate as to be in some way under their jurisdiction. Caitiffs of the vilest type, they are never so much in their element as when insulting and brow-beating workmen. These creatures are in almost every large industrial establishment in the country, and are all too fre-

quently found in the employ of railroad corporations. They do their employers incalculable harm; their influence is demoralizing; and when their meanness is pointed out to higher officials, it becomes a matter of astonishment that they are retained.

DURING the last twelve months, according to *Bradstreet's*, the following States have enacted laws bearing more or less directly upon the interests of labor, viz.: Massachusetts, New Jersey, New York, Rhode Island, South Carolina, Georgia, Iowa, Idaho, Kentucky, Louisiana, Maryland, Mississippi, Ohio, South Dakota, North Dakota, Virginia, Washington, Wyoming, Illinois, Tennessee, and West Virginia. Ohio makes ten hours a days work for railroad employes, and declares void any agreement by a railway employe, waving damages for injury from accident, defect, or insufficiency of cars or machinery.

THE St. Louis *Globe-Democrat* is the authority for saying that a number of senators cleared \$1,000,000 by the recent silver legislation in congress. They knew what was going to happen. One senator got \$275,000; the remainder was distributed between eleven senators and fifteen representatives, who netted on an average about \$35,000 each. Such is politics.

Literary Notes.

The November *Arena* is brainy without being too heavy. The table of contents displays a variety of attractive subjects prepared by scholarly minds. Probably the most striking paper is on *The Future American Drama*, completed by Mr. Bouicault a few days before his death. It is a scholarly essay, and being the farewell message of the most successful Anglo-Saxon playwright of this century, possesses peculiar interest. A paragraph of Mr. Bouicault's writing penned a few days before his death is reproduced on heavy plate paper, and accompanies the article. The venerable divine, Cyrus A. Bartol, whose strong yet benign face forms the frontispiece of this issue, writes on "Sex in Mind," a striking paper displaying all the mental vigor which, for so many decades, made Dr. Bartol one of the ablest representatives of New England thought. Prof. N. S. Shaler contributes an able philosophical paper on the African element in America. Professor Shaler is by birth and raising a Kentuckian, by education and later residence a New Englander; he therefore views the race problem broadly. Rev. Minot J. Savage in a "Glance at the Good Old Times," gives a striking contrast between the past and the present. There is some pathos and much fine humor in this paper. Nathan Haskell Dole contributes a paper on Turgénief as a poet, giving liberal translations from the great Russian author. A magnificent full-page picture of Turgénief, with his autograph in Russian, accompanies this paper. "A New Basis of Church Life" is the title of a thoughtful essay by Wilbur Larremore. The heavy papers of this issue are enlivened by a charming paper entitled "Fiddling His Way to Fame." It is a sketch of Governor Taylor's life, supposed to be given by the governor in the dialect of his early home—East Tennessee. It is said that Governor Taylor frequently drops into the dialect of his boyhood home. This sketch abounds in pathetic and humorous incidents set forth in a delightful manner. A beautiful poem entitled "Sunset on the Mississippi," by Virginia Frazer Boyle, follows "Fiddling His Way to Fame." One of the most valuable and interesting features of this number is a symposium on "Destitution in Boston."

Edward Hamilton, Rev. Edward Everett Hale, Rabbi Solomon Schindler, Rev. O. P. Gifford, Rev. W. D. P. Bliss, editor of the *Dawn*, contribute to this symposium. The moral force evinced in *The Arena* is very noticeable in these days of characterless publications. Its instincts are decidedly reformative, it is emphatically a disturber of the peace of conservatism. This moral power has undoubtedly contributed largely to the remarkable success of *The Arena*. The departments on "Notes on Living Problems" contain excellent contributions by Frances E. Willard, Gen. Marcus J. Wright, and Rev. Forrest A. March. The usual interesting editorial notes complete this excellent issue. *The Arena* has become a popular review among those who think broadly and are brave enough to hear all sides. Its sterling ability, its conspicuous impartiality, and the fearlessness with which it presents all sides of the burning issues that are agitating society, has won for it a host of earnest readers.

HAND BOOK OF CALCULATIONS FOR ENGINEERS, FIREMEN AND MACHINISTS, BY N. HAWKINS, M. E.

We have received from Messrs. Theodore Audel & Co., of New York City, a copy of their hand book bearing the above title. The book is intended for both reference and instruction in the first principles of the mathematics of steam engineering.

The opening parts teach, first, how to write and read figures, and from this primer like commencement the work proceeds to give the elements of Arithmetic, Mensuration, Geometry, Algebra, etc., all illustrated with examples of calculations relating to the everyday problems of the engineer.

Beginning with Natural or Mechanical Philosophy, in which the primary Powers (?) are mentioned and briefly described; the lever, wheel and axle, the pulley and inclined plane are illustrated with figures, examples and description necessary to be known.

Next follows general subjects. Thermo Dynamics or heat power, i. e., the power which is produced by burning of fuel; Horse Power, with copious rules for its calculating, both of engines and boilers, and of every variety; Pumps, with many practical "points" in their management and calculations, steam, description and figures relating to this main subject; Injectors, Gravity, strength of materials with useful tables; the Steam Boiler; the Safety Valve, with many rules for ascertaining the safety limit of pressure; the Steam Engine, with illustrations and calculations and description of varieties; Engine counters; Illuminating Gas, and how to read the gas meter; table of melting points for solids; Electricity, how to measure and figure it, with many useful points in its management; table of Conductors and Insulators of Electricity; Chimnies' Transmissions of Power by Belting and Pulleys; the Indicator, with illustrations and rules for figuring the diagrams; Business "points" for engineers, and Index combined with useful definitions.

The work is published in ten parts, neatly bound in green paper covers, and also the whole ten parts in cloth, handsomely and strongly bound in stiff covers, making a book for the library 6x9 inches, 1 1/2 inches thick. The price in parts is 25 cents each, in book form, \$2.50. The work contains 336 pages, with 150 diagrams and illustrations. The publishers are Theo. Audel & Co., 91 Liberty street, New York City, N. Y.

Honors for a Chicago Manufactory.

The Matchless Metal Polish Company, No. 88 Market street, Chicago, recently received through the Department of State at Washington the bronze medal and certificate of award for the best metal polish exhibited at the Centennial International Exhibition held at Melbourne in 1888. On the obverse is a likeness of her majesty, Queen Victoria, and on the reverse side is a wreath composed of the British oak and the Australian wattle. The two ends of the wreath are bound together at the stem by a true lovers' knot. In the center is the motto "Artibus Dignis Honor Insignis," and the five stars of the Southern Cross. The distinction was won in competition with metal polishes from France, Germany, England and other countries.—*The Iron Age*, Sept. 11.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month.

Compulsory Insurance.

MR. EDITOR :—In the January issue of *Scribner's Magazine*, 1889, appeared an able article captioned "The Ethics of Controversy," which treated of the proper and improper methods of conducting or participating in a controversy.

I learned by referring to this and an article, if it can be dignified by such a title, on page 822, September *Magazine*, that the writer, over the nom de plume of Dirigo, has flagrantly violated nearly every ethic and rule observed by men of sense and honor in the advancement of a difference of opinion.

He has deliberately ignored the assertions and arguments that I have advanced. He has wilfully distorted the sense and purpose of my letter and inferred false conclusions from the premises I have portrayed.

When I presented my collection of facts and ideas and logically constructed an argument out of them in favor of the abolition of compulsory insurance, I challenged anyone to refute the truth of my statements or the force of my logic. Dirigo has not done either one, in fact he has not attempted to, but under the pretence of doing so he has by slurs and contemptible insinuations attempted to cast odium on myself and a beneficial change; which he has neither facts nor intelligence to controvert.

If he had anything to offer that would nullify my statements, anything to prove or disprove, it is but reasonable to suppose that he would present it. Not doing so he has admittedly confessed that the arguments I have advanced and the statements I have made are sound and true, so he has insinuated and I am now going to show the absurdity of his insinuations. It is plainly evident that he judges other people's motives by the narrow compass of his own. He wishes to carry an insurance policy and, therefore, is violently in favor of insurance and compelling every other member to pay assessments on one in order to reduce the tax on himself. Because I wrote in favor of non compulsory insurance he straightway presumed, and brazenly published his presumption as a fact, that I am homeless and without a single relative and have no need of insurance, when the reverse is true. I have several near relatives who are partially depending upon me for support, and in whose favor I have always carried an insurance policy and always will. No, Brother Dirigo, I have no private axe to grind. I am not writing for the personal benefit of Newcomer, but for justice and the prosperity and growth of the Brotherhood of Locomotive Firemen. Dirigo asserts "This Order was (if I understand the sentiments of those who organized it) primarily a benevolent one and after due time branched out and took up protection." I partially agree with him in this respect, but I also believe that while the ostensible purpose was benevolence, there was the deeper and ulterior purpose in view of proclaiming it a labor organization when it was numerically strong enough to hold its own as such. In fact I believe that it was organized for direct personal benefit to the members and not abstract charity for the multitude. As the basic ground of this belief I will quote the closing clause of the preamble, which reads, "For the protection of their interests and the promotion of their general welfare." Now I will admit that protecting their interests can be construed into meaning the carriage of an insurance policy, which will protect a member's interest or family against his death, but nothing in it can be construed as authorizing or justifying the present knock 'em down and drag 'em out methods of compelling a member to be insured, regardless of

whether he wishes it or not. It provides a means of relief for a member's family against his death, not a means of bulldozing a member into becoming a shareholder in a wild-cat insurance association against his better judgment. And the promotion of his general welfare. What does that denote? There is not in my estimation anything that promotes a member's general welfare more than living wages, and nothing will secure living wages but perfect organization, which we have failed to achieve up to date, and will continue to fail while we allow the payment of an excessive and in some cases prohibitory insurance tax to be the criterion of a member's worth. If mutual insurance is to be continued as the aim and end of the B. of L. F., then why not throw our doors open to wipers, coal shovelers, machinists and miscellaneous railroad workmen? they are just as eager to be insured as we are, and it is an irrefutable fact that the larger the number of persons paying an assessment in a given organization the lower the assessments to each individual member. Then why not muster in all classes of railroad workmen and reduce our assessments accordingly? Why not canvass the engine men on the C. B. & Q.? Doubtless our insurance is cheaper than that which the company in its paternalism is trying to force on its employees, as we read of in the daily papers. On the other hand, if the B. of L. F. is trying to be or wants to be a labor organization, why not adopt legislation that will serve the purpose of a labor organization? Why not admit firemen who are worthy of being members of a labor organization, regardless of whether their finances will permit them to carry an insurance policy or not, and regardless of whether they want to carry one or not? Let us make either an excellent insurance institution out of it that will pay dividends to its stockholders or else a labor organization that will protect its members, in fact as well as in name, and abolish conflicting laws upon which the present double-headed nonentity is based that makes it a mediocrity as both, but would be an unqualified success as one. Before we proceed any farther with this argument, let us examine into the definition of the word benevolence, as defined in the dictionary and as construed and expressed by the Brotherhood of Locomotive Firemen. It is defined in Worcester's dictionary as "disposition to do good, good will, kindness." This, I would infer, is that the members of the B. of L. F. should have a disposition to do good to one another, be kind to one another in sickness or distress. Strictly speaking, I believe a vast majority of our members do feel disposed to do good to one another and railroad men in general. They do feel kindly disposed towards each other, but what protection or substantial sympathy have they provided for a member in distress? Hardly any. We can constitutionally allow a member to starve to death, or die by inches of consumption and there is no provision in our laws to alleviate his suffering in the shape of a bank check, except such charity as the lodge may feel inclined to bestow. And suppose the lodge has no money to bestow? Why then we can constitutionally allow him to starve to death as I have already stated. But after he is dead and his sufferings ended, we are bound by the most solemn ties and under penalty of being expelled forthwith and listed as a traitor to organized labor, to contribute our quota to the sum of \$1,500, to be paid to his brother or sister or any other distant relative or friend his mind had previously conjured up. This is benevolence as interpreted by the B. of L. F. This dead sea fruit, which will crumble to ashes on their lips when placed there, or to transpose the figure of speech, which we will not place there until their lips have crumbled to ashes. This benevolence is what Dirigo would have us believe the B. of L. F. was primarily organized and perpetuated for and everything else is incidental to it. If the principal end and object of the B. of L. F. is to coerce and harass its living members to provide an extravagantly large sum of money to pay to its dead members or their heirs, then I think it is time to shut up shop. If it is to be the supreme ambition of our combined efforts, then let us return our charters and let every man work out his own salvation. But I claim this is not or ought not to be the supreme object of the B. of L. F. I claim that protecting the rights of our members, securing them employment and their reinstatement when

unjustly discharged, is of far more importance to every member and every relative depending on them for support than the payment of a large sum after death. Dirigo further expresses himself as follows:

"I do not see wherein it is necessary to drop any of the good work already done." No Brother Dirigo, not only do I fail to see the necessity but I fail to see or understand how we are going to drop anything already accomplished or done as you have expressed it. I am inclined to believe you have got your tenses sadly mixed, or else you don't know what you are writing about. The next assertion of our Minneapolis friend is interesting as a curiosity. Where he declares "we certainly do not want optional insurance where the assessment ranges from \$5 to \$10 per month, such as the engineers have and pay twice as much benefit for over four times as much premium." The only logical inference I can draw from this assertion is: If we had optional insurance so few brothers would insure that the assessments to those that might insure would be increased to the amount stated above, viz.: 5 to 10 dollars per month. Further down he declared that Newcomer (who advocated non-compulsory insurance) does not in my estimation represent two thirds or even one thousandth part of it, which signifies that Dirigo believes that not one thousandth part of our membership wishes to dispense with their insurance policies. Here we have the spectacle of a man asserting in one paragraph if we had optional insurance such a small percentage of our membership would insure as to increase the individual assessment to \$5 or \$10 a month, while in the next paragraph he estimates the members who do not wish to carry insurance as not even one thousandth part. Now, Brother Dirigo, which one of these conflicting statements do you want us to swallow? Is the former your honest opinion, and the latter merely for effect, or is the former simply to frighten us, and the latter your candid belief? Perhaps you believe neither. Surely you cannot expect the readers of the *Magazine* to believe either of them. I will admit that as a skillful juggler of words Dirigo is an expert, but he was very stupid to commit the same blunder that I corrected in Brother Satisfacere in the August issue, and which correction he was endeavoring to criticize. When, where, and how did I boldly assert that two-thirds of our membership do not now nor never did want any insurance? Dirigo next asserts:

"The insurance and disability features of our Order are founded on a perfect equality to all." Yes, all who want insurance, but I claim that the laws which compel a man to accept insurance without the privilege of an appeal is not founded on a perfect equality to all. It coerces a member into paying \$4 a quarter to sustain something he does not wish at any price. If there is any "perfect equality" in this I would consider it a personal favor, if Dirigo would kindly point it out, as I am utterly unable to locate it. Another excerpt from page 822 is as follows: "For all that is devoid of humanity to the homeless and orphaned in the light of our history as a brotherhood, that which is the most soulless, cold, and unfeeling is found in a letter commencing on page 721 of the present volume." This reminds me of the arguments of those petty officers who are plugging for those kind old Railroad Companies like the Baltimore & Ohio for instance, who insist on all their cold, soulless and unfeeling employees taking out an insurance policy in the Company's institution regardless of whether they want it or not. This is not coercion. Oh no! certainly not. If you don't wish to be insured you can leave the service; if you won't agree to the Company retaining a couple of dollars a month, to pay those men for their trouble in running the private affairs of their employees, yourself included, why, then you can quit. It would be unfair to call this robbery. They don't go out on the highway and make a man stand and deliver; but as a real nice, high-toned confidence game it stands at the head of the class, and now, I would like to interrogate the apostles of compulsory insurance, Dirigo preferred. I presume he is head of the class from the roar of pain he emitted when his corns were stepped on. Why is it paternalism and so repulsive to the employees of a Railroad Company to have the officers force mutual insurance on their employees and then

state why it is the acme of brotherly love for the major portion of these employees (particularly firemen) to force mutual insurance on a minor portion or vice versa? I want him to explain the difference: If there is any difference, it isn't visible to the naked eye; in fact, the only difference I can see is that a man has the privilege of an appeal from a Railroad Company, he can leave the service, and there are hundreds of other roads as good, probably better for him to earn a living on, while there is only one brotherhood for locomotive firemen, and therefore no appeal from the arbitrary dictum of his fellow-workmen or brothers rather. I believe that is the proper title. Dirigo states "I have yet to hear of a single instance, since the Philadelphia Convention where the protective part of our structure was neglected for the benevolent;" then I will call his attention to one—on the 27th of February, 1888, the firemen and some engineers, who were members of the B. of L. F. engaged in the strike on the C., B. & Q. for an increase of pay, and as an outcome of that strike they lost their situations. How did the protective and benevolent laws of our Order operate on the condition of those men, who fighting under the official instructions of the B. of L. F. gave up their engines? The protective laws operated all right as far as they went, but the benevolent laws soon proved to be a veritable Shylock. No matter if a man was fighting for the B. of L. F. No matter if he was out of work a year or two, and perhaps had a family to support, the pound of flesh to satisfy the insatiable insurance policy must be paid, or else be ignominiously kicked out; in some places on the line of the Q. whole Lodges have been expelled. I claim this is neglecting the protective for the benevolent, and in my estimation is a very ungrateful manner of awarding the men who fought the battle for labor on the Q. What insurance company am I working for at present? Why, the Brotherhood of Locomotive Firemen, of course. By reading between the lines it is an easy matter to discover the name of the company Dirigo is working for. It is spelled with a capital I. Dirigo wishes to know the names of the two-thirds of our members which he claims I represent. Brother Satisfacere in the July *Magazine* asserted that if our insurance was optional about one-third would insure, leaving a balance of two-thirds who would not, and classed me with them. I instituted no inquiries into his figures, but accepted them as such and qualified my acceptance of them by stating that I thought his figures were too low; and now if Dirigo wants them verified I would respectfully refer him to their author. Dirigo next inquires: "Can he tell me why it is logical to have \$500 insurance and not \$1,500." No, Brother Dirigo, I can't tell you why; all I can do is to write out my facts and ideas and send them to the editor to be published, which was done on page 722, current volume, and then if you don't, or purposely won't understand them, I can do nothing for you. I will guarantee to clothe my ideas in appropriate language, but I will not guarantee to learn them to you. After you have mentally grasped the proposition in the closing paragraph on page 722, and you feel disposed to attack its practicability, then I will give you a more elaborate definition of its merits.

OCTOBER 1ST, 1890.

Newcomer.

ONEONTA, N. Y., Nov. 11, 1890.

MR. EDITOR:—I would say in reply to R. S., in the November *Magazine*, that I don't see how there could be any doubt as to the meaning of the train order that he received. If the dispatcher gave him an order to run from Paris to Mt. Carmel as train 13 in advance of time, he had the right to go as soon as he received the order, providing there were no scheduled opposing trains due. In other words, he had the same rights as an extra train carrying white flags with an order to run extra to Mt. Carmel. I receive such orders quite often and always proceed on them, but, as I said, keeping clear of all scheduled trains, and if by chance I fall back on the time of my own train, I then have all the rights of the train against opposing trains as laid down in the schedule.

M.

THE MOVING ARMIES.

We are coming in our thousands from the mountains towering high.
Where the eagle eyes of manhood see the glories of the sky:
We are coming from the valleys, where the rivers roll along,
Breast to breast, in solid phalanx, to increase the mighty throng;
From the cities come great armies of the brawny sons of toil,
Men whose brows are scarred and furrowed from a life of steady toil:
We are coming, slow but steady, to life's hopeful Runnymede,
Where the masses from their thralldom shall by master minds be freed.

From the mines ascend the miners to inhale the purer air,
Which the God of nature sends us, each insisting on his share:
From the workshops come the millions with a mighty rush and roar,
From the farms and from the rivers, from the seas and every shore,
Come the men of brain and sinew who discern the coming dawn,
Which presages golden sunlight on our resurrection morn,
When, enfranchised from the bondage which we've borne for countless years,
We shall stand in garb of manhood, spurning supplicating tears.

We have stood for many ages all the slings of cruel fate,
We have cringed with abject features to the worldly rich and great:
We have bent in meek submission till our backs received the load,
And have stood it uncomplaining, as we ever grave-ward strode.
We've been crushed and cruelly trampled underneath the feet of those
Who denied alleviation for our never ceasing woes;
Who have been but beasts of burden, held in bondage by our fears,
Crawling on in cowardly terror to Gethsemanies of tears.

Now, by heaven! a light is breaking on the minds of tolling men,
And emancipation's aided by the gloom-dispelling pen.
This electric age is learning men to think upon their wrongs,
Their great armies are in motion, marching on in mighty throngs.
From the highways, from the byways, forth they march in solid tread,
In battalions and divisions, with their leaders at their head,
To demand the Rights of Labor, and declare their newborn creed,
And insist that from their bondage men must evermore be freed.

All ye croakers, and ye doubters, let your ears but touch the ground,
And you'll hear their foot beats moving, for they make the earth resound,
In communion, in one union, every man his brother's peer,
And before you realize it that grand army will be here!
Here to sing their glad Te Deums, for the victory is sure,
Here to sing the exaltation of the long-enduring poor:
Here to have a resurrection from the thralldom of the slave.
And secure the manumission which most surely waits the brave.

Shandy Maguire.

BLOOMINGTON, ILL., NOV. 12, 1890.

MR. EDITOR:—It has been a long time since anything concerning No. 40 has appeared in the *Magazine*. Now, in case we should be thought asleep or dead, just let me say to any and all that they will find us the most wide-awake and lively corpse they ever saw. Since Bro. Joe Berner caught a strange disease, the complaint has spread to an alarming extent. It has already claimed for its victims Bros. Henry Heid, Nick L., T. D., Jesse W. and John R.; and those who are in various stages of this malady are Bros. Chas. H. and Ed S. With them it is very serious, and competent practitioners say they will reach the climax about Thanksgiving. Then follow Bros. Chas. M., Jas. K., and on down the line. The county clerk has added to his staff of assistants to aid him in writing off prescriptions, and these are filled at a Justice of the Peace's office or at a minister's house. Bro. John R.'s was a case that baffled the best; no one knew of the attack until the turning point was reached and the worst was over. *Mum* had charge of him, and he brought him out all O. K., judging by the happy, contented look on his face.

On the whole, we are dying, slowly but surely, and as a "single" Lodge we will soon cease to be, unless the writer (?) and two or three others can keep it alive. As a "double" Lodge we will still continue to do business at the old stand.

Bro. Chas. Moore is touring out through the west, looking for—well, Charlie can tell himself. If any of the brothers in the west should meet him, see that he don't get lost. Keep your eye on him, and see that he don't prove a victim to Cupid, for the reports of our delegates speak of the charming, bright-eyed women of the west in glowing terms, and as a good place for a SINGLE, UNENCUMBERED man to stay away from. Still, Bro. Moore's heart is in the right place—it is brotherhood all through, and we could spare a little of it to some charming lady. We have had several changes here lately. Bros. Gill, Ryan, Herder, Templeton and Langdon have been promoted—Bro. Gill is running an engine at Joliet, and the other brothers are hosting. Bros. Schaffer, Hayes, Raycraft and Jessett are now firing on passenger runs. Bro. Ed Spreen is at the head of the list of stokers, and after over nine years' service, it is not strange to hear all these brothers say, "How long, O Lord, how long?" We have had several changes in the machinery department. Our round-house foreman, Mr. Ed Schell, goes on the road again; he will run the 138, on way-freight. Mr. John Green, who was foreman at Roodhouse, is changed to Bloomington, and Mr. C. V. Lary, of the machine shop here, takes charge at Roodhouse. There was a rumor going the rounds to the effect that we were to have a traveling engineer on this road, but it seems to have no foundation. The changes on our engines have been the latest improvements, such as the extension front end, air-brake, injectors and lubricator cups.

We had considerable discussion on "Train Order," in November *Magazine*, and we are divided. What time does train 13 leave Danville? "The dispatcher won't run an extra." Well, does not running a train ahead of time make it an extra or a wild train? The order reads from Paris to Mt. Carmel ahead of time, but DOES NOT say to LEAVE Paris ahead of time. Please tell us how your dispatcher would word his order to meet this first section of 13, supposing there was a train bound north of the same class—that is, a freight train. (Some roads have way freights as one class, through freights another.) If the order read, "Will run as first section of train 13, and will run ahead of time to Mt. Carmel," I would go, as soon as I received the order, as far as possible without getting on the time of regular trains. No matter about the direction I was going, for I am then a wild train. But if it read "from," I would wait until my time was up or the time the train was due. Still, even if you don't lose your rights until after twelve hours, it would be reasonable to suppose that if you did not meet train 13 of the day previous, you had a clearance for them; otherwise it would be risky to try and do any work or switching at out-of-the-way places, on curves or in hollows, without flags being sent in both directions, and this would leave one man to throw switches, cut off cars, make couplings, and so on, and you would be very apt to get a mes-

sage asking you what was the matter, at the first place you came to where there was an operator. The majority here say, "Wait until 9 o'clock."
Yours fraternally.

No. 40.

Martin J. Conniff.

LOUISVILLE, KY., October 1, 1890.

Editor Firemen's Magazine:

Bro. Martin J. Conniff was fatally injured by falling from his engine's head light and running a flag-staff through his body.

Bro. Martin had served a term in the yard and was liked by all who knew him. When his time came to go on the road all the boys said "I'm glad to see Martin get out of the yard." He made a good fireman, and when the sad news came of his fatal accident, it was received with the deepest sorrow. He suffered great agony but his death was peaceful, and he was prepared for the dread summons. He was a good son, and devotedly attached to his sister, who knew his love, and his parents, brother and sister experience intense sorrow, for which they have the sympathy of all who knew their affectionate son and brother. His sudden departure should remind us all that life is uncertain and that we should be prepared to go at a moment's warning.

A friend,

J. E. G.

ALL THE SAME.*To the Delegates of the San Francisco Convention.*

Beyond the Rocky's western slope
And Sacramento's fertile vale,
Where the Pacific—peaceful scope—
Is set with many a snow white sail;
Where evening sunbeams hold the spires,
Of San Francisco, and await
Reluctant, as the day expires,
The last to leave the Golden Gate—
'Twas there that I was asked to be
To meet with friends I can not name,
Though that great joy was not for me,
My heart was with you all the same.

I tried to picture, as I could,
Upon the mind's mysterious webs,
With all that thronging Brotherhood
Our Sargent, Hannahan and Debs;
For these were all the names I knew
In that assembly gathered there,
Save one from "Fifty-Six"—so few
Among so many! Yet to share
The merry greetings of that throng!
What though I knew not every name?
For I have loved your cause so long,
My heart was with you all the same.

And when of late I chance to meet
The boys of Number Fifty-Six,
And note the warmth with which they greet
One another as they gayly mix
Their voices in a glad "Hello!"
"Good morning, Lon!" "How are you, Brick?"
"Tom, how's your frame?" and "How'd'y, Joe?"
Somehow it almost makes me sick
To think that I could not be there
And share your greetings; what a shame!
Yet my regret I'll try and bear—
My heart was with you all the same.

And now to all, from sea to sea,
From north to south, God speed to you!
Ambassador of Labor, be
Devoted to your cause, and true
To that high honor which inspires
The heart to earnest, kindly deeds;
And as before your gleaming fires
You bend, providing for the needs
Of loved ones, may you ever feel
That, though I may not know the name
As speeding o'er your path of steel,
My heart is with you all the same.

Geo. W. Hall.

STANBERRY, MO., Nov., 1890.

BEAUMONT, TEX., Nov. 12, 1890.

MR. EDITOR:—In answer to the questions propounded by R. S., in the November *Magazine*, in reference to a train order, I take the liberty to express my views as follows: If my orders read that first section of train 13 would leave and run ahead of time from Paris to Mt. Carmel, I would have perfect right in leaving as soon as my orders were completed; but if they read first section of train 13 would run ahead of time from Paris to Mt. Carmel, I would not leave Paris until the schedule leaving time, which would be nine o'clock.

We do not use that code of rules on this system. A schedule train can leave a terminal point and, if the dispatcher so desires, he can annul the train at any telegraph office and run it as an extra.

Thus, train No. 21 has arrived at Welch's, and is annulled between Welch's and Lafayette. Of course, he then would give them orders to run as an extra, thereby aiding the train to make better time.

I will now ask a question regarding a train order: Odd-numbered trains run east, even numbers west; east bound trains have right of track over west bound trains of the same or inferior class.

No. 21 and No. 22 are second class trains. No. 23 and No. 24 are third class. On November 1st No. 23 has a positive meeting order with No. 22 at Fern, a blind siding. At 12:01 A. M., November 2d, a new time card goes into effect and No. 22 is stricken off the new card. No. 23 has not arrived at Fern on the old card, but falls back on its time on the new one. What would you do when you arrived at Fern and No. 22 had not arrived? Yours fraternally, Dan.

Horse and Buggy to Hannahan.

A Chicago paper contains a notice of a visit inflicted upon Brother and Mrs. J. J. Hannahan, at their residence, by a party of gentlemen, friends and admirers of our Vice Grand Master, the purpose of which was to present Bro. and Mrs. Hannahan with a horse and buggy valued at \$500. We chronicle the incident with more than ordinary pleasure and congratulate Brother Hannahan upon his good fortune, not so much because he has a \$500 horse and buggy, as upon the fact that he has around him at his home a small army of large hearted and appreciative friends. In presenting the "rig" the speaker said that "A certain king of England, according to Shakespeare, on one occasion offered his kingdom for a horse. It was certain he had not lived in Chicago, or been a prominent member of the Firemen's Brotherhood, or the desired nag would have been supplied in short order." He assured Mr. and Mrs. Hannahan that they would never experience half as much pleasure from the use of the horse that their friends did in presenting it to them. In response to this Brother Hannahan, on behalf of himself and wife, assured his friends that while he could not properly express his thanks for their valuable present, still he valued their friendship more than a street car barn full of horses. He was gratified that the gift came not exclusively from railroad men, but from the citizens of his home, Chicago. In conclusion he assured them that while he might not be able to use the horse and buggy much, Mrs. Hannahan would enjoy it, and gave a standing invitation to all to consider his house their own at all times. Surely Brother Hannahan has a right to feel proud of such tokens of good will on the part of his neighbors, and his brothers of the Firemen's Brotherhood will esteem his good fortune in no small degree a compliment to themselves. We fancy we see Brother Hannahan dashing along the boulevard and soliloquizing—

"We, what's rich, can ride in chaises,
And them what's poor can walk, be jases—"

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

DECEMBER, 1890.

Assessment Notice for December.

OFFICE OF GRAND LODGE B. OF L. F.,
TERRE HAUTE, IND., December 1, 1890. }

ASSESSMENT No. 16, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death of the following members entitled to all the benefits of the Order, viz:

CLAIM No. 328. Henry C. Belt, of Midland Lodge, No. 147, was killed in a Railroad Accident, Aug. 20, 1890.

CLAIM No. 329. Jos. Cook, of Salt Lake Lodge, No. 178, died of Hepatic Abscess, Sept. 2, 1890.

CLAIM No. 330. Frank M. Kuhl, of Silver Mountain Lodge, No. 327, was killed by Railroad Accident, Sept. 4, 1890.

CLAIM No. 331. Harry Brown, of Silver Mountain Lodge, No. 327, was killed by Railroad Accident, Sept. 11, 1890.

CLAIM No. 332. Jacob Hatter, of J. K. Gilbreath Lodge, No. 264, was killed by Railroad Accident, Sept. 14, 1890.

CLAIM No. 333. Jos. H. Burk, of Banner Lodge, No. 56, was killed by Railroad Accident, Sept. 21, 1890.

CLAIM No. 334. Wm. H. Moore, of Saginaw Valley Lodge, No. 286, was killed by being Struck by Railway Struck on Head with a Coal Pick, Sept. 25, 1890.

CLAIM No. 335. Cyrus Carmer, of Black Hills Lodge, No. 86, was killed by Railroad Accident, Oct. 11, 1890.

CLAIM No. 336. Wm. E. Storey, of Georgia Lodge, No. 245, died of Consumption, Oct. 15, 1890.

CLAIM No. 337. J. G. Burkhart, of Weaver Lodge, No. 379, was killed by Railroad Accident by Bridge, October 16, 1890.

CLAIM No. 338. Jno. Wright, of Livingston Lodge, No. 389, was killed by Railroad Accident, Oct. 21, 1890.

CLAIM No. 339. Charles W. Barchus, of Holbrook Lodge, No. 378, was killed by Railroad Accident, Oct. 21, 1890.

CLAIM No. 340. Jules J. Cuny, of Pine Ridge Lodge, No. 17, died from scalds received by the bursting of a flue, Oct. 23, 1890.

CLAIM No. 341. Frank M. Dudley, of Wm. Hugo Lodge, No. 166, died of Typhoid Fever, Nov. 5, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls December 1, 1890, as provided in Section 52 of the Constitution said remittance to reach the Grand Lodge not later than December 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 51 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Acknowledgments.

LOUISVILLE, KY., October 20, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

I desire to acknowledge the receipt of a draft for \$1,500 from Bro. I. E. Garrett, assisted by Brothers McGuire, Kettler and Cook, of Falls City Lodge, No. 103, the full amount of insurance on the policy which I held in your Order. I take this opportunity to express my heartfelt gratitude to the Brotherhood of Locomotive Firemen for the substantial aid they rendered me during the long weary months of pain and suffering that it was my misfortune to endure, and also the kindness, courtesy and sympathy they invariably bestowed upon me at all times and under all circumstances.

I feel that words are too weak to express my thanks to the Brotherhood of Locomotive Firemen. May Heaven's choicest blessing rest on every member is the wish of myself and wife.

One word to all members of the Brotherhood: take my advice and keep your dues paid up promptly, for you do not know what minute or how soon misfortune may overtake you. I sincerely wish that prosperity may always attend the Brotherhood and that it shall forever continue in its noble mission of charity and peace. Hoping I may always be able to remain a worthy member of the Brotherhood of Locomotive Firemen, I am

Yours fraternally,

B. F. Barth.

HANCOCK, MINN., October 21, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my dear son, Fred M. Stebbins, through Mr. P. Anderson, Receiver. I also desire to express my sincere thanks for the beautiful flowers presented by Cooke Lodge, No. 358, and also to those who accompanied the remains and who so kindly assisted at the funeral. May God ever bless and protect your noble Brotherhood is the sincere wish of

Mrs. Elizabeth Stebbins.

SPRINGFIELD, UTAH, November 1, 1890.

To the Officers and Members of Salt Lake Lodge, No. 178, B. of L. F.:

Permit me to render you my heartfelt thanks and that of my family and the numerous friends of my deceased son, Joseph Cook, for your assistance during his prolonged sickness and suffering. Your acts of kindness during said illness will be cherished in our memories while the sands of life continue in the hour-glass of time, or while one ray of hope connects this earthly tenement with its fleeting existence will me and mine remember you. Trusting that when your hour to depart shall come some gentle hand may soothe your suffering as yours did his

From his father,

Joseph W. Cook.

Limited Withdrawal Cards.

Repeated complaints are being received from members who are unable to secure limited withdrawal cards to enable them to deposit the same in the Lodge nearest where they are located, as the law requires them to do. In all such cases there is a serious neglect of duty somewhere which is liable to have serious consequences. We have called attention to this matter repeatedly and if in the future such inexcusable neglect is persisted in on the part of certain Subordinate Lodges, the suspension of a charter or two may have a wholesome effect in inspiring a proper regard for and compliance with the plainly written laws of the Order.

Addresses Wanted.

WM. McCOLL—Is believed to have departed from Memphis, Tenn., about January, 1890, and has not been heard from since. His relatives are anxious concerning him and anyone knowing anything concerning his whereabouts will confer a favor by communicating with David L. Marrs, Collector of Rocky Mountain Lodge, No. 77, whose address is 425 Beecher Ave., Denver, Col.

JOHN SPELLMAN—A member of Bluff City Lodge, No. 55, who left Memphis for the West about six months ago. When last heard from he was in Texas, and if this reaches his eye he is advised to correspond with his Lodge without further delay.

Be Sure To Get

MEXICAN MUSTANG Liniment.

IT IS for MAN and BEAST.

Penetrates Muscle,
Membrane and Tissue
to the very Bone itself.

THIS NO SUBSTITUTE WILL DO!

READ WHAT IT HAS DONE!

Office of the City Auditor,
Richmond, Va., Nov. 15th, 1884.
Messrs. LYON & CO., New York.

Gentlemen: On Saturday last, November 8th, my son, a youth or seventeen years, was badly burned on the hands and face by an explosion of powder while assisting in firing a salute in honor of the election of Cleveland and Hendricks.

I at once commenced the use of your MEXICAN MUSTANG LINIMENT, and to-day, Saturday, November 15th, he is almost entirely well. His hands and face were nearly roasted. I have used about 10 bottles, 25-cent size, and it has completely healed the burns without leaving a scar. I have no doubt you have any number of testimonials as to the efficacy of your Liniment, but I cannot refrain from adding my testimonial with my heartfelt thanks for the great benefit my son has derived from its use.

I trust you will continue its manufacture, that all suffering humanity may be benefited. It is worth its weight many, many times in gold.

I may add that no doctor was called in or consulted at any time since the accident.

The MEXICAN MUSTANG LINIMENT did the work entirely.

Respectfully yours,
W. J. GENTRY, Secretary,
Richmond City Gas Works.

LOCOMOTIVE

FIREMEN

**YOU WISH PROMOTION. HEALTH
MEANS ADVANCEMENT.**

YOU ARE AMBITIOUS TO BECOME AN ENGINEER.
Preserve your Muscular Strength by a timely application of

M.M.L. MEXICAN MUSTANG
LINIMENT, which
gives immediate relief and speedy cure

to Rheumatism, Sciatica, Lame Back, Pains between the Shoulders, Facial Neuralgia, Sore Throat, Toothache, Bites, Bruises, Bunions, Corns, Burns, Scalds, Cuts and ALL OLD SORES.

As Sunshine, Rainstorm and Snowstorm are mingled in the honest service of all Trainmen, the Faithful MUSTANG is constantly needed to cure CHILBLAINS, FROST BITES and all INFLAMMATION arising from exposure to severe weather in climbing over the mountains and plowing through Snow Blockades.

Mustang Liniment discounts all "lay-offs" from LUMBAGO or PNEUMONIA, if applied in time and WELL RUBBED IN! The FIREMEN who "handle the scoops," "shine the brasses," "clean the jackets" and "oil the bearings;" the ENGINEERS who hold on to the "Throttles;" the BRAKENEN, whose lives and limbs are in constant danger for want of more and better "automatic car couplers;" the TRAINMEN, climbing over "Icy Freight Cars;"—in truth, the CONDUCTORS, SWITCHMEN, YARDMEN, SECTIONMEN, FREIGHTHANDLERS, BAGGAGEMASTERS and all Railroad men need

—MEXICAN MUSTANG LINIMENT.—

Apply it VIGOROUSLY! It will achieve the Climax of results! 'Tis the Acme of Reliable Remedies! It is not a new, untried article. For nearly half a century it has been sold all over the civilized, progressive world, and has cured millions of both MAN and BEAST!

No Mechanic wants to be a candidate for an "ambulance" or a "shutter;"—hence all should keep the Mustang Liniment in Shop, Stable, Factory, Kitchen, Round House, Toolchest, Engine Cab. All Superintendents and General Managers of Railways should see that a good stock is kept among their stores.

To FIREMEN and all R. R. men we say: Let the "head-light" of intelligence burn in your brains, devotion to duty warm your hearts, and the glow of MUSTANG LINIMENT run up and down your Spinal Column, and you'll be all O K for work. If promotion is to be had, you'll "get thar" sure! Whether you win your way on a six, eight or "ten wheeler" makes no difference.

ALL GENERAL MANAGERS OF RAILWAYS should see that MUSTANG LINIMENT is kept in the Shops and carried on all the Freight and Passenger Trains. It is as necessary as Axle Grease for your Trucks, or Oil for Locomotives. Its timely use would save great suffering, much expense and many lives.

Every loving, devoted wife will see that her husband has Mexican MUSTANG LINIMENT always kept in his Kit!

LYON MANUFACTURING CO., 59 FIFTH AVE., New York City. (SOLD BY ALL DRUGGISTS.)

Alexander's Ready Reference

New 1890 EDITION For
Engineers and Firemen.

Broke Down. What I Should Do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK-ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the manner of handling are given. A diagram of SLIDE VALVE MOVEMENT, 16½ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given, in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING. A careful study of the principal items of the old editions has qualified very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without it," or, "It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive FIREMEN AIMING AT PROMOTION. Price \$1.50 per copy.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

PATENTED NOVEMBER 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanness and noiselessness.

HOUGHTON, MIFFLIN & CO.

A conductor on a Western Express is the marvel of those who have been let into his secret. Although having had both of his feet amputated, he is a conductor of extraordinary ability.

He passes through his train going at the rate of fifty miles an hour. The car jolts, hitches, sways, and he retains his balance without the least awkwardness.

At stations he alights with agility, watches his passengers and gives signals, boards his train and walks the passageway with the steadiness of one possessing his natural legs.

Day after day for three years he has performed this round of duty, and not a soul has had occasion to suspect that he operates on a pair of artificial legs with rubber feet, and only those to whom he voluntarily reveals his condition ever know of his dependence on artificial extremities.

All this is made possible by the virtues of rubber, which largely composes the feet; the old methods of artificial limbs, with wooden feet and mechanical joints, would render this man unsafe, tottish, unsteady and unfit for a position that requires sound footing. The engraving represents Mr. Wade operating on his artificials in his chosen profession.

Conductors, engineers, firemen, brakemen, and men of all trades, who have met with the loss of either extremities, have been restored, and enabled to resume their labors by the use of artificial limbs with rubber hands and feet of the MARKS Patent.

Subjects can remain at home and have artificials made, with fit guaranteed. One-half the legs and arms are made from measurements and profiles, without the presence of the wearer.

Indorsed by the United States Government, the eminent surgeons in the country and over 11,000 men, women and children who wear them, residing in all parts of the world.

A treatise of 400 pages, with 200 illustrations, and 1,000 testimonials, sent free of charge.

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

BAKER CITY, ORE., March 12, 1890.

Reardon & Ennis:

I received your Patent Ventilated Dinner Pail, and believe it far superior to any other Dinner Pail now in use, and will take great pleasure in recommending it to all railroad men.

Yours truly,
DR. T. N. SNOW,
Surgeon.

Size of No. 2 Pail is 9½ inches long by 5½ inches wide by 9½ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth Pail order received we will refund the money and send the Pail free of expense. Try one.

GRAND SPECIAL SALE —OF THE— RAILWAY MEN'S FAVORITE WATCH!

We are making a strenuous effort to introduce our Goods among railway men throughout the United States, and in order to attain our object we are well aware that it is necessary to offer you the best goods, at prices so low that you cannot afford to buy elsewhere. **BEST IN THE WORLD**

The Deuber-Hampden Watch!

Cheapest House in America

The John C. Dueber movement, made by the Hampden Watch Co., is suitable to the railway service in every respect. It is solid nickel, handsomely damasked, full ruby jeweled (4 pairs in gold settings) chronometer balance, patent pinion and escapement, Breguet hair spring, patent regulator, and accurately adjusted to heat, cold and position. This movement is specially guaranteed by the manufacturers to be the best time-keeper in the world. It will not make any noticeable variation of time, and is, consequently, almost indispensable to railroad men.

We quote the John C. Dueber movement in Sil-

14 K Gold-Filled Case, Hunting, Louis XIV. style (see cut), handsomely engraved, in assorted designs, and warranted to wear 20 years, with the John C. Dueber movement. \$29 68

Any watch described above will be shipped by express, C. O. D. subject to a thorough examination on receipt of \$1.00 as a guarantee of good faith, which amount will be credited on the bill.

All goods guaranteed exactly as represented.

References: Your local Bankers, Managers of Express Companies doing business in Chicago, and Prairie State National Bank of Chicago.

Our 160 page illustrated catalogue will be sent to any address on receipt of 25 cents in postage stamps. This amount will be credited on your first order.

Our Watch and Jewelry Repairing Department is the best equipped in America. Fine and complicated work promptly done at wholesale prices.

Yours very truly,

Established 1874.

PRICES REDUCED.

**BAKER'S
TRIPOLINE**

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

**THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.**

SIDE BY SIDE.

TWO HEROES, speeding toward their homes where Wife and Little Ones await them, MEET THEIR DEATH while at the POST OF DUTY.

On Friday evening, October 3, 1890, a freight train, rushing down a heavy grade at full speed to the entrance of a tunnel, plunged into a land-slide which had completely blocked the entrance, burying the engine and piling up the cars in a heap of ruins. To add to the horror the wreck took fire. The Engineer and his Fireman were covered in the debris. The Fireman, GEORGE KNUCKLES, was caught by the arm, and was not released until about daylight the next morning, while ENGINEER McCoy was literally buried beneath the pile of wreckage. With his head terribly crushed and his body almost cooked by steam and water, he finally succeeded, after more than an hour, in crawling out more dead than alive.

Both men were insured in the **RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION**, and the history of their case is interesting.

ENGINEER JAMES B. MCCOY, Of Atlanta, Georgia,

was insured in the Railway Officials' and Conductors' Accident Association for \$1,000 at death and \$5 weekly indemnity. He was in a wreck on August 12th, being badly scalded and bruised. On August 18th, the Association sent him, while laid up, his first week's indemnity, and on October the 3d, the morning of his death, had sent him the balance of his indemnity for seven weeks. His first run after his recovery was that in which he was killed, on October 3d. He lingered in awful suffering until three o'clock Saturday morning, when his brave soul went out from his poor, maimed body. At nine o'clock that morning the Association in Indianapolis learned of his death, by telegraph. Before ten o'clock they telegraphed to his widow \$250 Funeral Benefit, and it reached her four hours and a half before the remains of her husband were brought home. Saturday afternoon's mail carried the balance of his death indemnity, which was paid over to Mrs. McCoy, and her receipt in full obtained on October 8th, just five days after his death. The following acknowledgment was received October 10th:

ATLANTA, GA., October 8th, 1890.

W. K. BELLIS, Secretary Railway Officials' and Conductors' Accident Association, Indianapolis, Ind.:

DEAR SIR—

I have this day received from J. D. Collins, your

agent, the sum of \$1,000, being the full amount due me on policy held by my late husband, J. B. McCoy, who was killed at Little Tunnel, E. T., V. & G. R. R., October 4th, by running into a land-slide. I wish to extend my heart-felt thanks to the noble Accident Association. The \$250 funeral benefit was paid to me in six hours after my husband's death occurred. The full amount of \$1,000 was settled in five days after date of death. I remain, truly yours,

MRS. MELISSIE MCCOY.

FIREMAN GEORGE KNUCKLES, Of Atlanta, Georgia,

had his arm badly crushed and burned, but the Association did not learn of his being in the wreck until Monday evening, October 6th. He was insured for \$2,000 death and \$10 weekly benefit. On Tuesday the Association sent him his first weekly indemnity. On Thursday they were notified that his arm had been amputated on the night of October 6th, at the hospital in Dalton. The same day, October 9th, they telegraphed to him the sum of \$250, and sent by mail the balance, \$750, due him as Half Benefit for loss of one limb. On Saturday morning, the 11th, they were notified that he had died from his injuries on the night of Tuesday, October 7th, and the same day (October 11th) sent to their agent in Atlanta the remaining \$1,000, having settled the full claim of \$2,000 in five days from the first information received of his injury, and within four days of his death.

Pocahontas Semi-Bituminous Coal

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

TO FIREMEN.

A. T. EVANS & CO., 182 State St., Chicago.

RAIN! RAIN! RAIN!

If there's one set of men who appreciate a good waterproof coat it is the farmer. He knows that a "Fish Brand Slicker" costs him less per year than any garment made. Did you know it rains or snows one day in three the whole year through? A "Fish Brand Slicker" makes every day a pleasant day to its lucky owner. Go anywhere with it in rain, hail, sleet, snow, or blow, it is wind and water proof. Costs less than rubber, and lasts ten times as long. Rubber is good for show days, but will rip in a week. If you want a coat for hard wear and hard weather, get the "Fish Brand Slicker." Every good thing has its imitation, so has the "Fish Brand Slicker." Look out. Beware of worthless imitations, every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

THE

WESTINGHOUSE AIR BRAKE CO.

PITTSBURGH, PA., U. S. A.

MANUFACTURERS OF THE

Westinghouse Automatic Brake.

The WESTINGHOUSE AUTOMATIC BRAKE is now in use on 20,000 engines and 170,000 cars.

This includes 75,000 freight cars. Orders have been received for 20,000 of the improved quick-action brakes since December, 1887.

The best results are obtained in freight train braking from having all the cars in a train fitted with power brakes, but several years experience has proven conclusively that brakes can be successfully and profitably used on freight trains where but a portion of the cars are so equipped.

now in use on 20,000 Engines and 240,000
Cars. This includes 140,000 Freight Cars.

Orders have been received for 80,000
of the improved Quick Action
Brakes since December,
1887.

The best results are obtained in freight train braking from having all the cars in a train
fitted with power brakes, but several years experience has proven conclusively that brakes
can be successfully and profitably used on freight trains where but a portion of the cars are
so equipped.

AN OPPORTUNITY

For Some Railroad Man to get a

HOWARD WATCH

FREE OF COST TO HIM.

I propose to furnish one of the well-known HOWARD MOVEMENTS, of their best quality Gilt, fully adusted to Heat, Cold, and Position, and cased in a specially made Filled Case, Open Face, or Hunting, as may be desired, to SOME RAILROAD MAN who will send me his name in full, giving his address and classification of employment.

Each letter will be assigned a number, and that number will be registered against the name of the writer, and the lucky number gets the HOWARD WATCH, which is universally acknowledged to be the best Railroad Watch manufactured.

A 2 cent Stamp, enclosed with the letter, will insure the return of a certificate bearing the registered number of the name, and for 25 cents will include our 230-page catalogue, illustrating movement and case to be given.

MY OBJECT in making this extraordinary offer is to get the correct name and address of all Railroad men. The number drawing the watch, and the name of the party holding the same will be published in this Magazine. Drawing to take place Sept. 1st, 1890., and to be under the supervision of responsible parties.

Send your name and address to J. S. TOWNSEND, 1554 Wabash Ave., Chicago, Ill.

TOWNSEND'S NEW WATCHES

While maintaining the old-time high standard of general excellence of our goods, are fitted with the new Non-Magnetic Balance, Hairspring and Escapement. They are sold with the Guarantee of Absolute Freedom from Magnetic Influences and to Pass Inspection under the Time System on any Railway. For a high class, accurate watch, get the new TOWNSEND. Our specialty is "Watches for Railway use." We handle all makes and in greater quantities than any house in the Country, and will give you honest goods at the best possible figures. We are specially appointed agents for the celebrated Howard Watches.

WE WILL SUPPLY:

American Keystone, Hampden, Springfield or Elgin, stem-wind, 7-jeweled movements, chronometer balance and straight line escapement, hunting or open face, 14-carat gold-filled engraved case, warranted for 20 years (assorted engravings), as per cut, (warranted).

Open face, net . . . \$17 00
